FARMERS, the Best is the Cheapest,
And before you buy, examine
THE PRIZE CHURN!
Patented July 31, 1866, *and October* 8, 1867.
This is what thousands of butter makers say who are using this Churn:
"THE BEST CHURN EVER INVENTED;"
Simple in Construction, Very Durable and Easily Operated.
Ten Thousand of these Churns have been sold since March 1st, 1870. A large portion have been sold on these conditions:—If not giving perfect satisfaction, to be returned at our expense; and in no case that has come to our knowledge has one been returned.
"We have thoroughly tested this churn and find that it does good work; it cannot fail to give satisfaction."—*N. A. Willard.*

"THE VIBRATOR."
1,000 SOLD LAST SEASON
WITHOUT ONE FAILURE OR REJECTION.
This is the famous Threshing machine that has "swept the field" and created such a revolution in the trade, by its Matchless Grain-Saving and Time-Saving principles.

THE ENORMOUS WASTAGE of grain, so *inevitable with other styles* of Threshers, can be SAVED by this Improved Machine, *sufficient, on every job, to more than pay all expenses* of threshing.
FLAX, TIMOTHY, MILLET, HUNGARIAN and like seeds, are threshed, separated, cleaned and saved, as easily and perfectly as Wheat, Oats, Rye or Barley.
AN EXTRA PRICE is usually paid for grain and seeds cleaned by this machine, for extra cleanliness.
IN THE WET GRAIN of 1875 these were substantially the ONLY MACHINES that could run with profit or economy, doing fast, thorough and perfect work, *when others utterly failed.*
All GRAIN, TIME and MONEY wasting complications, such as "Endless Aprons," "Baddles," "Beaters," "Pickers," etc., are *entirely dispensed with*; less than one-half the usual Gears, Belts, Boxes and Journals; easier managed; more durable; light running; no costly repairs; no dust; no "litterings" to clean up; not troubled by adverse winds, rain or storms.
FARMERS and GRAIN RAISERS who are *posted* in the large saving made by it, will not employ inferior and wasteful machines, but will *insist* on this improved Thresher doing their work.
FOUR SIZES made for 6, 8, 10 and 12 Horse Powers. Also a specialty of SEPARATORS designed and made EXPRESSLY FOR STEAM POWER.
TWO STYLES OF HORSE POWERS, viz.: our improved "Triple Gear," and our "Spur Speed," (Woodbury Style), both "Mounted" on *four* wheels.
IF INTERESTED in Threshing or Grain Raising, apply to our nearest Dealer, or write to us for Illustrated Circular (sent free) giving full particulars of Sizes, Styles, Prices, Terms, etc.

Consumers Importing Tea Co.,
No. 8 Church Street,
P. O. Box 5,509. New York City.
This is a combination of capitalists to supply the consumers of Teas throughout the United States on the mutual principle.
We have experienced agents in all the best districts of China and Japan to select Teas especially for our trade.
We expect every consumer of Teas to render us all the assistance they can in carrying out our enterprise, as we make a specialty of SUPPLYING CONSUMERS ONLY (and allow no middlemen to make any profit on our importations), which will enable us to supply them with Teas at prices lower than have ever been known, and of those fine qualities that seldom reach the interior, being sold only to the large cities and among the very wealthy.
Hoping the consumer will take an interest in our enterprise, and send at once for a circular with full explanations of how to proceed to obtain our goods, we remain,
Most respectfully yours,
Consumers Importing Tea Co.,

Floricultural.

POINSETTIA PULCHERRIMA PLENISSIMA.

We have so often and so recently referred to and described this showy plant that extended details are unnecessary now—especially as the excellent engraving which we reproduce from the Gardiners' Chronicle will well present an idea of those parts which the most careful descriptions ofttimes fail to convey.

The old single Poinsettia is a native of Mexico—introduced by M. Poinsette and secured by Mr. Buist of Philadelphia in 1834. The proper flowers are borne in corymbose cymes, each cyme subtended by the brilliant leaves which are commonly spoken of as the flowers. But the word double should be confined to a multiplication of the corolline leaves only—so that, accurately speaking, the new Poinsettia is no more double than the old form. In the former, however, the cymes are duplicated and each one is provided with its series of bracts, which in their entirety form the superb crimson rosette or bouquet of floral leaves which the engraving shows, and which are scarcely over half the natural size. The flowers themselves are so little and plain that it has been suggested that the brilliant bracts perform the same office as the gaudier flowers of other plants, viz., to attract insects and insure the transference of pollen from the stamens to the pistils, either upon the same individual or from one to another, if the pollen and stigma do not in the same individual mature simultaneously.

The double Poinsettia which, if we judge from all we read, will utterly eclipse the old form is, at present, controlled by the Messrs. Veitch & Sons of England, who will offer it as soon as their stock becomes large enough to meet the popular demand—probably this fall.

English horticulturists are more alert than are those of our own country, and a hungry market is, among them, always craving for a change of food.

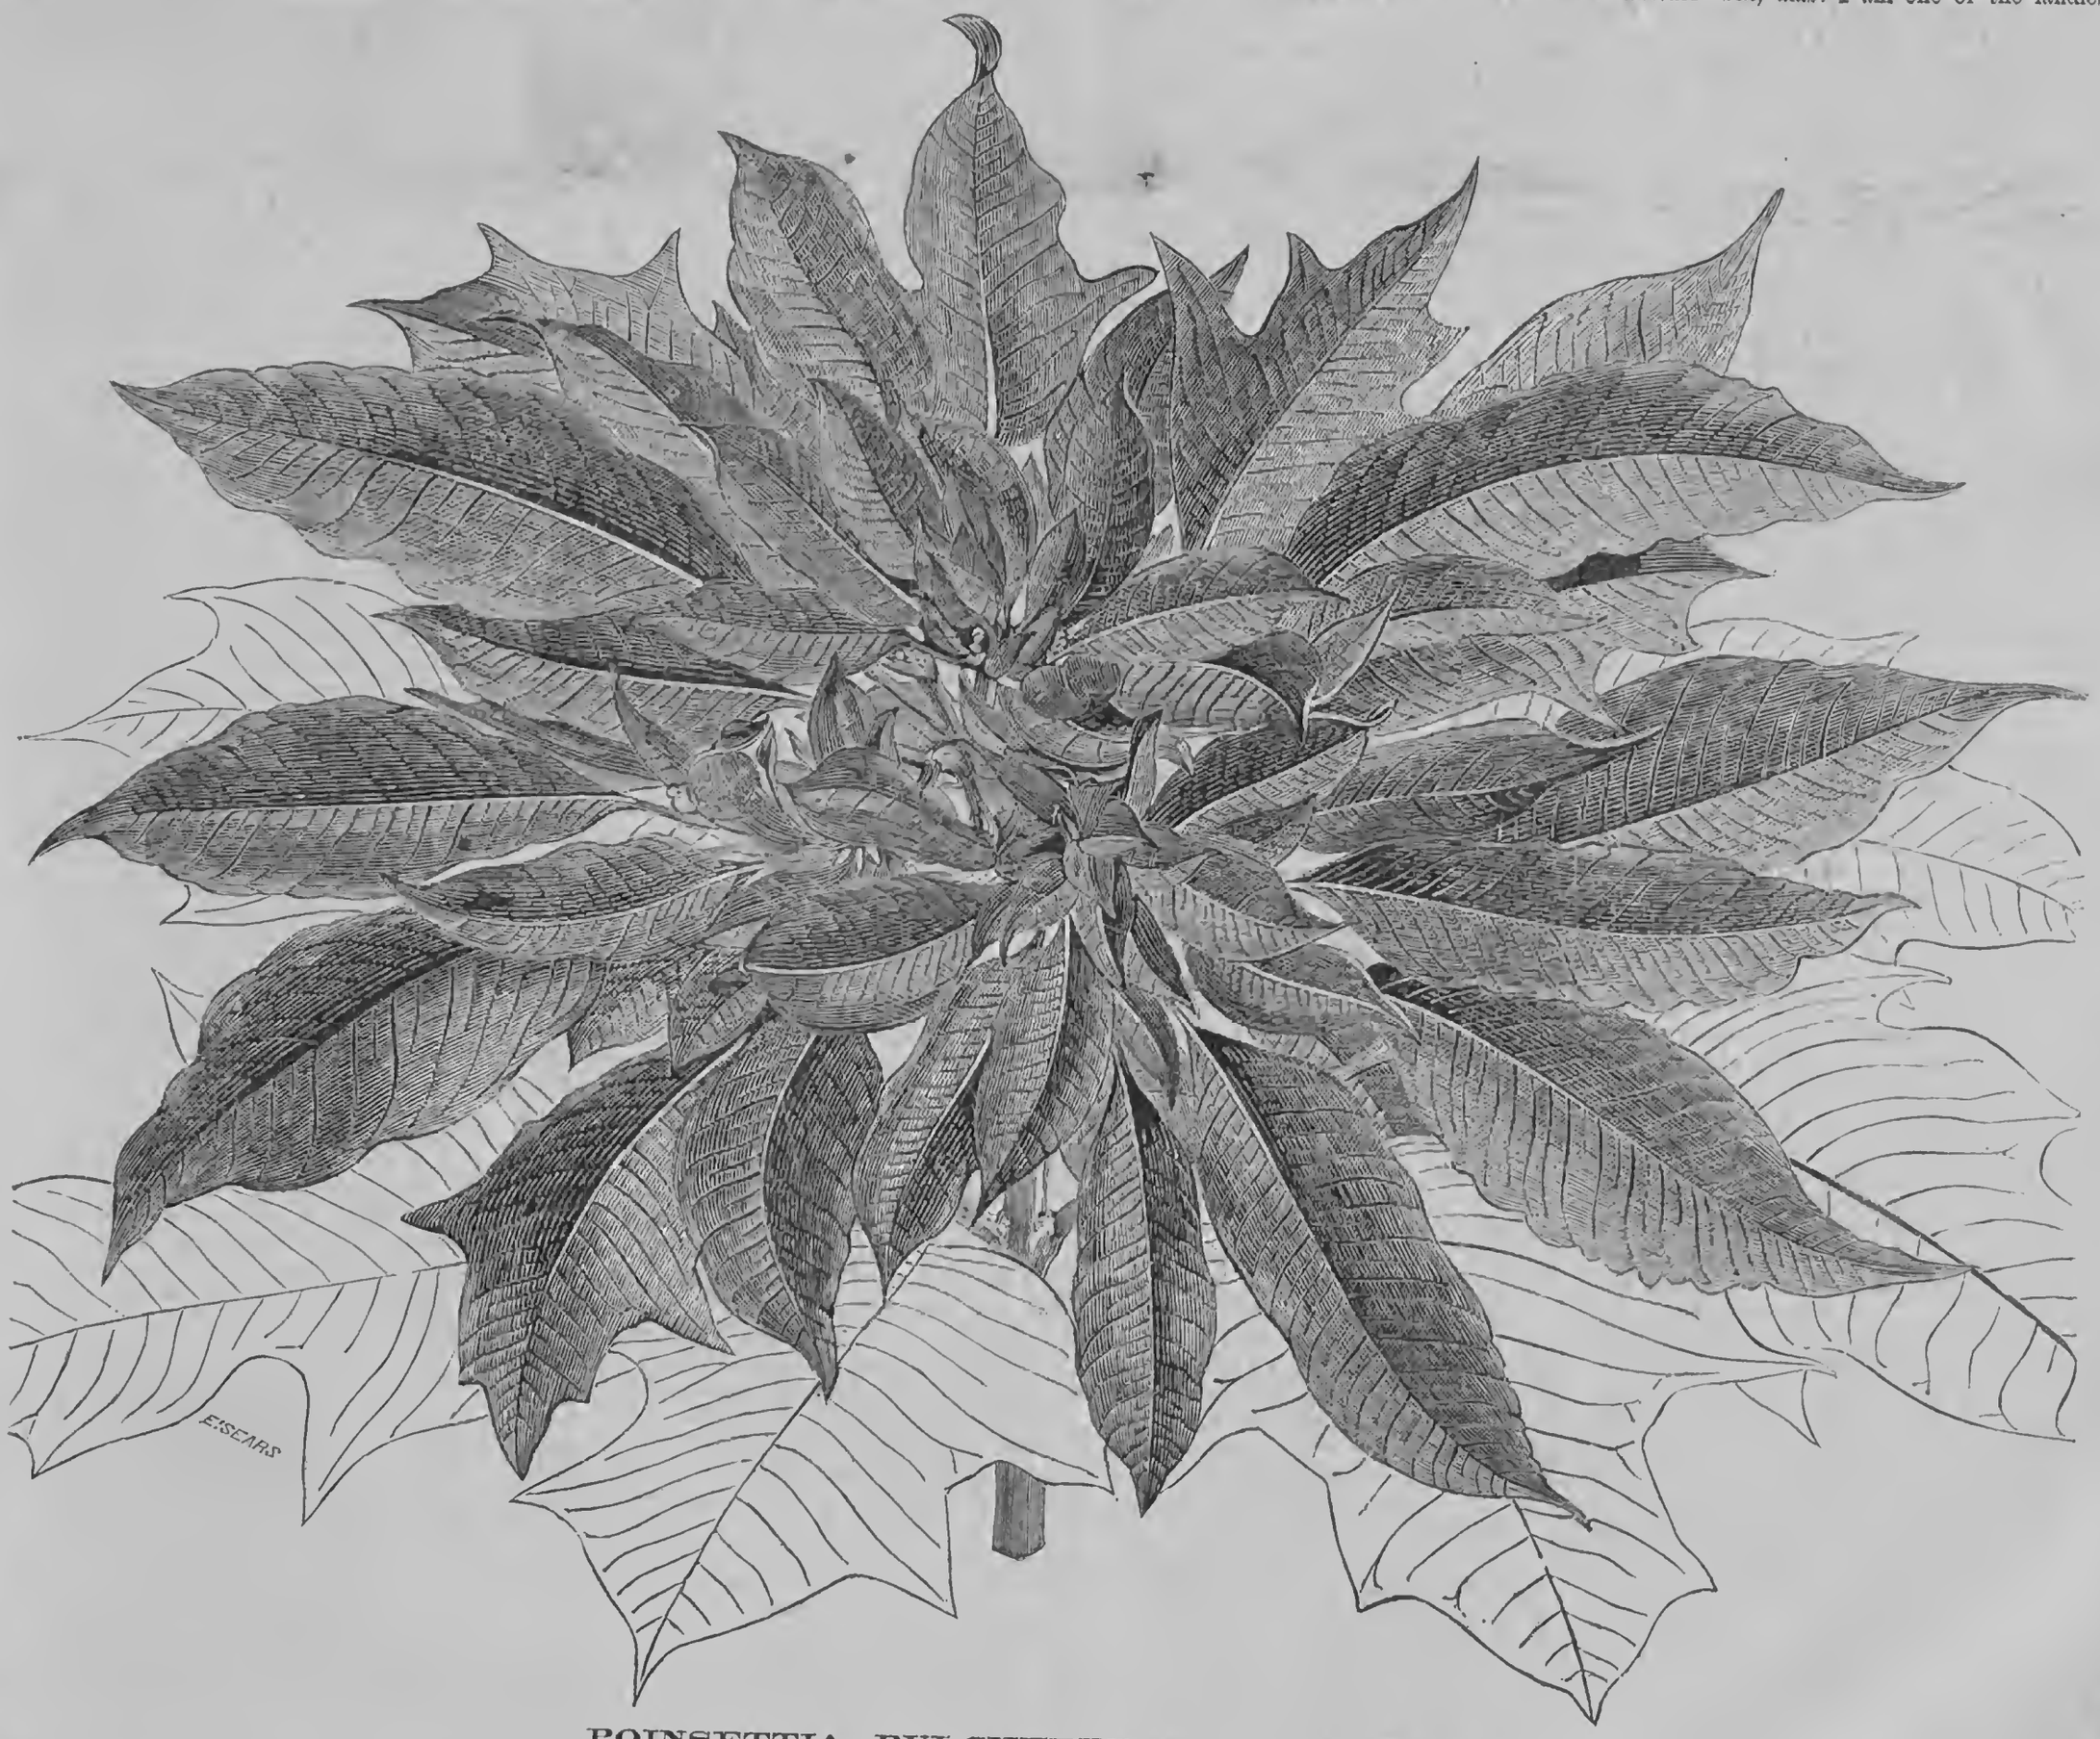
Thus it was that the "double" Poinsettia slipped through our fingers, as "it was first secured to cultivation through the enterprise of our veteran I. Buchanan, Esq., and was first described in the American Agriculturist in '73, accompanied by an original engraving from the plant itself."

We presume that Mr. Buchanan must have treated directly with M. Benedicte Roezl himself, who, in May of the same year, discovered it in a little village of the Mexican State of Guerero.

Since writing the above we have received the London Garden of the 1st inst., which, in an article upon Poinsettias in general, says:—"*P. pulcherrima* has now a formidable rival in the new variety named *plenissima*, to be sent out by Messrs. Veitch this month, and to which the old favorite will shortly have to give place. This has all the good qualities of *P. pulcherrima*, with the additional merit of having the colored bract at least double its size, so that the effect a few well-grown plants of this species will produce may be readily imagined."

RAMBLES IN THE WOODS AND FIELDS.

Dear Ruralist:—Like you, I am very fond of a ramble in the woods and fields, and whenever I meet with a plant bearing pretty flowers, I am seized with a desire to bring it home to cultivate—but, alas! I am one of the landless



POINSETTIA PULCHERRIMA PLENISSIMA.

ones, and am, therefore, obliged to cramp my favorites in a box or pot.

Last Spring I collected Painted Trillium, Blood Root, Spring Beauty and Columbine, and planted them in a box outside of the window on the east side of the house. They did very well all summer, and I am now (Feb. 22) anxious to know how they have passed the winter.

There is a swamp in this neighborhood that contains an abundance of the showy Lady's Slipper, *Cypripedium speciabile*. I observed also seven different species of plants belonging to the Orchis family.

It is four years since I commenced the study of botany. I bought Gray's School and Field Botany and stuck to it until I have pretty well mastered it, working in the factory at the same time and botanizing when I had a chance. It is surprising how many more plants a person will *see* after he has become interested in it.

I made a great effort to find *Arethusa bulbosa* and *Sarracenia purpurea* last summer, but could not succeed. Do you think they are likely to be met with in this locality? [Yes.] Although I do not own a foot of land, my *botanical garden* is quite extensive, including the noble Graylock Mountain. I have planted seed of *Primula vulgaris* and *Datura Wrighti* in a box in the house. Do you think they will do well in the house? [Yes.] YOUNG BOTANIST.

South Adams.

FLORICULTURAL NOTES.

"*Why*," says HUMBOLDT, "have not everywhere the names been preserved of those who, in place of ravaging the earth, have enriched it with plants useful to the human race?" [We should like to have this question answered.]

A plant that should be found in every garden, whether for ornament or use—Asparagus.

The following touching paragraph we copy from a letter to JAMES VICK:

"And now, at the age of seventy-two, and in feeble health, I am compelled to give up my flowers, except a few of those easiest cultivated. Nothing has afforded me greater pleasure than my flower garden, and it is hard to think I cannot enjoy it longer. But I shall soon go to that world where flowers forever bloom, and there I shall meet that dear mother who taught my little hands to cultivate them here!"

EXCHANGE.

WHAT a blessed thought of the dear old RURAL, this exchange of flower seeds! Now we poor flower lovers have nothing left to wish for. I have a few seeds of Portulaca (mixed), *Eschscholtzia Californica* (California Poppy) and *Celosia* (Cockscomb) that I wish to exchange for stock (Gillilower), mixed colors.

Many thanks for privilege of floral exchange.

MARY WALEY.

Sheep Husbandry.

IMPROVED BREEDS OF SHEEP.

IN an essay read by Dr. L. E. BROWN, before the Kentucky Wool Growers' Association, brief reference is made to the history and value of five of the most popular breeds of sheep, which will doubtless interest some of our readers:

First—The Merino is a breed originally Spanish, but now generally existing over Europe and the United States, and very extensively in Australia. Merino wool constitutes a great part of the wealth which flows into the new continent from its exports. The Merino has large limbs and the male has large spiral horns which do not rise above the head. The skin of the neck is loose and pendulous, the cheeks and forehead bearing wool. The fleece is fine, long, soft and twisted in silken spiral ringlets abounding in oil which attracting dust, gives it a dingy appearance until scoured, after which it is silky and white. This variety fattens slowly and is valuable mainly for the excellence of its wool, but as a general thing, has not been found profitable in England or the United States, and is not reckoned by some as being strictly one of the long-wool sheep.

Second—The Leicester sheep is regarded in Europe as one of the most valuable of the long-wools. This breed in the present improved condition, is the result of the skill and care of Mr. Bakewell of England, who, soon after the middle of the last century, began to make experiments for the improvement of the old Leicester sheep. It was then a large, coarse-boned sheep, not easily fattened, with coarse wool weighing about ten pounds to the fleece. The new Leicester, or present breed, has wool moderately long and of better quality, weighing seven or eight pounds, and is easily made very fat. The color is white, and both sexes are horuless with bald face tinged with blue, and low carriage. Other breeds of long-wools in England have been greatly improved by crossing with this—the Lincolnshire, Romney Marsh, &c. In this country the Leicesters are large and coarse, but easily fattened and with good mutton, the wool moderately long, but stiff, and without gloss. Altogether this variety is not generally held in great esteem.

Third—The Lincolnshire is a large, bony animal, takes longer to mature, has a long, flat, bony head quite bare of wool, with a good fleece, rather thin, slightly kinky with some gloss. But although the Lincolnshires have been greatly improved in late years, their legs being shorter and the wool more glossy, yet the fleece not being equal in quantity or quality to that of some other breeds, they have not met with general favor, and are rarely adopted by our wool growers as a breed.

Fourth—The Southdown is one of the most popular breeds both in Europe and the United States, and have, by crossing, produced what are called Hampshiredowns, Shropshiredowns, Oxforddowns, and perhaps others, all larger and coarser, but retaining the Southdown marks and characteristics, all producing valuable wool and making good mutton. But the Southdowns must be regarded as at the head of all these, both for wool and table use, the crossing of this breed having added nothing to the originals in either quality. The Southdowns are exceedingly neat in form, both in head and body, with gray face and legs, forehead and legs well covered with wool, the fleece short, thick and soft, the outer surface often appearing as smooth as the nicely clipped. The body is straight, with well-sprung ribs, broad, level back, and deep flanks, all well covered with wool. This breed stands at the head of all the breeds of sheep for superior table qualities, but does not rank so high for quantity and quality of wool. The Southdowns derive their origin and name from the Chalkdowns of the south of England, but are not adapted to a cold climate.

Fifth—The most important and valuable of all breeds of sheep is the Cotswold or Gloucester, the wool of which has been held in great esteem since the fourteenth century, and has generally commanded a higher price than any other. In 1464 Edward IV. of England, sent a present of Cotswold rams to Henry of Castile, and in 1468 he sent a similar present to John of Aragon. So the Cotswolds reach back to a right honorable age and right royal patrons. But in modern times the Cotswolds have been greatly improved by crossing with the Leicester, producing a shorter wool and better mutton than in former times. The Cotswold of to-day has a long, straight body, well rounded ribs, flanking low down, good full twist, broad, flat back, full and low in brisket, a neat, stylish head, broad between the eyes, neatly tapering mouth, short legs, with head, jaws and legs covered with wool, and altogether a pretty and stylish body, covered with long, fine, wavy wool, which is glossy, and very valuable and in great demand. The face in this breed is sometimes gray, but not generally so. They are more docile than any other breed, and take on flesh very kindly, making good mutton, but are not considered, in this respect, equal to the Southdowns. Yet, all things considered, the Cotswold is the best and most profitable breed for the wool growers of Kentucky, and we would earnestly advise them to continue to improve their flocks until they shall be as near thoroughbred as possible. It costs as little to raise and take care of a good animal as an indifferent one, while the thoroughbred will yield a fleece of from twelve to twenty-five pounds, worth twice as much per pound as the fleece of a common sheep, which would weigh three or four pounds.

CRUELTY TO SHEEP.

THE Pall Mall Gazette ssys:—"An interesting question was raised in a case which came before the Woodbury Police Court, near Exeter, when a butcher of Sidmouth was charged with cruelty to sheep. It appears that the defendant bought some sheep at an auction, and with a pair of shears cut off the top of their ears, in some cases cutting off as much as half the ears. He did this to mark them. It was urged in defence that it is the usual custom among farmers and butchers to mark sheep in this way. A veterinary surgeon said the sheep suffered little or no pain, the vessels being few and small in the ear. Ladies had their ears pierced for rings and did not suffer from the operation. He (the veterinary surgeon) "would not mind having part of his own ears cut off." It was less painful, he added, to the sheep to cut off their ears than their tails. The defendant was, nevertheless, fined £5 ($25), much to the surprise, it is stated, of several farmers and butchers present. Although the veterinary surgeon would not mind having his ears clipped, there was certainly no evidence to prove that the sheep were equally indifferent to this disfigurement and the annoyance attending the operation. Moreover, the fact that ladies have their ears pierced is no argument in favor of cutting off sheeps' ears. Any proposal on the part of husbands to nip off their wives' ears for the purpose of distinguishing them from other people's wives would, it may be imagined, be received with disapproval, and increase the animosity with which man is regarded by woman."

We never did believe it right to inflict the cruelty of docking or cutting off the tails of either colts, hogs or sheep.

SHEEP HUSBANDRY IN SOUTHWESTERN MISSOURI.

I HAVE read with some interest the statements made by JOHN SHELDON in the RURAL in regard to sheep raising and wool growing in Colorado.

I have often wondered why people go so far West, where they find nothing but waterless and treeless prairies, when in Southern Missouri there are oceans of grass, the country well supplied with choice timber, and watered with innumerable streams and springs of the clearest and purest water. The climate is as mild and genial as that of Italy, and all the accompaniments of civilization, such as schools, churches and the best of refined society, are in abundance.

I have spent much time in Christian and Stone Counties, and must candidly say that I know of no portion of the United States that offers such encouraging inducements for sheep raising and wool growing, as well as fruit growing in all its branches and general agriculture. The portion of country of which I speak extends southward to the northern line of Arkansas, starting from the line of the Atlantic and Pacific Railroad. It is in a latitude lower than Colorado, and on the score of climate far surpasses it, while in all other respects it is infinitely superior.

I am interested in giving information to my fellow-citizens in regard to this land of plenty, healthfulness and quiet. More than 100 families from Southern New York have located at Billings and have secured most desirable homes.

Tioga Co., N. Y. ELIJAH OSBORN.

The Horseman.

UNSOUNDNESS OF WIND.

IF any trouble exists with the respiratory organs of horses among our farmers it is usually set down as "heaves," a kind of guess-work way of naming a disorder, the nature of which may or may not be known. The London Field, in referring to these diseases under the name of "unsoundness of wind," says:

Roaring or whistling, when they are fully developed, may generally be detected without difficulty by putting the horse into a canter; but in some cases, when the disease is in the incipient stage, the sounds can only be heard when the pace is very moderate, and often only when the animal starts off. The reason of this is that the obstruction to the passage of air into the lungs is so slight that the expansion of their air tubes during exciting breathing removes it altogether, and the horse appears to be sound; but in very decided cases of roaring the sound becomes more marked as the exertion is continued, and the fact of the animal becoming distressed and making more noise at the end of a gallop than he did at the beginning is a clear proof that the affection is thoroughly established, and likely to get worse in the future. In making an examination of a horse which is suspected of being a roarer, the best plan is to start him suddenly at a canter for a short distance, and then pull him up as short as possible. Slight sounds, which are not distinguishable when the horse is going, will be very audible to the ear if placed close to the nostrils immediately the movement is arrested; and in this way slight defects, which might otherwise escape notice, are detected. It may appear that a sound which is so slight as to escape observation while a horse is going at a moderate speed is not of sufficient importance to demand special notice, and, if it were the case that abnormal sounds showed a tendency to remain in a fixed condition, the objection would have some weight; but the slightest noise of an unhealthy character is an indication of the commencement of a disease, which is almost certain to advance to the condition in which it seriously affects the horse's respiratory powers. There is no way of describing in so many words the peculiarities which distinguish an unhealthy from the healthy respiratory sound. Close observation is necessary to educate the ear to appreciate the natural and morbid sounds which are made during respiration. When there is a distinct whistle or roar, no one can fail to recognize it as an unhealthy sound; but there are noises which are close on the confines of the natural sounds, and the practiced observer requires his attention to be concentrated on the examination in order to decide whether or not any defects exists.

The differences of opinion which are constantly met with among competent horsemen as to the existence or otherwise of unsoundness in the wind, are sufficient evidence that there are many cases in which the departure from the healthy sound is not so marked as to be readily distinguished. Extraordinary cases of roaring, in which it has been impossible to decide at first whether the sounds were merely the result of some peculiar habit or depended on disease of the respiratory organs, have been from time to time recorded. These cases are very unsatisfactory to everybody concerned, the professional examiner especially, because, whatever view he may take, there are facts to be advanced on the opposite side. That there are a few eccentric horses which make unnatural noises at times, quite irrespective of any disease of the air tubes, is beyond all doubt. Fortunately, such cases are very rare, and if the existence of a bad habit exposes the horse to the stigma of being an unsound animal, no one ought to complain. It is probable, however, that the owner, who knows the animal's qualities, does not take this view of the matter, and protests against a verdict of unsoundness in the case of a horse which long experience has convinced him is perfectly sound, notwithstanding the objectionable noises which he makes on occasion in his breathing.

Various causes of roaring and whistling are enumerated by veterinary pathologists. Whistling is most likely to be caused by some obstruction in the nasal cavities, which, by diminishing the size of the tube through which the air passes, causes the pitch of the note produced to be elevated. The same effect will result from thickening of the mucous membrane at the opening of the larynx. Distortion of the cavity of the larynx or trachea is a not uncommon cause of roaring—the one condition is due to loss of power of the laryngeal muscles on one side, generally the left one; the other is a natural consequence of the bent position of the neck which follows from the improper use of the bearing rein.

The presence of a tumor in the gutteral pouches, in such a position that the side of the larynx is pressed, is an occasional cause of roaring, and the symptoms induced are very marked in such cases; the animal under exertion becomes excessively distressed, and it is necessary to allow him to rest in order to avoid suffocation. If the tumor is temporary in its nature, as in the case of an abcess, it is essential to keep the animal perfectly quiet until the process of suppuration is completed, and the contents of the tumor are excavated by bursting, or by the aid of the lancet; but in cases of premature tumors, as those of a scrofulous kind or fibro-fatty structure, there is no hope of cure, because, from the position of the deposit, an operation would be attended with a great amount of risk, and would besides be of doubtful efficacy, as there would generally be left enough deposit on the mucous tissue to cause some noise in respiration, although the actual relief to the animal might be considerable.

Treatment of ordinary cases of roaring or whistling, with a view to the restoration of soundness, is generally a very unsatisfactory affair. Different plans have been at various times advocated, and if it can be truly alleged that any method has succeeded in curing a whistler or roarer, the system is straightway lauded as infallible; and the result is that confiding horsemen subject their unfortunate animals to various degrees of punishment, in most cases without any benefit. When the abnormal sound depends on some recent deposit, which would, in all probability, be removed by a natural process of absorption as the acute disease which gave rise to it subsides, any form of counter-irritation will, to some extent, assist the removal of the morbid matter, and thus would have done in time, but in cases of roaring and whistling of long standing, counter-irritants are quite powerless, and their application only inflicts pain on the animal, without any chance of removing the cause of the mischief.

Severe blistering of the surface along the course of the trachea, firing the same part, applying seatons from the jaw to the chest, are plans of counter-irritation which have been advocated as means of cure, but in reality, in most cases, the use of them amounts to an act of unmeaning brutality. The operation, which has been successfully adopted in some cases, of removing a portion of cartilage at the opening of the larynx, is only likely to be beneficial when the disease is due to loss of power of the muscles, which allows the walls of the organ to fall inward, and thus diminish the area of the cavity. As this is a common cause of roaring, the operation may be successful in many instances; but there are no means of determining beforehand whether this condition exists, and if it is not present no benefit would be gained, and possibly injury might result. The proceeding, therefore, borders on the empirical, and, except as an experiment, should seldom be attempted. A roarer may be kept in workable condition by a careful system of management, regulation of diet and exercise, and the avoidance of irregular and severe work; but it is rarely worth while to attempt a radical cure by the aid of medicine and surgery.

Dairy Husbandry.

THE CENTENNIAL DAIRY RING.

CARD OF MR. BLISS TO THE UTICA HERALD.

The following letter in the Utica Herald of May 11, from Mr. O. S. Bliss, the well-known Secretary of the Vermont Dairymen's Association, explains how some of the "Ring work" was done. Mr. Bliss is Secretary of the Centennial Dairy Committee of which J. V. H. Scoville is Chairman, and as Secretary of the Committee, holding the records of that body, he is supposed to know what he is talking about. It will be seen that Mr. Bliss in his letter corroborates the facts stated in the exposure of the "Dairy Ring" published in the Rural several weeks ago.

The reader will bear in mind that the irregular meeting of Jan. 22, referred to by Mr. Bliss, was the time when Mr. Scoville and his five members of the Ring met at Utica without notice to the rest of the Committee, and nominated Jurors, &c., &c.

In justice to Mr. Bliss and to other members of the Committee, as well as to the Dairy public, we reprint his letter to the Herald:

"Editor of Utica Morning Herald:—Your letter of the 25th inst. is at hand. I find I was mistaken in supposing that I had at least a moral claim to as much of your space for my own defense as had been accorded to Mr. J. V. H. Scoville to make a bitter and untruthful personal attack upon me, under the guise of giving the public facts. Under the circumstances, I accept your 'courtesy' in permitting me to use a half column of the Herald, though it will not nearly permit me to do justice to myself or the public. I must of course pass over many material points in the case, and must take up together both Mr. Scoville's letter and your article founded upon mine which you declined publishing, though it leaves out of view the more material points in it. I am sure that the public have a claim upon you and me for a much fuller exposition of the case.

"Mr. Scoville did not in his 'card' state as you assert that 'Mr. Bliss with other members of the Committee, was duly notified to be present;' but he labored very hard to show that I had some sort of an irregular notice, which was not the case, however. On the other hand, he practically admits that but six of the more than fifty persons whose names appear on the list of members had any notice whatever of the meeting. In the same paragraph in which he proposes to convict me of lying on the affidavit of the members of the Committee, he speaks of the 'members of the Committee who had no knowledge of the meeting'—your covert insinuation to the contrary notwithstanding. I beg to ask how it happens that the two members of the Committee who are said to have conversed with me on the subject of the Vermont meeting, failed so signally to converse on the subject with any of the six or seven other members of the Committee who were there? You are mistaken in saying that I charge him with 'hampering' me. I did complain that I was held responsible by members of the Committee for their not getting notice of meetings of which I was not myself notified, and I quoted the letters of Mr. Scoville, not for the purpose indicated by you but to show that even after the Committee had voted at Utica, Feb. 3, to hold a meeting at Philadelphia, Feb. 23, and instructed me, as Secretary, to notify the whole Committee, he made three distinct efforts to thwart the purpose of the Committee and have only 'such as it was necessary,' notified; and he said he would send out the necessary notices himself. The admonition which he had received at Utica was not sufficient. He was still defiant, and determined to control the Committee. Your statement that the Utica meeting of Jan. 22 was ratified at Philadelphia, is not correct.

"My limits will not permit me to enter into details; but the material fact in regard to that matter is that when it was proposed to treat that meeting as regular and reconsider the vote taken there, it for the first time came to be known to the Committee that the resolution recommending Jurors had been indorsed by Gov. Seymour and forwarded to the Commission. I saw at once that a reconsideration of that subject would compromise some innocent parties, and I made the motion to drop the whole matter and to expunge from the records all allusion whatever to the meeting of Jan. 22. That vote passed unanimously and the Committee have, from that day to this, treated the meeting of Jan. 22 as dead. They afterward made it the duty of the Executive Committee to appoint three auditors, which was done at the last meeting of the Executive Committee, held in Utica March 17, wholly disregarding the alleged election of Jan. 22. The only other thing which the Committee could have done in regard to the matter, would have been to recall the resolution then in the hands of the Commission.

"I, myself, (and I believe every man with whom I consulted in regard to the matter,) was actuated by the purest motives in protesting against these irregularities. I have been a member of the Committee from its original formation, three years ago, and I have had a very wide opportunity to know with what disfavor many of the acts of Mr. Scoville have been looked upon and how necessary it was that the public distrust should be dispelled. We had hoped that the free discussion of the Jan. 23d meeting at the Feb. 3d meeting would correct the evil; but when it became apparent through Mr. Scoville's letters that he still supposed he had authority to annul the action of the whole Committee, it became necessary to carry the protests, &c., into the Philadelphia meeting, or let him run away with the whole project.

"I thought and said then, and still think, that the whole matter should have been kept from the reporters, and I have deeply regretted that it was not. I least and last of all, expected to see Mr. Scoville rush into print in regard to it. He, of all men, had reason to keep silence. During the unhappy contest I have been importuned times without number, 'to write the matter up;' but I have steadfastly declined till Mr. Scoville in a most wanton manner has assailed my integrity and my motives. I did not in my answer to him, which you declined publishing, feel called upon to explain the disposition made of the Jan. 22d meeting; but your very positive but entirely erroneous statement, has seemed to require correction. Much as I would have preferred to continue to keep silence, I cannot longer believe that such is my duty.

"I must say in closing that the charge of collusion with Mr. Willard is entirely unfounded. I never exchanged a word with him on the subject till after my protests were all made. I have not approved of his publishing the matter, although I know his provocation was very great.

Georgia, Vt., April 28, 1876. O. S. Bliss.

DAIRY TRANSACTIONS.

NORTHWESTERN DAIRYMEN'S ASSOCIATION.

We are in receipt of the Tenth Annual Report of the above association from the Secretary, Dr. R. R. Stone of Elgin, Ill. The report comprises the addresses, discussions and factory reports presented at the Annual Meeting held at Fort Atkinson, Wis., Feb. 8-10, 1876. It is a well printed pamphlet of 86 pages, and contains much interesting matter relating to the dairy interest of the Northwest, and to which we hope to refer hereafter. Dr. Stone attributes a large share of the cause of the development of the dairy business of the West to the interest awakened at the Dairy Conventions. At these meetings the masses have been benefited by the valuable experience of the few. He thinks that it has been proved that the "West possesses the proper soil, water and climate to make as fine qualities of butter and cheese as can be made in New York or New England."

The report contains the address of welcome by Dr. H. E. Willard, and the address of response by Dr. R. R. Stone; the address of Hon. Hiram Smith and of Mr. Thompson; Secretary G. E. Morrow's annual report, the address of H. C. Drake; a paper by John Porter on "Keeping up supply of milk in summer drouth;" one on "Butter making from milking to selling," by S. J. Goodwin; "The children of the farm," by Mrs. Frances C. Jones; essay on "Cheese making," by S. Littlefield; President Favill's paper; "Shall we make skim-milk cheese?" by I. H. Wanzer; "Where, when, and how to sell dairy products," by Dr. Stone; "Buying and distributing dairy products," by A. H. Barber of Chicago, together with a number of short speeches made at the banquet.

VERMONT DAIRYMEN'S ASSOCIATION.

Mr. O. S. Bliss, Secretary of the Vermont Dairymen's Association, has always issued an excellent report, and the seventh in the series, embracing the papers and discussions at the winter meeting, Jan. 19-21, 1876, is of great interest and value. It contains 183 pages, covering quite a variety of topics in relation to butter and cheese dairying.

The Secretary gives a brief account of the Annual and winter meetings, and then follows the address of welcome by Hon. Henry Clark at the Rutland meeting. We give the several papers in the order which they are printed in the report: Opening address, by President Mason; "Dairy progress and dairy engineering," by the Secretary; "How to get the most profit from milk," by Wm. Blanding of New York; "Swiss cheese factories," being a letter from an American in Switzerland, read by H. M. Kenedy of the Utica Herald; essay on the "Management of the butter dairy," by Mrs. J. T. Ellsworth of Barre, Mass.; "Breeds of Cattle," by Harris Lewis of Herkimer, N. Y.; "Dairying vs. thoroughbred bulls," by Dr. Sturtevant of South Framingham, Mass.; "Butter factories and the importance of improving butter stock," by W. L. Rutherford of Waddington, N. Y.; "A Holderness herd, by T. D. Curtiss of Syracuse; "An improvement on the Swedish method of setting milk," by L. S. Hardin of Louisville, Ky.; essay on "Home," by Mrs. P. L. Hopkins; "The contagious diseases of domestic animals and the laws of the New England States for their prevention," by Hon. T. S. Gold of the Connecticut State Board of Agriculture; "Diseases of animals," by Dr. Cressy of Mass. Ag. College; address on the Centennial Exposition, by Burnet Landreth of Philadelphia; "The manufacture of butter and skim cheese," by J. T. Ellsworth of Barre, Mass.; "The past and future of progressive agriculture," by Gov. Hyde of Conn.; "The philosophy of curing cheese," by X. A. Willard of N. Y.; "The management of pastures," by A. W. Cheever of the New England Farmer; "Dairy topics of the season," by T. D. Curtis. Thus it will be seen from the above list of papers (each of which was followed by discussion) the report makes a valuable document for reference.

TRANSACTIONS OF THE AMERICAN DAIRYMEN'S ASSOCIATION FOR 1875.

This is a pamphlet of 108 pages, giving the papers and discussions at the annual meeting at Rome in January last. The Secretary, Mr. L. B. Arnold of Rochester, in his prefatory remarks takes occasion to recommend the "Heated Milk" theory for making butter and cheese. He says it "promises to be of great value in utilising skim-milk," and he thinks it is "the most important advance lately made in cheese making, as it enables the manufacturer to so perfectly cure skim cheese as to make of it a palatable, nutritious and wholesome food, thus solving the problem of the economical use of skim milk, which has so long baffled the skill of the best experts."

This opinion seems to differ widely from that of the Illinois dairymen. The experiments with the "Heated Milk" theory made at Elgin, Ill., last year, proved a sad failure, and it is a question whether Mr. Ellsworth's success in making skim cheese is due to heating the milk or to other causes.

The report is smaller than usual, but contains a number of papers of interest and value. As we gave a pretty extended report of the Rome meeting in the Rural, we need not present here a list of topics.

COLORING CHEESE.

A correspondent writes us, urging that annatto should not be used for coloring cheese, and he asks us if something cannot be done to discourage its use and thus relieve factories and dairymen from a heavy expense which adds nothing to the flavor or quality of cheese, and which he says "cannot be regarded in any other light than a villainous fraud."

We quite agree with our correspondent that cheese is not improved in flavor or quality by the use of annatto, and we should be glad to see it done away with in cheese making; but so long as certain markets demand a colored cheese and are willing to pay a premium for it, our cheese makers will find it to their interest to make it. We can hardly go so far as to say that the coloring of cheese is a fraud. Annatto is a harmless coloring material, and our cheese makers do not use it for the purpose of deception but only to meet the wants of trade. A very large proportion of the cheese demanded for the English market requires to be colored; but there are some markets like that of Manchester, where pale or uncolored cheese is preferred.

It is hard to say why the practice of coloring was first introduced; but very likely it came from a desire on the part of manufacturers or dealers to impress upon consumers the idea that color was an indication of better quality. At the present time we think the preference for color is a matter of education. People fancy that a colored cheese looks better on the table, and from long custom in its use they may fancy it is better than pale cheese.

Annatto is a very great expense to our cheese factories and dairies, and on this account we should be glad to see its use abandoned. But apart from this we can see no material harm in employing it, providing it is unadulterated and not injurious to the cheese as an article of food. Tastes differ, and we cannot all think alike. If certain classes of consumers desire their cheese colored and are willing to pay for it, we do not see why their wishes should not be gratified, providing such coloring matter is not injurious to the cheese as an article of food. All that can be done at this time by the advocates of pale or uncolored cheese is to educate consumers by proving to them that color is unnecessary, and that it in no way affects the quality of product. To attempt to force pale cheese upon a market that does not want it would be disastrous; and the cheese makers of the country have now enough to contend with without attempting to raise an issue of this sort with our foreign customers. There is a limited demand for pale cheese in the English markets and also in the home trade. This of course should be supplied. But we cannot advise factories which are making a shipping cheese to abandon coloring without they know where their goods are going. If factories can get an order for pale cheese, then let it be made; but without such order it will be safer to make colored cheese, because the demand for this is much larger abroad than for the uncolored article.

There was a time when a large share of the annatto in market was adulterated and some of it with materials injurious to health. But at the present time annattoine, annatto seed and other preparations can be had, which are free from impurities of the kind referred to. And it is the duty of manufacturers to procure only such an article as is known to be pure and which can be had from dealers under the proper guarantee.

This question of coloring has been agitated from time to time at our Dairy Conventions, and we know there is a great difference of opinion as to the course to be pursued. Some have advocated that if all the factories would unite to abandon coloring, our English customers would soon be educated into the use of pale cheese and would then prefer it. This course is not practicable, for in the first place the factories could not be united on this question, and even if they could it would only give the English manufacturer, making colored cheese, an additional advantage over our own make. We must for the present take things as they are, our highest aim being to meet the demands of the various markets, and make our goods so that they will command the best prices.

THE ICE METHOD IN BUTTER MAKING.

Mr. H. O. Freeman is making extensive and repeated experiments at his creameries in cooling milk for raising cream, as suggested in our "Practical Butter Book." He writes us under date of April 28th that he has applied ice water to the style of cooling vat adopted at the Ridge Mills Creamery with most satisfactory results, and he says:—"I am confident the principle of cooling with ice water is correct when all the cream is wanted and the milk is to be kept sweet for cheese. The point with me is, What *plan* is best adapted for a creamery?"

The effect of low temperature on milk set for butter making is arresting attention, and is likely to make some important changes in our system of butter making. The London Lancet gives the result of M. Eug. Tisserand's observations recently communicated to the Academie des Sciences. He found the nearer the temperature of the milk is to the freezing point the more rapid is the collection of cream, the greater is its bulk, the more butter it produces, and the better is the quality of the butter as well as the skimmed milk for cheese making. He experimented on milk fresh from the cow at various temperatures from 95° Fahr. to that near the freezing point, and the butter made from milk which had been cooled down to a low temperature was always of a fine quality, more delicate and of a firm consistency, altogether more unctions to the touch than the butter from the cream of the milk that had not been cooled or insufficiently so from 45° to 52°. It had above all that property required for culinary purposes — of keeping fresh for the longest time.

These facts, he thinks, may be explained by Pasteur's observations on ferments and their effects on the media in which they live. Refrigeration assists the growth of the living organisms which set up fermentation. In the process of fermentation these organisms feed upon the solid constituents of milk—the butter and the caseine—bringing about changes which if they do not lessen the quantity of butter at least prevents a complete separation of it from the milk. Hence the advantage of reducing the temperature of the milk and arresting their growth.

Such is the theory suggested; but without entering upon this branch of the subject, it will suffice perhaps for dairymen to know the practical operations of this plan and the results obtained by experimenters.

When the quality of milk is considered of especial importance, the ice method, it would seem, may be employed with great advantage and the subject must be of interest to butter makers. We hope at no distant date to give the result of Mr. Freeman's experiments more in detail, and have no doubt they will be of interest and utility.

The Effect of Cold on Milk.—The Lancet says that the effects of a low temperature on milk have been carefully examined by M. Eugene Tisserand, who recently communicated his observation to the Academy of Sciences. He found that if cow's milk is, immediately or soon after being drawn, placed in vessels at various temperatures between 90 deg. Fah., and the initial temperature is maintained for twenty-four or thirty-six hours, it will be found that, the nearer the temperature of the milk is to freezing point, the more rapid is the collection of cream, the more considerable is the quantity of cream, the amount of butter is greater, and the skimmed milk, the butter and cheese are of better quality. It is probable that the refrigeration arrests the evolution of the living organisms which set up fermentation, and hinders the changes which are due to their growth.

Scientific and Useful.

THE KENTUCKY SHOWER OF FLESH.

We presume all of our readers have heard of the supposed shower of flesh which recently fell in Kentucky, many explanations of the cause of the phenomenon have been given, but none of them seemed to come anywhere near the truth, except the following by Leopold Brandeis in the Sanitarian.

It appears to be a law of nature that weeds should grow with flowers, tares with corn, and that superstition should almost touch truth. Showers of frogs, of fishes, of bloody rain and snow have frequently occurred. The last sensation, however, "the fall of flesh in Kentucky," offers some features of special interest.

In 1537, while Paracelsus was engaged in the production of his "elixir of life," he came across a very strange looking vegetable mass, to which he gave the name of "Nostoc." The want of rapid transportation, combined with the perishable nature of the substances fallen, have hitherto prevented a complete and exhaustive examination. The specimens of the "Kentucky shower," reached New York well preserved in glycerine, and it has been comparatively easy to identify the substance and to fix its status. The Kentucky wonder is nothing more or less than the "Nostoc" of the old alchemist. The Nostoc belongs to the confervæ; it consists of translucent, gelatinous bodies, joined together by threadlike tubes or seed bearers. There are about fifty species of this singular plant classified; two or three kinds have even been found in a fossil state. Like other confervæ, the Nostoc propagates by self-division, as well as by seeds or spores. When these spores work their way out of the gelatinous envelope they may be wafted by the winds here and there, and they may be carried great distances. Wherever they may fall and find congenial soil, viz., dampness or recent rain, they will thrive and spread rapidly, and many cases are recorded where they have covered miles of ground in a very few hours with long strings of "Nostoc." On account of this rapidity of growth, people almost everywhere faithfully believe the Nostoc to fall from the clouds, and ascribe to it many mysterious virtues. The plant is not confined to any special locality or to any climate; sown by the whirlwind, carried by a current of air, in need of moisture only for existence and support, it thrives everywhere. Icebergs afloat in mid ocean have been found covered with it. In New Zealand it is found in large masses of quaking jelly, several feet in circumference, and covering miles of damp soil; and in our country it may be found in damp woods, on meadows, and on marshy or even gravelly bottom.

All the Nostocs are composed of a semi-liquid cellulose and vegetable protcine. The edible Nostoc is highly valued in China, where it forms an essential ingredient of the edible bird-nest soup. The flesh that was supposed to have fallen from the clouds in Kentucky is the flesh-colored Nostoc (*N. carneum* of the botanist): the flavor of it approaches frog or spring chicken legs, and it is greedily devoured by all domestic animals.

Such supposed "showers" are not rare, and are entirely in harmony with natural laws. In the East Indies the same Nostoc is used as an application in ulcers and scrofulous disease, while every nation in the East considers it nourishing and palatable, and uses it even for food when dried by sun heat.

HYBRID—CROSS-BREED.

We need both of these words in our language, and we need them to express just what, until within a few years, they were understood to express, viz., the genital union of animals or vegetables more or less nearly related. To those less nearly related, the name Hybrid has been adopted—and to those of the nearest relationship, the word Cross or Cross-breed.

Hybrid is derived from the Latin *hybrida* signifying lawless, unnatural, and was used in the sense of half man half beast, or to "one born of a Roman father and a foreign mother, or of a freeman and a slave."

Mongrel, therefore, is the true spirit of the word. The remotest botanical relationship between two genera or species that is capable of a fruitful union is that which produces hybrid fruit. The organs of the hybrid plant are usually imperfectly developed and their seeds when formed infertile. Fertilization by either parent is sometimes effective, but in this case the offspring at once or in the second generation reverts to the grand-parent species. But in the few authentic instances of true hybrids, there was no blood union or intermingling of the distinctive characters of each parent—but, as if budded or grafted, different parts were perfect reproductions of one or the other.

It is plain, therefore, that we need another term to denote that union which is induced naturally or artificially between varieties of the same species and which results in an intimate and permanent blending of the characteristics of both.

If true hybrids occurred less rarely and assumed a uniform resemblance in all their parts to both parents, and these were again crossed with other varieties of the species of either parent—neither Cross-breed nor hybrid, it is true, would accurately express the relationship; but it is not the less true that the union of a hybrid with either of its parents' species would be nearer to a cross-breed than to a hybrid, and its pedigree could, by the use of both words, be expressed without confusion. Be this as it may—it offers no reason for the interchange of these terms which are as definite as any terms can be that are applied to orders, genera, species and varieties which are themselves indefinite, and must so remain until botanical affinities and distinctions are more accurately ascertained than they are at present or, for aught we see—are ever likely to be.

The wrong use of these words originated with those horticulturists who, having produced crosses between certain fruits or flowers of varieties of same species, preferred the high-sounding, refined name Hybrid to the commonplace one Cross-breed. This sacrifice of accuracy to sound has been generally acquiesced in, and our catalogues teem with hybrid roses, peas, corn, potatoes, strawberries *ad infinitum*.

If horticulturists are willing to continue the confusion of these words—there is nobody to say them nay; but they thus encourage a perversion of accepted nomenclature that they, of all persons, should be the first to guard against.

A CHEAP WINDOW VENTILATOR.

Professor Kedzie writes as follows in the London Sanitary Record:

"Some one has recommended to place a strip of board three inches wide and as long as the lower window bar, under the lower sash, thus leaving an opening between the top of the lower sash and the bottom of the upper sash, through which fresh air may enter.

"I propose a modification of this plan, by which the air will enter in two thin layers, with an upward movement by which it will mingle with the warm air of the room so as to prevent sensible currents of cold air. Take two pieces of board a quarter of an inch thick, one inch wide, and as long as the lower bar of the window; three narrow pieces half an inch thick and one and a half inches long, one end being cut with the bevel of the window-stool. Nail those pieces across one of the long-slats, one at each end and one in the middle, placing the short side of each piece even with the lower edge of the slat. Nail the other slat on the opposite side of these short pieces, bringing the upper edge of the slat even with the square end of the short pieces. This will make a compound bar with half an inch between the slats, and one slat half an inch higher than the other when the whole is turned upon its edge.

"Place the whole under the lower window sash, with the higher slat on the outside. The air can then pass under the outer slat, between the two slats, and enter the room over the top of the inside slat, having an upward motion which will cause it to mingle rapidly with the warm air of the room, and thus prevent any sensible draught. By thus raising the lower sash, a space will be left between the top of the upper sash, through which another thin layer of air may enter the room at some distance from the layer at the bottom of the window. This air must also enter with an upward current, causing it to speedily mix with the hot air in the upper portion of the room.

"This arrangement is especially adapted to secure safe window ventilation in bedrooms. If properly constructed and inserted, it will never cause sensible currents in the body of a room except when strong winds prevail, when we usually secure enough ventilation by the imperfect construction of our window-casings, etc."

Pomological.

FRUIT CULTURE.

From a very interesting article published in a Troyes (France) horticultural monthly from the pen of Dr. Pigeaux, we extract the following:

"We have been following a wrong tack, and it will be both wise and profitable to adopt a more rational practice. In the culture of free stocks, it is indispensable not to plant them in soil having only a depth of 15 or 18 inches. Good vegetable mold, three or four feet in depth, is not too much for a fruit tree which is to live and bear for, let us say fifty years. With vigorous trees to choose from—trees that have not been enervated by too early production, that have come of a good stock and that have been properly pruned, of a good form, with plenty of room for the passage of the air—we may count on a sufficient and lasting yield, which is, after all, the most desirable point.

"A grave error, which cannot be too clearly pointed out, consists in giving the worst part of the land to fruit tree growing, the best portion by far being devoted to flowers and vegetables. In a poor soil trees soon degenerate, and the most careful culture will not suffice to maintain the production of fruit at its proper level. We must resist the temptations to introduce new varieties of fruit trees into a plantation except, indeed, as an experiment. For a similar reason we must avoid the worthless varieties which our forefathers planted in their ignorance of what was really good. Ground taken up by worthless trees is simply a continual source of loss.

"In virtue of the principles laid down above, we deprecate the system of cultivation which only allows of trees being grown which are cared for by trained cultivators. One of the complaints to be urged against modern fruit growers is evidently the system of pruning at present in vogue, and which has been carried to an extreme by the majority of those who practice it. To such a pitch has pruning now arrived, that it is held to be synonymous with cultivation. We frankly declare that this assertion is erroneous. A properly pruned tree—that is to say, pruned with knowledge and circumspection of which our best practitioners give every proof—ought easily to satisfy the wants of all amateur cultivators; but in the hands of unpracticed or amateur growers it may be affirmed that it will never return during the whole of its short existence the half of the sums laid out upon it. What fault could we not find with the system of reversing the natural order of vegetation by curving the branches downward towards the soil; of the grafting of fruit buds; of the cutting of leaves, and of the twisting of shoots? These modes of procedure are looked upon as constituting a real progress in fruit culture, but, on the contrary, they are a mistake. Without in any way wishing to abolish amateurs' small gardens, let us make the cultivation of fruit what we have already made the cultivation of the vine, and let us no longer be afraid of devoting the best part of our land, even of our corn-growing districts, to the growing of fruit. It would soon become largely remunerative. But it must not be thought that it is only necessary to cover large surfaces of land with fruit trees well fitted for the particular soil and climate of the locality chosen, and then fold our arms and trust in Providence; far from it, for an orchard of only a few acres requires the assiduous care of an experienced and laborious cultivator.

Industrial Implements.

THE ILION WHEEL HORSE RAKE.

When our attention is called to the numerous improvements in farm machinery, we are more than ever impressed with the fact that the American farmer is a thinking man. He performs his duties with his eyes open, and does an amount of brain labor that lifts him on a plane quite above the level of the same class in other parts of the world.

Hence inventors can offer for the farmer's approval any new idea that has for its object the mitigation of labor, and may feel confident that his auditor will grasp all the points in its favor, or raise pertinent objections that leave no room to doubt his having long since turned the matter over in his mind and that he apprehends exactly what is needed. Among such inventions, probably none are so generally appreciated as the hay rake, and that there can be many sides to the same subject receives ample illustration in the number of rakes of various patterns that are offered for sale. No intelligent man who desires to so manage his farm that it shall not be a continual round of manual labor, to the entire exclusion of all mental development, hesitates to admit that the hay rake is a very necessary implement, and that without it the waste of hay, etc., each year would greatly exceed the cost of the implement. The value of the time and labor saved by its use makes it a foregone conclusion that it is indispensable, and it only remains a question—of the many rakes offered—which to buy. We give this week an illustration of the Ilion Wheel Horse Rake, manufactured by the Remington Agricultural Co., N. Y. This company is so famous for the high excellence of its work that it is almost unnecessary to say that the material and workmanship of this implement is as perfect as can be desired. The Ilion Rake is distinguished for simplicity, durability, ease of management and effective work. It is self-discharging and automatic, can be thrown in or out of gear at any light, or can be worked by hand without any changes. The pieces composing it are made in duplicate, and can be replaced, when broken, without trouble or much delay. This rake is quickly adjusted to uneven surfaces, avoids scratching, and has no exposed gears, ratchets, etc.

THE ILION WHEEL HORSE RAKE.

There are 20 steel teeth, oil tempered, which are held in place laterally by a metal tooth-holder. The pawls are cast steel, being springs within themselves, without extra pieces, and as they can be changed from right to left, they wear twice as long. The ratchets are housed and independent, clutching to wheel. In short, the rake is what one would expect from the reputation of the makers; and as the Remingtons are most pleasant gentlemen to deal with, our readers cannot do wrong in sending for full particulars, which will be sent free.

The Garden.

GROWING SEEDLING STRAWBERRIES.

EDS. RURAL.—When strawberries are fully ripe, take a quart of berries and mash them in enough dry sand to separate the seeds, so that they can be sown. This quantity of berries will produce all the plants that most people can give space for them to fruit; and a bed three or four feet square is large enough to sow the seed on. It should be made of rich, light earth, and be in a shady place, or artificial shade should be made for it. Sow the seed, sand and all, as soon as it has been mixed with sand, upon the surface of the bed. Then take a coarse wire sieve, if you have one, and sift on just dirt enough to cover the seed about an eighth of an inch deep. Now pack the soil over the seed a little with the back of a spade, then water the bed lightly from a watering-pot, and keep the bed moist constantly before, and after the plants come up.

In the fall you may have a thousand plants on such a bed, which should be protected in winter by laying down some small brush, to be covered with hay or straw, kept about two inches above the plants by the brush. In the following May the plants should be set where each will have ample room to fruit, two feet apart is not too much space, as when you discover a promising variety, you need a little space immediately around it to increase it by its runners the same season. The next season your valuable varieties, if you happen to have any, should be removed to ample grounds, and the worthless ones should be thrown away.

The question, "what are the chances for obtaining a superior variety?" comes up naturally in the mind of every person inclined to experiment in seedling strawberries. Some persons have grown many thousands without obtaining a single valuable variety; and some, by mere chance, have obtained splendid varieties in growing a few hundreds. The seed of the largest and best berries does not produce any finer sorts than the seed of inferior kinds. This is a law of nature, when applied to growing any seedling vines or fruit trees. If we take a very fine apple, pear, or peach, and plant their seeds, we get no better fruit from such seedlings, as a general rule, than from seedlings from seed of inferior fruit. The only possible way to be benefited by planting the seeds of choice varieties, is by first hybridizing a valuable variety, and planting its seeds. But as no one in this country has ever obtained any good results from this method, except in a few cases of hybridizing grapes, it is doubtful if we ever discover a sure method of hybridizing fruits generally. Even in hybridizing grapes but one or two persons, during the last fifty years, have produced new varieties that carry in their general character any proof of being hybrids.

Attempts have been made to hybridize strawberries, but the results have not yet been very favorable; and to-day not a single variety exists that has been conclusively shown to be a hybrid. If we plant two varieties of squashes in the same garden they will cross, or become hybrids, as shown in their products the same season; but strawberries cannot be affected in their fruit by growing near other varieties; but if it be possible to fertilize one variety by the pollen of another, so as to be sure that no other chance fertilization has also been produced, then we may probably effect results in strawberry seedlings that cannot be obtained by chance.

Linden, N. J. T. B. MINER.

GARDEN NOTES.

Potatoes—Beetles.—Judging from the writer's neighborhood, fewer potatoes will be planted than usual this spring in anticipation of beetle depredations. Last summer in a four-acre field, planted with potatoes except a patch of muskmelons, not one green leaf or vine was to be seen by the time the melons began to ripen. The beetles collected in surprising numbers (surprising to us) over the entire field and were feeding upon the small potatoes left upon the surface. The melons were also attacked and we counted a dozen beetles upon one of them no larger than the palm of the hand. A field thus given over to these disgusting things, presents a saddening—a desolate sight.

In our own grounds, having no potatoes, our tomatoes were chosen by these Nightshade Blights—and even in Petunia beds hundreds were found. Those, therefore, who plant fewer potatoes on account of the beetle, may extend their philosophy to the tomato as well—and, indeed, it will be found that any attempt to starve them out will prove futile.

Gen. Grant Cucumber.—Tempted by the fine specimens twenty inches long and upwards displayed in the show cases of seedsmen, we tried the Gen. Grant cucumber summer before last, and again last summer, planting half a dozen hills with extra care. Blossoms were the only product of the first season, and two or three cucumbers, of an indescribable shape, neither "twenty inches long nor upward," the crop of the second. However well these odd novelties may succeed in frames, they are not to be recommended for out-door cultivation.

Tomatoes.—We have tried several of the newest and most highly praised tomatoes extant without changing our conviction that the Trophy is yet the best. The Arlington is firm, solid and of good shape, ripening with the Trophy or a little earlier. The Conquerors and Victors—both excellent early sorts—ripened the one with the other. A very few ripe tomatoes were gathered upon the Victors first, but there was no difference in the average ripening. Hathaway's Excelsior is a beautiful variety of medium size, round and solid. It is prized in Europe and esteemed here by many who have given it a fair trial.

Sweet Corn.—Among the varieties of sweet corn we have a word to speak in favor of the Black Mexican. It is as sweet as the Evergreen, and it is more. There is an oily richness peculiarly its own that makes us partial to it, the same as many prefer the old Peachblow potato for its peculiar flavor that is not excelled or, perhaps, equalled by any of the popular self-seedlings and "hybrids" in which there is such a lively interest at present displayed. Though the color of the Mexican Black—which is a blackish-purple—and the size of the ear—which is rather small—are unfavorable to its general use, yet it should be eaten before the kernels change color, though good afterwards,—while the size is just the handiest for table use.

Wheat Bran for Cabbage Worms.—It has been frequently stated that wheat bran scattered over cabbages would effectually prevent the ravages of the cabbage worm, but the efficacy of this preventive has also been denied. Will some of our readers who may have this pest in their gardens give the bran remedy a trial and report the results.

The Poultry Yard.

GAPES IN CHICKENS.

ED. RURAL NEW-YORKER: Will you be so kind as to give me the best remedy known to yourself for the "gapes" in young chickens.—*L. E., Williamsburg, Va.*

Although having kept fowls almost constantly during the past quarter of a century, and of various breeds, such as Cochins, Brahmas, Leghorns, Dorking and cross-breeds of the same, we have yet to see the first case of gapes among our chickens. Under the circumstances it must not be expected that we can speak from experience in giving a cure for gapes or other diseases of fowls, such as cholera, loss of feathers, or for lice and other vermin which sometimes infest them, as none of those have ever appeared in our poultry yard.

If you ask why this exemption from diseases and vermin, the reply must be equally as indefinite, unless there is something in the surroundings and care given, which prevents them. It is our honest belief, however, that the exemption from loss through any of the maladies named, may be attributed entirely to cleanliness and proper food and pure water.

Of course the fowls are given a good range through the garden and field, and not confined in close yards; neither are they crowded into a close, filthy place to sleep at night, nor fed irregularly, or when some negligent servant happens to remember that they may require attention.

The system which we practice may be stated in a very few words. The food is placed where the fowls can help themselves, no scattering it about in mud or snow at stated hours of the day. Corn is the main reliance, but oats, wheat, buckwheat and similar coarse seed are sometimes thrown in to give variety. In winter, vegetables and meat of some kind are given at least once or twice a week, and a trough of water is kept handy and refilled twice a day.

Dry dirt under an open shed is always at hand for a dust bath whenever the fowls may choose to use it; henhouse and roosts cleaned spring and fall—whitewashed and thoroughly dusted with sulphur. Every hen, when commencing to set, has her nest also well sprinkled with sulphur, and the heat from her body will cause just fumes enough to arise to prevent any vermin from attacking mother or young chicks.

As soon as the chicks are strong enough to remove from the nest they are taken out, and, with the mother, placed in a coop on the grass, if in warm weather, otherwise under a shed. The hen is kept in a coop for about a week, the chicks running out if they choose. After this the hen is allowed to go out as soon as the dew is off in the morning, and again shut in at night.

The feed of the young chicks is plain corn meal, no scalding or addition of any stimulants whatever. Gapes is usually attributed to filthy coops, unwholesome, sour food and putrid water, but if this be true it would go to prove that the gape-worm is the result and not the cause of the disease. In other words, the worm only finds lodgment in the windpipe of the chick, and feeds upon the mucous secretions which are the result of disease.

This would appear to be in accordance with what we know of the majority of other animal parasites, such as chicken-lice, intestinal-worms, etc.

One of our most experienced and observing poultry breeders, Mr. HENRY HALES of New Jersey, informs us that he can tell almost to a day when the gape-worm will be found among his chickens in spring, if the weather should be unfavorable to healthy growth.

The fact that this gape-worm is not found among chickens at all seasons, even if they become weakened by disease, is another proof that it is picked up from the earth, and seeks a position where its favorite food can be found, just as the *Gordius*, or hair snake, seeks a lodgment in the intestines of crickets, grasshoppers and other large insects which intrude upon its natural habitats.

It is, at least, exceedingly doubtful if a healthy chicken is ever injured by gapes, because it has the vitality to resist its attacks, and the worm finds no safe lodgment except in the peculiar mucous secretions of the unhealthy one's windpipe.

But after the worm has located itself there, it becomes necessary to remove it. This may be done with a small feather, stripping off the vane to within a half inch of the end. Dip this in spirits of turpentine and then thrust it down the windpipe, give it a turn and draw out quickly, bringing out the worm or killing it.

Another remedy is to blow tobacco smoke into the chicks mouth, a portion will pass down the windpipe as it breathes, thereby reaching the worms and killing them.

AN EGG WITHIN AN EGG.

EDS. RURAL: I will tell you of a curiosity that has in the last few days come under my notice. A lady in this place had occasion to use some duck eggs for culinary purposes, and in breaking one, which was unusually large, discovered, in addition to yelk and white, a perfectly formed egg *inside*, about the size of a walnut. It is the first "freak" of the kind I have ever known, and I am sure must be quite unusual. How can it be accounted for?—J. K. WINKELER.

This is one of the freaks of nature which we never attempted to account for. Instances of double hens' eggs are not infrequent, but such freaks are as nothing in comparison with the finding of hard, foreign substances within eggs, such, for instance, as a full-grown marrowfat pea, as noticed recently in one of our English exchanges, which, by the way, caused a great deal of ridicule to be heaped on the journal first publishing the story.

But we have in our possession the head of an iron bolt, one fourth of an inch in diameter, which was found inside of a hen's egg as laid. Of course we know that, according to all scientific and natural laws as understood by us, no such foreign material could possibly find its way from the crop of the hen into one of her eggs, still the passage has been made in more than one instance.

The Naturalist.

TRADITIONS RELATING TO BIRDS AND ANIMALS.

A WRITER in the Farmer's Journal for May gives some of the interesting traditions relating to birds and animals which are assuring and instructive as they show how ignorance and superstition give away before the advancement of science and general intelligence among the masses.

Certain traditions relating to birds and beasts are only explicable on the supposition that they were once objects of divination or worship. The old Germans, we know from Tacitus, used white horses, as the Romans used chickens, for purposes of augury, and divined future events from different intonations of neighings. Hence it probably is that the discovery of a horseshoe is so universally thought lucky, some of the feelings that once attached to the animal itself still surviving around the iron of its hoof. For horses, like dogs or birds were invariably accredited with a greater insight into futurity than man himself; and the many superstitions connected with the flight or voice of birds resolve themselves into the fancy, not inconceivable among men surrounded on all sides by unintelligible tongues, that birds were the bearers of messages and warnings to men, which skill and observation might hope to interpret.

Why is the robin's life and nest sacred, and why does an injury to either bring about bloody milk, lightning or rain? The Christian legend says that it extracted a thorn from the crown of Christ, or that it daily bears to hell a drop of water to put out the flames, and accounts in either way for the red dye on its breast. But this is evidently a mediæval gloss to some heathen belief, like the unluckiness of the magpie, that it would not enter the ark, but sat jabbering outside over the drowned world; or like the idea of the aspen still trembling at the part it played in the crucifixion. It has been suggested that the robin, on account of its color, was once sacred to Thor, the God of lightning; yet is it not possible that its red breast singled it out for worship from among birds, just as its red berries did the rowan from among trees, long before its worshipers had arrived at any ideas of abstract divinities?

All over the world there is a regard for things red. In the highlands women tie some red thread around the cows' tails before turning them out to grass in the spring, and tie red silk around their own fingers to keep off the witches; and just as in Esthonia mothers put some red thread in their babies cradles, so in China they tie some around their childrens' wrists, and teach them to regard red as the best known safeguard against evil spirits. Indeed, one of the chief lessons of comparative folk-lore is a caution against the theory which deduces popular traditions from Aryan or other mythology. We have already alluded to the fact that in parts of China, the same feelings prevail about the swallows as in England or Germany. But there are yet other analogies between the east and the west. A crowing hen is an object of universal dislike in England and Brittany, and few families in China will keep a crowing hen. The owl's voice is ominous of death or other calamity in England and Germany, as it was in Greece (except at Athens); but in the Celestial Empire also it presages death, and is regarded as the bird which calls for the soul.

And the crow, also is in China a bird of ill omen. Is it not, therefore, likely that all popular fancies about birds and animals have begun in the same way, among the same different races of the globe, and were subsequently adopted, but never originated by mythology? May it not be that certain birds or animals became prominent in mythology because they had already been prominent in tradition, rather than that they became prominent in tradition because they previously had been prominent in mythology? For instance, instead of tracing a dog's howling as a death omen to an Aryan belief that the dog guided the soul from its earthly tenement to its abode in heaven, may we not suppose that the myth arose from an already existing omen, and that the latter arose, as omens will do, from a coincidence which suggested a connection subsequently sustained by superficial observation? The St. Swithin fallacy which arose within historical memory and still holds its ground in an age of scientific observation, well illustrates how one striking coincidence may grow into a belief which no amount of later evidence can weaken or destroy.

Just so, if it happened that a dog howled shortly before some calamity occured to our Aryan forefathers, thousands and thousands of years ago, long before they had attained to any thoughts of soul or heaven, we can well imagine that the dog, which already betokened death, should, when they came to frame the myth, be conceived as the guide which was waiting for the soul to take it to heaven, and that the belief thus perpetuated by the myth might survive to latest ages. It, at all events, militates against the exclusively Aryan nature of the belief, and exemplifies the extraordinary coincidence of ideas among different people, that the Esquimaux lay a dog's head by the grave of a child, for "the soul of a dog can find its way everywhere, and will show the ignorant babe the way to the land of souls!"

THE SAGACITY OF ELEPHANTS.

THE services rendered by elephants to the English army during the Abyssinian expedition have suggested an article in the "*Revues des Deux Mondes*," by M. Guidoz on the use of these animals in warfare. Such an elephant as that described by Major Skinner, whose narrative is quoted by M. Guidoz, would be a valuable auxiliary at any time. According to this account, the major was riding in a forest near Kandy, when he heard a muffled sound of ourmph, ourmph, the peculiar cry of the elephant, and soon came upon a tame animal of this species, who, being left to himself, had undertaken to carry away a large beam, which he carried across his tusks, progressing, however, but slowly, owing to the narrow limits of the path which forced him to turn his head first on one side, then on the other, uttering ourmphs of vexation. Seeing the major approach, he threw down his load, and stood aside to let the man and horse pass. The major's steed trembled in every limb, when the sagacious beast, noticing his terror, backed still farther into the jungle, uttering his ourmph in a gentle and encouraging tone; and as soon as the horse had summoned up courage to proceed, he re-appeared, took up the beam once more, and resumed his arduous undertaking. It seems almost sacrilege to contemplate employing animals so considerate and reasonable in the questionable operations of man against man.

The Centennial.

CENTENNIAL CORRESPONDENCE.

COLONNADE HOTEL, PHILA., May 20, 1876.

REGARDING the material comfort of visitors to the Centennial, it would seem that self-interest and hospitality had conspired to make the journey of the stranger paths of pleasantness. He will have his dinner of herbs *and* contentment if he is wise.

The journey being ended and the passenger having arrived in Philadelphia, the next question is where to obtain board and lodging. He can have a choice between the down-town hotels, the private houses under the management of the Lodging House Agency, the regular private boarding houses, and the numerous hotels located near the Exhibition buildings. If he decides to go to one of the latter, and arrives via the Pennsylvania Road, he need not look for a carriage or an omnibus, for he can easily walk the few blocks intervening between the Centennial station and the hotel. But if he avails himself of accommodations in the city, which will be from two to five miles distant from the depot, he will take one of the Transfer Company's coaches and pay fifty cents for a ride and forty cents for each piece of heavy baggage. If he is acquainted in the city, or can learn of the exact location of his proposed lodgings, he can go by street car, the fare being seven cents.

Several lines of street cars start from near the station and run to all parts of Philadelphia. If the visitor does not wish to stop at the Centennial station, he can go to the regular Pennsylvania depot in West Philadelphia, which is a mile nearer the heart of the city, from whence he can take a transfer coach or a street car to the exhibition, or to any part of the city. Those who go to down-town hotels or boarding houses will save time, by going to the West Philadelphia depot. If for any reason the visitor should decide not to take a transfer coach or street car he can avail himself of a carriage or cab, with trunk or valise, and go not exceeding one mile for fifty cents; over one mile and not exceeding two, seventy-five cents. If the distance be over two miles, each additional mile will be twenty-five cents. Carriages and cabs can be hired at the rate of $1 per hour, going from place to place and stopping as often as required.

Among the limited corporations formed for the care and comfort of the million is the Centennial Lodging House Agency. This agency was organized to supply the demand for lodgings on the part of those unable to secure satisfactory hotel accommodations. The agency has secured about 4,000 rooms in 1,700 different private houses, where they expect to be able to furnish lodging, breakfast, and supper to 10,000 or 15,000 visitors. Applications are received from householders who are willing to receive guests, and the agency sends an inspector to survey the premises, and determine whether the accommodations are likely to be satisfactory. If the inspector reports favorably a contract is made, of which the following is one of the provisions:

And I do hereby further contract and agree that said lodging rooms shall be furnished with such good, clean, and comfortable beds and bedding, soap, towels, chamber-sets, and furniture as shall meet with the approval of said agency's inspector, and that daily changes of said linen, towels, etc., shall be made unless occupied by same lodger more than one night, and then such change shall be made not less than twice each week; also, to furnish good, cleanly, and comfortable meals. Breakfast to consist of coffee and tea, with bread and butter, warm meat or fish, and vegetables. Supper to consist of tea and coffee, with meat, bread, and butter, etc., and what may be regarded as constituting a good, ordinary meal. The agency not to be responsible for extra meals furnished said guests.

Orders for tickets issued by this association will be for sale at railroad offices throughout the country. Messengers in the employ of the agency will be on passenger trains approaching Philadelphia, and will furnish each holder of an order with a ticket in exchange, supplying minute directions by which such lodgings as are desired may be reached by street car or otherwise. The ticket is the stranger's letter of introduction to the householder. The charge will be $2.50 per day for lodging, supper, and breakfast, the guest to pay the agency, and the latter to settle with the householder. The agency have no contracts by which they will be enabled to furnish board by the week. If in any case more tickets are purchased than are required, the agency will redeem them without discount. The agency houses furnish no dinners; these will have to be procured at or near the grounds.

In addition to the boarding houses controlled by the agency, there are about 2,000 which are "regular," and which must be hunted up by the visitor. At some of those board by the week may be obtained at from $12 to $15.

As will be seen from the above showing, the visitor will necessarily be compelled to pay from $3.50 per day (which allows $1 for dinner for Lodging House Agency guests) to $5 per day, for the wherewithal to keep soul and body together. Those who stop at the hotels near the grounds will have no transfer charges to pay, but persons lodging in the city at hotels or boarding houses will have added to their other expenses street car, coach, or cab fare, seven cents for the former and fifty cents for the latter. Whether the visitor resorts to a coach, a car, or his legs, he will not be able to compass the distance between the Exhibition buildings and the city in less time than an hour.

The Patrons of Husbandry, or as they are more familiarly called, the Grangers, have made preparations on an extensive scale for the accommodation of members of their order during the exhibition. A tract of land at Elm station on the Pennsylvania road, about four miles and a-half from the Centennial grounds has been secured, and arrangements have been made with the railroad company by which passengers are to be conveyed to and from the grounds, from this locality for fifteen cents a round trip or ten cents one way. Wooden buildings have been erected capable of accommodating two thousand four hundred people, and the tariff of prices has been fixed at fifty cents for every meal and fifty cents for a night's lodging. For persons who desire to spend the day within the Centennial grounds, but who may not care to go to the restaurants in the grounds, lunches will be prepared. The buildings are located upon high ground, with a number of springs and fine trees in the vicinity. The buildings each contain ninety-two rooms, forty-six on either side of a broad corridor. The rooms are twelve by eight feet; and the doors all open on the corridor, light and air being admitted by numerous windows and transoms.

As a rule, I have found that the *cheap* hotels contiguous to the grounds too fully justify the appellation. It seems to have been the object of the owners to throw up crude structures and trust to luck and the wall paper to hold them together; but there is an honorable exception. At the foot of George's Hill, within easy distance to that entrance, stands a monster building, the Atlas Hotel, which, on inspection, leaves an agreeable impression. Unlike the other hotels near the grounds, it is pleasantly located, having an abundance of shade trees. The fittings are not precisely such as one would find in a palace, but they are neat and *clean*. The restaurant is independent of the hotel, or *a la carte*, and is under the management of Mr. MICHAEL RILEY. The lodging accommodations are $1 per day, and the prices in the restaurant are a grateful contrast to what is charged in and about the Exhibition grounds. Mr. RILEY is the caterer who has made the Colonnade table famous, which fact is an appetizing indorsement of this restaurant. This hotel should not be left out of the expense calculation of the visitor.

As for looking up private lodgings the files of the "Philadelphia Ledger" will furnish copious information. YOUNG RURAL.

CENTURY BLOSSOMS.

THE main circle of the grand chandelier for the Main Building is 75 feet in diameter.

THE Philadelphia horse railways are capable of delivering 40,000 people an hour at the Centennial grounds.

THE mammoth vases sent from the celebrated Sevres establishment will attract great attention in the French department.

THE Canadian goods, consisting of carpet-looms, silks, worsteds, and ribbons, are in their places in the Women's Pavillion.

THE original Declaration of Independence will be on exhibition in the National Museum in Independence Hall during the entire time of the Exposition.

THE choicest works of the Royal Porcelain manufactory at Berlin are in an elegant pavilion which the Prussians have erected in the Main Building.

THE post-office arrangements within the grounds are very complete. Collections are made by the carriers every hour at prominent points.

ENGLISH cattle-breeders, designing to compete at the Centennial, are making numerous applications to the English Centennial Commission in London.

SEVEN Short-Horned cattle purchased direct from the farm of Queen Victoria will be among the exhibits of Mr. Grant, the large landholder of Kansas.

THE great steam engine at the Centennial weighs 600 tons; will drive eight miles of shafting; has a fly-wheel thirty feet in diameter, and weighing seventy tons; is of 1400 horse-power, with a capacity of being forced to 2500 horse-power; has two walking-beams, weighing twenty-two tons each; two forty-inch cylinders, a ten-foot stroke; a crank shaft nineteen inches in diameter and twelve feet in length; connecting-rods twenty-four feet in length, and piston-rods 4 inches in diameter. The platform upon which it rests is fifty-five feet in diameter, and composed of polished iron plates resting upon brick foundations that extend far down into the earth. The hight from the floor to the top of the walking-beam is thirty-nine feet.

Arboricultural.

FIRE BLIGHT IN THE PEAR.

THIS disease of the pear has been for years a source of annoyance and loss to our orchardists, and its cause wholly unknown. Scientists, until lately, have also failed to discover its origin, and, although sometimes attributed to the attacks of microscopic fungi, the assertions were little more than a matter of opinion; no one seeming to know positively whether a fungus was the cause or not. But in an essay on "Fungi and Fruit Diseases," read by THOMAS MEEHAN before the last session of the American Pomological Society, we find a very clear and concise description of the disease, as well as the latest discoveries in regard to its fungoid origin. Mr. MEEHAN says: "That this (pear blight) is of fungoid origin is now clear, from the researches of Dr. J. GIBBONS HUNT. Dr. H. is President of the Biological Section of the Academy of Natural Sciences of Philadelphia, an excellent botanist, and one, as a rule, skilled in microscopy as you and I are with the pruning-knife. He finds that a very minute fungus germinates on the bark, enters the structure, destroying the cells as it goes till it reaches the alburnum, and then it penetrates clear to the pith by the way of the medullary rays, totally destroying the branch from center to circumference. Dr. HUNT was not one of those who believed in fungoid diseases. Indeed, I believe Dr. H., if he really had any prejudice at all, was impressed with the idea that the fungus found in pear blight was but a follower of the disease. But there is no other conclusion here than that arrived at by Dr. H., that in the true fire blight fungi are the cause of the disease.

The fire blight attacked large branches, destroying them rapidly, because all connection with sap-collecting roots was cut off; but there were numerous diseases of the pear similar to fire blight, but not so destructive, because the fungus did not penetrate the roots.

It may be that fungi causing these appearances are forms of other fungus, for it is now known that many characters are assumed at various stages of growth of these little plants. One of these diseases appears as a sort of bark-scaling at a period anterior to that when the pear becomes naturally rough-barked, which is not till its twelfth year. This does not penetrate deep enough to affect seriously the inner bark, still that it has a bad effect on health is apparent, from the fact that trees with it have their leaves turn a red or brown color early in the fall, showing that their nutrition has not been perfect.

Another form attacks the green bark of five and six year old branches, making dead patches of an inch or more, surrounded by the healthy green bark. Where the destruction terminates there is a separation, and the appearance is much as if the irregular patch had been marked by the edge of a knife. Still another form seems to confine itself to the spurs. It eats out the structure at the junction with the main branch, and gives the tree a peculiar appearance. Dead leaves and spurs everywhere, but the main shoots and branches as healthy as they possibly can be.

LATE TRANSPLANTING OF TREES.

IT sometimes occurs that it becomes necessary to transplant trees late in the season, or after the buds have swelled or new growth commenced. This can be done quite safely if due caution is given in protecting the roots from light and air.

In removing trees or small shrubs after growth has commenced, we have a watering-pot full of water near by, and as soon as the tree is dug up, the roots are re-sprinkled until every one is thoroughly wet, then fine earth is scattered over all the large roots and small fibers, thus preventing them from being affected by the light, as well as becoming dry while being packed up or removed from one part of the grounds to another.

A portion of the branches is also removed, and usually it is best to do this before digging up, because the pruning can be done much more systematically and readily while the tree is fixed in the earth than afterwards; besides, it lessens evaporation in proportion to the number of young shoots and leaves removed.

Trees and shrubs of moderate size may be removed quite safely, even after growth has commenced in spring, if these precautionary measures are strictly followed.

Where trees have been left heeled-in until growth has commenced, the roots may be puddled as taken out, that is, dipped into a solution of earth and water of the consistency of thin mortar. This should always be done when trees are to be set out in a windy day, for a few moments drying will frequently make one-half difference in the growth of a tree the first season, even if all other conditions be favorable.

EARLY-RIPENING TREE-SEEDS.

THERE are many persons who have spent a long life among elms and silver maple trees, but never noticed that their seeds ripened in the spring instead of fall. This is not strange, because we are not inclined to notice things in which we are not particularly interested.

But should there be any of our readers who care to grow silver or scarlet maples, or the American elm, from seed, we would advise them to commence looking out for seed this month, or the first of the next, in more northern localities. The seeds of these trees ripen quite early in the season, and if gathered as soon as they begin to fall, or soon after they have fallen, and sown immediately in a well-prepared seed-bed, young trees one to two feet high can be grown from them before next winter.

Very frequently one can find trees along the roadsides where seeds falling on clean, hard soil can be swept up in large quantities if they are wanted. The seeds of the trees named are very delicate, and will not remain sound for any considerable time, even if kept in a cool, dry place, therefore it is always best to sow them soon after gathering. But a very slight covering of soil is required, not more than a half-inch, and less is better, especially if it is inclined to become hard after a shower. A hint to the wise on this matter should be sufficient to make them open their eyes and look about, if new plantations of these trees be desired or old ones extended.

Insurance Department.

INSURANCE NOTES AND NEWS.

Not a Paying Business.—The commonly-received opinion that the business of fire insurance is a profitable one, as compared with others, is entitled to many grains of allowance. Here and there a small company, confining its insurance to the vicinity of its office, may make a large dividend out of the savings of an exceptionally fortunate year, but, taking a number of years together, the leading agency companies have made very small profits indeed. It appears from some recently-published statistics that the premiums of twenty-eight large companies, from the date of their organization to the time of the Chicago fire, but not including this calamity, were two hundred and fifty millions, and the expenditures two hundred and twenty-three millions. The difference of these figures amounts to a little more than a profit of ten per cent.—a rate usually regarded as unremunerative now in less hazardous times of business. Besides, nearly a dozen of these twenty-eight were ruined by the great fire alluded to, leaving the aggregate gain of the remainder even less satisfactory.

Lurking Dangers.—During the Centennial year, with its ebullitions of noisy patriotism, there will be a large sale and use of explosive toys. Most, if not all, of those that explode by concussion are composed of some preparation or combination of nitro glycerine. Children especially will purchase and "pop" innocent-looking wafers and long strips of prepared paper, which, taken singly, are comparatively safe, but are capable, used in considerable quantities, of a deal of hurt. A few years ago the accidental fall of a box of candy torpedoes caused a fearful explosion, and, later, a similar accident to a lot of toys in a show window on Broadway did scarcely less damage. The best way to avoid the consequent danger is to avoid the use of such toys. A grain or so of dynamite between the thumb and finger of a child may lead to a great destruction of property.

This Will Hurt Somebody.—For many years some of the life companies have required of those who obtain loans of money from them some additional security (?) in the shape of a heavy life insurance policy. This practice has been condemned by a Kansas Court as being usurious, because the borrower pays something more than interest upon the loan. In this condemnation is included also the exaction of bonuses and fees, or any consideration whatever other than legal interest. The companies referred to, will doubtless take measures to avoid violations of the rule based upon this decision.

Good News.—We are glad to learn that the better class of companies confining their insurances to detached and farm risks are more prosperous than at any former period. We claim no small share of the credit of this, because of our persistent advocacy of the expediency and safety of confining farm risks to farmers' companies.

Domestic Economy.

REPLY TO HATTIE F. BELL.

DEAR FRIEND: Ever since I saw your article in the RURAL my sympathies have all been enlisted in your behalf, for if there is one thing in the cooking line I love better than another it is a good pot-pie, and to be able to make one is no trifling matter. I will give my mother's recipe, which I have tried and always with the greatest success. Your failure in making pot pie and ludicrous description of it, reminds me of my first attempt to make biscuits.

My mother leaving home for a few days, I concluded to have a mess of biscuits all of my own manufacturing, and such biscuits! They never raised from the time I put them in the oven until they were raised from the tin, and, instead of increasing in size, they increased in weight. Just because they were biscuits we managed to eat sparingly of them. Father declares six would weigh a pound, and, after sundry attempts and many failures to soak them for the chickens, I was compelled (from the force of circumstances) to leave them for mother's inspection. I can make them now, but (as you say of your pot-pie) I cannot make a respectable soft cake—one that is really palatable—with the same recipe mother uses, which is delicious. Mine comes from the oven in such a sorry plight that, unless the chickens will condescend to eat them, they are a failure.

Now for the pot-pie. Take good, thick buttermilk, sufficient for the quantity required, and soda, as you would for biscuit, mixing a little stiffer. Let it stand and raise one hour before boiling. The first twenty minutes given to cooking leave the kettle uncovered, then cover closely till done.

My recipe for ginger cookies:—1 cup sugar; 1 do. molasses; 1 do. butter; two eggs; ginger to taste; one teaspoonful of soda, with just enough water to dissolve the soda.

Pony Hollow. LU.

THE IRREPROACHABLE WAY TO BROIL A STEAK.

FIRST see that the fire is clear and not too much of it; open wide all the drafts, to carry off the smoke that is made during the process of broiling; then see that the gridiron is smooth and quite clean; rub it well with whiting or chalk; lay on your steak. Do not pound it, nor after it is on the fire, stick a fork into it, as the juice will escape. Neither salt nor pepper it; do that on the dish. Place the gridiron close to the fire for the first few minutes, to carbonize the surface, then turn it over quickly to carbonize the other side. Now it should be exposed to a slower fire, to do which, place two bricks on their edges, and rest the gridiron on them. The steak should be turned repeatedly and carefully, and when it feels rather firm to the touch it is rare, and, if so liked, it should be taken off, laid on a hot dish, on which 1½ ounces of butter has been melted, less than one-half teaspoonful of salt, a pinch of white pepper and one teaspoonful of chopped parsley, well mixed; lay the steak on one side and then on the other. Serve immediately.

ORIGINAL RECIPES.

Cracker Recipe Wanted.—If you or any of your subscribers have a recipe for making crackers, known to be a good one, its publication in your columns will much oblige an old patron of your excellent paper.—C. C.

Lemon Pie.—Boil in 1½ quarts of water, the juice, pulp and grated peel of two lemons. Add, when it boils, three heaping tablespoonfuls of flour, mixed smooth with cold water. Before it cools, add two teacups of sugar, three well-beaten eggs, a piece of butter half the size of an egg, and a little salt. Bake with under and upper crusts.

My Recipe for Pot-Pie.—One coffee-cup of sweet milk; one tablespoonful of butter; one heaping teaspoonful of baking-powder, added to flour enough to make a very *stiff batter*. Have just water enough in the pot to cover the meat, *but not the dough*; drop in the mixture by the spoonful; cover tight; boil fifteen minutes, and you will have a light, delicious crust.—MRS. RUSTIC.

Velvet Cream.—In reply to C. G. in RURAL of May 13, I will give my recipe for Velvet Cream; Half a box of Cox's gelatine in a third of a teacup of tepid water and two glasses of sherry wine. When thoroughly dissolved, flavor and sweeten one quart of rich milk; add to jelly; stir well, and strain into molds. To be eaten cold with cream. It is best to be made the day before it is used.—MRS. RUSTIC.

Apple Meringue.—Prepare six large tart apples for sauce; while hot put in a piece of butter the size of an egg. When cold add a cup of fine crackers or bread crumbs, the yelks of three eggs well beaten, a little salt, sugar and nutmeg to taste. Bake in a large plate, with undercrust and rim of rich paste. When done take the white of eggs, beaten to froth; half cup of powdered sugar and some flavoring; pour over the top and brown slightly.—W. E. J.

SELECTED RECIPES.

Apple Float.—A pint of stewed, well-mashed apples, the whites of three eggs beaten to a stiff froth, four large tablespoonfuls of sugar, then add the apples, and beat all together until stiff enough to stand alone; fill a deep dish with whipped cream or boiled custard, and pile the plant on top. This is excellent with other fruits.

Egg Sandwiches.—Boil fresh eggs 5 minutes; put them in cold water, and when quite cold peel them; then, after taking a little white off each end of the eggs, cut the remainder in four slices. Lay them between bread and butter,

Hygienic Information.

ADVICE TO YOUNG MOTHER.

IN answer to "A Young Mother's" inquiry in the RURAL of May 6, I give my opinion, the result of considerable experience. The best time to wean children is when they are a year to a year and a half old. A child a year old in the spring should be weaned as early as March, that it may get accustomed to a change of diet before the warm weather comes on, or else it should be nursed until November. September or October are not safe months, as at those periods diarrhea is most prevalent, and, therefore, a cooler season is better.

The practice, which used to prevail, of the mother leaving the child to the care of the father or some other person through the night, while weaning, was one of needless cruelty. Some persons feed the child with bread and milk through the day, and after it gets asleep at night nurse it again for two or three nights. It is thought that the change, being more gradual, is not felt as much.

As to food, if a child likes and thrives on bread and milk, that is the best food for it; but beefsteak and mealy potatoes are not hurtful to healthy children.

The disposition of a child makes a difference about the trouble of weaning. Some are more yielding than others. But in rearing children, as in many other things, a little experience of your own is worth a great deal of other people's advice. A MOTHER.

MORE ADVICE ON THE ABOVE SUBJECT.

FOR the information of Mrs. H. A. B., who desires to learn the best method of weaning her infant boy, I would suggest that the health of the mother has much to do with it. If she is well and vigorous and her baby healthy, it will do to nurse him until he is twelve or fourteen months old. It is not healthy, for themselves or children, for some mothers to nurse them.

If the mother is not strong and her baby sickly, the sooner she weans him the better. A child should be accustomed to bread and other kinds of plain food before weaning; then there is not so great a change. Beware of arrowroot and all such food! It weakens the stomach, rendering it unable to digest anything. The best months for weaning are February, March and April; or if in the fall, November. Never wean in summer. W. E. S.

ADVICE TO THOSE WHO NEED IT.

MANY housekeepers injure themselves needlessly by lifting wash-tubs or wash-boilers half full of water. It takes longer, of course, to dip water out of a tub than to carry it away, but it pays in the long run; and what kind of forethought is there in setting the wash-boiler on the floor, filling it with water, and then lifting it on the stove? One such exertion of strength hurts a person more than a week's steady work.

FARMER'S WIFE.

THE VITALITY OF THE JEWS.

IT is claimed by those who have made vital statistics a special study, that the Jews are the longest lived race of people in the world. Their immunity from diseases of all forms is remarkable. Even the great epidemics pass them by with the infliction of a much lighter scourge than falls upon other races. It is declared that the cholera never chose one of them for its victim, and, in fact, the deaths from this malady have been so few as almost to bear out the assertion. Suicide is seldom practiced among them. It has been computed, from statistics returned in certain provinces of Austria and Germany, that in a population of 1,000,000, the proportion of suicides between the Jews and the mixed white races was one to four. From data carefully studied, Hoffman found that, between the years of 1823 and 1840, the number of still-born among the Jews of Germany was as 1 in 39, and amongst other races as 1 in 30. Mayer ascertained that, in Furth, the proportion of Jewish children who die between the ages of 1 and 5 years is 10 per cent., and of Christian children of the same age it is 14 per cent. M. Neuville, calculating from the statistics of Frankfort, shows even a greater vitality existing among the children of the Jews. He also finds from his data that the average duration of the life of the Jew is 47 years and 9 months, while of the Christian it is 36 years and 11 months. "In the total of all ages, half of the Jews born reach the age of 36 years only."

One fourth of the Jewish population live beyond 71 years, but the same proportion of the Christian population live beyond 59 years and 10 months. The official returns of Prussia give the Jews a mortality of 1.61 per cent., and the whole kingdom 2.62 per cent. While the Jews double their numbers in 41½ years, others require a period of 51 years. In 1849 there was in Prussia 1 death for every 32 of the remaining population. Commenting upon these statistics, which are brought together by Dr. Richardson in "Diseases of Modern Life," that author ascribes the high vitality of the Jews to their sober way of living. "The Jew drinks less than his 'even' Christian; he takes, as a rule, better food; he marries earlier; he rears the children he has brought into the world with greater personal care; he tends the aged more thoughtfully; he takes better care of his poor; and he takes good care of himself; he does not boast of to-morrow, but provides for it; and he holds tenaciously to all he gets. To our Saxon eyes and Celtic eyes he carries these virtues too far; but thereby he wins, becomes powerful, and scorning boisterous mirth and passion, is comparatively happy."

IMAGINATION AND DISEASE.

THERE is much more in this than many people suppose; at least, the unobserving and unreflecting do not understand how much influence and effect the will, the imagination, has over the health and vigor of body and mind. A man of strong resolution can bring on or resist disease or unhappy feelings by the very power of his will and mental actions. The following is to the point:

DON'T WORRY ABOUT YOURSELF.

The Journal of Health says:—To regain or recover health, persons should be relieved from all anxiety concerning diseases. The mind has power over the body. For a person to think he has a disease will often produce that disease. This we see effected when the mind is intensely concentrated upon the disease of another. It is found in the hospitals that physicians and surgeons who make a specialty of a certain disease are liable to die of it themselves; and the mental power is so great that sometimes people die of diseases which they only have in imagination. We have seen a person sea-sick, in anticipation of a voyage, before reaching the vessel. We have known a person to die of cancer in the stomach when he had no cancer or any other mortal disease. A man, blindfolded and slightly pricked in the arm, has fainted and died from believing that he was bleeding to death. Therefore, persons in health, and desiring to continue so, should at all times be cheerful and happy, and those who are sick should have their attention drawn as much as possible from themselves. It is by their faith men are saved, and also by their faith that they die. If a man wills not to die, he can live in spite of disease; and if he has little or no attachment to life, he will slip away as easily as a child falls asleep. Men live by their souls and not by their bodies. Their bodies have no life of themselves; they are only resources of life—tenements of their souls. The will has much to do in continuing the physical occupancy or giving it up.

PLANTS AS SANITARY SCOUTS.

A LONDON journal raises the question, "How comes it that such a well known and sensitive plant as the camellia suffers so much in so many living rooms and windows, that many have given up its cultivation?" and proceeds to answer it thus: "It is an easy matter to remove the plants and to substitute others of less value. But might it not be far wiser to inquire into the causes of the leaves turning yellow, and the buds dropping off, as they frequently do in living rooms and window gardens? Is it not, in fact, more than probable that the causes that injure such plants as camellias also injure the human occupants? What are the chief causes that turn the leaves of plants yellow in living rooms or make their buds fall? They are chiefly these: gas and fire-dried atmosphere, sudden drafts and extreme alternations of temperature. Are these more salutary or less injurious to men than to plants? They are more mischievous to us than to plants. The parched atmosphere of our rooms is a constant cause of irritation to weakly or diseased lungs. It dries up the natural juices of the body, excites thirst, and causes exhaustion, and perhaps one of the most grateful and wholesome changes that could be effected in our dwelling-houses would be the genializing, by some skillful means, of our gas, lamp and fire-burnt atmoshpere, that delicate women and children inhale all day and all night long. The plants cannot stand it with impunity, neither can we."

MEMBRANEOUS CROUP.

I NOTICE an article in the RURAL, copied from the Western Farm Journal, showing how membraneous croup was cured by a steam bath. To Hydropathic physicians this disease is not at all alarming. Their practice is to wrap a wet cloth round the throat and chest, covered by a dry one; to give small bits of ice from time to time, or sips of ice-cold water, which the patient retains in the mouth as long as possible; to keep the feet warm, and the head cool by sponging. Provided this course is adopted before the patient's strength is entirely exhausted, there is no danger of a fatal result.—H.

Suggestions like the above are always welcome when they are the result of experience in the treatment of diseases, and our columns are open to whatever information may be contributed for the benefit of our readers.—ED.

Around the Republic.

IN PRAISE OF KANSAS.

SINCE the publication of an extract from a letter written by me on Jan. 24, I have received numerous letters asking for further information in regard to the natural resources of this country. With your permission, I will endeavor to show the advantages of this part of the West to the man of limited means.

We have a climate superior to that of any other country now opened up for settlement. It being in latitude 38° north (which is the same as that of Central Kentucky and Virginia), it is far enough south, and yet is delightfully tempered by the rapidly-increasing altitude toward the mountains, which secures a healthy, breezy atmosphere.

Having had an experience of over three years in this part of the State, I can say, in truth, that it is the healthiest country in America. Doctors find it very difficult to live by their profession here, and some of them have had under contemplation the erection of a distillery, in order to prepare victims for their practice.

We have an elevation of from 1,500 to 5,000 feet at Pueblo, rising at an average of eight feet to the mile. This, with the well-drained surface of the land, no stagnant water or overflowed lands, tells the story of its healthful climate.

The fertility of the soil cannot be surpassed, consisting of a large proportion of thoroughly-drained valley land, producing bountiful crops of all the grains, fruits and vegetables of the temperate zone.

Having come from Central New York, where we could boast of the best and purest waters in the world, I can say by actual experience that the waters of the wells, springs and streams in Southwestern Kansas compare very favorably with those of my native State. We have water in abundance from our numerous springs and creeks, or by digging from six to fifty feet for it.

We are fast filling up with the cream of Eastern immigration, which has given this new country prosperous towns, churches, schools, mills, and the society and conveniences of a well-settled community.

Winter wheat, of which there was a large quantity sown last fall, is looking splendidly, many pieces standing from three to four feet high and just ready to head out. Wheat never kills out here in the winter. Winter wheat is destined to become the great staple product of the Arkansas Valley, and it has been demonstrated beyond a chance of successful contradiction that whoever sows wheat here in proper order is sure of a good crop.

I was out in the country a few days ago, and among the many large fields of wheat which I saw was that of Judge Ross of Penn, comprising over four hundred acres, and most of it is sown on sod. I noticed that the portion sown on the newly-broken prairie was the best, proving the fact that a good crop of wheat can be raised on our prairies from the first breaking.

I would mention another fact in this connection: Judge Ross is a land speculator, but takes a very different course to make money from most of that class who go to a new country and buy up wild lands. He is a fair sample of the numerous moneyed men who are coming here daily and purchasing lands of the A. T. and S. F. R. R. Co. and putting them under cultivation. They have learned that it will pay to do so; and if it will pay for that class who have all of the help to hire, it certainly must be profitable for the man of small means who can do the work himself.

SATURDAY, MAY 27, 1876.

THE CENTENNIAL.

THE position always maintained by the RURAL NEW-YORKER is favorable to Fairs and all Industrial Exhibitions. The value of the information obtained by the people through their means, which would not be obtained in any other way cannot be estimated in dollars and cents. It is said that one of the strong foundations of the affection which the French nation had for NAPOLEON III. was his faculty of keeping them constantly amused and, while such a statement may place a nation in a somewhat undignified and childish position, the facts and results will bear us out in saying that the American public is not exempt from a similar desire to learn recreatively rather than studiously. Notwithstanding the practical turn of mind which is so prominent a characteristic of the Average American he is eminently human and will receive and retain knowledge much more readily through pleasant and agreeable channels than in any other way. Much has been urged in favor of the Kindergarten, or object teaching, as a means of imparting knowledge to the childish mind; but nothing however, which would not be equally applicable to our adult Kindergartens, (if such an incongruous expression is permissible) the Industrial Exhibitions.

Of all the great Expositions of this world, in many respects the Centennial at Philadelphia is the greatest. In magnitude it not only compares favorably with its predecessors in foreign countries, but far exceeds them. No citizen of the United States, whether male or female, aged or young, who can command the means, should fail to attend it this summer. There seems to be nothing in which any one can be interested which cannot be found there. If one can imagine the largest of our State Fairs one thousand times magnified, it would inadequately convey an idea of Philadelphia Exhibition.

Then again from a patriotic point of view, the beholder is almost lost in admiration of the progress made by this national family in one century, of the favorable comparison of their productions with those of other nations and of the general cunning of the great people of which he himself is an integral part. With a hundred thousand others around him he may form a mutual admiration society and indulge to his hearts content in that sort of spread-eagle self laudation which most people affect to despise; but of which a reasonable modicum is almost a necessity and quite a benefit to any nation on earth.

From present indications, the Centennial can hardly be a financial success; but it is already a success in every other way. Don't think however to run through it and discover this in one day. The foreign departments alone will occupy the most cursory observer much more time than that. Less than a week's attendance can hardly give one an idea of it in all is immensity. A more suitable location than Fairmount Park could hardly have been chosen. The beauty of the surroundings adds largely to the elegance of some of the structures, while the accessibility to all parts of the grounds renders the labor of sight seeing comparatively light. As we shall see but one Centennial, let us make the most of it.

THE CENTENNIAL DAIRY RING AGAIN.

IN the RURAL NEW-YORKER of March 11 and subsequent issues, we gave a number of facts relative to the Centennial Committee of Am. Dairymen's Association and the manner in which a few of their number sought to control the action of the whole for the immediate benefit of the few. Various of our contemporaries saw fit to censure our action in the matter as ungenerous and unpatriotic, attributing it to motives of personal feeling instead of to a high-minded intention of giving to the public the truth, without regard to whom or where it might strike. Among the numerous parties supposed to be in the confidence of that *select few* and who rushed into print in their defence, was JOHN H. REALL of Philadelphia. In his manly, straightforward letter published below, he admits his error and confesses to have discovered a portion of the facts already well-known to us and which were the basis of our position in the matter. We are sorry if any of our friends are hurt, and can only give them the consolation of gratuitous advice, to keep out of bad company in future. A careful perusal of Mr. REALL'S letter (as well as the letter of Mr. O. S. BLISS of Vermont, published on another page of this issue) is all the vindication needed for anything we may have said in the past regarding the RING and is also an assurance that, hit whom or where it may, the RURAL NEW-YORKER will always be ready to pounce upon fraud and expose corruption.

Even with all this before them we do not advise Dairymen to abstain from exhibiting at the Centennial; but on the contrary, we should say that a more beneficial thing could not happen to the Dairy interest of this country than a large and successful display at Philadelphia under any circumstances. In view of the facts, however, let us again caution the exhibitors to see to it that the funds are not diverted from their proper economical channel and that justice is maintained in the distribution of the awards. Mr. REALL writes:

PHILADELPHIA, May 19th, 1876.

J. V. H. SCOVILLE, *Chairman Centennial Committee American Dairymen's Association*:

SIR—I hereby tender my resignation as a member of the Centennial Committee of the American Dairymen's Association, and of its executive and sub-executive Committees, and in doing so, I would say, that the step is not made without due deliberation, having carried a letter of resignation in my pocket since the 23d day of March. I became fully convinced months before that date, that you were totally unfit for the high position you occupy in the Committee as Executive Officer, (to which you were somehow appointed,) and almost every subsequent step of yours has developed proclivities by no means creditable to one who has undertaken what should be an unselfish work, and which might have been one of incalculable advantage to the Dairy industry.

Instead of maintaing harmony in the committee, and conducting the work with high minded zeal and intergity, you have, by scheming, and the exercise of personal favoritisms and personal animosities, not only created dissensions in the committee and estranged some of the best members from its labors, but you have excited the distrust and disrespect of the Dairymen of the Nation.

I have delayed resigning, hoping a change for the better might occur, and being unwilling to impede the progress towards a Dairy Exhibition Building; but within a brief period, you have given new evidence of your unfairness, to use a very mild term, and an imperfect building being in a fair way of completion, I must in justice to myself, refuse to have my name longer connected with the enterprise, especially since you have treated with great discourtesy several members of the committee; and after the Canadians were given to understand, when they made their subscription, that the building would be properly refrigerated, you have had the effrontery to secure the passage of a resolution by the committee, in the absence of myself and others, asking them to pay the expense. As the Building being erected is entirely in accordance with your desires, as I judge from your support of the plans, in season and out of season, you will of course take the responsibility of its suitableness for the purpose. I cannot, however, recommend it to the Dairymen or Cheese-factorymen of the country, and, for their pecuniary interest, shall advise them to keep their goods at home, unless the Centennial Commission will take entire charge of it at once and adapt it to its uses, and provide for its management, an end to be desired by every Dairyman interested in the Exhibition: as then, and not till then, will it be properly built and managed.

It is now unsafe for Cheese or Butter, as I have repeatedly said it would be, and my opinion is indorsed by leading Dairymen who have seen it. A much superior structure could have been erected at one-third less expense, as I am prepared to prove.

You and your associates having seen proper to unjustly construe my motives, in supporting other plans than those from which you are building, I call your attention to the fact that the cardinal principles of the plans that I have advocated were unanimously indorsed by the General Committee, whose wishes you have utterly ignored.

Mr. Pope after examining said plans, told more than one gentlemen that there were features in them that he preferred to Blanding's plans, so called, yet for inexplicable reasons, you and he have pushed them nearly to completion. The plans that I have advocated were submitted entire to Prof. Arnold, after examining which he wrote Prof. W. as follows:—"*They are all that is required; such a building will satisfy exhibitors.*"

You deserve to be called to account for the manner in which yourself and others of the Committee, are incurring expense by repeated and entirely unnecessary trips to and from this City, Utica, Albany, etc. If you continue as in the past, the entire amount subscribed will be squandered. It is an outrage upon the Dairymen and Merchants at large, and upon your own State, which has contributed to the fund. Inasmuch as your State appropriation is made with the explicit statement that none of the funds shall be used for the committee's expenses, and the Centennial Commission will certainly not pay them from the people's money. I assume that you expect to realize the amount from a tax on the exhibits. If the Dairymen submit to such an exaction, I have nothing to say. But they obtain their money in too laborious and self-sacrificing a manner to suffer such imposition.

In conclusion, let me advise that you do not carry into practice the proposition made by one of your managers, to exact from the Centennial Commission $2,000, or any other sum above the actual cost of the building, as pay for your services and the services of others, simply because you think you can build cheaper than the Commission, whom, I have no doubt, expect a much superior building to that you are erecting. Neither Prof. Wilkinson, Prof. Willard, Mr. Bliss, Mr. Folsom, or myself expect, or would take a penny for anything we have done or may do, and the Dairymen do not understand that they are to pay any one directly or indirectly. The proposition is both dishonorable and unjust, and will disgrace all connected with it.

I refrain from mentioning your accomplices by name, leaving those of whose position I am not certain, to expose themselves. At the proper time I shall, if occasion requires it, give the particulars of your disgraceful conduct.

J. H. REALL.

RURAL NOTES AND QUERIES.

The Pomological Display. — It would seem that the shriek of our National bird had sadly disconcerted the good judgment of the gentlemen who manage our agricultural affairs at the Centennial, for on no other hypothesis can we account for a Pomological show at this season. Of the display we will say nothing, it is beneath notice, and does not rise to the level of wholesome contempt. We might, good-naturedly, tolerate vagaries of this kind at home, but when we consider the sharp, well-trained, foreign eyes, that ceaselessly watch this National exhibit of ourselves, we ought, surely, to astonish them in the right direction—with the beauty and quality of our apples. We can take a proud stand on apples. There is to be a display of small fruits this week. May the energy of the exhibitors be the reverse of the size of the fruit, and a good show given!

Bonus to Agricultural Enterprises.—The Victorian Parliament, (Australia,) has appropriated five thousand pounds for the encouragement of the cultivation and manufacture of beet-root sugar, silk and flax, and for the invention of a mechanical reaper and binder. According to the published regulations, the sum of five hundred pounds will be paid any person or company who manufacture prior to June 30, 1876, 50 tons of sugar from beet-roots grown in Victoria and a further sum of ten pounds for every ton additional, but it is stipulated that the sum paid shall not exceed two thousand pounds. The remainder of the five thousand pounds is offered in various sums for the production of the other articles named above. This is the way the English encourage agriculture even in their far-off colonies.

Disease among the Silk-worms.—A few years since our California exchanges were filled with glowing accounts of the surpassing ability of the State to raise silk-worms, and even silk, and it was broadly hinted that Japan was to be superseded in its trade in *Bromlyx Mori* eggs which for many years has been to that country a source of considerable revenue. But alas for human anticipation! the dreaded epidemic which for years has devastated most of the European sericultural districts appeared in California in 1869–70, and still remains, destroying the worm in vast numbers. Unless some preventive is soon discovered, sericulture in California will be one of the things of the past.

Norway Oats in Australia.—The black Norway oats have found their way to Australia, and a gentleman in Victoria writes that their culture has been quite satisfactory having yielded 55 bushels per acre. The yield is not only good but caterpillars which are very destructive to other sorts will not touch the Norway. In many cases the Norway oats, growing side by side with the more common varieties escaped injury, while the others were seriously damaged.

RURAL BREVITIES.

FRESHLY-slaked lime is one of the best insecticides for scattering over plants growing in the open air which may be infested with insects.

WE are pleased to notice in the last number of the Semi-Tropical that our old friend and co-laborer in agriculture, SOLON ROBINSON, still lives and wields his pen with all the vigor and directness of other days.

DOM PEDRO is said to have purchased farm machinery of Messrs. SEMPLE, BERGE & Co., while at St. Louis. Why is it that foreigners purchase their implements in this country? There must be an excellent reason for it.

MESSRS. REED & BARTON, the great Manufacturers of Silver Plated Ware, have removed their warerooms from No. 2 Maiden Lane to 686 Broadway. They certainly deserve success in their new quarters, as they have always had in their old.

A RECENT writer, in descanting on the food of nations, remarks that the Romans ate mice and the Cubans eat a climbing species of rat, while civilized men and women in America eat hog; therefore, there is little room for dispute about taste in such matters.

A NEW way to drive a rival out of the field is broached by the owner of one of the two patents to make comb-foundation for the apiary. He proposes to give his patent to the public if his rival will do the same, thereby removing all chance for jealousy and lawsuits.

SERVANT-GALISM, which troubles some city people so much, is said by a contemporary to be phenomenal, for no other country before has ever refused to do its own "chores" and then called in an army of foreigners for the purpose. This is equivalent to saying that there are a great many lazy people about, which is doubtless true.

PHILADELPHIA claims to have been the first to give to the world the iron roller, now so extensively used in gardens and upon the farm, and this, too, only about thirty years ago. It's a pity to spoil so good a story, but cast-iron rollers are not a Yankee invention. They were in use in England in the beginning of this century, if not before.

MR. FRANZ XAVIER HESSINGER, Landscape Gardener and Architect, whose card appears on our last page this week, received the first premium at the Vienna Exhibition. He has also done some good work in this country, laying out grounds for S. L. M. BARLOW, J. H. STARIN and several other well-known gentlemen, to whom he refers.

COL. HARDEE'S theory that concussion destroys insect life on trees is said to have been put in practice by a fruit-grower in Louisiana, and that coccus, or scale insect, eradicated by firing guns loaded with powder into the trees. Some of our fruit-growers may attribute the destroying of the scale to the fumes of burnt powder instead of concussion.

OUR English cousins seem to take as much interest in the Centennial Exhibition as we do on this side of the water, judging from the way they talk about it in their papers. This is just as it should be, for the prosperity of the one nation means the same to the other, and the big pond lying between us has narrowed considerably during the last century.

BUSINESS NOTICES.

EVERY keg "Phœnix Pure White Lead" warranted *perfectly pure*—is white, fine, and has the very best body and covering properties.

UNFINISHED STILL.

A BABY'S boot, and a skein of wool
Faded, and soiled, and soft;
Odd things, you say—no doubt you're right—
Round a seaman's neck this stormy night,
Up in the yards aloft.

Most like it's folly; but mate look here:
When first I went to sea,
A woman stood on the far-off strand,
With a wedding-ring on her small, soft hand
Which clung so close to me.

My wife—God bless her! The day before
She sat beside my foot!
And the sunlight kissed her yellow hair,
And the dainty fingers, deft and fair,
Knitted a baby's boot.

The voyage was over; I came ashore,—
What think you, found I there?
A grave the daisies had sprinkled white,
A cottage empty and dark as night,
And this beside the chair.

The little boot, 'twas unfinished still;
The tangled skein lay near;
But the knitter had gone away to rest,
With the baby asleep on her quiet breast,
Down in the churchyard near. [*Anon.*

The Story-Teller.

FIFTY YEARS AGO!

AN EPISODE OF THE SEMINOLE WAR.

"BUT, grandpa, did you really fight the Indians, and right at this spot, too?"

"Lor' bless you, child, I reckon we did! My! it makes my hair stand on end, like the porky-pine, to——"

"Por-*cu*-pine, grandpa."

"Yes, that's it, porky-pine. Children now-a-days knows a mighty sight more 'an old folks."

"But, I say, grandpa, did you—did you kill one?"

"Why, I 'spect I did, dearie. Howsomever, it was mighty hot, and the tarnal redskins jest 'hooped and hollered like they was goin' to send us to kingdom come in less 'an no thue."

"Oh! wasn't it frightful? Now, grandpa, let's begin just as they do in the story books and say 'once upon a time,' and then you will go on and tell me all about it. You must have been awful brave when you were a young man."

"He, he! you young flatterer. I reckon I'll have to surrender at direction."

"Discretion, yes. But do go on, grandpa, please."

"You see I 'listed quite young like, and the fust thing I knowed we was packed off to Florida to fight the Seminoles. Gen'al Clinch had command, and he was jest a parleyin' and pow-wowin' like fun with the redskins over at Camp King. We was at Fort Brooke,—that is, Major Dade's men—and one bright mornin' the order come to march to Camp King. We packed our traps in a hurry, and in less 'an no time was a gaily marchin' cross country. We didn't 'spect nothin', you know, 'cause everything was at peace. Howsomever, we thought so. Well, we got along pretty well for about forty mile or so, when, jest as we entered a piece of woods, bang, bang went the guns, and the red fiends were on us quicker 'an you could say Jack Robinson! I was in the rear and saw the men go down. It was my first fight, and I felt mighty queer, I can tell you. But it was fight or die, mebbe both, and the word passed along that the Major was dead and that orders would come from Cap'n Gardiner. He was a brave un', poor feller! He jest waved his sword and we went in like mad and driv the enemy quite smart. Then we got out infer the clearin' and commenced to throw up a breast-work. They seed what we was up to, and afore we had finished two feet or so they was on us again. It seemed as if there was millions of 'em. We tried to work the field-piece we had with us, but, bless you! as fast as we popped our heads above the works over we went as dead as Jerusalem. So we calkerlated it wouldn't do to have funerals so often when the other side didn't show any proper signs of grief, and we loaded and fired on our faces a'most. It was awful, though! We kept on a fightin' this way for some time, when, all at once, our ammernition gev out. Then the Indians rushed over the breastwork like an incarnate wave of red destruction. We were at their mercy, but, alas! that quality was not included in their fiendish natures. The last I remember I was a layin' about lustily with the but end of my musket, when I got a stunnin' blow and remained senseless I don't know how long. When I come to at last, I found myself buried under the dead bodies of my comrades. I will never forget how I felt as I crawled out and slunk away from the scene. All about me lay the poor boys that was so full of life that very same mornin', and now it was as silent as the tomb, and the frightfulest feelin' came over me as I saw the carrion birds hoverin' over their expected feast.

"Heigh-ho! Well, I made my way as best I could to camp, only to learn that the very same day Gen'l Thompson and some of his companions was murdered right under the guns of the fort.

"In '36 the army under Gen'l Gaines passed this place, and right here, where you see this tree, we come upon the skel'tons of my unfort'nate companions. It was a sad sight! Lyin' around, scattered like, was cartridge-boxes, bits of clothin' and sich like 'couterments. Ter one side was a cart a'most burnt, and the skel'tons of oxen yoked to it. All 'round us lay the bones of the poor boys, jest where they fell, and sure enuff there, too, was the old field gun, some'at the worse for wear.

"Well, we detailed a party to gather the bones and put them in the ground decent like. Ninety-eight privates were put in one grave and eight officers in another. Then we planted the old gun at the head of the officers' grave, fired a volley and left the spot."

"Grandpa, how did you happen to come back here to live?"

"Well, you see, child, arter the war I went

"AND RIGHT HERE, WHERE YOU SEE THIS TREE!"

back home; but the family had got sort o' scattered, and I liked this country, so I jest asked your grandma to come along and help me make a home in Florida. I got this piece of land from the Government, and here the old man has been ever since."

"Where did the Indians go to, grandpa?"

"Bless you! I don't know, child. They sent 'em some'eres West, I b'lieve, and I heerd John Gibbons tell us how they are all livin' peaceful like up Red River way. But I 'spect it taint so. It's mighty hard to l'arn them redskins to be like decent folks.

"Thar, now, you have made the old man run on until his tongue clattered jest like a mill wheel, I declar'! But them was awful times!"

THAT AWFUL SMITH.

CHAPTER I.

A DEFERENTIAL tap at the outer door, and then the low-pitched voice of my man Ward woke me from my morning dream. It *was* annoying. The clock on the mantel-piece had just struck one; it was a divinely-tempered May day, and a man felt in no humor to attack the usual pile of letters from creditors. I had carefully filled and lighted my pipe, yielded myself with a lazy sigh to the soft embraces of my pet lounging chair drawn up close to the open window where the sunshades flapped languidly over miniature hanging gardens—I had done all this, and oblivious for a while of debts and duns and entanglements, was falling fast into a blissful trance, like a Celestial in a state of bhang, when——

"Please, sir," said Ward, opening the door.

Brought back to sublunary matters thus, I looked at him reproachfully.

"I thought I told you——" I murmured.

"Yes, sir—I know!" he responded, anxious to vindicate my confidence in him; "you wasn't to be disturbed. More I shouldn't have, sir; only—it's your aunt! It was no good trying to stop her. And she's coming up."

Ward stated the exact truth; it *was* no good trying to stop her.

I drew the amber mouthpiece of the pipe slowly from between reluctant lips; laid it down with a covetous sigh and a faintly muttered strong ejaculation, and resigned myself to my fate.

The door opened once more, and Aunt Medusa pranced through the opening straight down upon me with a more determined expression than usual upon her aristocratic face.

Ward made a rapid exit, and the outer door closed behind him.

"My dear aunt!" I drawled, picking myself up languidly and moving a step or two to meet my infliction.

"Frank!" said Aunt Medusa, with ominous abruptness, "sit down again. I've something to say to you."

She folded herself, as it were—Aunt Medusa never seemed to sit down like ordinary humanity; she was very lean and abnormally long and, I fancied, had a hinge somewhere about the middle of her, and nowhere else—into a straight, knotty-backed, mediæval chair that formed a portion of my belongings and that, regarded as a resting-place, invariably made me shudder; folded her long thoroughbred gloved hands, and held me with her glittering eye.

I felt I was likely to be in for it. The charges that might be brought against me were so manifold that I only speculated, in that moment's breathing time I got, which particular one I was to be called to plead to on this occasion.

I thought of that neatly red-taped and docketed sheaf of bills in the bottom drawer of my writing desk, all impartially unpaid; of my losses at Jerome Park; of my subsequent (and consequent) transactions with Mr. Nepthall of No. — Bowery; of my flirtation with Miss Beaucatcher, and I was rather curious to know where Aunt Medusa was going to break ground; for that high-actioned, high-nosed, high-tempered relative of mine, with all three peculiarities more strongly marked than ever, was obviously about to come down on me for something.

Aunt Medusa had no end of money, and as I was the heir presumptive, I charitably assumed she had acquired the right of bullying me to any extent, and she was by no means slow to exercise it. Only, she had been usually wont to send for me to Park Avenue when she wanted to. What could have brought her to Bond street at this undue hour this morning?

"Well, Aunt Medusa," I went on aloud—for I was getting rather nervous under the prolonged gaze of the lady's glittering eye—"and what have you to say to me?"

Here I glanced ruefully at the pipe on the little table at my elbow, thinking I could have stood what was coming better if I could have had it between my lips again.

"Just this, Frank," said my aunt; "I saw, like every one else, the way you were going on last night with that horrible woman."

I know what my crime was then—Annie Montressor.

"What horrible woman?" I asked innocently; "and how did I go on?"

"You know what I mean. That Mrs. Montressor. Montressor, indeed!" snorted Aunt Medusa, in an indignant parenthesis, "her name's no more Montressor than mine is, I'll be bound."

"So I've heard," I responded meekly; "but if she likes to call herself so, why—and Mrs. Fitz-Fulke has taken her up this season, you know."

Now Mrs. Fitz-Fulke is one of the leaders of the Elect; with power to bind and loose, and make and mar; a very incarnation of Propriety; to be taken up of whom is to gain the meed of all who despairingly desire the same good fortune.

"Mrs. Fitz-Fulke is a fool!" snapped my uncompromising relative sharply; forgetting, as I fondly hoped, her wrath against me in her wrath at the cogency of my arguments; "she is a fool! This Mrs. Montressor"—indignant snort again—"this Mrs. Montressor has completely got over her by going to hear Mrs. Burthwaite, the revivalist, every Sunday, and that sort of thing."

"Well, she deserves something for *that!*" I ventured to suggest; "it must be decidedly the reverse of festive; and——"

But Aunt Medusa wasn't to be turned from her point. She had come to Bond street to hold forth to me on the heinous nature of my flirtation with the dangerous Circe that every woman in New York envied and hated, and said spiteful things about; and she did it.

"The long and short of it is, Frank," Aunt Medusa said, by way of general conclusion, opening and shutting her under jaw like a steel-trap between each word, and nodding her head at me emphatically, "the long and the short of it is, that you must marry. And the sooner the better. There!"

I wasn't certainly prepared for this heroic remedy; but I managed to make answer with tolerable composure.

"Well, yes; I suppose I must when the right woman asks me. But that hasn't happened to me yet; so——"

"Fiddlestick!" ejaculated Aunt Medusa. "You will be good enough to do as you're bid. I mean you to be married before Christmas!"

There was no question that she looked as if she meant it, at any rate. The situation was becoming rather alarming.

"Who is she?" I asked, submissively.

"She is very nice, Frank," Aunt Medusa said, propitiated; "but I shan't tell you who she is till you've seen her. What are you going to do this afternoon?"

I had intended to spend the most of it in Annie Montressor's parlor, so I said:

"Going to hear Moody and Sankey, I think."

"Oh!" said Aunt Medusa; "well, then you had better come down to Mrs. Leo Huntingdon's garden party at Astoria afterwards. I have a card for you."

"Very well," I assented. And then, as a thought struck me, "Is she to be there?"

"Perhaps," replied Aunt Medusa, rising all of a piece upon her hinge and preparing to depart. "Don't be later than four, mind. "No; you can't see me downstairs in that dress!"—as I dutifully moved towards the door with her—"Ward will open the door for me. Good-bye!"

And my aunt was gone.

I fell to smoking again, speculating who my Fate was to be. I had no thought of avoiding it. It was less trouble to be married than to combat a resolution of Aunt Medusa's; and I am, naturally, the laziest man of my acquaintance. Moreover, I couldn't afford to quarrel with her, even if I had had the energy. I concluded, as Artemus says, "to let things slide."

Just as I had awoke to the consciousness that it was time to dress, Charlie Twistleton and his bull-pup came in.

The latter always evinced a deadly animosity to my person, and invariably flew at my legs as he caught sight of me, as he did on this occasion.

Practice, however, had made me perfect in my system of defence; and I kicked him dexterously back again to his admiring owner, who quieted him by the application of his own boot-heel.

"Plucky, ain't he?" Charlie said. "Nearly nipped you, Frank. He'd better have something to eat. Ward, fetch me a bit of meat of some kind—raw, mind!" Over which refreshment the bull-pup continued to growl at me at intervals.

"Going to the garden party?" asked Twistleton, by-and-by.

"Supposed to be," I said.

"Same here. I'll drive you over if you like. Cut away and dress."

I went and dressed; thinking that as the matter was thus decided for me I'd better go to Astoria and not to Mrs. Montressor's.

"We'll leave the pup here," Charlie said, when I emerged from my bedroom. "He'd be in the way, perhaps, in the trap. Ready? Come along."

Charlie's dog-cart was waiting below. The next minute we were charging at his usual pace down Broadway to the ferry.

"I say," said my Jehu, lolling his arms on the apron, and tranquilly indifferent to the fact that we had shaved by a ponderous coal cart with about an inch to spare. "I say, Frank, I hope she's there! That's all I'm going for—to see her."

"All I'm going for too," I muttered, thinking of my *future;* "who do you mean, though?"

"Woman everybody's talking about, to be sure."

"And who's she?"

"Who?" Charlie drawled, as we swung sharply through the gate that led to the ferry and sent the stock in trade of the apple vender into the middle of the street; "who? Why, Mrs. Wybrowe, of course! Jove! we smashed something, didn't we?"

CHAPTER II.

"But who is Mrs. Wybrowe? And why is everybody talking about her?" I persisted.

"Long story," Charlie responded; "romantic, and that- However, old Dipas told me all about it last night; and here it is."

And this, briefly, and divested of Twistleton's peculiar diction, was the story:

Wybrowe, Brazilian millionaire, age seventy or thereabouts, marries Helen Chetwynd, impecunious belle, aged nineteen, daughter of an American consul in those parts; and, after two years of connubial felicity, considerately dies. Wybrowe is jealous as a Spaniard; and his jealousy looks beyond his own life. So he leaves a terrible will behind him. This cunningly-contrived document provides that his widow, then just twenty-one, shall receive and enjoy an income of some $75,000 per annum so long—and only so long—as she shall remain unmarried; that if she do marry again, she shall receive absolutely nothing—the entire estate of the deceased passing

to two distant relatives, believed to be living in obscure poverty in Boston.

Now comes the most curious part of the story.

A good many men besides old Wybrowe went mad about Mrs. Wybrowe out in Brazil; notably a man who was thought to be nearly as big a Croesus—a half-Spaniard, half-American, by name Alvarez Smith. This hybrid was said to have the temper of a fiend, the face of a baboon, and the complexion of a jaundice patient. The frantic vehemence with which, when at last he did speak, Smith pleaded his cause to her, nearly frightened Miss Chetwynd into hysterics; the malignant black scowl that twisted his ugly face till it grew absolutely awful in its hideousness when she unconditionally declined his proposals and shrank away from him, haunted her sleep for many a night afterward.

Alvarez Smith went away and thought out his vengeance. This is how he took it, after waiting patiently for three years.

During old Wybrowe's lifetime he kept quiet and made no sign. When the old man was dead, Smith broke in upon the widow and, with full knowledge of the provisions of Wybrowe's will, renewed his former propositions. They were rejected again—this time with the addition of certain words that Helen Wybrowe would have been more prudent not to have spoken to such a man.

The same steamer which brought the widow home to America had among its passengers Alvarez Smith. He never once spoke to her or molested her in any way during the voyage; but his hungry black eyes would rest upon her in a way that frightened her in spite of herself.

Those eyes watched her into the carriage and met hers as she got out at the door of her sister's house. Every time she went abroad she met them; sleeping and waking, Alvarez Smith haunted her. It was intolerable; but what could she do? She left town; he followed her. She shut herself up in the house for days; and the first person she saw when, by day or by night, she came out again was—Smith; always Alvarez Smith. Mrs. Wybrowe grew nervous and ill under this implacable persecution, which it was impossible to put an end to. And the worst of it was that she felt her persecutor was gaining a certain power over her; that those terrible eyes fascinated her like a basilisk's. She never avowed this feeling to Mrs. Oswestry, her sister, but she couldn't help confessing it to herself.

In a few weeks after her arrival in New York, old Wybrowe's lawyer communicated to her the following startling intelligence. A person had bought up the reversionary interest of her husband's two distant relatives in the income that had been left her, subject to her remaining unmarried. Wybrowe's kinsmen, too poor to be troubled with many scruples, and considering that it was barely likely a woman would give up $75,000 a year when she could keep it on such easy terms, had greedily accepted the offer that had been made them, had accordingly executed the necessary legal documents, had received a stipulated sum down and had emigrated to Salt Lake City.

The person who had thus bought them out was, consequently, the person who would claim the heavy forfeit from Helen Wybrowe in the event of her marrying again. And it was hardly needful to tell her that person's name. She guessed it instinctively—Alvarez Smith.

This, then, was her position:—She must either, at one-and-twenty, condemn herself to a life-long widowhood, or relinquish a magnificent income to the man she detested. True, a court of law might, as her lawyer told her, set the will aside; but how could a woman petition such a court? Her woman's delicacy, at all events, rendered that out of the question in her case. Again, there might be men who would think (and who could afford to think) lightly of marrying a beggar, and among them there might be one whom she could love. But, wise in her generation, Mrs. Wybrowe built no castles in the air of this sort. She accepted the situation; shut herself up no longer; went among her kind; encountered her basilisk with an implacable visage; and tortured her tormentor by an ingeniously arranged sequence of flirtations with passed masters of the art.

Such, in substance, was Charlie Twistleton's story which, interspersed with his own comments, lasted all the way to Astoria.

I felt curious—strangely eager—to see this woman; from all I had just heard about her, I fancied she must needs stand apart from her kind in some way. And I had had five years of penal servitude with apparently homogeneous society women; whose manners and customs and ideas seemed, like their dresses, to be all cut out of the same piece and fashioned on the same model. What would Helen Wybrowe be like? It was my pet name, too—Helen.

"See her?" I asked Twistleton when we had got out on to the croquet lawn. With his eye-glass stuck in his eye, Charlie was raking the groups round us—vainly, as it seemed.

"No," he said, "she ain't here."

"Frank!" said Aunt Medusa's voice behind me, just as I was moving off; "Frank, let me introduce you to Miss Boodle."

Brought up short like this, there was nothing for it but to stop and turn.

I turned. There was Miss Boodle, a plump, good-natured-looking girl, apparently very appropriately named. "*This* is the person you will be good enough to marry, sir," Aunt Medusa's eyes said to me as I lifted my hat; and Miss Boodle blushed a little and smiled a good deal, as though she quite understood and rather liked it.

But I made up my mind—with wonderful celerity, considering the little practice I had had in performing the feat of late—that Miss Boodle should never call herself Mrs. Francis Drasdyl unless, at least, Helen Wybrowe should prove to be——

"Frank will take you to the lower lawn, Bella," Aunt Medusa said, breaking in sharply upon me, and folding herself into a garden chair as she spoke, "I think the sets seem all made up here."

And Bella and I moved away. I looked at her as I strolled down a gravel walk beside her.

No; it was impossible. No; it really could not be done unless, indeed——

"You play croquet, Mr. Drasdyl?" Miss Boodle asked. Not a bad voice; but somehow, not the voice I (rather hard to satisfy in that particular) fancied could ever thrill me much.

"Do *you*?" I returned, prudently.

"Oh, I doat on it," Miss Bella cried, with a healthy enthusiasm I couldn't but admire. This was her first season. Her what I must call Boodledom was fresh upon her still; like the roses on her round, plump cheeks.

"Do you know," she went on, "I won the champion mallet at our club last year!"

"Did you?" I said, gravely; "I'm so sorry, Miss Boodle."

"Dear me, Mr. Drasdyl! Why?"

"Because I shan't dare offer myself as a partner to a champion. I'm a shocking muff at this sort of thing."

"Never mind!" she returned, with charming frankness, "I'm going to play with Cousin Tom."

I invoked a fervent blessing on that individual wherever he was.

"And Cousin Tom is a champion, too?"

"Oh! yes. He plays so well." And Miss Boodle's eyes went roving about in every direction in search of her partner.

"There he is!" she cried at last, half bounding forward. There he was, unmistakably. A broad-shouldered, freckle-faced, orange-whiskered youth perspiring with eagerness for the fray, must be Cousin Tom, of course.

"Mr. Claypool—Mr. Drasdyl," said Miss Boodle, performing a most uncalled-for and absurd ceremony for my sole benefit apparently, the champion being totally unconscious of my existence, and intent only on getting to work with the shortest possible delay.

"You couldn't be in better hands, I see, Miss Boodle," I said, as I lifted my hat to her and lounged off. I kept away from the upper lawn, where Aunt Medusa was, and turned into the river walk, where a score or so of flirtations were progressing more or less satisfactorily, with a firmer resolve than ever that never, at any price, would I take Isabella Boodle to wife.

I strolled along without meeting any one I knew and was just going to sit down under a tree in a secluded corner and take a surreptitious whiff, when the voice of some one hidden yet by the turn in the path—the divinest woman's voice that ever fell on a man's ear out of Paradise, fell on mine.

My slow, languid pulse, that nothing ever quickened, quickened then. I stood still, drinking in the sound. Two ladies came round the bend toward me. One I knew—Mrs. Oswestry. The other I fancied I had seen before—in my dreams.

They were talking so earnestly that neither saw me till they were quite close. Then Mrs. Oswestry looked up. "Ah! Mr. Drasdyl." And we exchanged hand-pressures and commonplace. Then she said, deliciously—

"Let me introduce you to my sister—Mrs. Wybrowe. Helen, Mr. Drasdyl."

Mrs. Wybrowe's heavy violet eyes turned slowly, full upon me; and I stood face to face with my Fate.—[Continued next week.

The Literary World.

RECENT LITERATURE.

Passing the Portal; or, A Girl's Struggle. An Autobiography. By Mrs. Metta V. Victor. [12mo.—pp. 408. $1.50.] New York: Carleton & Co.

Obviously Mrs. Victor has paid much attention to the recent discussions of the scientists who advocate the evolution theory, and thinking the general tendency of this discussion to be toward that kind of materialism which either denies, or does not choose to discuss, the doctrine of future conscious personal existence, in which she is apparently a firm believer, takes this method of giving to the public a digest or brief of the arguments of both sides, which the careful reader will admit she has done fairly and well. It is always a difficult task for a writer to combine a philosophical essay with a popular story. Those whose tastes incline them to desire the one will usually reject the other, and the author who can weave together philosophy and fiction in such way as to make the fabric acceptable to the reader, as Mrs. Victor has succeeded in doing, deserves much credit. There are hundreds who will read this book and learn from it enough of some of the great scientific questions of the day to give them a desire to know more, and consequently become familiar with the works of Spencer, Darwin, Huxley and others—which otherwise they would never be inclined to examine,—while others who have never thought of the great subject of the immortality of the soul, but have accepted without question the doctrines as taught in the churches, will give the matter their more serious attention, and what is now only a vague belief may become with them a living faith. We should be glad, in order to interest our readers in the work, to give an extended analysis of its contents, but must content ourselves by saying that the heroine of the story—she through whom the author speaks her views and arguments, Marion Guthrie—is a young lady of eighteen, daughter of a Congregational clergyman. Her parents, dying, left her to the care of her uncle, Mr. Maxwell, by whom she had been kept at boarding school. The story opens when she leaves school and takes up her abode at her uncle's on Fifth Avenue, as an adopted daughter. Mr. M. is a wealthy physician out of practice, and devotes himself to scientific studies and experiments, in which Marion soon becomes deeply interested. The house is a favorite resort of professors, scholars and savants, nearly all of whom deny the doctrine of instantaneous creation and immortality, but are divided as regards the Great First Cause. Marion hears their discussions with astonishment, receives the evolution theory as an incontrovertible fact, while she sees no reason in consequence for giving up her faith in the future, but sets it forth in such light as to make at least one convert. Meantime "the old, old story" is going on: love which is not love but misplaced affection, and love that is love forevermore—jealousy, regrets, hopes blighted, anticipations unrealized, everything that goes to make up life—all of which is told in a manner creditable to the author and interesting to the reader.

There is in this book much food for thought, and if at times the positions of some of the parties seem somewhat improbable, it may be remembered that there is more romance in real life than any novelist would dare put on his pages. We notice that Mrs. Victor has been able to argue the question at issue from the teachings of Nature and her inner consciousness, without being obliged to quote Scripture—a mode usually adopted by those who have not brains enough to frame arguments for themselves.

Proceedings of the Fifteenth Session of the American Pomological Society, held in Chicago, Ill., Sept. 8-10, 1875. [4to.—pp. 200.] Edited by the Secretary.

The biennial volumes of this Society have come to be generally considered as our standard and guide in the various branches of pomology. The Society is composed mainly of the leading scientific and practical pomologists of the country, hence their deliberations, as reported in these volumes, are the most reliable and trustworthy information which can be obtained on the subject. We must say, however, it is to be regretted that so small a number of our farmers and fruit growers feel it incumbent upon them to support by their subscriptions the noble efforts of the American Pomological Society to gather and disseminate information upon the subjects in which they are or should be most directly interested. Out of the hundreds of thousands of men who own land and cultivate fruits—and we may add are constantly seeking information relating thereto—less than four hundred give material aid to the cause of Pomology by subscribing for the proceedings of a body of the most learned pomologists the world has ever seen. The volume before us, like its predecessors, is a model of typographic art, and its pages are filled with information which no fruit grower can afford to do without.

Illustrated Hand-Book of American Cities, with Outlines of Through Routes and Railway Maps. [8vo.—pp. 160. Cloth, 75 cts.; paper, 50 cts.] New York: D. Appleton & Co.

Prepared more particularly for travelers and tourists, but not less valuable for stay-at-home readers. All of the principal cities of the United States and Canada are briefly but concisely described, giving location, history, business, points of interest to tourists and sight-seers, and many other items of information. Its arrangement and condensation is such that it brings in small compass what in the usual style would fill a large volume. The text is illustrated by seventy-three engravings, of a finer character than are usually found in books of this kind.

The Poultry Yard and Market; Or, A Practical Treatise on Galine Culture. By Prof. A. Corbett. [Pp. 83.] New York: Orange Judd Co.

This book has been before the public for some time, although but lately issued by the above-named publishers. It gives a concise history of the origin and introduction of what is termed artificial incubation, or hatching eggs by heat generated by fermenting manures or otherwise, with a full description of Prof. Corbett's Incubator. Those who desire to test this method of raising chickens will find the work quite useful.

The Liberty Bell; a Collection of National and Patriotic Songs for All Nations. [8vo.—pp. 80.] New York: W. A. Pond & Co., 547 Broadway.

A most seasonable publication. The spasm of fraternity that just now racks the country must have some sort of vocal expression, and the howl may as well be a musical one. There are in the book all the old, familiar, patriotic songs of various countries and many new ones, all with a carefully arranged piano accompaniment. It is a good collection, sure to be popular.

THE AULD KIRKYAIRD.

O' a' the spots on earth sae sweet,
There's nane I lo'e so dear
As that wee spot where freens aft meet
Ower freens to shed a tear.
Wha slumber 'neath the cauld, cauld sod,
Though ance our joys they shared,
But noo lie free frae every load,
Within the auld kirkyaird.

It stands sae quietly a' alane,
A wee bit patch o' lea,
Wi' here and there an auld tombstane
To mark its sanctity.
A' ivy-grown the totterin' wa's
That lang ha'e been it's gaird;
There's no a sign o' earthly brawn
Within the auld kirkyaird.

The sweet wee daisy's snaw-white head
Bedecks the turf a' roun'—
Fit emblem 'o the silent dead,
Made pure through Him aboon,
Devoid o' grandeur, life's behest,
For death nor Judgment scar'd;
Their dust lies peacefu' noo at rest
Within the auld kirkyaird.

There Minnie sleeps the lang, lang sleep
That kens no waukin' here;
But though our hearts are fain to weep,
E'en shed grief's bitter tear.
We ken that noo her speerit's gane
To him wha for it eared;
There's nocht but lifeless flesh and bane
Within the auld kirkyaird.

Oh, may we ne'er forget the day
Shall come when we maun kee,
Ne'er cease to mindfu' be alway
O' Calvary's sad tree.
Then swift oor souls shall upward fly
To God, who lang has spared,
When oor puir mortal frames shall lie
Within the auld kirkyaird.

PRAYER IS PRAISE.

Real prayer is joyous, because the promise is sure. The sense of want is more than balanced by the assurance of blessing. The Spirit recognized this when he coupled "thanksgiving" with "supplication." The reason for such a union of acts springs from the union of facts. There is always and necessarily, a great joy in conscious want if attended by strong faith that the supply is more than enough to meet it. If we prayed to a selfish, cold-hearted, sordid God, the shadow of despair would chill our supplications; but the wealth of love and generosity which we know our Father exercises to us-ward, casts a rainbow over the soul, and drops rays of gladness into its depths, making our prayers so nearly praise that it is impossible to divide between them, or tell where the former begins, or the latter ends. "Ask and receive," is a sweet sentence. Not that the Lord always gives the precise thing we ask; he gives that or something better. If we misjudge, he judges for us, so that we have the benefit of his infinite wisdom as well as the wealth of his love. Faith rejoices in this. Doubt is anxious about the thing we desire; faith relegates all to God, and rests rejoicing that Divine wisdom supervises and corrects our wishes. Thus prayer is praise.

PRAYERS OF THE RIGHTEOUS.

Cranmer says:—This is a great comfort for us to know that all the Church and congregation of Christ doth pray for us, and that all the treasures of God's riches, i. e., Christ himself, the kingdom, the holy gospel, the sacraments and the prayers of all godly men, be common to us all. For whensoever any godly man requireth anything of God, he also requireth the same thing for us; for no man ought to pray for himself alone. And this is a great consolation for all Christian people; for the Scripture saith that the prayer of one just man availeth much with God; and therefore when many just and godly men do make their supplications unto God with one accord, we may be sure that their prayers are heard.

GOLDEN THOUGHTS.

Purposes are better than regrets.

Christianity softens the edge of life.

The world can never sour on a heart of love.

Keep on the side of love and you'll keep on the right side.

There is a chart showing every harbor in the sea of life, so that none need be lost or go astray.

It took thousands of ages to fit the earth for man, and it may take as long to fit man for the earth.

Sins of the parents may be visited upon their children, but it is that the sting may strike back into the parents' hearts.

God's grapes of blessing are not gathered from the thorns of wrong, nor the figs of his abiding peace from the thistles of evil.

There are strings in the harp of every life, though covered with dust, that give out music when the wings of Truth stir the air.

Pain, like a trusty sentinel, guards every avenue leading to the citadel of life, and we are admonished whenever danger approaches.

Beautiful lives have grown up from the darkest places, as pure white lilies, full of fragrance, have blossomed on slimy, stagnant waters.

Never was a sincere word utterly lost, never a magnanimity fell to the ground; there is some heart always to greet and accept it unexpectedly.

Ladies' Portfolio.

WOMAN.

An angel wandering out of heaven,
And all too bright for Eden even,
Once through the paths of paradise
Made luminous the auroral air,
And walking in his awful guise
Met the Eternal Father there—
Who, when he saw the truant sprite,
Smiled love thro' all those bowers of light.

The while within his tranced spell
Our Eden sire lay slumbering near;
God saw and said it is not well
For man alone to linger here—
Then took that angel by the hand,
And with a kiss its brow He pressed,
And whispering all His mild command,
He laid it near the sleeper's breast,
With earth enough to make it human—
He chained its wings and called it *Woman*.

And if perchance some stains of rust
Upon her pinions yet remain
'Tis but the mark of God's own dust,
The earth mold of that Eden chain.

[*T. B. Read.*

"REALLY AND TRULY" FRANK ADVICE.

Some ladies seldom venture out upon the streets without having a tale to tell about being "followed by a gentleman," (?)—"stared at by a gentleman," (?)—"addressed by a gentleman," (?) or in some way or another "insulted by a gentleman." (?) They tell these tales with eyes that look indignant and in a tone that sounds earnest.

"It is strange," writes Miss Flyer (I have known her since she was a baby), "that I *never* go out; never ride in a stage or car but what something of this sort occurs." . . . "Why is this?" I propose to answer Miss Flyer's question in my own way—in a way that is "really and truly" frank.

There are many females who care more for dress than they do for any other earthly thing. Their pleasure is derived not from the sense of knowing that they are handsomely dressed, but from the gratification of feeling that they attract the notice, perhaps excite the admiration, of those among whom they mingle. In their toilet preparations for out-of-door walks or rides, the inspiring motive is that of attracting notice—and when this motive works its premeditated result, and men stare rudely at the gaudy sign which was painted for them—the indignant one cries, "Why am I thus insulted!" Now, dear Flyer, tell me truly, "Would you not cry if you were *not* thus insulted? Are not these insults balm to a chronic inflammation that else might defer the timely visits of "Nature's sweet restorer" until more masterly toilet efforts were crowned with the old results and you were again "stared at, followed, insulted?" We cannot imagine why it is that a lady will spend a full half of her time and an amount of money incredible to anybody but her father or husband, upon dress, unless she loves to be gazed at and admired. We cannot suppose that if ladies

——"were wafted off to seas unknown"

and surrounded by blind creatures only that were destitute of any knowledge or appreciation of costly dresses and rich colors, they would spend any considerable share of their time or money in this way. Labor, time and money have their value to sane people, and to squander them without an object would be an act of imbecility or insanity—and you (to use a diplomatic and popular form of expression which I much like) are not unpossessed of either intelligence or sanity. Any one in half-an-hour may dress himself with all the precision and taste that cleanliness, neatness and a worthy pride warrant. He may then appear as nature, health and circumstances intended he should appear—and what he *appears* to be, he *is*. To be admired *then* is something to be proud of—for that which is admired is *his*. The rose of the cheek and the fair skin were not produced by powder and paint, and an hour before the looking-glass vilely spent in their application—but they are the rewards of obedience to hygienic laws—an obedience that, owing to its scarcity and great value, is not of itself a thing to be sneezed at.

But here is where you are weakest—or, as I may say, most suicidal—my dear Flyer. People do not admire *you*—or rather the disguise under which you sail. They *do* gaze—rudely it may be—contemptuously—pityingly, it may be—but admiringly, respectfully——never!

You who in many things are so circumspect, Flyer—learn this one thing (it would prove the most valuable lesson of your life), that you are *never* so *homely* as when you have loaded yourself with your most bewitching dresses, and have changed your naturally saffron complexion to one of white and rose! Could you see yourself as I—as others—see you; could you know that the disguise is as manifest as a veritable false-face and that it reflects no more credit upon you than a false-face would upon a peacock; could you but *realize* that everybody knows these dress and cosmetic devices to be so many banners painted and unfurled at the cost of precious time—at the cost of money that might gladden the lonely, sickened hearts of many a poverty-stricken home—*then* you would not ask me why it is that people rudely stare at and insult you—for, I believe the question which you have asked is not intended to be a question, but merely an ingenious form of statement (invented by your enshrouding vanity) to make it known to your friends that—whether in the street or cars or other public place, you are ever gazed at as a marvel of beauty and grace.

Vanity, no less than love, blinds the eye and warps the judgment. The gaze which you covet is hateful to the well-reared, right-thinking woman whose pride first busies itself with a consciousness of personal neatness and then occupies itself with external details;—the healthy verdure of the rich and inexhaustible soil beneath.

Many ladies travel from Dan to Beersheba *alone* who are never "stared at"—never "followed"—never "insulted"—ladies (pardon me, dear Flyer) far more captivating than you. But they have the "ring of gold." Nature and education have pencilled for them the sign that powder and paint and meretricious dress have bedaubed for you.

We are all of us privileged to look at each other in passing. But our gaze is respectful in the one instance, because uninvited. In the other, it is as we choose to make it, because it is solicited—because it is "fished for"—and beggars must not be choosers.

You will not be angry, my dear Flyer—too well thou knowest the deep regard of

Vue de L'eau. S. Krout.

SNUFF BLIGHTED BELLES.

Talk about the opium-eater or the whisky-drinker, how much more are they to be pitied than the lady who is addicted to dipping snuff? We believe there is more snuff used in Hopkinsville than in any other place of its size in Kentucky, and its use is steadily on the increase. Hopkinsville has a reputation for beautiful women, but how long that reputation will last 'tis hard to tell. Some of the prettiest women we knew ten or twelve years ago are now nothing but faded flowers. Lips that once looked like ripe cherries, and for one kiss from which a man would almost give his right-arm, now look more like dried apples than anything else we can think of. The cheek once full and rosy is now sunken and colorless. The chin, which looks longer now, glories in a bronze-colored stripe, which reaches down to the throat.

We were going down the street the other day, and noticed a lady coming up. It was a windy March day, and the lady's skirts were lifted a little above her boot tops. We knew the aristocratically arched foot, but hang it! what had become of the nicely rounded ankle? It wasn't there. When we got near enough to look into the lady's face we knew that snuff had done its work. Snuff is robbing women of their beauty and depriving them of husbands. (Who ever saw a women that wanted to marry?) It is more harmful than smoking, and more repulsive than chewing, and its use by ladies is almost as much to be condemned as drinking of whisky by men, and if the ladies have grounds to talk about men drinking and smoking, they are assured that snuff-dipping, in the eyes of men, is about as repulsive as the smell of a two-cent-and-a-half segar, or a sniff of "rifle whisky to the olfactories of the fair sex,

We indulge the hope that soon there will be an anti-snuff society formed, which will be a twin sister of our temperance society. We have no idea how many ladies in our city will take exception to this article; if all that use snuff were to get after us, we would call their name legion, but we are upheld in our actions by some of the most sensible mothers in town in entering a protest against a habit, the adoption of which by a girl is almost as much to be dreaded by a parent as is the first taste of liquor by his boy.—*Hopkinsville (Ky.) Dem.*

TEARS.

The power (or weakness) of abundant weeping without disfigurement is an attribute of deficient rather than excessive feeling. In such persons the tears are poured from their crystal cups without muscular distortion of the rest of the face. In proportion to the violence or depth of emotion, and the acute or profound sensibility of the temperament, is the disturbance of the countenance. In sensitive organizations the muscles round the nostrils and lips quiver and are distorted, the throat and temples swell, and a grimace, which but for its miserable significance would be grotesque, convulses the whole face. Men's tears always seem to me as if they were pumped up from their heels and strained through every drop of blood in their veins; women's, to start as under a knife stroke, direct with a gush from their heart, abundant and beneficent; but again, women of the temperament I have alluded to have fountains of lovely tears behind their lovely eyes, and their weeping, which is indescribably beautiful, is comparatively painless, and yet pathetic enough to challenge tender compassion. I have twice seen such tears shed, and never forgotten them: once from heaven-blue eyes, and the face looked like a flower with pearly dew-drops sliding over it; and again, once from magnificent, dark, uplifted orbs, from which the falling tears looked like diamond rain-drops by moonlight.—*Fanny Kemble, in Atlantic.*

AN ODD PERSON.

Some young ladies were one day talking about one of their friends. As he entered the room, he heard the terms "odd," "singular," and the like, freely applied to somebody. He asked and was told the name of the young lady they were speaking of.

"Yes," he remarked very gravely, "she is an odd young lady; she is a *very* odd young lady; I consider her extremely singular;—*she was never heard to speak ill of an absent friend.*"

If you have built castles in the air, your work need not be lost; that is where they should be. Now put foundations under them.—*Thoreau.*

Reading for the Young.

ALADDIN.

When I was a beggarly boy,
And lived in a cellar damp,
I had not a friend or toy,
But I had Aladdin's lamp;
When I could not sleep for cold,
I had fire enough in my brain,
And builded with roofs of gold,
My beautiful castles in Spain!

Since then I have toiled day and night,
I have money and power good store,
But I'd give all my lamps of silver bright,
For the one that is mine no more;
Take, Fortune, whatever you choose,
You gave, and may snatch again;
I have nothing 'twould pain me to lose,
For I own no more castles in Spain!

[*Lowell.*

FERNERIES FOR SMALL PEOPLE.

I want to tell all the boys and girls who are fortunate enough to live in the country how they can find some work that will be play too. Of course you all like work, when it isn't too hard, and play, whether it is hard or not, and if you can both work and play together, you will like to know how it is done.

You want a basket, as large as you can conveniently carry, white paper nicely folded inside to keep the dirt from doing any harm, and it would be well to take a small trowel, unless you are so careless that you will lose it, in which case you must dig with your fingers, because they are fastened on, and you cannot forget to take them home. If you have a long walk, you need a luncheon, and you might as well have one in any case. Go to the pleasantest woods you know, where there are tall trees and soft mosses, and, perhaps, a little brook running over the stones; and don't stone the frogs, if you see any; they have quite as good right there as you have. Before you begin to dig, it would be wise to eat your luncheon, then, that being out of the way, you will feel more like going to work. First, you want some rich earth; the best has a dark brown color, and you will be likely to find it under a maple or oak. If the first place you open has only light, sandy or clayey soil, don't say, "That must do; I can't find any better," but go to another place, and another, and yet another, till you find the best kind. You do not need a great deal; if you each fill your basket a quarter full, that will be enough.

Then you must look out for mosses. Take all the pretty ones you can find, except the kind that looks like a tiny, green star and is so delightfully soft to jump on; the little stars will shut up in the house and look as if they had gone to sleep. Be sure to get a variety, and to pick out all the bits of dirt, pine-needles, etc.; this takes a good while, and it is pleasanter to do it out in the fragrant, sunny woods than in the house; besides, mother will not like to have you bring so much dirt into her neat rooms.

After the mosses are clean, you must get the prettiest vines, leaves and berries to put with them, and be very careful to dig up the roots, for the poor things will die if you do not, and you want your ferneries to live. I think you will be surprised to find so many different shades of green and bright berries and graceful little vines hiding about under the trees; the more you get the better, especially of scarlet berries.

After you have all these, put in the ferns; they must come last, because you cannot put anything on them, in the basket, without breaking the delicate leaves. In some places you can find several varieties, and you should take the smallest specimens of each kind, unless they are very small indeed, because you will not have room to arrange large ones; besides, you will have more trouble in carrying large leaves without breaking them.

If you are near a brook, when your basket is full you may a sprinkle the ferns a little; then they must be taken home as soon as possible. Try which of you can walk fastest without breaking a leaf on the way; that will be something like running a race with a book on one's head; you have to be careful. Your pretty things will live all night if you put them in pans full of water but they look better when they are arranged at once. You will not enjoy them half as much if you tease somebody to take care of them as you will if you do it all yourself. It is not of the least importance if you have not a nice fernery with a glass case to hold your treasure; anything that has a hollow and can hold water will do; any glass dish, a soup-plate, even a saucer, or a tin pan, if you paint it; a shell is very pretty, but will not often hold much.

Put in earth enough to cover the bottom of the dish thickly and to make a little mound in the middle; then plant your fern roots, taking care that each one has earth all about it, but do not press down the mound too hard on the tender little things, and do not try to put many into one dish, for they cannot grow well when they are crowded. Lay the mosses gently over the earth, and push the roots of your vines and little plants down through the moss till they reach the soil. When they are all in order, sprinkle the whole affair, pour in as much water as the dish will hold, and put it where everybody can see it.—*E. E. Newman, in Am. Young Folks.*

THE ESCAPE OF SECUNDUS CURION.

Celius Secundus Curion, a zealous Lutheran, having dared to give the lie in open church to a Jacobin who had heaped on him the most odious calumnies from the pulpit, was immediately arrested by order of the Inquisitor of Turin. He was dragged from prison to prison, but he at last made his escape so cleverly that his enemies could only account for it by accusing him of magic. In order to exculpate himself from an accusation extremely dangerous at that time, he published an account of his escape in a little Latin dialogue, entitled "Probus," from which we select the following passages for translation:

"I had been shut up for eight days in my new prison," says Curion, "with my feet fastened to enormous pieces of wood, when, by nothing less than a sudden inspiration from Heaven, I was urged to supplicate the young man in charge of me to release me from at least one of my fetters. The other, as I pointed out to him, would be quite heavy enough to insure my safe custody. As he was merciful, and bore no malice against me, he at length suffered himself to be persuaded, and set one of my feet at liberty. He had no sooner left me than I set to work to carry out a plan I had already formed for my escape. I tore my shirt into shreds, and taking off my stocking and slipper, stuffed them with these rags till I had made a very fair model of a leg and foot. But though the form and contour of the flesh was there, you had only to touch the new limb to find that it was lamentably deficient in bone. What was to be done? I looked about everywhere, till at last my eye lighted o a stick hidden away under a settle. I seized it eagerly and soon fashioned bones for my leg; and then, hiding my real limb under my cloak, I sat calmly awaiting the success of my ruse. After a time the young man came in to pay me his usual visit and to ask me how I did. 'I should feel better,' I said, pointing to my dummy, 'if you would kindly fasten this leg to the fetter and let me give the other a rest.' He consented, and chained up my false limb with all imaginable care."

The rest is soon told. The prisoner waited till nightfall, and as soon as he heared his attendants snoring, quietly parted company with his fettered leg, undressed it, clothed himself again, and softly stole out of his cell, which no one had taken the trouble to fasten on the outside. Even then his difficulties were not at an end; but he at length found means to scale the outer walls of his prison and to regain his liberty.—*Library of Wonders.*

"BUT THIS WAS TOMMY'S, AND HE'S DEAD!"

As we passed along the street one day, we saw a little boy sitting upon the curbstone. He was about five or six years of age, and his well-combed hair, clean hands and face, and tiny but well-patched pinafore, indicated that he was the child of a poor and loving mother. As we looked at him more closely, we were painfully struck with the heartbroken expression of his countenance and the tears rolling down his cheeks. We stopped and, placing a hand on his head, kindly asked him the cause of his trouble. He replied by exposing to our view the fragments of a tiny toy—the figure of a cow.

"Oh, is that all? Well, never mind it. Step into the toy-shop here and buy another," and we dropped a fourpenny piece into the little fellow's hand. "That will buy one, will it not?"

"Oh! yes," said he, in a flood of grief; "but this was Tommy's, and—*he's dead!*"

The Puzzler.

BOTANICAL ENIGMA.—No. 1.

I am composed of 72 letters:

My 12, 10, 6, 2 is the "queen of flowers."
My 22, 52, 53, 3, 4, 27, 36, 47 is a pretty flower.
My 51, 13, 24, 42, 8, 55, 14, 31, 30, 41, 37, 39 blooms once in a hundred years.
My 20, 2, 18, 31, 70, 57, 59, 35, 70, 52, 30, 68, 69 is a very graceful tree.
My 49, 68, 65, 50, 66, 15, 60, 56, 71, 45, 11, 3 is a fragrant house plant.
My 38, 21, 57, 39, 64, 54, 25 is a wild flower.
My 31, 29, 9, 23, 52, 62 is a part of every flower.
My 48, 31, 23, 52, 46, 17, 52, 26, 63, 16, 34, 3, 43 are the most beautiful fruit tree flowers.
My 22, 7, 64, 51, 32, 1, 2, 53, 58 is something to feed canaries.
My 28, 2, 3, 52, 68, 22, 44 is suitable for Christmas trees.
My 22, 4, 51, 39, 18, 43 is a tropical plant.
My 68, 67, 22, 40, 36, 63 is a singular-shaped flower.
My 22, 61, 19, 33, 70, 31 is a plant kittens like.

My whole is a poetical description of June, by J. R. Lowell.

☞ Answer in two weeks. Eudora.

PUBLISHER'S SPECIAL NOTICES.

The Rural is a very good present to send to a friend, and it pleasantly reminds the recipient of the donor fifty-two times a year—this year fifty-three times. Any *subscriber* can send it to a relative or friend, as a present, at our lowest club rate—only $2.15, including postage.

Back Numbers of this Year (from Jan. 1) can be furnished to all new subscribers, but we shall not send them hereafter unless specially requested. Those who desire can begin with any number, however.

Select Your Premiums.—All persons entitled to Premiums will please designate what they prefer and notify us how and where to forward—whether by Freight or Express—if articles are not mailable.

The Best Paper, and the Best Premiums to Agents, is our motto. We ignore Chromos and all other cheap colored pictures, preferring to put our money *in the paper*, and in Premiums to Agents.

Act as Agent!—Reader, if there is no agent for the RURAL in your locality please become one by forming a club. *It will pay.*

At Our Risk.—You can remit by Draft, P. O. Money Order or Registered Letter *at our risk.*

News of the Week.

HOME NEWS PARAGRAPHS.

One of the clauses of the Cushman will is the following: "To a friend, Emma Stebbins, $1,500 yearly." This Miss Stebbins was the constant traveling companion of Miss Cushman. She is said to be a person of some literary attainments, and it is the general opinion of the friends of Miss Cushman that she will undertake to write a biography of the departed actress.

A new swindle, now extensively practiced principally in country towns, is the sale of almost worthless dry goods by trickery. A peddler calls upon a farmer and shows a large bundle of assorted cloth, and represents himself as the agent of a bankrupt firm in England. He says that under a special provision of the revenue laws, remnants in packages of not less worth than $150 each may be imported free of duty, thus saving about seventy per cent. The purchaser of a lot really pays double instead of half the value of the goods.

The flood in the Connecticut and Passumpsic rivers exceeds any rise since the great flood in October, 1868. All the lowlands and meadows north of White River Junction, Vt., to Barnet are under water. Wrecks of buildings, wood, bark, hay, etc., are constantly passing down. The toll-bridge at Piermont was swept away. The water was up to the chords of the bridges at Fairlee, Thetford and North Thetford. The station at Bradford was surrounded by water, and several stations near by flooded. The cattle-yards at West Lebanon were partially submerged. Several miles of the Connecticut and Passumpsic Railroad track between Bradford and Newburg were three feet under water.

The Ohio Legislature has passed a bill providing for the punishment by fine and imprisonment of all persons who get on or off railroad trains that are in motion.

The "heathen Chinee" has introduced a new industry in San Francisco—the manufacture of the genuine Chinese fire-crackers. Two factories, with a capital of $15,000 invested, turned out, last year, the value of $30,000; using $7,500 worth of raw material, and paying out $5,000 for labor.

A large number of counterfeit $5 bills on the First National Bank of Northampton, Mass., were detected in the New York banks recently. They have been only a few days in circulation, yet have become widely distributed, and it is evident that a large quantity has been issued. It is said that they are printed from the same plates as were the bogus lives of the First National Bank of New Bedford, which were issued two weeks ago. The picture on the right end is darker than in the genuine, and is blurred.

Jonah Titus of Providence, the oldest member of the Rhode Island bar, is dead.

The seventh annual report of the Bureau of Labor Statistics was published recently. Returns are given from 80,893 persons, 63,263 of whom are males and 17,630 females; 71,339 are of the "wage" class, and 9,554 of the salary class; 47,861 of the total number return 142,386 persons dependent upon them for support. From returns by employers for 254,993 employees, it is found that they amount to $118.39. On the other hand, 90 per cent. of males and 93 per cent of females gave the average yearly earnings of the former as $482.72, and of the latter, $198.76. The highest average of yearly earnings, for males, is found to be in Suffolk County, $576.19.

A substitute for the postal card, that is being considered by the Postoffice Department, is a stamped sheet (about note paper size), with gummed edge, to serve as both paper and envelope, and to cost two cents.

The Misses Logan and Board, young evangelists, have been giving Bible readings at the Hudson river towns.

The Hon. Newton Morse of Natick, successor of Winslow, the forger, from the Fourth Senatorial District of Massachusetts, has fled, having appropriated $3,000 of the town funds of Natick. He is said to have squandered large sums at faro.

An excellent quality of tea is being grown in Jasper Co., Texas.

The Centennial Commission has met and elected officers for the ensuing year. Gen. Hawley was again chosen President and Mr. Goshorn Director-General. Changes took place in the Executive Committee, the following being chosen:—Messrs. Goshorn, Corliss, Morrell, Boteler, McCormick, Beckwith, Loring, Kimball, Lynch, Latrobe, Atwood, Bernard, and Phillips. George W. Biddle was elected Solicitor.

The General Synod of the Reformed Presbyterian Church of North America held its meeting in Philadelphia. The Episcopal Convention met in Boston.

Trouble in Louisiana again. Bloodshed—negroes—military.

Late frosts have made the Ohio fruit crop a very dubious one.

The Boston City Council has reported adversely to the demolition of the old State House.

The season in Northern Vermont is reported very backward, owing to the heavy rains and freshets.

Wm. C. Austin, Deputy Marshal, has captured in Scott County, Va., five illicit distilleries, with over 10,000 gallons of mash and beer. He also arrested nine men engaged in distilling. Stony Creek has long been a place dreaded by the officers, where the distillers felt safe in defying them.

The sub-marine cable across Hampton Roads, which was broken a few days since by a vessel anchor, has been repaired.

Capt. McNally's men caught a party of Mexican raiders, while crossing the Rio Grande. They killed two and captured some stock.

Sixty members of the Boston Commercial Club have left for Philadelphia, where the annual dinner of the Club will be given. Gov. Rice is with the party.

Owing to heavy rains, little farming has been done in the country. Brooks and rivers everywhere are overflowing, and mills have been obliged to stop sawing. The Gulf ports are blocked with ice, which prevents the entry of schooners. It is believed that one result of the high water will be a fish famine for the next two years. The streams having overflowed their banks, the fish will spawn far in shore, where the eggs will be exposed when the water subsides.

The Grand Lodge of Pennsylvania of the Independent Order of Odd Fellows has adjourned after selecting Erie as the place for the next annual meeting.

Heavy damage by thunder storms is reported at Wheeling, West Virginia.

The Canal Investigating Commission met at the State Hall, Albany, N. Y., all the members being present, and considered the substance of two additional reports upon the canal frauds, which they will forward to the Governor in a few days. They also proceeded to the settlement of their final accounts.

Moody and Sankey have held a number of densely thronged meetings in St. Louis, and excited great religious interest among nearly all classes. They are now in Kansas City, where they will participate in the Sunday School Convention.

There was a terrible explosion in the mixing-house of the Atlantic Giant Powder Company's Works, 4½ miles from Drakesville, N. J. Frederick Johnson, the chemist, and Patrick Gallagher, a laborer, lost their lives.

A report just issued by the Examining Committee of the New Hampshire College of Agriculture and the Mechanic Arts respecting the recent examination, shows that there are at present in the institution twenty-nine students. More than one-half of the graduating class will make farming their profession, as has thus far been the case with fifty-two per cent. of all the graduates.

Robert Bonner has eighty thoroughbreds on his breeding farm near the county farm.

The General Assembly of the Presbyterian Church of the United States began its sessions in the Brooklyn (N. Y.) Tabernacle, May 18. About 400 delegates were in attendance. The morning session was occupied with a sermon by the Moderator of the last Assembly, the Rev. Dr. Edward D. Morris of the Lane Theological Seminary, on the "Past and Future of American Presbyterianism." At the afternoon session the election of a Moderator occurred, and the Rev. Henry J. Van Dyke, D. D., pastor of the First Presbyterian Church of Brooklyn, was chosen on the first ballot. Four clerks of the Assembly were also elected. In the evening a communion service was celebrated.

The Spring meeting at the West Side (N. J.) Driving Park began May 23d., and continued four days. The aggregate value of the prizes is $700.

The race against time by 30 mustangs, ridden by one man, ended in failure. The race was the result of a wager on the part of an old Californian that he could produce a man who would ride a distance of 305 miles in 15 hours, using for this purpose 30 mustangs. The first 10 miles were traveled in 26 minutes and 40 seconds, but it required 27 minutes and 20 seconds to accomplish the second 10. In riding the first 40 miles the rider changed horses 32 times, showing great agility in leaping from the back of one into the saddle upon another, and frequently meeting with serious difficulty because of the restive and vicious nature of the mustangs. Up to the 60th mile Parker rode with remarkable ease and grace, appearing only a little heated, and not materially fatigued. The weather proved unpropitious; the drizzling rain soaked the rider through and rendered the track very heavy. After Parker had made his 200th mile his motions were watched with intense interest. He was then 16 minutes behind time, and had been riding 10 hours and 6 minutes. At the end of the 226th mile Parker gave out and was unable to mount. He was completely exhausted, and was taken to the little hotel in the park. He suffered greatly from the effects of his undertaking, being blind and affected with nausea. The race closed at 3:27 P. M., Parker having been in the saddle 11 hours and 27 minutes. Mr. Hand now states that there will be another race, in which the attempt will be made to run 155 miles in 7 hours, using 25 mustangs.

FOREIGN NOTES.

Grave financial irregularities have been discovered among the Treasury officials at Madrid, and inquiry has been instituted which will lead to very disgraceful developments.

A town of 500 inhabitants in Syria has been converted to Protestantism. A chapel and a school-house have been built, and a preacher and teacher stationed there.

Dr. Aguilo Para, the new President of Colombia, was installed on the 1st of April. The Colombian Congress has voted $150,000 for the improvement of navigation on the Upper Magdalena River. In Peru the Government has failed to pay the first installment of the interest due on the purchase money for the nitrate establishments taken from private owners. Payment was to be made April 1, but the banks which were to advance the funds refused to make the additional loan required by the Government. Mr. John G. Meiggs has contracted for the working of the nitrate beds in Bolivia for 20 years, at an annual rent of $10,000. Great discontent exists in Ecuador. Dr. Borrero, the President, refuses to accede to the remodeling of the Constitution which Garcia Moreno gave them.

A private letter received in San Francisco, dated Honolulu, April 27, gives the following highly interesting extract: "The Zealandia brings stirring news from Samoa. The English ship Barraconta landed a force to add dignity to the captain's attendance at a conference of chiefs over the recent condemnation of Steinberger's vessel, and, thinking it a good opportunity, attempted to disarm the native forces. The result was much slaughter, and consequently the Barraconta shelled and destroyed the town, killing many natives, then landed and spiked the batteries and howitzers. All the English condemn the act of their captain, who is to be court martialed. Steinberger's brother is on the Zealandia."

For some time past the workmen in the Zoological Society's Gardens in London have been busily employed in the construction of a large temporary building, and an adjoining yard, intended for the reception of the Prince of Wales's living collection of Indian animals, which will be deposited there on his return to England. The collection is said to be extensive, containing nearly 150 mammals and birds, among which are four elephants, five tigers, two bears, one Cashmere deer, six other deer, and a very fine series of Himalayan pheasants. There were also living at the time the collection left Suez specimens of the Indian munis and gooral, or Himalayan chamois, neither of which animals has yet been introduced alive into England. Unfortunately the valuable armadillo died on the passage from India.

A British firm have completed for the Chinese Government an iron gunboat and supplied it with a 4½-inch Nevasour gun, which has such power that there is not an English man-of-war in the service that can resist damage from its shot.

A dispatch from Havana says that a party of insurgents in the jurisdiction of Sancti Spiritus attacked and captured a convoy of commercial goods and rations, killing the officer in charge. Another band of insurgents, numbering 500, captured a convoy consisting of twenty-three wagons. There are rumors of a great fight in the jurisdiction of Colon, but no particulars thereof have been received. Two hundred wounded soldiers are said to have been brought into Cardenas. In the jurisdiction of Cardenas an attack was made upon the large estate of Flor de Cuba by the insurgents, but they were repulsed. It is rumored that the Government will shortly increase the export duties on sugars and leaf tobacco.

A dispatch from Pesth says:—The Austrian Delegation has been engaged in discussing the estimates of the Foreign Office. Count Andrassy, in reply to questions, said: "I am now able to state that the peace of Europe will not be disturbed. The proposed reforms have been accepted by Europe and Turkey, and joyfully greeted by the insurgents, who now only desire guarantees for their execution. The present action of the Powers is directed toward the removal of obstacles preventing the accomplishment of the reforms." Count Andrassy said he was personally convinced that England would join in the agreement when the purely pacificatory intentions of the Powers become manifest. The result of the Conference at Berlin was that the Powers, setting aside all individual interests, had resolved to make the maintenance of European peace their guiding principle and to confer together on each case as it might arise. The Count declared that he would guarantee that no injury to Austro-Hungarian interests would result from the conference. He repudiated the charges of Austrian connivance in the insurrection, and opposed the idea of military occupation by Austria of the insurgent provinces. Austria, he said, in conclusion, had no enemies, stood on the best terms with all foreign countries, and might confidently anticipate that her efforts to defend peace would be successful.

A whole family in France has been poisoned by eating raw mussels gathered in places where an old copper-bottomed vessel lay. Boiling would have removed most of the poison.

During the past year 6,865 horses, mules and asses were delivered for consumption in Paris.

The "Urn Cremation Society" at Dresden has sent a circular to all other cremation societies in Europe, inviting them to send delegates to a congress which will be held at Dresden on the 6th and 7th of June. There will be one public meeting, succeeded by one held with closed doors, at the latter of which "experiments will be made." The process of cremation has more partisans in Holland than in any other country, and a Dutch Society, the headquarters of which are at the Hague, counts no fewer than 1,300 members. Similar societies have been founded in Germany, at Berlin, Dresden, Bremen, Hamburg, Breslau, Leipsic and Gotha, and the German adherents of cremation now publish three journals to advocate their views—the Sanitas, edited at Leipsic by Prof. Reclam, who invented the mode of incineration now practiced; the Medical Family Friend, published at Dresden; and the Correspondence for Encouraging Cremation, which appeared at Walburg.

THE MARKETS.

PRODUCE AND PROVISIONS.

NEW YORK, Saturday, May 20, 1876.

RECEIPTS.—The receipts of Produce for the week were as follows:

Flour, bbls	61,775	Molasses	—
Whisky	2,391	Rice, bbls	536
Corn meal, bbls	4,214	Cut meats, pkgs	9,790
Corn meal, bags	450	Lard, pkgs	8,623
Wheat, bush	390,050	Tobacco, hhds	1,497
Corn, bush	782,623	do. cases	3,317
Oats, bush	383,200	Butter, pkgs	23,920
Rye, bush	11,050	Cheese, bxs	13,426
Malt, bush	94,900	Cotton, bales	13,950
Barley, bush	11,550	Rosin	13,000
Beans, bbls	4,016	Spts. turp., bbls	2,686
Grass seed, bush	1,050	Dried Fruits, pkgs	160
Beef, pkgs	510	Eggs, bbls	14,800
Wool, bales	1,025	Peanuts, bags	1,738
Hops, bales	630	Leather, sides	22,970
Pork, bbls	2,025	Sugar, hhds	—
Tallow	1,517	Oil cake	9,329

HINTS TO SHIPPERS.—Pack produce as firmly as its nature allows; otherwise many items suffer in appearance, if not in quality, through the jostling incident to transportation. Do not mark packages with any material that will smudge. A good paint for marking purposes can be made of bichromate of potash and extract of logwood. Nailed cards are very insecure. For long lines of goods a marking plate or brand is preferable to ordinary lettering. At the time of shipment put a complete list of the lot into one of the packages if it can be done; but be sure to mail to consignee a full list, naming date, style of packages and contents. Aim to have each parcel of uniform quality as far as possible: mixing always injures sale. Roll butter should be wrapped in clean white muslin. Dressed poultry should be packed in well shaken dry straw. When poultry sweats in boxes straw-dust gives a mean look. Break off nail points from the inside of old barrels when they are used in order to prevent properly from tearing. Short cut dry straw is better for packing eggs than anything else. Try and avoid the arrival of summer items here on Saturday.

BEANS AND PEAS.—Exports of beans past week, 1,025 bbls.; since Jan. 1st, 25,391 do.; same time last year, 10,215 do. Exports of peas past week, 10,130 bush.; since Jan. 1st, 326,110 do.; same time last year, 197,400 do. Warm weather reduces the wants of medlums to nearly a jobbing demand and late prices are very dull. A round lot of the best would not go above $1.15; holders, however are not inclined to offer freely at that rate. Marrows fall off to $1,90 early in the week, but a fair shipping inquiry has revived them again and some marks are held above $1.95 free on board vessel. Prime Pea beans suitable for eastern cities are scarce and wanted. For white kidneys there is no call. Red kidneys are quiet, but as stock has become reduced, holders of choice are firm. Poorly cured red are not looked at. There is a fair demand for Limas. Canadian peas are more animated and close firmer for bulk. Green peas very inactive with a further decline. B. E. dull. We quote:

Beans—Prime pea, $1.30@1.35; fair to good, $1.00@$1.25; prime mediums, $1.15@1.20; fair to good, 90c.@$1.10; poor, 50@60c.; prime marrows, $1.75; fair to good, $1.50@1.60; prime white kid., $1.40@1.50; other, $1.15@1.30; prime red kidney, $1.30@1.35; other, $1@1.10; Limas (Cal.), $3.00. Peas—Canadian, bbls., free, $1.18@1.20; do., in bulk and bond, 95c@$1; green, $1.20@1.25; Southern B. E., 2-bush. bag, $2.65@2.70; split, ₰ bbl., $6.

BEESWAX.—There is a little better supply, but sufficient demand to give it a steady market. Southern quoted at 36½@37c.; Western, 35c.

Exports past week, none; since Jan. 1, 36,200 do.; same time last year, 62,500 do.

BROOM CORN.—Business continues very light, with prices unsettled.

We quote Brush, short green, 8½@10c.; hurl, green, 8½@10c.; green, medium, 5@6½c.; red and red-tipped, 3@4c.

BUTTER.—There is no special change in quotations. Most of the past week the sales of State have been at the inside line, but we look for full prices next week, especially for selections. There is a fair demand but some interruption is occasioned by the lack of uniform color. Some lots are arriving more or less streaked and the best trade will not touch them. Again parcels that would be called yellow last week are pushed aside in the endeavor to find enough of rich grass color such as is showing in a good many small lines. Careless seasoning condemns a good many lots. We know it is not easy to exactly hit the taste of all buyers but a little judgment would prevent the extreme of over-salting or washing out all of the seasoning. Speaking of color, packers in firkins should guard against putting up anything of a light tinge, as the trade that calls for firkins now will not use white or straw-colored at any price. Pails seldom exceed best tubs. In fact most of our grocery trade prefer the latter. Western butter holds up rather better than State. The retailers who have a quick trade are induced to purchase freely with prices so much in their favor, while its deep color (when natural) attracts other buyers. The Centennial does not as yet help our ordinary trade with Philadelphia, for the moment it is intimated an over supply there.

New butter, Pails, State selected, 28@—c.; do., other 23@27c.; creamery, 27@30c.; half firkin tubs, prime, 27@28c.; fair to good, 24@26c.; Welsh tubs selected, 26@27c.; Welsh tubs, prime, 25@—c.; fair to good, 23@25c.; Pails, Western creamery, prime, 27@28c.; fair to good, 24@26c.; Western tubs, dairy, good to prime, 24@—c.; fair to good, 18@20c.

Western factory choice, 24@25c.; do. fair to good, 18@20c.; poor, 17@21c. Some low grades of State, 15@21c. Old Western, 15@20c.

CHEESE.—Exports for the week, 16,928 boxes, showing only a slight movement as yet. Receipts have run somewhat larger, but they have been mainly of medium stock and skims. The fine factories do not accumulate materially, and are selling at 11@11¼c. The Liverpool dispatches, while not of a depressing nature, offer but little inducement to buy other than small lots.

New at 11@11¼c. for fine factory; 10@10¼c. for good; 9@9½c. for fair; do., half skimmed, 7@9c.; do., skimmed, 3@5c. Old, nominally as follows: State fancy factory at 12@12½c.; do. fine, at 11½c.; do., good to prime, at 10@11c.; do., fair to good, at 8@9½c.; do., poor to fair, 3@7c.; State farm dairy, good to prime, 9½@10½c.; do., fair to good, 7@9c.; western factory, good to prime, 9½@10½c.; fair, 7@8c.; poor to fair, 5@6c.

COTTON.—Export movement is still small and at easy prices. Closing prices are for May, 12@12 1-16c.; June 12 1-16@12 3-32c.; July, 12¼@12 9-32c.; August, 12⅜@12 13-32c.; September, 12 7-16@12 15-32c.; October, 12 5-16@12 11-32c.; November, 12 7-32@12¼c.; December, 12 7-32@12⅜c.; January, 12 11-32@12⅝c.

Quotations for spot cotton, based on American standard of classification:

	Uplands.	*Ala.*	*Orleans.*	*Texas*
Ordinary	8 11-16	8 11-16	8 11-16	8 11-16
Strict ordinary	9⅛	9¼	9⅜	9¼
Good ordinary	10 1-16	10 1-16	10 3-16	10 3-16
Strict good do	10⅜	10⅜	10⅜	10⅜
Low middling	11 3-16	11 5-16	11 7-16	11 7-16
Strict low middling	11⅜	11⅜	12⅛	12⅛
Middling	12⅜	12⅜	12 5-16	12 5-16
Good middling	12⅝	12⅝	12⅝	12⅝
Strict good middling	13⅛	13⅛	13⅜	13⅜
Middling fair	13¾	13⅞	13⅞	13⅞
Fair	14⅜	14⅜	14⅜	14⅜

Stained.

Good ordinary	8¾	Low middling	10⅜
Strict ordinary	9⅛	Middling	11⅛

DRIED FRUITS.—Apples have further demand from the West, but desirable lots are offering reservedly; generally prices very strong. Otherwise in this market business is limited to a few small job lots, and prices barely settled.

Apples—State, sliced, 10@10½c.; do., quarters, 10c.; Western quarters, 9c.; Southern sliced, 9½@10c. for prime; fair lots, 8½@9c.; Tennessee quarters, 8¼c. Blackberries, 10½@11c. Peeled peaches, good and prime Georgia, 14@15c.; do. fancy, 16@17c. Unpeeled peaches, new, 12@12½c. for halves, and 10@11c. for quarters. Plums, 30c. Raspberries, 27c. Cherries, 20@21c.

EGGS.—The market is gradually improving, and the receipts are expected to now fall off. A portion dealers are asking the advance with confidence, tion of the Western is not turning out well in quality. These are irregular. Southern do not give their former satisfaction. State eggs are in fair supply. Penn. and Lower Jerseys are mostly going to Philadelphia. Low prices for duck and geese eggs are working them out. The new quotations for Western eggs have ruled only for the past two days. We quote:

Near points, ₱ bbl., 16½@17c.; State and Penn., 15@15½c.; Western, prime, 14½@15c.; do. fair marks, 14@14½c.; Southern and Southwestern, 13½@14c.; Canadian, 14½@15c.; duck, 17@18c.; goose, 24@25c.

ESSENTIAL OILS.—Oil Peppermint, in glass, $3.75 ₱ lb.; in tin, $3.25. Spearmint, in glass, $3.50; in tin, $3. Wintergreen, $3. Sassafras, 55c. There are no changes to report in price or situation.

FEATHERS continue very dull, and prices for even the best sorts are nominal. We quote prime live Western geese, 52@55c.; mixed, do., 35@45c.

FLOUR.—There has been a liberal export demand and prices generally stronger. Quoted at:

Superfine State, $4.15@4.60; extra do., $5.05@5.30; superfine Western, $4.15@4.60; extra do., $5.05@5.75; No. 2, $2.85@3.60; extra round-hoop Ohio, $5.05@5.30; trade brands do., $5.35@7.00; white wheat extras, $5.80@7.00; St. Louis, $5.30@9.00; City Mills extra, $7.50@9.00; Southern at $5.10@5.35 for superfine; $5.10@6.25 for poor to choice shipping extras; $6.35@8.50 for trade and family brands. Corn meal selling at $2.85@3.30 for yellow Western; $3.50@3.55 for Pennsylvania; $3.50@3.55 for Brandywine. Rye flour at $4.75@5.10.

FRESH FRUITS.—Prime russets are lower; the market was not strong enough to bear additions from the over-stock of other cities. In this way Boston and Philadelphia have for a time broken the market. Strawberries are abundant enough to form a market item, and moderate prices keep them in motion; Marylands open very fine this season; first large instalments of Norfolk poor. Gooseberries quoted at $2.50@3 ₱ crate; not wanted. Cranberries are quoted as in our last; strawberries and rhubarb kill their sale locally. Peanuts steady, though quiet.

We quote:—Choice apples, $3.75@4.00; good, $3.00@3.50; fair mixed, $2.00@3.00. Strawberries, Norfolk, 10@20c.; Maryland, 15@23c. Peanuts—Virginia, ₱ bush., $1.60@1.70; Wilmington, $1.80@2.00; do. Tennessee, 95c.@$1.15. Hot-house grapes, ₱ lb., $1.50@2.

FURS AND SKINS.—Receipts are about all here for the season, and we know of nothing that will vary our recent revision of prices, which are as follows:

Otter, ₱ piece	$6 50@ 8 00	$4 00@ 5 50
Gray Fox	1 75@ 2 00	1 40@ 1 60
Red Fox	1 90@ 1 75	1 25@ 1 40
Black Bear	10 00@15 00	7 00@10 00
Brown cubs and yigs	4 00@ 5 00	2 00@ 3 00
Fisher	8 00@10 00	7 00@ 8 00
Mink, dark	2 00@ 3 00	1 25@ 1 75
pale	1 00@ 1 50	75@ 85
Muskrat, spring	28@ 30	23@ 25
winter	23@ 25	21@ 23
fall	18@ 20	16@ 18
Kitts	6@ 7	5@ 6
Beaver, ₱ lb.	1 00@ 1 75	75@ 1 00
Raccoon	68@ 80	40@ 55
Opossum	12@ 15	12@ 15
Skunk, black		75@ 90
striped		10@ 40
Wolf, mountain		2 00@ 3 00
prairie		75@ 1 10
Sheep, clipped		25
In wool		90@ 2 00

GRAIN.—Advices from the Continent of cold weather and unfavorable prospects have led to a sharp export demand for wheat, corn and rye, with prices generally higher and strong. Sales of wheat at $1.03@1.10 for No. 3 Chicago spring, so-called; $1.08@1.09 for rejected spring; $1.10@1.25 for ungraded spring; 1.18@1.19 for No. 3 Milwaukee spring; $1.20@1.22 for No. 2 Chicago spring; $1.23@1.25 for No. 2 Minnesota spring; $1.31@1.33 for No. 1 spring; $1.25 for No. 3 New York white; $1.20 for New York No. 2 spring; $1.35 for white Canada; $1.25 for No. 3 winter red Western; $1.45@1.52 for white Michigan. Rye at 83@85c. for Western; 95c. for white Canada; 92@95c. for State. Corn at 59@62½c. for mixed Western; 61c. for Western yellow. Oats at 34@42c. for mixed; 36@45c. for white Western and State.

GINSENG.—Southern, $1.15@1.20; Northern, $1.15@1.20; Seneca root, 75@80c.

HAY AND STRAW.—An active business has been reported in hay, largely in shipping grades; prices generally favor the buyers.

Bale hay is quoted:—Shipping, 85c.; retail quantities, $1.00@1.10; clover, 70@75c.; salt, 60@70c. Straw is quoted at $1.05@1.10 for long rye; 75@80c. for short rye; 60@65c. for oat.

Exports past week, 3,200 bales. Since Jan. 1st, 21,400; same time last year, 12,850.

HIGHWINES selling at $1.12.

HOPS.—Exports for the week have been 591 bales; these in good part go forward on owners' account, there being but little fresh export demand. Receipts are small, but in excess of the same time last year. Brewers are doing but little. It is most too early yet to get a decided idea to regard to the prospects for the new crop. The roots in most of the important districts have wintered well. We quote:

N. Y. State, 12@13c.; Eastern, 10@16c.; Wisconsins; 10@10c.; Yearlings, 8@10c.; Olds, all growths, 4@6c.; Californias (nominal), 15@18c., ₱ lb.

LEATHER.—Hemlock sole at 20@21c. for light; middle, 21@23c.; heavy, 21@23c.; good damaged, 18@20c.

MAPLE SUGAR.—The supply is not large, but the light demand keeps prices unusually low.

Choice new sugar bricks, 10c.; small, 11c.; fair, 8@9c.; old, 6@7c. Syrup, ₱ gallon, 75c.@$1, which is relatively lower than crystallized.

OIL CAKE.—Western brings $30 per ton.

POULTRY AND GAME.—Dressed poultry is scarce, but any extra call for it can be now supplied by city killers. These operators can of late years prepare stock so as to resemble the desirable near points, and the fact gives them quite a hold upon retailers. A little Eastern frozen stock is left, but it does not go above 17c. for turkeys.

We quote Philadelphia fowls at 19@21c.; spring chickens, 35c. for small slips, 28@30c. for small capons and 33@35c. for large capons.

Chickens, Bucks Co., good to prime, 18@19c.; Jersey, good to prime, 16@18c.; State, good to prime, 15@17c.; Western, good to prime, 13@15c.; fair to good, 10@12c.; poor, 5@8c. Turkeys, Jersey, good to prime, 18@19c.; State, good to prime, 16@18c.; Western, good to prime, 14@17c.; inferior, 7@10c.

The supply of live poultry is good, and the demand is brisk enough to advance prices. We quote:

Fowls, N. J., ₱ lb., 16c.; do. Western, 15@18c.; Roosters, 8@9c.; Turkeys, N. J., 13@15c.; do. Western, 13@15c.; Ducks, N. J., pair, $1@1.25; do. Western, 65@80c.; Geese, N. J., $1.75@2.25; do. Western, 75c.@$1.25.

Pigeons have been in large supply, but by working them off to other points dealers have been enabled to somewhat work up prices. English snipe are most out. Plover are coming from ice house. Long Island yellow-legged snipe quotable next week.

Wild pigeons, feathered or dressed, ₱ doz., 60@80c. English snipe, ₱ doz., $2.00@2.25; plover, ₱ doz., $1.12@1.25; sand snipe, 40@50c.; wild squab, ₱ doz., 90c.@$1.00; tame do., $2.50@2.75.

PROVISIONS.—Hog products generally have remitted a little from the late low prices. Trade is slow. Spot lots quoted at $20.85; June, $21; July, $21.20; August, $21.30; extra prime, $17.50; prime mess, $21.25. Bacon at 11¾c. for Western long clear; 12c. for city do. Western steam lard at $12.90 for spot lots and June; $12.72½ for July $12.85 for August. Stearin at 13¾c. for Western. Beef hams at $22@24. Tallow at 8¾@8¾c. Beef—Extra mess, $13; do. plain, $12.00@12.50; tierced at $21 for prime mess, and $23 for India mess. City extra India mess at $24 and Philadelphia mess at $23.

SEED.—Grass neglected; clover is quoted at 16¼@16½c. Timothy, $2.80@2.85.

REFINED SUGAR.—Quoted 8¾@9¼c. for soft yellow; 9¼@9¾c. for soft white; 10¼@10¾c. for crushed; 10¾c. for powdered; 10¼c. for granulated.

TOBACCO.—Export trade is quite liberal in Kentucky leaf, prices for which are stronger. Seedleaf moderately active.

KENTUCKY LEAF—NEW CROP.

Wisconsin	6 @ 8

VEGETABLES.—Exports of potatoes past week, 1,206 bbls.; since Jan. 1st, 77,653 do.; same time last year, 39,896; onions, since Jan 1st, 5,432 bbls.; same time last year, 1,275 do. Prime old potatoes are a trifle better; common not wanted. Bermudas are doing better; Asparagus coming from all points. Quotations for green stuff are subject to sudden fluctuations at this season of the year.

Norfolk now supplies green peas, others not wanted.

Early Rose, bulk, ₱ bbl., 97c.@$1; Peach Blows, $1.25@1.50; Prince Alberts, 75c.@$1.00; common, 50@75c. Bermuda, $5@6; Florida, $3@4. Cabbages, ₱ 100, $5@8; red, $7@11. Squash, Marrow, bbl., $2.25@2.50; Hubbard, $1.25@2.50. Russia Turnips, bbl. 50@75c.; white, 30c. Carrots, $1.00. Spinach, ₱ bbl., 75c. Charleston green peas, ₱ bu., 50c.@$1.50; Savannah, 50c.@$1.50. Southern cabbage, ₱ bbl., $1.25@2. Bermuda tomatoes, 5-quart box, 50@60; beets, 100, $1.25 ₱ crate. Mushrooms, ₱ lb., 60@75c. Rhubarb, ₱ doz., $1@2. Bermuda tomatoes, 5-quart box, 50@60c.; Bermuda onions, ₱ bush, 1.75@2. Florida string beans, $3@5. Asparagus, ₱ doz., $1.25@2.25, the latter for O. Bay. Florida cucumbers, crate, $2@4. String beans, crate, $1.50@2.50 for Florida and $3@4 for Charleston. Norfolk green peas ₱ bbl. $2.50@4.00.

WOOL.—Domestic fleeces sell slowly, but no further decline in price. California grades are a little more freely dealt to at easy prices, otherwise a dull market. Manufacturers are not disposed to purchase beyond urgent requirements. The recent failures tend to demoralize the market. Sales of XX Ohio fleeces, 40@41c.; X Ohio, do., 40@43c.; X Penn., 42½@45c.; pulled at 38@41c. for super; California at 19@25c. for the new clip; Texas at 17@22c. for the new clip.

ROCHESTER, May 20.—Flour market dull: spring, $6.75; amber winter, $7.00; white winter, $7.25; double extra, $7.50. Rye flour quiet at $5.00. Wheat lower; Milwaukee club, $1.25@1.30; amber winter, $1.20@1.25; white winter, $1.35@1.35. Oats, nominal at 35@40c. Corn quiet at 70@75c. Corn meal, $1.50@1.75. Butter, 22@24c. Cheese, 12@14c. Eggs, 13@14c. Lard, 14½@15c. Apples, bu., 75c.@$1.75. Potatoes, bu., 25@60@70c. Beans, ₱ bu., 60c.@$1.10. Mess pork, $23.50. Wool, 25@40c. Hay, $10@16. Straw, $6@10. Timothy seed, $2.75@3.00; clover, $9.50@9.75. Mill feed dull at $16 for shorts, $18 for shipstuffs, and $23 for middlings. Railroad Freights—Flour to Boston, 40c. ₱ bbl.; to New York, 30c.; to Albany, 25c. Wood, hard, ₱ cord, $8@9. Coal, $6.05@6.45 for stove.

COUNTRY CHEESE MARKET.

LITTLE FALLS, N. Y., May 20, 1876.

THERE has been some improvement in the market this week, owing to the better quality of the cheese offered. We have not, however, reached full-cream make, the best cheese on the market being every-day cheese, with the night's milk skimmed. For farm dairy cheese, every-day make, 85c, was paid; full-skimmed went at from 6 to 7c., according to quality.

The offerings from factories amounted in the aggregate to about 3,000 boxes, and sales were rather dull, though the market as a whole was more brisk than for the preceding week. The range of prices for factory was from 8 to 10c., the latter price being reached for extra lots of every-day make, with the night's milk skimmed. There were one or two lots reported at a fraction over 10c., said to be full cream. The market can hardly be considered settled, and prices will not be fully established until we begin to get full-cream cheese in quantity. Considerable cheese was sent forward to be sold on commission. The country roads continue to be in a wretched condition for travel, but, notwithstanding the difficulty of reaching market, there was a large representation from farm dairymen and factorymen.

The delivery of butter has fallen off and prices also. Sales this week have been made at from 22 to 23c. for the bulk, a few extra lots bringing 25c.

The weather has been favorable for grass, and some of the herds are being turned to pasture. Cows are reported to be in good condition and to be yielding fair returns in milk.

We have advices from abroad to the fourth week in April. Our London correspondent says there has been a good sale for all sorts of English and American cheese at previous rates. Dutch cheese is easier.

The prices are for extra American, 63@63s.; fine, 62@61s.; good, 56@60s.; secondary and common, 34@52s. English cheddar brings 80@90s.; Wiltshire double, 70@80s.; Cheshire medium, 36@56s.; fine, 76@80s.; Scotch, 66@70s. Dutch cheese—Edams, September make, 70@74s.; Goudas, 56@62s.; Derby shape, 56@62s.

Butter sells as it comes to hand, and at the close of the previous week's market there was not a pound in agents' hands. Normandy brings 116s.; Corks, 110@115s. No Canadian or American butter in market. Oleomargarine sells at 100@120s. ₱ cwt.

LIVE STOCK MARKETS.

NEW YORK, May 20, 1876.

RECEIPTS OF LIVE STOCK.

	Beeves.	Cows.	Calves.	Sheep & Lambs.	Hogs.
Sixtieth St.	4,929	58	3,846	3,032	000
Forty-Eighth St.	00	54	217	761	000
Fortieth St.	000	00	000	000	11,641
Harsimus Cove	4,806	00	000	7,375	8,103
Totals this week	9,735	92	4,063	11,768	20,044
" last week	9,846	46	2,769	17,823	24,775

BEEVES.—Trade on Monday last was extremely slow on a heavy run of horned cattle; to dispose of the herds, sales had to be effected at ½c. ₱ lb. less than the closing rates of the past week; quality from common to good, with a limited number of choice quality steers, a few of which were held over and the others slaughtered and shipped for England. Prices were at 9¾@12c. ₱ lb.; weights, 6¾@9¾ cwt. Wednesday, trade very slow on a moderate run of generally coarse but fat beeves; prices at 9½@11c.; weights, 5¾@8¾ cwt. Thursday, trade small at 9½@11c.; weights, 5¾@8¾ cwt. Friday the markets closed weak; sales at 9@10¼c.; weights, 6@8¾ cwt. Bulls on live weight, 4¾@5c. ₱ lb. Native steers, 8@11c.; grade, 11¾@12c.; a few top quality steers fetched 13¼c.; oxen, 12¾c.; Cherokee steers, corn-fed, 9¾@10c. Mixed herds, 8¼@10¾c.

COMPARATIVE RATES.

Quality.	This week. Cents.	Last week. Cents.
Good	12 @12¾	12 @12¾
Fair	11 @11¾	11 @11¾
Poor	10 @10¾	10 @10¾
Poorest	8 @ 9¾	8¾@ 9¾
Gen. selling rates	9¾@10¾	9¾@10¾

MILCH COWS.—On a better quality of fresh cows trade has been easier at advanced rates; 20 cows sold at $50@70 ₱ head; 3 at $55; 16 at $40@60; 7 at $60@75—calves always included.

VEALS AND CALVES.—Buttermilk-fed calves, quality poor, 4¾@5c. ₱ lb.; coarse lean calves, 5@8c. No smooth quality veals to hand. State calves, 4¾@8c.; Jersey, 6@7c.; Pennsylvania, 7@8c.; the demand was fair, and the markets closed firm.

SHEEP AND LAMBS.—Monday last trade generally slow; sheep at 6@7¾c.; yearling lambs, 8½@8¾c.; spring lambs, 9¾@13¾c. Wednesday, trade fell off ¾c. strong; sheep, 6@8¾c.; yearling lambs, 8c.; spring lambs, 9@14c.; quality superior to that received on Monday. Thursday, trade slow in sheep at 6@8¾c.; lambs, 9@13c. Friday, the markets closed weak; sheep at 6@7¾c.; lambs, in small lots, 9½@12½c. State sheep sold at 6@8c.; Michigan, 7@8¾c.; Kentucky, 7¾c.; State lambs, 9½@13½c.; Jersey, 9@14c.; Virginia, 9@13c.; State yearling lambs, 5½@8¾c.

HOGS.—One carload Ohio hogs, 129 head, average weight 184 lbs. ₱ head, sold at 7¾c. ₱ lb. City dressed remain slow of sale on a light run. Heavy hogs, 9c.; 180 lbs. ₱ head and downwards, 9¾c.; 160 lbs. do., 9¾c.; light pigs, 9¾c.

HORSE MARKET.—City trade heavy; high-priced valuable horses held on sale; 50 head of poor quality light harness horses sold at $25@95 ₱ head; 30 ordinary, $100@179; 11 head of coarse quality heavy draft horses, $120@210; 3 pairs do., $300@450 ₱ pair; 3 saddle horses, quality inferior, $150@200 ₱ head; 1 pony, $92; 15 roadsters, with moderate trotting action, $250@475 ₱ head; 170 horses arrived per Erie Railway, via Oak Cliff Station.

THE COATES LOCK LEVER HAY RAKE.

C. SEARS

Manufactured of the best wood and iron, and put up in the staunchest manner. Shafts and rake head extra strong; thimble skein axles; wheels high, well built and finished; seats easy and thoroughly braced. The teeth made of **Refined Cast Steel, Tempered in Oil**, and every one tested at the factory. They readily adjust themselves to uneven surfaces. **Every Tooth is warranted.** The springs double coil, made with the body of the tooth, much stronger and better than the small separate wire coils so often used in inferior rakes. The Lock Lever has an ingeniously-contrived patented joint, which holds the rake rigid and firmly to its work, while down, WITHOUT USING THE HANDS OR FEET.

Discharging the Rake is effected by simply giving the slightest upward motion to the handle of the lever, which, unlocking it, causes the **Driver's weight** to tilt the Rake and discharge the contents. A child can operate the Rake with ease. *It is easily regulated for any kind of ground.*

Twenty Acres per Day is a fair day's work with the **"Coates,"** and you can save enough grain from twenty-five acres of stubble to PAY FOR THE RAKE. Send for Illustrated Circular to the Manufacturers,

PERSONAL ITEMS.

PRESIDENT GRANT is 54 years old.

JOHN YOUNG, son of Brigham, has but one wife.

A SCULPTOR has been at work on a model for a pale cast of thought.

A CEMETERY is the last place in the world in which to look for a man.

WALT WHITMAN has written a poem—"The Prayer of the Canteen."

A CERTAIN man whose clothes shine from age thinks himself a polished gentleman.

DR. PEPPER is Medical Director at the Centennial. Dr. Pepper's report will be read.

AN editor wanted something from the pen of a farmer. He received a pig and a bill for $9.60.

THE Emperor William of Germany will not submit, when traveling, to be distinguished in any way from his retinue.

MISS PERRY, a lady lawyer, who graduated from Michigan University last spring, has recently won an important lawsuit in Chicago.

GOLDWIN SMITH wants to see the man who knows that there is a hereafter. Goldwin will some day think he knows him all too well.

ADMIRAL VERNON JACKSON died recently in England. He was the original of Captain Marryat's capital character of O'Brien in "Peter Simple."

MR. LANIER'S cantata would have been much better if the head and tail of it had been cut off and some other lines put in the place of the rest of it.

A FARMER in Berks County, Pennsylvania, has used the same scythe for thirty-five years, and expects to make it last until he is himself cut down.

SUCH American girls as have married Chinamen pronounce them excellent husbands. "John" does all the work, while his wife reads all the novels.

AN Ohio clergyman, praying in his church was interrupted by his dog, which trotted up the aisle and pulpit stairs and put his paws on his master's shoulders.

A CHEYENNE editor says the only way to treat the Indians there is to boot them out of town. Pshaw! you wouldn't Kickapoo-r fellow for nothing, would you?

LUKE, the jockey who rode Petrarch in the Two Thousand Guinea race at Newmarket, England, subsequently received an anonymous gift of £500, enclosed in an envelope.

ANNA DICKINSON cleared $700 by her opening night, and if she is a failure she has money enough to buy a spring hat and a new dress and go home looking real sweet.

THE 2,629th anniversary of the foundation of Rome by Romulus was celebrated in that city on the 23d of April, with an illumination of the antique monuments and relics.

THE young man who was offered a situation in a tobacco factory at five dollars a week, half of it to be paid in fine-cut, replied that he didn't chews to accept any such chores as that.

DON CARLOS'S horse, upon which he intended to make his triumphal entry into Madrid, has been put up at raffle in that capital. The proceeds are to go in aid of the wounded campaigners.

THE editor of the Rocky Mountain News is worth $560,000, and yet he labors away as if he couldn't afford two calico shirts. His wealth consists of notes of hand from raving Indians.

GEN. JOHN A. SUTTER, who owned the ground upon which California gold was first discovered, is now said to be a very poor man, whose friends are petitioning Congress to vote him a pension.

A PAIR of Indiana twins 50 years old, if we may believe the Chicago Times, want to pass themselves off as a centenarian. Debating society will please commence. We stand by the twins.

A MOUNTAIN of superior white chalk has been discovered in Idaho, and now, if a never failing spring is in close proximity, an enterprising man might start a dairy there without investing in a single cow.

A HARRISBURG man who boasted he'd never seen the horse that could throw him, was landed in a druggist show window five minutes afterward, amid a chorus "There's alight in the window for thee."

Now subscribe for the newspaper. An eminent physician says: One of the cheapest and most efficient chest protectors, when unexpectedly exposed to cold, raw winds, is a folded newspaper inside the vest.

AND now historians tell us that Montezuma was not such a huge fellow after all, but only a simple Indian Chief, minus marble halls, bags of diamonds, and mountains of gold and silver, just like the rest of us.

MACAULEY says of Mrs. Beecher Stowe: "I am glad that I met her so seldom, and sorry that I met her at all." And of her book (Uncle Tom's Cabin): "It is the most valuable addition that America has made to English literature." The value of the compliment to the book depends upon whether he read it before or after he formed Mrs. S.'s acquaintance.

OLE BULL has just returned from a most successful tour in Egypt, where, according to a promise made to the King of Sweden and Norway, he played on the top of the pyramid Cheops on his his last birthday, Feb. 5. Having accomplished this, he telegraphed to the King, who answered him immediately:

"I thank you for your telegram and rejoice in all your success. OSCAR."

"	Quinn's Money in the Garden...	3 50
"	Willard's Practical Butter Book	3 00

WILLARD'S PRACTICAL BUTTER BOOK costs but $1, and is the standard. Order it.
RURAL PUBLISHING CO., 78 Duane St., N. Y.

ANSWERS TO CORRESPONDENTS.

Alexis.—You want to know what we think of the assertion of a correspondent of one of our contemporaries, who says he "Has driven thousands of caterpillars from apple trees in less than thirty-six hours by putting sulphur in holes bored in their stems." Well, our honest convictions are the man, either innocently or designedly, intended to deceive; for if the worms did leave the tree, the sulphur in their stems had nothing to do with the desertion. But there is little use of trying to show some persons the absurdity of such remedies, for they are too ignorant of entomology and vegetable physiology to see it. The late BENJ. D. WALSH, in referring to a recommendation to use sulphur in the stems of trees for the purpose of destroying insects in them, said in derision, "Why not try jalap, rhubarb, and ipecac? But be careful not to give too large a dose of blue mass or vitriol, else you may salivate the trees."

M. C. S.—Purchase a copy of "White's Cranberry Culture," price $1.25, and read it carefully; then you will be able to determine for yourself whether it will be worth while to go into the culture of this fruit. Much depends upon the location and natural facilities for making the beds, and it may be after thoroughly investigating the subject you will conclude not to make the venture.

Alex. W.—For two light, slender-growing vines of rapid growth, we do not know of anything better than the American five-leaved ivy and the Golden-leaved Japan honeysuckle. They are both hardy, and the contrast in the color of their leaves produces a pleasing effect when grown side by side or the stems and branches intertwined. You can obtain the first from almost any wood or swamp and the second from our florists for about 25c. or less per plant.

A Subscriber.—If you are not familiar with the common Sea Wrack, or sea weeds in general, it would be better to get some one who is, to gather it, than to run the risk of getting the right thing yourself. Perhaps your nearest druggist or some botanist in the neighborhood could assist you.

Farmer.—If you think the cow is afflicted with a disease of the eyes popularly called "hooks," and they must be cut out in order to effect a cure, we must say emphatically, *Don't do it.* It is very likely that the membrane at the inner corner of the eye—called the "haw"—is inflamed through some injury, which may be allayed by bathing in cold water or covering with wet cloths. But avoid surgical operations in such cases, as they are pretty certain to cause permanent injury to the animals.

J. W. N.—"Barry's Fruit Garden," (new edition,) is the work you need, as it contains all the information necessary on the subjects of selection of varieties or kinds of fruits, with plain, practical information in regard to the propagation and culture of all the various fruits adapted to the climate of New York and other Northern States. Price, $2.50 post paid.

Portchester.—Old meadow sod turned over in spring or fall will usually give a good crop of corn without any addition of manure. A little plaster or ashes applied to each hill soon after the corn comes up will of course assist growth very much. We would advise sending orders for fruit trees direct to some of our leading nurseries. The price named for the trees as asked by your local nurserymen, is too high for ordinary kinds. Send for a catalogue of some other establishment and see what they charge for the same.

S. S. S.—You cannot do better than consult "French's Farm Drawing," price $1.50. By reading this book you can doubtless find just the information desired. After understanding the general principles, the application is comparatively easy.

D. W. Hoyt.—If all farm and road wagons designed for carrying heavy loads had tires four or five inches wide, it would be a great benefit to the highways as well as being much the best for the farm. But the change from the narrow to the wide tire increases the cost of wagons, and this is one of the principal reasons why so few farmers adopt this style, which are so common in England, where the law makes their use compulsory. Such changes however, will come in, as the country grows older and the people more wise.

Mrs. Hibborn, State Center, Iowa.—Juniperus Venusta is the name of the evergreen of which you send a twig. It is, indeed, as its specific name tells, a charming, graceful tree. Nurserymen offer it from one to two dollars each according to size. *J. excelsa stricta* is the name adopted by Gordon—but it is best known among us by that first given.

L. E. B., Cherokee.—One ounce of watermelon seed will answer for 75 hills. Plant a dozen in a hill—thin out to four. The Russian American is said to be a cross between the Persian and the Mountain Sweet raised by Bayard Taylor—but it is very late.

Fertilizers.

These goods are analyzed by Professor G. A. Liebig of Baltimore and other eminent chemists, and their quality guaranteed. Send for Circular.

Paints, &c.

Traveler's Guide.

JOHN CRUMP, - - Proprietor,
Chestnut St., cor. 15th,
PHILADELPHIA.

CALIFORNIA.

Have you any thought of going to California?
Are you going West, North or Northwest?
You want to know the best routes to take?
The shortest, safest, quickest and most comfortable routes are those owned by the Chicago and North-Western Railway Company. It owns over two thousand miles of the best road there is in the country. Ask any ticket agent to show you its maps and time cards. All ticket agents can sell you through tickets by this route. Buy your tickets via the CHICAGO & NORTH-WESTERN RAILWAY for San Francisco, Sacramento, Ogden, Salt Lake City, Cheyenne, Denver, Omaha, Lincoln, Council Bluffs, Yankton, Sioux City, Dubuque, Winona, St. Paul, Duluth, Marquette, Green Bay, Oskosh, Madison, Milwaukee, and all points west or northwest of Chicago. If you wish the best traveling accommodations, you will buy your tickets by this route, and will take no other.
This popular route is unsurpassed for Speed, Comfort and Safety. The Smooth, Well-Ballasted and Perfect Track of Steel Rails, Westinghouse Air Brakes, Miller's Safety Platform and Couplers, the celebrated Pullman Palace Sleeping Cars, the Perfect Telegraph System of Moving Trains, the regularity with which they run, the admirable arrangement for running Through Cars from Chicago to all points West, North and Northwest, secures to passengers all the COMFORTS IN MODERN RAILWAY TRAVELING. *Pullman Palace Cars* are run on all trains of this road.
This is the ONLY LINE running these cars between Chicago and St. Paul or Chicago and Milwaukee. At Omaha our sleepers connect with the Overland Sleepers on the Union Pacific Railroad for all points west of the Missouri River.
For rates or information not attainable from your home ticket agents, apply to
MARVIN HUGHITT, Gen'l Superintendent. W. H. STENNETT, Gen'l Passen'r Agt.

THE PALACE HOTEL TRAIN
BETWEEN
NEW YORK AND CHICAGO,
via Cleveland.
Leaves Erie Railway Depot, foot of Chambers St. New York.
9:00 A. M., Daily except Sunday. Drawing-Room Sleeping Coaches through to Chicago; but one change of day cars.
7:00 P. M., Daily. The Palace Hotel Train to Chicago. Drawing-Room Sleeping Coaches and Pullman's Hotel Dining Car, through without change; but one change of day cars
The only line running Hotel Dining Cars out of New York. A ride of nearly a thousand miles without leaving the car to eat, drink or sleep!

MOORE'S RURAL NEW-YORKER became a household word and power in the land long before we quit "going to school," and, perhaps, needs no comment from us; still "its memory is ever fresh and green," and is renewed by its appearance every week, brimful of *good things* as ever. We are glad to announce that our predictions in the January number are being more than fulfilled. We have sent it more than *five hundred* names, and we learn that subscriptions have been pouring in in like proportions from all parts of the country, despite the hard times. Long may it continue to be what it is—a power for good in the land.—*Agent's Friend.*

Wit and Humor.

SPARKS AND SPLINTERS.

"THE blessed man that preached for us last Sunday," said Mrs. Partington, "served the Lord for thirty years—first as a circus rider, then as a locust preacher, and last as an exhauster."

"BROTHER, why don't you ask the stranger to pray?" "Because," reprovingly observed a deacon, "this ain't no place for practical jokes. That man's the President of a gas company."

A SKATING rink accident is thus described by a Kentucky reporter:—"She struck out; couldn't turn; started for the ceiling; shouted, 'Don't you look;' turned a hand-spring, and then sat down."

"COME, Pete," said a merchant to a gentleman of the colored persuasion, "what'll you put that load of wood into the cellar for?" "In de fuss place, my name is Peter, sir, secondly, I'se a profeshnal carpet cleaner and whitewasher; furdermo,' I doesn't compete for sich jobs, sah!"

"WHICH is the deepest, the longest, the broadest and the smallest grave in this churchyard?" said a pedestrian to his companion, while meditating among the tombs at Esher. "Why," replied he, "it is that in which *Miles* Button is buried, for it is Miles below the sod, miles in length, miles in breadth, and yet after all, it is but a Button-hole."

Consumers Importing Tea Co.,
No. 8 Church Street,
P. O. Box 5,509. New York City.

This is a combination of capitalists to supply the consumers of Teas throughout the United States on the mutual principle.

We have experienced agents in all the best districts of China and Japan to select Teas especially for our trade.

We expect every consumer of Teas to render us all the assistance they can in carrying out our enterprise, as we make a specialty of SUPPLYING CONSUMERS ONLY (and allow no middlemen to make any profit on our importations), which will enable us to supply them with Teas at prices lower than have ever been known, and of those fine qualities that seldom reach the interior, being sold only to the large cities and among the very wealthy.

Hoping the consumer will take an interest in our enterprise, and send at once for a circular with full explanations of how to proceed to obtain our goods, we remain,

Most respectfully yours,

Consumers Importing Tea Co.,
No. 8 Church St.,
P. O. Box 5,509. New York City.

Entered, according to Act of Congress, in January, 1874, by the Consumers Importing Tea Co., in the Office of the Librarian of Congress, Washington, D.C.

WHOLE No. 1375.

NEW YORK CITY, JUNE 3, 1876.

PRICE SIX CENTS.
$2.65 PER YEAR.

[Entered according to Act of Congress, in the year 1876, by the Rural Publishing Company, in the office of the Librarian of Congress at Washington.]

The Centennial.

THE WOMEN'S PAVILION.

DIRECTLY in front of and opposite the Government Building, and northwest of Machinery Hall, stands an irregular wooden edifice painted in sober tints, and at each of the three portals, in as many languages, is painted the legend: "Let her works praise her in the gates." This is the Women's Pavilion. The illustration on this page gives a very correct idea of the structure. The house and its exhibits is under the direction of the Women's Centennial Committee, of which Mrs. GILLESPIE is the President. The moneys necessary for the success of the enterprise were raised by voluntary contributions, concerts, etc., and great praise is due the President in this connection as those who should have been most heartily enthusiastic—the women of the land—have shown but a lukewarm interest in the scheme.

The interior is, however, light, airy, and well adapted to display woman's work to the best advantage. But a modicum of the exhibits are yet in position, owing mainly to the delay of the ship "Supply," which has at last arrived from abroad with a precious cargo, the contribution of women of other lands. The cases at present litter the floor in a chrysalis state, but in a short time ladies will have an opportunity to make notes of the progress of women in the arts and sciences from the time of PENELOPE to date.

The first impression, I think, will be one of disappointment, but when we recollect that the best display of practical female industry, textile fabrics, is in the Main Building, and that the notable results of the Philadelphia Female Schools will be shown in the Pennsylvania Educational Building, it will be seen that the Pavilion is not exactly representative after all, and, except as an amiable and worthy enterprise on the part of patriotic ladies, I see no particular reason for its being.

The walls are well filled with paintings, engravings, &c., and there are some meritorious examples of needle-work, embracing richly embroidered fabrics and a voluminous display of Japanese apparel, which is a practical demonstration of how not to do it, if you seek the æsthetic in your dress. The Lowell Industrial Schools make a creditable display, and the N. Y. Cooper Union Art Schools are not behind in meritorious work.

Madame JERICHAN of Copenhagen, contributes quite a number of pictures and the information that she "paints crowned heads," which may account for the fact that royalty never looks badly about the eyes after gentle vinous exhilarations. There are displayed, also, 74 patented inventions which will, doubtless, surprise many who think woman is not inventive. They are mostly in the domestic line, consisting of dish-washers, mangles, bedsteads, a frame for stretching and dyeing curtains, an ironer, and "darning made easy;" males have found no difficulty in doing that, and its practice is so universal that a patent seems superfluous. There is also a safety mattress combining comfort and the preservation of life. In times of distress at sea, the distressed are recommended to throw it in the water and—decide if it would be prudent to follow after it. The wax flowers and the Centennial Woman's Banner are quite perfect in their way, and not the least interesting feature is a loom worked by women. Telegraphy is shown to be a branch of women's work, and a paper, "The New Century for Women," is written and set up by women in the building. The press work is relegated to man, as the stronger animal. It would be impracticable to enumerate the many articles that will, without doubt, commend themselves to the peripatetic female visitor, but those of our readers who can give but a limited time to seeing the wonders of this vast Exposition, would not be recreant to their duty if they passed the Woman's Pavilion by the way.

CENTENNIAL CORRESPONDENCE.

PHILADELPHIA, May 27th, 1876.

I HAVE striven, in previous letters, to buoy the channel so clearly that inexperienced navigators would sail as smoothly as in familiar seas. In doing this it has been necessary to omit any mention of the Exhibition, except incidentally; but in devoting so much space and time to what appertains to the physical comfort of the tourist, I should not like to have RURAL readers infer that these letters are merely intended for a guide book; on the contrary, when I shall have filled with good advice those of you who will see the Exhibition, I hope to "do" the buildings in order, and give full and particular descriptions of all that is remarkable and in any way interesting. We will not follow the custom of the Chinese and attack the delicacies of the repast before demolishing the solids.

HOW TO SEE THE EXHIBITION.

intelligently, and with the greatest lasting profit, becomes, therefore, a query of vast importance. I believe it is quite incredible for those who have not been on the grounds to realize the spasm of mental imbecility and utter helplessness that seizes one as he looks around on the acres of interesting places to be seen, and reflects that life is short and he has only two eyes; the result of which is, that the tourist drifts along aimlessly, soon becomes fatigued, and finds, to his disgust, that the legs move quite independently of the will, and have a bad habit of making circles about one locality, bringing up at the place from whence you first started. Meantime you look at various things as if you were passing in a balloon, get confused ideas, and finally your tired brain and body combine in the conclusion of Sir CHARLES COLDSTREAM, that there's nothing in it; and you feel as if you had expended time and money in vain; seen a mob of unfortunates similarly afflicted, that America is *the* country of the Globe; that you would give as large a pile of gold as you saw in the Main Building, if you were only home, thoroughly rested, the cobweb daze brushed from your aching head and ready to make a rational start once more.

If, perchance, you avail yourself of the Rolling Chair, you are trundled about quite as aimlessly, (if you have no definite plan) and the motive power being an indifferent citizen of the Republic, thinks he has performed his duty if he gets you over a goodly number of acres in the allotted time. This is the "having eyes, and ye see not" plan, and the one most generally adopted.

To say that this is all wrong would be merely to echo the sentiment of sensible people, as an Exhibition of this character is nothing if not educational. I would advise, then, in the first place, that before leaving home you procure a good Centennial Guide Book and a complete Catalogue of the various Centennial buildings. The Guides issued by either PORTER & COATES, Philadelphia, or HUBD & HOUGHTON, New York, are excellent. The Catalogues can be had only in Philadelphia (JNO. R. NAGLE & Co.). Study these carefully, that you may have a perfect idea of the location of buildings and their contents. You cannot fully appreciate this advice unless you disregard it, and unhappily find yourself in a sea of trouble on the grounds. As, to attempt to do this then, would only lead to wearying confusion. Conclude at once that it is beyond the power of human indurance to examine *everything thoroughly*, even though you remained through-

1776. WOMEN'S PAVILION. 1876.

out the entire term of the fair, and, like the wise person I assume you to be, select one or more departments in sympathy with your inclinations or previous study, and promise yourself to do them so efficiently that your absolute stock of knowledge may be thereby increased. Then, to get a good, general idea or outline of the whole, take a day, or week if you can, and devote it to "skimming." It will surprise you to find how quickly and smoothly things fall into place, and by the aid of your special, thorough knowledge many things, otherwise without meaning, will almost explain themselves. This is happily illustrated in science. If you are a specialist, it is at first amazing to view the tons of books you are supposed to have to read; but as soon as you have mastered principles, it becomes quite as much a matter of wonder how so many books on the same subject could have been written. Repetition is necessarily a large element in books and sight-seeing. As this Exposition is a comparative museum on a grand scale, it may at once be seen how nicely this analogy is carried out.

If your bent is Agriculture (with which I assume you to be quite familiar) you will get the bearings of Agricultural Hall from your Guide Book map so perfectly that you can find it as easily as you could your barn. Once there your fancy may direct you to the Implement Display. Knowing the principles that should govern mowers for instance, you will have marked on your Catalogue all the exhibitors of that class of implements, and never again, perhaps, will the opportunity occur to form such a just estimate of what, in your opinion, constitutes the perfect mower. Such knowledge is wealth as well as power, and you will never regret the outlay by which you gained it; and so on through all practical departments. The manner in which various countries treat their cereals, as illustrated in A. H. is of itself information of the most curious and useful character. I could extend the list indefinitely, but your catalogues, carefully studied as suggested, will furnish abundant hints.

As to the ornamental, I would advise a modified plan of the above system. In your catalogues of the Main Building you will find enumerated the gist of all that is beautiful in art.

If you attack art on the "subject," principle as herein recommended, and not on the hurly-burley "object" plan, you will accomplish wonders. There is scarcely a Nation represented that does not illustrate their national way of treating the same art, hence in your comparison of one subject you exhaust the exhibit of every nation illustrating that subject, which saves time, labor, and confusion, besides leaving a distinct impression.

I will illustrate my idea by taking Pottery—a subject I would recommend, as you kill, in your researches, several quite gigantic birds with one stone. If you are not familiar with ceramics, it would pay to read up on the subject before you leave home. An encyclopedia, or access to a fair circulating library, will put you in possession of the fact that pottery is one of the oldest and most beautiful of the arts; that by its aid we have gained most of our knowledge of old and extinct peoples; that Scripture has been mainly indebted to it for the authentication of many of its facts; and, that the history of its progress is in almost every instance the history of a people in art, culture and refinement. Here, then, is a sufficiently wide field for the most ambitious.

It would be well to particularly note the meaning of Pottery, Porcelain, Fayence, Majolica, Terra Cotta and Ceramic, as, if you do not, like Banquo's ghost, they will constantly rise before and plague you not a little, and the explanations of exhibitors will be about as intelligent as sanskrit to an ape. I would especially attract you to the English display to view the most exquisite creations in this department, and it may well excite your admiration when you reflect that all this is the outcome of the common delft ware, and that leads you to the fact that the ware was so called because it was first made by two sturdy Dutchmen who emmigrated from Delft in Holland, where the potteries were famous, and the wares not at all what we imagine by delft. The fact that Majolica is purely Saracenic in its origin, takes you at once to the fact that had it not been for those so-called barbarians we could not boast of our present culture, as when they rescued it from oblivion, Europe was banishing much that makes life pleasant, and doing it, too, under the sacred name of religion. Here, you see, is history in its broadest sense, as well as art. Knowing this, you may then compare the efforts of a score of countries in producing the identical ware, and form your judgment of their intellectual caliber as well as manual skill,

I think that if the Exhibition is studied in this way, the visitor will leave it with a stock of ideas as gratifying to himself as they will be astonishing to his less sapient neighbors, and he will also have laid the foundations of knowledge that may grow hereafter just in proportion to his inclination and industry. YOUNG RURAL.

CENTURY BLOSSOMS.

A VIRGIN MARY of colossal dimensions is among the statuary in the French collection.

THE great demonstration of the National Division of the Sons of Temperance will take place June 12.

ORGANIZED parties of visitors to the Centennial Exhibition will leave Europe shortly, one from Italy being mentioned.

A SIGNAL service office completely fitted up and in operation will be an interesting part of the United States Government display.

ALL the trees and shrubs exhibited by James Veitch & Sons of London, have been presented to the Fairmount Commission for the park.

A PIANO section has been organized near the eastern end of the Main Hall, in which the principal manufacturers are largely represented.

PUGET SOUND, Alaska, sends an Indian carving 40 feet high—a specimen of the wood of the region and of the skill of the Kulonsh Indians.

THE Jacquard loom, from Coventry, England, by which the process of weaving silk of the most elaborate patterns will be illustrated is now ready for work.

THE large model intended to represent the quantity of gold (£30,536,246,106) which has been produced by New South Wales is placed in position.

THE grand display of cotton velvets from Hanover attracts great attention. But on what ground? A cotton ground that velvet is made on, of course.

FAT men and people with tight boots will be gratified to learn that there are only thirty-eight miles of walking required to obtain a full view of the Centennial.

FORTY tents have been put up intended for the accommodation of the officers of the United States Army and employees assigned for duty on the Centennial grounds.

IT is stated, as one reason why the Exposition should not be opened on Sunday, that it "would be a flagrant breach of the well-settled law of the State of Pennsylvania."

A PHOTOGRAPH of Halliwell's unique portrait of Shakespeare has been sent from London. After the Exhibition it is to be given to some museum or library in the United States.

AN original painting of George Washington, by Stuart, presented by him to the Indian Chief cornplanter, and now owned by William Wilkins, will be placed in the Washington Memorial chamber of the Centennial Historical Department.

WHEN Russia fully unpacks she will exhibit enough malachite in vases, tables, chimney pieces and blocks for building houses to make us wonder that we much esteem the same beautiful mineral for earrings, studs and sleeve-buttons.

A MUSICAL contest will take place during the month of July between bands and orchestras from all parts of the country. These performances will be succeeded by competive performances of chamber music; and Handel's "Te Deum" will be given by all the singing societies of Philadelphia on the Fourth of July.

BARNUM says he could pay all the municipal expenses of Philadelphia, giving every poor family a barrel of flour, and lay up half a million, if all the drink money in that city in one year were paid over to him. Very well; why doesn't he buy up all the saloons and make it certain that all the money would be paid to him for his great philanthropic experiment?

AN immense chandelier, 24 feet in length, having a spread of 14 feet, and weighing 4,000 lbs., has been hung in the Art Gallery. It is manufactured of crystal and gilt in the Renaissance style, of a special design, to accord with the interior design of the building. Twenty large four-light brackets, of a style to match this chandelier, are being put up by the same firm.

Field Crops.

POTATO EXPERIMENTS.

A MR. MAULE of England has been making experiments with the object of endeavoring to arrive at certain fundamental principles in which a cure for the potato disease may be found. Some of these are extremely interesting not only in their bearings upon the disease but as likely to lead to new discoveries of practical value to the potato grower.

Mr. Maule in his first experiments considered if we could give a European foliage and constitution to the South American plant we should so strengthen it as to adapt it to the conditions under which it grows in Europe, and thus avert disease. Acting on this impression, he, as early as 1846, crossed the potato with Solanum Dulcamara and S. nigrum, and raised a batch of seedlings. This experiment was so far successful, but it was not so as regards Mr. Maule's principal object, for, he tells us, all the seedlings "partook of disease as much as their parents." Not disheartened by this result, but reflecting on the matter more and more, Mr. Maule determined to try the effect of grafting. In his former experiments he had endeavored to inoculate the potato with the hardier properties of the Bitter-Sweet and of the black Nightshade by means of cross-breeding; he now tried to bring about the same result by grafting. If, reasons Mr. Maule, a hardier foliage can be given to the potato its liability to disease will be lessened.

His photographs show, first, a spray of Solanum nigrum grafted on to a shoot of the potato. On the underground branches of this latter, a tuber was formed in the ordinary way. That tuber must presumedly, but not necessarily, have been formed by the aid of the leafage of the Solanum nigrum. It remains to be seen what this tuber will produce, and this is a point to which we look forward with lively interest.

Next, we have a case where a portion of the potato was grafted on to the Bitter-Sweet, or woody Nightshade, "Solanum Dulcamara." In this case tubers were formed on the potato shoot in the axils of the leaves, a position in which they may occasionally be found where no grafting has taken place. These tubers, having received their sap through the roots and stock of the Dulcamara, may, however, be assumed to possess some of the qualities of the stock. Lastly, and most interesting of the whole, we have a case where the Potato shoot was, as in the preceding case, grafted on to Solanum Dulcamara, and from the roots or underground shoots of this latter, tubers were formed, exactly as in the case of the potato in an ordinary condition. Here, again, we await with great interest the result and fate of these potato tubers produced on Dulcamara roots. But whether Mr. Maule's anticipations as to relative immunity from disease be realised or not, it is impossible not to see that in his hands the process of graft hybridization has received a most important confirmation, supposing the facts to be rightly interpreted.

Further particulars as to Mr. Maule's ingenious experiments may be found in the London Gardeners' Chronicle of the 22d ult., from which we glean the above. *Solanum nigrum* (the common Nightshade) and *Dulcamara* (Bitter-sweet) are found in the Northern and Western States. The first has jagged leaves, white flowers with yellow anthers, bearing black, poisonous berries. The second has shrubby, sub-climbing stems, blue flowers and red berries also somewhat poisonous.

CULTURE OF PUMPKINS.

W. H. WHITE, the well-known agriculturist, still holds on to the good old practice of raising pumpkins for stock, and he writes to an agricultural paper, giving his experience, as follows:

I remember how, in my younger days, a good supply of nice yellow pumpkins was produced by every farmer, furnishing a vegetable which found a place in domestic cookery as well as a goodly supply for milch cows, fattening cattle, hogs and other stock. Why the product is less prized at the present time (if it is less prized) I am unable to say; I only know the fact that pumpkins are less cultivated than formerly, in large sections. Probably the more general introduction of the squash as a substitute in domestic and family use, is the principal cause of lessened culture of the pumpkin. The squash, being so much preferred for a table dish, lessens the desirability of the pumpkin for similar purposes. Still the latter is the more sure and easily grown crop, when treated similarly. Pumpkins were always planted among corn, and as a rule there was an equally good crop of each, as if grown alone, and I find that similar results may be had now with good culture. Perhaps our corn cannot be planted as close in the row where pumpkins are planted among it as where alone, but the quality of the grain and fodder is superior to the close planted, and the yield in bushels per acre, is nearly or quite as great: and then we have several tons of pumpkins, which are excellent food for any kind of farm stock, and the following year no difference will be perceived in lessened product, by any successive crop in the rotation.

I prefer to put in the pumpkin seed by "sticking" them after the corn is planted and begins to come up, then I can distribute the pumpkins as I choose over the field. A good way is to stick the seed in every other row, and every third hill in the row, or more space can be given if desired. This mode of culture infers that a dwarfish, or rather low growing variety of corn is cultivated, such as is grown in our New England towns.

As an exclusive crop, the writer has grown and seen cultivated, small patches of half to several acres, with quite uniform success, and there is little doubt but that this might prove a paying crop in the vicinity of a good market, or as food for stock. As a feed for cattle and farm stock during the fall and winter, the pumpkin is not duly appreciated. They supply a most valuable food when grass fails from frosts and cold. For cattle and feeding purposes the old-fashioned yellow seems to be the more economical, as the product per acre is larger, but where the crop is produced for culinary use as well, the sweet or sugar pumpkin is preferable, it being thicker meated, according to size, and very much finer grained and flavored than the former. Seed can be obtained from any seedsman.

BARLEY AS HOG FEED.

D. A. COMPTON, writing to the Weekly Tribune about hog feed says:—As corn is frequently scarce and dear at the time hogs need it most, permit me to say a word in favor of barley. It should be sown on rich, dry land, as early as possible—land occupied the year before in corn or potatoes is preferable. It is a most excellent crop to seed down with, as it does not shade the ground to such an extent as most other crops. Two bushels per acre is about the right quantity to sow. As soon as the barley is fairly up sow two bushels of plaster per acre. When fully ripe cut with mowing machine or scythe, and let it get perfectly dry; then rake into windrows, draw in, and thresh at once. Ground and soured it makes the cheapest and best hog-feed I have ever used. It is also excellent boiled or steamed with pumpkins or roots. The straw makes good fodder and bedding. The great beauty of the crop is its cheapness and earliness, coming just at the time when required most. By giving hogs the run of the orchard and feeding barley as recommended, I find no difficulty in making early spring pigs dress over 300 pounds by Christmas. Corn-fed pork has a strong flavor, resulting from the acrid oil contained in the grain—a flavor not admired by any except Gentiles of the old type. Hogs intended for family use should be fed on ground barley, buckwheat, or oats for at least three weeks before slaughtering, to improve the flavor of their flesh. That corn alone makes solid pork is all bosh. As we have but one life to live here, let us have the best to eat that can be had, especially when the best is the cheapest.

DID TOBACCO COME FROM AMERICA?

A GERMAN iconoclast, says the Newark Daily, maintains that tobacco was familiar to the Old World before the year 1492. He claims to have found two mentions of the weed antedating the discovery of America. First—according to Sale the Koran contains a prophecy of Mahomet couched in these words:—"In later times there will be men calling themselves Moslems, but they will be Moslems only in name, for they will smoke *tambaco*." Second—In the writings of a Rabbinical author who lived before Columbus occurs a passage which Buxtorf translates thus: "The Persians eat *tabhaki* without salt." The verb in this passage (*achal*) signifies not only "to eat," but also "to drink." And very many Oriental nations say "to drink tobacco" instead of to smoke, this phrase reaching so far east as Japan. Among the wares imported into Alexandria during the reign of the Emperor Commodus was one indicated by the name Duakkha; very similar to the name Tuakko, applied to tobacco by the inhabitants of the Mosquito coast and many Caffirs, while the name among the Cochin Chinese is Tuakhan. The narghileh, or water pipe, furthermore, is found represented in the ruins of Nakshi Rustun, an ancient city of Persia.

VERMONT BEAUTY POTATO IN ENGLAND.

A CORRESPONDENT of the London Garden speaks enthusiastically of the Vermont Beauty potato which is worthy of note inasmuch as American sorts, do not as a rule succeed any better in England than the English sorts do here. In speaking of the above named variety he says:

"This has proved here to be a most excellent late-keeping variety; to-day I have had a dish of it cooked, and I have never eaten a better potato. I mentioned some time ago that this is one of the best of the American kinds, aye, and of English sorts, too. It is also a handsome potato; that coarseness both in haulm and root, so general in the American potatoes, is quite wanting in Vermont Beauty. Its comparative freedom from disease, its short haulm, heavy crop, and early ripening and late-keeping properties all contribute to make it one of our best garden potatoes. It has the clean, smooth surface of the best of English-raised potatoes, and in many other respects leaves them a long way behind. Snowflake kept along with Vermont Beauty is not nearly so good."

FARMERS, HAVE A HOBBY.—Farmers, as well as other people, should have a hobby, and the best kind of a one is some particular crop under cultivation. It makes no difference what it is—corn, potatoes, or wheat—but push some one or more with all your might.

Dairy Husbandry.

CONCERNING MILK AND FEED.

DEAR RURAL:—Put me under an everlasting obligation to you by answering the following queries, which I am very anxious to know:—In order to get 150 quarts of milk daily, how many cows will a man be required to keep, of what breed, and at what daily average cost per cow, supposing that he buys all his feed? Also, what is the smallest possible space that said number of cows can be kept in with due regard to their health and all necessary exercise? Any other information or suggestions bearing on the subject will be gladly and thankfully received.—GEO. JACKSON, *New York City.*

The above letter was unfortunately mislaid, or it would have received a more prompt answer. The questions, however, can be properly discussed at any season.

The average dairy cow, taking the good and poor together in all the dairy herds of New York, makes a yield of from 1,800 to 2,000 quarts per year. It is generally put at the former figure, as there are many poor cows and many herds that are kept poorly. There are herds of from 20 to 30 cows that make a yield of about 3,000 quarts per cow during the year. This would be at the rate of 10 quarts per day on an average for 300 days, which would allow the cows to go dry 65 days. Good cows not unfrequently make a yield of from 15 to 20 quarts per day each for four or five months after "coming in milk." The Dutch, or Holstein, breed are noted for the large quantity of milk which they produce. But there are good cows of every breed, and if milk simply be the object—without regard to breeding in order to keep up the herd—we should say that selections could be made from the common cows of the country, or from grade animals with a dash of Holstein, Short-Horn or Ayrshire blood, that would give satisfactory results and at much less cost than to resort to thoroughbreds. If ten to twelve *extra good* cows are selected, they ought to make a yield of 150 quarts per day, on an average, for four or five months, and perhaps longer; but there is so much difference in the capacity of cows for milk and the time during which they will "hold out" in their milk, that it will be found difficult to state with exactness the least number to produce the quantity of milk named. The usual way with those running milk dairies is to have the cows come in milk at different seasons, so that as the milk begins to fall off, the cows failing or "drying up" are replaced with others "fresh in milk."

As to the cost of keep, that will depend upon locality or on the cheapness of the different kinds of cattle food. A cow not in milk and fed upon hay alone will consume on an average from 20 to 25 pounds per day. If she is giving a large quantity of milk, she will require—say, six pounds of wheaten bran and three pounds of oaten meal in addition to the quantity of hay named. The Germans put the ration of a cow giving milk at the rate of 30 pounds of good meadow hay per day. When we speak of hay as a ration, it must not be supposed that everything bearing the name of hay is to be taken. Good hay consists of a variety of nutritious grasses, cut when in bloom, cured in the best manner and stored in good order. Much of the hay employed in feeding cattle is defective, having been cut when the grass was too far matured, and, therefore, containing a large proportion of woody fiber, or perhaps it has been badly cured, exposed to rains which have washed out much of its nutritive elements. If we assume, then, that 25 pounds of the best hay, 6 pounds of wheat bran and 3 pounds of oat meal per day be sufficient to keep the cow in good condition while yielding the rate of milk named, we shall find the cost of keep to be as follows:—For 25 pounds of hay at $20 per ton (city price), 25 cents; for 6 pounds of bran at $1.20 per hundred, 7 cents and 2 mills; 3 pounds ground oats at $1.50 per hundred, 4½ cents—amounting in all to not quite 37 cents per day. Of course other kinds of ground grain may be substituted, or the proportion of hay lessened and the ground feed increased, according to the cheapness with which each may be obtained, from time to time. We have mentioned bran and oat meal because they are good milk-producing foods. A writer in a late number of an agricultural journal says that WILLIAM PYNCHON of Springfield, Mass., President of Hamden Agricultural Society, has a cow that averaged last year thirty quarts of milk per day through the month of June, and twenty-three quarts a day from July to October, her feed being a peck of bran twice a day, with grass and corn fodder. Bran will weigh from 12 to 16 pounds to the bushel. Another large milker is mentioned that was fed 4 quarts of rye feed and 2 quarts of corn meal per day, together with plenty of good hay. The amount of hay the latter consumed during the year was about five tons.

If the cows are to be fed green grass or other soiling crops duri any portion of the year, the cost of keeping would depend so much upon locality and circumstance that no satisfactory estimate could be made, probably, to meet the case of our correspondent without more specific description than is given in his letter.

If the cows are to be kept near the city, where hay and grain are the chief or main articles of food to be depended upon, an effort should be made to provide rations of some kind of roots, carrots, mangolds, potatoes, or the like, which do not affect the flavor of the milk. These will promote the health of the animals, and will also serve to keep up a good flow of milk. These rations could be made to take the place of a part of the dry fodder or meal, and often at no increase in cost of keep.

Now, as to the smallest space needed for ten or twelve cows, in order to give them the necessary exercise for health, etc. Our ideas in regard to this matter are that the cows should have a yard of pretty good size connected with the stable, where they may be turned daily. An acre would be quite small enough for the purpose to meet our views. Perhaps a much smaller space—a half acre—could be made to answer the purpose if the animals were carded daily and the herd were divided so that each portion in turn have the run of the yard. Those who advocate and have practiced soiling urge that cows can be kept in health by being confined within narrow limits and not allowed to roam in pastures; but so far as we have observed, the space allotted for exercise is larger than that we have named. If proper attention be paid to cleanliness of stables, to ventilation and freedom from filthy surroundings, and if the animals be kept clean and daily carded, they can be kept healthy in a smaller space than where these points are neglected.

CONCERNING SWISS CHEESE.

IN discussing the points of difference between the qualities of Swiss cheese as made in America and in Switzerland, a correspondent of the Utica Herald—a native of Switzerland, but now residing in this country—gives some explanation in that paper in regard to the cause of this difference. He insists that the cheese made in Switzerland is necessarily superior in that peculiar flavor and palatableness which are the chief characteristics or this kind of cheese. In the first place, he attributes a peculiar sweetness and flavor to the milk from the grasses and herbs on which the cows grazing on the lower Alps feed. He says:—"Those who have traveled in Switzerland will remember our beautiful dark-green meadows, alongside of numberless brooks and rivers, and encircling the sky-blue waters of some sixty smaller and larger lakes, feeding upon the everlasting snow and ice of our central mountains. They know that short, fragrant hay and grass, almost stunning with its odor, and growing along the sides and tops of our lower Alps. They will remember that sweet, powerful milk of our Alpine regions, not "white as snow," but perfectly yellow with cream, coloring and flavoring matter extracted from mountain herbs and prepared by the wonderful chemical apparatus of our stout, fair-looking and finely-coated cattle. It is not the "curd" only which forms a good cheese; it is a balsamo etheric principle, too, contained and dissolved in the milk, and coagulated and precipitated together with the curd. This principle, unknown in its constitution as it is, undergoes different changes during the "ripening" process of a cheese and turns out at last that peculiar taste and flavor by which different kinds of cheese are to be distinguished and valued. This is a chemical process completely analagous to that taking place in curing young wine, and differs only in the products finally obtained."

The curing process in Switzerland, he says, differs considerably in space of time in different localities. In Ementhal Valley this time ranges from five to six months; in Gruyere, Val de Pns and Unterwalden, from six to eight months. The Gruyere cheese is cured at a low temperature. At Gruyere, he says, there are natural cavities in the rocks surrounding that village. These cavities, though small, are used as curing rooms, having a natural temperature, never changing beyond 44 to 48° Fahrenheit. They are completely dry, having a perpetual, gentle blast from different slits all over the walls and running out probably from other cavities inside the mountains. It is accounted to that peculiar formation of these natural curing rooms that Gruyere cheese cannot be made elsewhere, though milk and method of cheese-making are as good anywhere else in Switzerland.

Exactly the same method of curing cheese can be followed at Roquefort, Depart, Aoeyron, France (*fromage de Roquefort*). There are a number of such cavities opening to the north (*les grottes au Delmul*), which cost in outfitting about 12,000 francs, and, though small and limited in space, they were sold in 1857 to the present proprietor for 215,000 francs. The curing time at Roquefort, he says, lasts from eight to ten months, the grottoes having an average temperature of 41 to 42½° Fahrenheit.

It will be observed in this description that the temperature of the cheese while curing is very low, as compared with the curing processes adopted in America. And we have heard it suggested that something of the value of these grottoes for curing the cheese was due to the presence of ammonia, which has a peculiar influence on the curing process. We have given these statements as the Swiss view of the matter, but we are hardly prepared to admit that, with the requisite skill in manipulating the milk and the proper method of curing the cheese, any better quality can be made in Switzerland than in this country; for we have mountain pastures here as well as there, while the Jersey cow upon these sweet upland grasses will yield quite as rich milk as the Swiss cattle. The Swiss take great pains with their cows, treating them very kindly and giving them the best care in every respect. This, with the clean, sweet water, the low average temperature of the climate and the nutritious grasses, has undoubtedly an important influence in producing good, healthy milk. In care and kindness to stock, many of our dairymen would do well to take pattern after the Swiss.

A MODEL DAIRY COW.

AND now Orange County, N. Y., takes the credit of having a famous cow. According to a correspondent of the Turf, Field and Farm, one SAMUEL MARVIN, living near Oxford Depot, in said county, has in his herd of 35 one small cow, purchased out of a Western drove, that gave last year, from Jan. 6, 1875, to Jan. 6, 1876, six tons eight hundred and eighty-two pounds of milk. Now, this makes 12,882 pounds of milk, which, if it had been converted into cheese at the rate of ten pounds of milk to one of cheese, would amount to 1,288 pounds, which, even at the low price of ten cents per pound, would come to $128.80. But if her milk had been made into butter at the rate of 25 pounds of milk to one of butter, we should have over 515 pounds, amounting, at 30 cents per pound, to $154.50, besides all the skimmed milk. Cows like this are evidently intended for "hard times," when dairy products fall to a low figure, as the increased product more than makes up for the depreciation in price. The writer says the statement of the yield of milk is no guess work, but is taken from Mr. M.'s farm book, and can be verified by *affidavit if necessary*. As to her feed, during the winter months she got one scoopful of soaked wheat bran and two and a half quarts of meal each morning, and a scoopful of brewers' grains and two and a half quarts of meal each evening and all the hay she would eat. When on grass she was fed two quarts of meal each day.

The following is stated as her record, which is certainly a remarkable one:

	Lbs.	Milk, quarts.	Per qt., cents.	Total.
Feb. 6 (31 days).....	42	21	4¼	$27 67
To March 6 (28 days).	42	21	4¼	24 99
April 6 (31 days).....	40	20	4¼	26 35
May 6 (30 days).....	40	20	4¼	25 50
June 6 (31 days).....	40	20	3¾	20 25
July 6 (31 days).....	36	18	3¼	17 55
Aug. 6 (31 days).....	36	18	3¼	18 13
Sept. 6 (31 days).....	36	18	3¼	18 13
Oct. 6 (30 days).....	32	16	3¼	15 85
Nov. 6 (31 days).....	32	16	4¼	21 08
Dec. 6 (30 days)	28	14	5¼	22 05
Jan. 6, 1876 (31 days).	20	10	4¾	15 06
[Or gave in 365 days 6,441 qts. milk; sold for.				$252 61

Dairymen who think they are getting fair returns when a cow yields 400 pounds of cheese or 150 pounds of butter per year will do well to study the above and consider what the possibilities are of a model dairy cow.

ARTIFICIAL BUTTER IN ENGLAND.

THOSE who have kept the run of the English dairy markets for the past year will have noticed that the much-despised oleomargarine, or artificial butter, has often sold for a much better price than genuine butter of American and Canadian make. There is no deception practiced in this matter in the markets of London. The oleomargarine is quoted as such; it is well known to dealers as artificial butter, and it is placed by the dealers in competition with the genuine article, customers being left to decide for themselves as to the merits of each and that which suits their taste best.

On the 21st of February American and Canadian butter sold in London, according to the quotations, at from 90 to 125 shillings the cwt., while oleomargarine at the same time brought 90 to 130 shillings the cwt. On the 28th of February the highest price for American and Canadian butter was 130 shillings, and the same price was reached for oleomargarine. Jersey butter on the 21st of February brought from 100 to 148 shillings, and the same price on Feb. 28. So it would appear that the manufacture of oleomargarine, or artificial butter, has been brought to a tolerable degree of perfection, or that American and Canadian butter is quite inferior. And it may be remarked in this connection that 130 shillings per cwt. is about the highest point at which American and Canadian butter has been quoted in London for two or three years past. We have never been partial to oleomargarine butter, and should prefer to select our supplies for the table from the genuine, old-fashioned dairies. We have always advocated that oleomargarine butter should go upon the market under its own name and should not be used to adulterate the genuine article; and while strongly advocating these points, we have not felt disposed to misrepresent facts concerning its manufacture, or to interfere in any way with the legitimate rights of those who are putting this article before the public in a proper manner. It has been said that the oleomargarine factories have been using impure and filthy fats in their manufactures; but no proof has been presented to show that any factory has been engaged in such work. On the contrary, so far as we can learn, the greatest cleanliness and care is taken in the manufacturing, while nothing but good, wholesome fat has been used. If it could be shown that refuse and improper material were used, thus sending abroad unhealthy food, we should be among the first to condemn its manufacture and urge that the factories be closed.

The London Grocer, in discussing this question in a recent article, says:

"Butter is fat from cow's milk; margarine is butter from cow's fat; no analyst can tell the difference. The known chemical analysts of London and Paris certify that margarine is chemically butter, and as a food it is equal to and will do all that is required of cream butter. We are indebted to the late Emperor of the French for the discovery and introduction of margarine as an important article of food. It will spread on bread and dissolve in the mouth, and, as it does not turn rank, it is now largely supplied to the French navy.

"Its consumption in this country is large, taking the place of the repacked foreign, as also third, fourth and fifth Cork Crane inspected butter (which, by the way, the Cork farmers say never came out of their dairies). It is sold by all the London wholesale houses, who, as also the retailers, well know what it is. As to the charge of venders not putting their names on the packages, it is not the custom for foreign butter to have the shipper's name on the packages."

KEEPING MILK AND BUTTER IN CELLARS.

EDS. RURAL NEW-YORKER:—I wish to acquire through your valuable paper information in regard to keeping milk and butter in a cellar where the bottom has been grouted.—A SUBSCRIBER, *Skaneateles, N. Y.*

REMARKS.—Milk or butter may be kept in a cellar the bottom of which has been grouted, and with good results, if proper attention be given to ventilation, drainage and temperature. When the ground is not of a character to afford natural drainage, drains should be laid so as to carry off all accumulations of water liable to occur at any time at the bottom of the cellar, and this should be done before grouting. By so doing, dampness from the floor is avoided, as well as impurities from stagnant water under the grout. If milk is to be kept in the cellar for the purpose of getting the cream and for butter making, means must be taken to have the temperature of the room as low as 60° Fahrenheit. Unless some one of the devices now in use for reducing the milk to a low temperature be employed, such as the large pan system, where flowing water is carried under the milk, or where the ice system and its modifications are adopted, there should be good ventilation to carry off stale air or noxious gases, as milk absorbs taints that will prove injurious to the butter.

We have seen excellent results from milk cellars having grouted floors, the walls being nicely plastered with water-lime cement and the floors made smooth and level with the same, and presenting the appearance of an immense block of stone.

We should not advise butter and milk to be kept in the same apartment. A butter cellar should always be kept by itself. It should be properly ventilated and used for no other purpose than for keeping butter. And so with the milk cellar; it cannot be used for storing vegetables, or for the meat and soap barrels, or for fish and other family provisions. Milk and butter are dainty aristocrats in their nature. They are extremely fastidious about coming in contact with filth and anything having an unsavory odor, as such contact speedily demoralizes them; and when they once become tainted, they go on from bad to worse, apparently having no disposition or power for reformation. So the dairyman should be careful and not introduce them to bad company.

FRESH GRASS AND SALT.—COWS in spring, when first turned out to pasture, require salt more frequently than at any other season, but in the hurry of spring work they are very likely to be neglected. The best way to insure a supply is to put a quantity in a box under cover, or where the animals can at all times reach it without assistance. In this way all danger from neglect through the carelessness of laborers will be avoided.

Industrial Implements.

THE PHILADELPHIA LAWN MOWER.

Nothing in the whole range of landscape gardening is more pleasing to the sight than a well-kept lawn. It maintains about the same relation to the ordinary grass plat that silk does to fustian. As nations advance in civilization their fancy for skillful gardening increases, and it incontestibly affords us one of the most delightful occupations in the range of out-door employments. What Americans have but recently come to regard as a distinctive beauty of the landscape—a fine lawn—has for centuries been the pride of the English. Such is the assiduous care and labor bestowed by the Briton on his grass plat that English lawns have become famous. Perhaps no spot on the globe can compare with the velvety turf that surrounds Windsor Castle. The recipe for a similar lawn is composed of two ingredients—plenty of labor and a good lawn mower; and man's inventive genius has striven and succeeded in lessening the labor by the improvement of the lawn mower. This implement is now used in nearly every country, and we may add, with great satisfaction, that the majority are of American manufacture.

HAND LAWN MOWER.

The makers of the popular "Philadelphia Lawn Mower" are, with their usual enterprise, among the first in the field this season, with new varieties of and improvements on this favorite machine.

As is our custom, on the appearance of improvements in agricultural machinery, we give in this issue two illustrations of an improved "pony" 30-inch cut, and a 6½ inch driving-wheel "hand" lawn mower, made by Messrs. Graham, Emlen & Passmore, Philadelphia, Pa. The pony mower is easily handled, compact, strong and durable,—the gearing is boxed, and with the exception of the shafts and foot board, the machine is made entirely of iron and steel, and cuts while turning either to the right or left. It weighs, complete, 350 lbs.

Of the hand mower, five sizes of the style illustrated are made. The size of the lawn must always be taken into consideration when deciding what to order. For small lawns or city grass plots the 12 inch and 14 inch are sufficient, but for general purposes, and where the lawn covers one-eighth of an acre or over, the 16 inch is the best size. Where the ground is smooth and the grass is cut every week, the 18 inch and 20 inch sizes are used to advantage.

To begin to enumerate the many styles made by this firm would be a work of supererogation, but we may say to those interested in the subject, that for light summer reading, where the illustrations please as well as instruct, we know of worse books than the little free pamphlet of G. E. & P.

THE ITHACA STEEL TOOTH HORSE RAKE.

Gradually but surely we see Darwin's theories exemplified, and the "survival of the fittest" not only operates on species but extends its influence to mechanics. The progress from the hand rake to the old revolving rake was as radical, as the advance to present high standards has become. It would seem that inventive ingenuity could no further go.

To discuss the importance of having an implement of this nature on the farm would almost be an absurdity, as no farmer worthy the name, (and surely none of the readers of this journal) would for a moment admit that it was not among the most essential helps to successful agriculture. Day by day the agriculturists of this country are being impressed with the great importance of farming scientifically, to the end that the land may be made to yield its utmost, and the loss of revenue caused by shrinking values, counterbalanced by increased productiveness. To do this, improved machinery must be employed, as in no other way can our material sails be filled by the wind of prosperity, and the ship that we all expect arrive, heavily laden with the blessings of this life, into the port of abundance.

In hay rakes, as in good breeding, the test is simplicity—accomplishing the end in view by directness, and a lopping off of redundancy. The perfectly bred person is natural and unobtrusive, the best hay rake is unostentatious, and so simple that we always wonder how perfection could have been so successfully boiled down, until the implement looks as fragile as a centipede and is in reality as strong as a whale. The Ithaca Rake, long and favorably known in the State of New York, is among the most popular implements made. It has been improved for the season of 1876, and its various makers say it is perfection in raking hay and stubble. The rake is made of the best material, steel teeth tempered in oil, which work independently. The teeth are held firmly to the surface when necessary, by applying the foot to the hand lever, leaving both hands free for driving.

The improvement consists of an attachment to the lever by means of which the load is discharged with but little effort to the operator and the teeth are raised above the cleaners by moving the hand lever to a point even with the side of the operator. The singletree is attached to forward part of the curved lever underneath the cross-bars, so that the draft of the horse acts simultaneously with the action of the operator upon the lever. This rake was exhibited at the Grand World's Fair at Vienna, by the Wheeler & Melick Co., and gained the *Medal of Merit*.

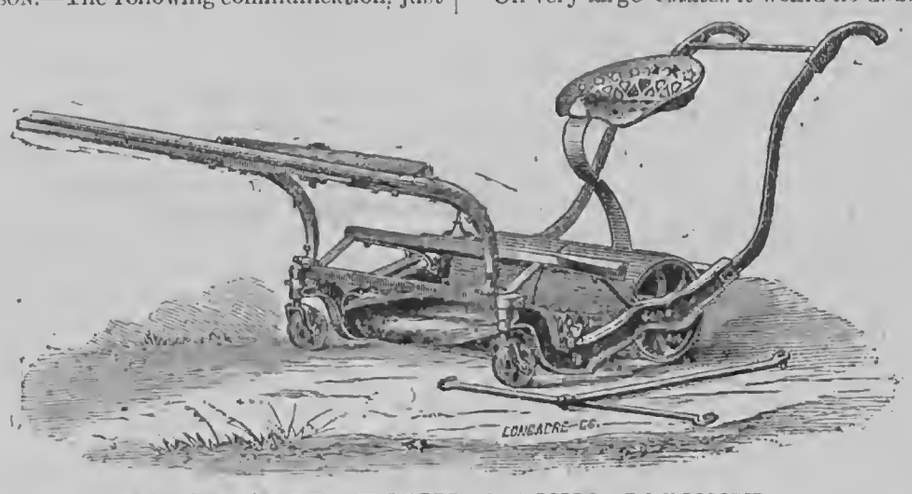
Catalogues and other information concerning this implement will be sent free on application by addressing either the Wheeler & Melick Co., Albany, N. Y., Williams Bros., Ithaca, N. Y., or Abbott, Brew & Co., Cleveland, Ohio, who manufacture the rake in these several localities.

WIND MILLS.

J. Edson.—The following communication, just received, answers your inquiry so fully that further comment is at this time unnecessary:

"Merrill Farm,"
Gwynedd, Pa., April 8, 1876.

Eds. Rural New-Yorker:—It gives me much pleasure to give you my experience in getting a supply of water for house and stock use on my farm. I first tried a small mule and endless chain power, which I found was very troublesome and far from satisfactory, as it required one man to attend to the mule when pumping, which was every day, and I concluded this did not pay, and determined to try something else. Some friend suggested a wind mill, and so I procured an old-style mill, said to have been improved, but, like the mule power, it was a complete failure. During the twelve months it was in use it was wrecked twice by wind storms, and had to be re-built at great expense and inconvenience.



IMPROVED PONY LAWN MOWER.

Having seen an advertisement of the Halladay Standard Wind Mill, I concluded not to abandon wind power until I had tried one of them. I accordingly purchased one, ten feet in diameter, of Wm. G. Rhoods, 1221 Market St., Philadelphia, who is Agent for the manufacturers, and he erected it in good shape. I am happy to say it has proved a complete success. It has run about two years at a cost of only $3. It has stood some very hard storms without the slightest damage in any of its parts. It elevates the water 54 feet, and we have had an abundant supply every day since it was first started. It is very simple and easy to manage, and I wish more of our farmers would adopt this great labor-saving machine.

I was so much pleased with the small pumping mill, that I decided to get a small geared mill for driving machinery in my barn. I therefore ordered a No. 6 standard mill, geared, and that, like the pumping mill, has proven an entire success. It has done much more work than the agent said it would. It was claimed to possess two-horse power in a good wind, but I am confident I have run it up to five-horse power. We have ground 10 bushels of corn meal per hour and run a corn fodder cutter, cutting large quantities of hay at the same time. We ran a 24-inch circular saw, cutting wood for house use at the rate of a cord per hour. We have ground all our feed, cut the fodder and shelled the corn for our stock, for which the grinding alone last year cost me $200, and the quality was not as good. We also run the grind stone, and a lathe for turning wood or iron, and can regulate the speed with perfect ease.

I have no interest whatever in the wind mill business—only to recommend to my brother farmers what I have tried to my full satisfaction, and hope that the day is not far distant when wind mills will be used as extensively in the East as they are on the prairies of the West.

W. O. B. Merrill.

PLOWING BY STEAM.

Mr. Editor:—In the Rural of March 18, you head an article: "The Steam Plow Still Wanted." My earliest recollection of the plow, over 40 years ago, was the exhibition of a model of a steam plow—five plows in the gang. It was then, I think, considered for some reason very doubtful of success. No doubt the time will come when it will not only be a success, but considered indispensible to the country.

On very large estates it would no doubt prove of great value, if not altogether in an economical view, but in making it possible to fit the ground in a reasonable time for the seed.

It seems to me that a good gang-plow with which three ordinary farm horses would do the work of four horses on two single plows, and thereby save the labor and keep of one horse and one man, is of far more importance to the great masses, both East and West, North and South. The price of a good gang plow seems so large that farmers will hardly stop even to discuss the merits or demerits, while to me it looks far cheaper than the best single plows now in use. The difference in cost of plowing 200 acres with the single plow and the gang is so great that the value of the gang can be saved in every plowing. If this is so, and it can be verified by practical farmers, how can any farmer afford to be without a gang, as owner either in whole or in part?

ITHACA STEEL TOOTH HORSE RAKE.

It would be much better, if one did not feel equal to the purchase, to join with his neighbor and buy jointly, and, by interchange of teams, each party as he uses the plow could have the advantage of a three-horse team, and do his plowing up quick, while he would be obliged only to keep a single team the remainder of the year. I do not see any gang plow advertised in the Rural, nor do I know of one made in this State though there may be. I would like to see the opinion of practical men presented in the Rural on this subject. I think the harvest is almost white for a good gang plow.

Buffalo, N. Y. S.

[By referring to our advertising columns you will find a gang and sulky plow offered, and both excellent implements of their kind.—Ed.]

Pomological.

SELECT YOUNG FRUIT TREES.

Three years ago we purchased with others two Baldwin Apples from a well-known nursery firm, the age of which may be guessed at from their size which was eight feet in hight and three inches diameter of stem. They were fine specimens of health and symmetry and were received from the nursery in excellent order with as much spread of root and fiber as could be transported with safety.

They were cut down about half or nearly so—all wounded roots smoothly cut—and planted with extra care. During the first summer the bark and wood of half the stem—that exposed to the South—died. The branches put forth a few leaves and the longest growth did not exceed two inches. The second summer showed an extension of dead wood and bark and it was evident the tree would never recover. It was, therefore, dug up and thrown aside.

The stem of the second tree remains sound—though a portion of the remaining top died during the first summer and the other portion made, like the other, but a sickly and insufficient growth. Last summer it recuperated so far that we considered it "out of danger," though its beauty is gone and the word "symmetry" can only be applied to its poor one-sided head in a spirit of miserable sarcasm.

Perhaps these two cases ought not to be taken as types of the injudiciousness of selecting large trees for transplanting. We can assure the reader that the experiment suffices for *us* and we shall in future recommend with that emphasis suggested by a thorough concurrence of the teachings of every fruit book and catalogue with personal experience—the selection of *young trees* alone.

As needless, however, as such experiments may seem and as needless as it proved to have been in the above instance—it is nevertheless a truth that "what everybody says is" not always "true," and that there are some things which "no fellah can find out" except by going it all over again himself.

THE CHERRY OR VERSAILLES CURRANT.

There has been considerable discussion among our pomologists in regard to the identity of the two currants known by the above names. Our nurserymen with few exceptions have offered both Cherry and Versailles in their catalogues as distinct sorts, charging in some instances fifty per cent. more for the latter than the former, and while they doubtless believed that there was a difference between the two, we have for the past ten years or more considered them identical. As an evidence of this we quote from the Small Fruit Culturist, page 205, 1867. "Very large; bunch, long and slightly tapering; dark red, acid; and by many it is considered to be a better flavored variety than the cherry, but by others very similar if not identical. The principal points of distinction claimed are that the Versailles is not so acid as the Cherry, and that the bunches are more tapering. But like variations may be observed in other well-known varieties, and upon plants growing in close proximity. At one time I thought that there was a difference in the growth and foliage of the two kinds, but more experience has not confirmed me in this opinion."

The above opinion was not reached through hasty investigations, but after procuring plants from various European nurseries, as well as all the best known and most reliable in this country.

E. P. Roe, in his late work entitled "A Manual on the Culture of Small Fruits," after referring to what we have written, as well as others, on the subject, says "But those purchasing the Versailles with the expectation of getting something very different and much better than the Cherry, should be undeceived."

We would naturally suppose that the English pomologist and nurseryman would be as likely as ourselves to discover a difference between the two sorts named, if any really existed, but, in an exhaustive article on currants by A. F. Barron, in the London Garden, for April of the present year, we find this head-line to the paragraph describing the cherry currant, "Cherry (*Synonym-La Versailles*)."

Now we leave it to our horticulturists in general if it is not about time to drop the name Versailles, from the list of currants or merely insert it as a synonym of the Cherry.

I have a large, luxuriant-growing cherry tree, about 30 feet high, which each year produces blossoms perfect in every particular, but never a perfect cherry, and seldom any at all. On examining the blossoms under a microscope, I discovered pollen in abundance and the grains actually attached to the stigma. What is the matter?—B.

We confess entire ignorance as to the cause of non-fruiting, and should be pleased to hear from some of our pomologists in relation thereto.—Ed. Rural.

Floricultural.

BANDAGE PROPAGATION.

The practice of slitting a branch and binding moss or other material over and about the wound is a very old custom. Six months or more ago we applied it to Geraniums (Pelargoniums) with results that lead us to speak of it now.

In raising the "Tricolors" from seed, we have already stated that it hardly ever occurs that the whole plant is variegated. Here is a shoot perfectly green; here is one with leaves half variegated, half plain. Still another shoot may be variegated with more or less uniformity—the only one upon the seedling, and it is this upon which we have to rely for establishing a "fixed" Tricolor of seedling origin. Those who have propagated cuttings in the usual way know that in spite of the most careful efforts the Tricolors sometimes fail to strike. In this case we should lose our variegated shoot and, perhaps, a year or more of time spent in its production. It was upon such shoots that we tried cutting the stem from half to three-quarters through—pressing the cut slightly open so that the parts should not grow together and then binding with moss—sometimes placing a small quantity of damp soil, as if it were putty, underneath and covering all with netting, gauze, or merely tying with a tape or yarn. This of course, must be kept constantly moist. In about the usual time required to strike the same cuttings in sand the roots will be found growing through the moss, when the shoot may be cut off just beneath the bandage and, with or without removing it, placed in small pots. By this method we have never once failed, and, indeed, we believe it to be unfailing, even though attempted when, under unfavorable conditions of moisture and temperature, the sand-bed would prove useless.

One advantage of this mode of propagation is that it may be accomplished during the winter in a conservatory or sunny window without marring the symmetry of the plant operated upon until the shoot is ready to be taken off. The variegated leaves hold their colors firmly while the callus and roots are forming, and the bandage may generally be concealed by the foliage. It is well to support the shoot which has been cut nearly through, by a neat stick or prop, since incautious handling is liable to break it off.

In this way many new and costly plants which one is desirous of increasing, and with which he is timid about running any risk, may be treated with little fear of failure.

Observe:—Our friends who are really interested in plants and who study to improve—to perfect (if this were but possible) their gardens—will now have their eyes wide open and will be keenly observant of every creeping, growing thing that blooms, wherever found; and they will note any that they deem worthy of their own collection, with a view of procuring it next fall or spring. No matter how fine the description of a plant may be written—*seeing* it is better, far. Then may be ascertained almost at a glance everything that belongs to the plant itself, as well as the conditions in which it thrives or fails. Visit the parks—visit your neighbors' grounds (to learn—not to copy), and don't think a flower mean because it *is* your neighbor's and prettier than yours. Visit nursery grounds. Nurserymen are obliging and are ever ready to answer civil questions, if they do not in several respects too closely resemble hail storms. Two things we have noticed in nurserymen: They do not like to have a second and a third question asked before they have answered the first in their own way; and (second) being great smokers, they appreciate a *good* cigar—not at all as a compensation for the information sought, you know, but as a "*guarantee of good faith.*"

We call attention to *Exochorda grandiflora* (*Spiræa g.*), now in bloom. Its axillary racemes of white flowers, as large as apple blossoms, almost conceal the shrub. It sometimes attains the size of a small tree, if so permitted—but it always branches low and retains a round shape. We know of a specimen ten feet high and more than three times its hight in circumference. In the fullness of its bloom (about the middle of May) it becomes a most showy object. It is especially to be prized for its extreme hardiness and its ready adaptation to many soils and situations. There are several peculiarities of this *Spiræa* possibly worth mentioning. The leaves vary from one to four inches in length, mostly of a spatulate shape—sometimes entire, sometimes half-serrate, sometimes having but two or three serratures near the apex. The calyx tube is green, but its lobes are nearly white. The racemes droop slightly and bear from five to ten flowers an inch to an inch and a half in diameter. Although advertised in a number of catalogues, this is not, like many inferior *Spiræas*, to be found in every garden.

The time of transplanting may be considered as having passed for another year—at least so far as hardy things are concerned—except for those who favor fall planting, from which number we respectfully and ruefully withdrew after the lesson taught by the fall of '74.

We extend to our good readers the very best of wishes touching their success for the present season. Let them ever bear in mind to well do whatever they undertake—to label plants accurately—to commit to memory their botanical as well as their familiar names, and to examine the more minute parts of the flower and plant that always escape those who, satisfied with beauty in the mass, think not—care not to search for that which may be hidden, but which, ofttimes, is no less captivating.

EXCHANGE.

C. F. McCloud, Darlington, Beaver Co., Pa., wishes to exchange Dahlia roots (sprouted), viz., dark velvet-red, bright-red, scarlet-quilled, maroon, flame-color, and a few pink—for lilac, white, quilled-buff, and variegated or tipped of any color.

Arboricultural.

TREES AS A PROTECTION.

On this subject there has been for the past few years much written and said, and as with most such matters that seem to come up, somewhat spontaneously, more crude theories have to be advanced before the real truth is reached.

Scientific men are liable to err like the rest of mankind, and when they do start a theory, it is taken up and nursed, pampered and propagated a long time, before any investigation is had of its merits. One of the most popular writers of the age says "One of the best books might be made by writing the biographies of defunct theories in science. Men have received as settled truths vast systems of Astronomy, Chemistry, and Geology that are now exploded, yet while these sciences were the faiths of the day, it was quite as much as a man's reputation was worth to teach otherwise."

Scientific men ought to know, and probably do know, that the cooling effect of winds is quite different upon vegetation from that upon living animals, and still many of them speak highly in favor of arborial wind-breaks as a protection to fruits, when in fact as true science indicates and experience proves, they are promoters of early and late frosts, the most deadly bane to the peach, grape and all tender fruits.

Winds are not necessarily colder than still air, and are quite as likely to raise, as to lower mercury in the thermometer, and their cooling effect upon the animal is due entirely to the fact, that the air surrounding the animal is constantly being heated by the combustion within its body, which heated air the winds move away to be replaced by cooler. Very different is it with the tree, for although it is held that all living matter generates heat, still with the plant when in leaf, the amount is infinitely less than with the animal, and what little is at this time generated, is more than over-balanced by the cooling effect of the evaporation from its leaves.

I am well aware that forests have an equalizing effect upon climate, raising the mean temperature of winter as well as lowering that of summer, for while in a torpid state, evaporation ceases mainly if not entirely, while the stem and branches being much better conductors of heat than air, receive heat from the sun when it shines, and conduct it below the reach of frost in the soil, to be restored again through the same channel to the air, while the sun is absent or behind a cloud.

I shall now attempt to show how and why these living wind-breaks promote killing frosts. It is well known that these spring and autumn frosts occur only on clear, still nights, when the heat which the earth has accumulated during the day passes rapidly upward into space. Either winds or clouds will prevent this rapid ascent. Even a slight motion of the atmosphere will often save tender plants that would otherwise be destroyed.

In districts where the surface of the land is uneven, (as most of the cultivated portions are more or less) the air as it begins to cool after sundown on these clear, still nights seeks the lowest level, and its place is occupied by warmer air, thus creating a current, the cold air flowing down the slope to the lowest point and the warmer air of the valleys which has received extra heat during the day following up; and this current like all other currents has the effect to prevent frost, except in the lowest places.

Now what will be the natural effect of wind-breaks? What but to prevent or obstruct these currents? Here is a specimen of tree protection. In the report of the orchard committee of the State Pom. Society (Transactions of 1874 page 133) is an account of four acres cleared, in the center of a 40 acre tract of timber and planted to peach trees; the owner doubtless believing in the doctrine of tree protection as taught, and had perhaps felt the thermal effect of forests in cold winter weather. Result "one-half the trees killed outright" during the winter and spring of 1874, and the remainder nearly worthless.

The reporter says "compare this orchard surrounded by forest protection with the Engle orchards so fully reported, (a premium orchard described on page 109) and the theory of forest protection falls at once."

There are also now to be seen on the bleak bluffs of Lake Michigan, peach trees that stood through the same winter and spring unharmed, while the same kind of trees on land nearly level, but protected by forest trees and high board fences are all dead.

It is not certain that winds if not strong enough to do mechanical injury, are not beneficial to vegetation in general.

The main part of the bulk of trees is carbon, which physiologists tell us they receive from the air, and as the proportion of carbon in the air is very small, it must take a very large amount of air to come in contact with the tree, to supply the necessary quantity. Then why not blow upon your trees to supply carbon, as you do upon the carbon in your fire to supply it with oxygen.

That trees are a great protection to animal life is beyond a question, and that large tracts of forests affect favorably the climate of the space they occupy, and to a considerable space beyond is fully demonstrated. I have no doubt that points elevated above the trees within the influence of these forests, are among the best points that can be chosen in this latitude for the peach and grape. At all events, no points are safe for tender fruits where the "atmospheric drainage" is obstructed. S. B. Peck.

Muskegon, Mich., May 18, 1876.

Remarks.—While we are glad to publish the above article, which bears evidence of thought, we must doubt the writer's theory that hedges and the like are favorable to the formation of frost. All objects radiate their heat in all directions, the same as luminous bodies do light. If a box with the cover off be upset upon the grass during a frosty night, the grass underneath the box will be protected. Let us now remove the bottom also. It will still be found that no frost has formed upon the grass within, owing to the mutual radiation of the sides, unless the temperature of the air has been below freezing. Now, what the sides of this box are to the grass which they inclose, hedges, etc., are to the grounds that *they* inclose. Clouds, like the branches of trees, radiate back the heat which they receive from the earth. It is not the frost which works the injury to the blossoms. Frost is if anything a protection to the parts upon which it forms, and its formation is attended with the evolution of heat. It is that degree of coldness which renders its formation possible that injures tender verdure.

Frost may form upon the surface of the earth while a foot above it the temperature may be many degrees above freezing. It is only when the temperature of the air itself is at or below freezing that blossoms, etc., are harmed—and *then* wind does but intensify the injury. We trust a further consideration of this subject on the part of our esteemed correspondent will induce him to favor our views, which we have not space to further discuss at this time.

Farm Economy.

WHEAT FARMING AND PROFITS.

Eastern journalists are continually pointing to the immense sum received annually from the export of wheat and flour to Europe and other countries, and continue to urge Western farmers to produce more wheat. We are told that water and rail communications are becoming better and better each year, thus reducing the cost of transportation. We are told that Missouri, Arkansas, Minnesota, Iowa, Wisconsin, Nebraska and Kansas are capable of trebling their present productions; and that already American wheat has virtually driven Russia from the field in disgust.

There is no doubt these States might treble their productions. It is fully as true that any other Western States might do the same if they chose. That they do not is due to the fact that wheat is not found to be a paying crop, except on new lands, and as the first few crops until the farms can be brought into condition to produce grass, corn, cattle, hogs and sheep—the only real staples in the West that pay a profit without seriously deteriorating the fertility of the soil.

Those journals that are so anxious to urge wheat growing upon the West, persistently ignore this fact: Europe has had two short crops of wheat. The reason why Russia is not a competitor now, is because that region tributary to the Crimean ports, through bad seasons, have not had the wheat to sell.

The Western Farm Journal has steadily held forth the futility of any country trying to get rich from the export of any grain where, besides 1,000 to 1,500 miles of land carriage at least, 3,000 miles of water carriage must be added. In the case of corn and other rough grains, in seasons of plenty, the land carriage alone will eat out the profits, leaving nothing for the farmer at home over the bare cost of production—often not that. The case is not widely different with wheat, for even at present prices but few farmers in the West consider wheat a paying crop. They raise it until they can get ready to feed stock, and for the reason, they cannot get even by growing and shipping corn.

We suppose every sensible farmer will produce, and continue to produce, such crops as will bring him the most net money, having due regard to keeping the fertility of his farm as near intact as possible. This cannot be done with any one or two crops. The history of agriculture will show ruined farms from persistent wheat culture. It will show bankrupt owners where they have persisted in running their soil to wheat. It will also show that the area of wheat culture has steadily been pushed westward, and also a steadily diminished yield the longer wheat culture has been persisted in. The fact is, every bushel of wheat the country raises over the legitimate supply for the nation's use is nearly a dead loss. The true policy of the nation is to export only such products as are manufactured, flour, meal, beef, pork, butter, cheese and wool. Of wool we do not produce an exportable quantity: on the other hand millions of pounds are yearly imported into the United States to be manufactured.

The present price of No. 1 spring wheat Northwestern, in Chicago on April 1st, was $1.16. Last year, at the same date, it was 95 cents; in 1874 it was worth $1.27; in 1873, $1.27; and in 1872, $1.24, at a date corresponding to the first. In prolific seasons it often falls as low as 80 cents. Notwithstanding that high prices for the last five years have stimulated production, as it always must, we do not believe any community of farmers in the West can be made to acknowledge acquaintance with that mythical individual who has ever got rich raising wheat.

There are certain sections of the country where the land is especially adapted to the culture of wheat. Where this is the case, the farmer, if he did not give special attention to this crop, would not show business sagacity. We believe wheat may be profitably grown in many localities where it has been virtually abandoned, if it is made a part of a regular rotation, and due care is employed in giving the crop proper attention. That it pays railway companies well to transport this crop to the seaboard there is no doubt; that it pays commission merchants and shippers well there, is a fixed fact. That it does not pay farmers as a crop to ship to England, is fully as easy of demonstration. That it does pay the first two classes is probably the reason why Eastern commercial journals are so anxious that Western farmers should treble their productions. Sagacious Western farmers we opine, will not rush unduly into wheat because the present export demand happens to be good. It is not well to pin one's faith to a single crop.—*Western Farm Journal.*

ASHES ON CORN.

A correspondent asks us "what amount of leached and unleached ashes would be advisable to put in a hill of corn," "and on land which will produce thirty to thirty-five bushels per acre."

Now this is one of those questions to which a definite answer cannot always be given in the absence of very full data upon which to base an opinion. The cost of the ashes and the value of the crop to be raised should be taken into consideration beforehand, else a man may, after being successful in securing a large yield, still find that he has raised it at a loss.

Then again, upon some kinds of soil ashes produce better results than upon others, although all should be equally fertile at the time the applications were made. On light, sandy soils or loam, ashes generally produce better results than on heavy, tenacious clay, also in a wet season more than in a dry one. But, as a rule, ashes are valuable as a fertilizer on all kinds of soils, and for the various farm crops, because, the potash which they contain is an essential property that cannot be dispensed with in the production of plants.

In planting corn upon moderately rich soil, a half pint of good unleached hard wood ashes may be safely applied to each hill at the time of planting, and double or treble this amount of leached. After the corn is up, and before a second cultivation or hoeing, a single handful additional may be applied with benefit.

There are few farmers who can afford to sell their wood ashes for twenty-five cents per bushel, especially when the land has been cultivated for a number of years; still, many do sell them for six to ten cents and think they are saving money by doing so. We would say keep and use all the ashes you make and purchase all you can at a reasonable price, thereby keep up the fertility of the soil.

Patrons of Husbandry.

THE LEGITIMATE MISSION OF THE GRANGE.

One of the best exhibits of the true mission of he Grange which we have seen in some time, appeared in the Southern Plantation for May, evidently written by some good Patron, who takes a broad and comprehensive view of the subject. He says:

Inasmuch as I see some of our good Patrons, inclined to wander, or as I think over-reach the demands of our Order, I feel disposed to enter my feeble protest. While I fully appreciate our success as an organization, and participate in their pride of the results, I regard our great aim not yet attained, the war not ended. Success is apt to inspire confidence and often causes us to undervalue the strength of our enemies.

There is a general desire in the minds of our Patrons to constantly increase our numbers and I participate in this desire, provided always, this increase is from the ranks of the farmers, for whose interest primarily, the Grange movement was first made. I cannot conceive the probabilty of a practicing lawyer, politician, banker, money lender, note shaver and men of such like occupations making good Patrons of Husbandry, but the Grange can make better men in those various pursuits. The Grange has no fight to make with any of the industries of our country. Our object is first to place the farmer in a prosperous, independent position, controling the product of his labor, then we will present a sound remunerative set of patterns to all the other industries of our land, and in order to do so, we must not divide our time, energies and intellect or diversify our pursuits too much. We may divide our fields, diversify our crops as we should do, but let us concentrate the most of our energies and intellects upon our farms. Many of our members want to be identified with life insurance; the only insurance I desire is, to insure the dependent families of poor deceased Grangers from want. I will submit to a tax annually, as a charity fund to aid the bereaved families of deceased Patrons of my Grange, but am opposed to Grange Life Insurances, such as we see around us in the land. Others are for banking, I am of opinion that banking on borrowed capital as we would be forced to do, would certainly and speedily bankrupt the bankers or the patrons of the bank.

I desire our farmers to be so situated as to be their own *bankers*, investing their money as the comfort of their family or the requirements of their farm, may demand. Others are advocating Grange stores. I think there are too many merchants already, and I am of the opinion that dry goods are as cheap as we should demand, and from what I see, there is not much money made on meat at this time; this cannot be visited upon our grocers. We must go to the West to properly analyze the cause. So it seems that a good cause exists why the Grange should not pull out of the course blazed out for us in our ritual; the paramount object should be to vitalize and energize the great motive power of all the industries of the country, agriculture. We should strive to produce at least profitable expense, and procure all we can for our productions.

We should recollect the cheapening of goods is a small advance towards the prosperity of a country and I doubt its being any evidence of prosperity, at all events unless you employ in some way the poor of our country, they will not be able to buy, even at reduced prices. Let us look beyond our own home and firesides and invest our money so as to make our productions more valuable and enable the honest poor and destitute women and children of our country, to be what they should be, respectable producers, instead of the idle consumers they now are. The boys roving through the country uncontrolled, unadvised and almost unmindful of the Holy Sabbath, willing subjects of the most pernicious, the vilest habits taught them by their older and still more degraded companions, while the girls almost from necessity, being homeless and penniless and unaided, and often the subjects of habits even more damning in their results, while the wretched mother, sorely pressed by hunger, whose heart has been petrified by the ceaseless and useless cries of her innocent infant for bread, until she becomes the willing recipient of the accursed fruit of vagrancy and prostitution. Are we not called upon to stay this mighty tide, which is so rapidly tending to national imbecility and personal degradation?

Let us build factories and thereby increase the demand for our productions as well as double their value. We can then employ those destitute women and children as operatives, inspire them with pride and emulation and make them, as we can, useful and profitable producers, no longer hanging like an incubus upon us for their support and their habits and influence, like the pestilential sirocco, poisioning all around them. How often have our bosoms been made to heave and our hearts to thrill with pleasure from the eloquence of men born in obscurity and taking their first lessons in the workshops or the field. Labor is honorable and labor is but to carry out the injunction to man by his Creator and that too, before the bliting mildew of sin had fallen upon him. Successful agriculture, is a convincing proof of the supervision of a just and wise God, it is the improvement of the talent entrusted to our keeping. Agriculture not only develops the wisdom and goodness of God, the beauties of Creation, but it should inspire us with gratitude to our Creator, and charity for our fellow beings. Let us not be competitors in the various industries of our country, but let us foster, let us sustain them in their legitimate pursuits. Let us not create, but destroy all unjust monopolies.

Rural Architecture.

CONCRETE WALLS.

Can you give me a description how to make concrete walls for a cellar? Should it be made in one solid wall or in blocks, as described in the Rural a few years ago? Please give the description of the ingredients in full, and oblige an old subscriber.—J. R. Stephenson.

A number of years ago, Mr. D. Redmond of Georgia gave a very full description of the way he built his concrete house, and as the building is still standing and in good order we can scarcely do better in reply to your question than copy the directions he gave at the time.

1. *Location, etc.*—Select, if possible, a dry situation, and get all heavy materials, such as rock, sand, lime, gravel, etc., on the spot as early in the season as possible, say by the first or middle of May, in order that you may avail yourself of the long, warm days of summer for successfully carrying on your operations.

2. *Materials*—The proper materials are lime, sand, coarse and fine gravel, large and small rock, and water. The lime may be from any good, pure limestone that will slack readily, and "set" or harden thoroughly when dry; the sand should be sharp, and as free from clay, loam and other earthy matter as possible; and the gravel and rock may be of any size, from that of a boy's marble up to eighteen inches or two feet square, according to the thickness of your walls.

3. *Foundation.*—Having fixed on your plan, lay off the foundation, and dig a trench two feet deep, the area or full size of your cellar wall. With a heavy piece of hard wood, squared or rounded at the lower end, pound or ram down the earth in the bottom of this trench, going over it repeatedly, until it is solid and compact. A layer of hydraulic cement mortar, two inches thick, spread evenly over the bottom of the trenches thus compacted, gives you a solid foundation to start on, as soon as it "sets" or becomes hard. If you intend carrying up inside division walls of concrete, the foundation for these should be laid in the same way. Good hydraulic cement will take at least three parts of sharp sand; but it must be used as soon as mixed, or it will "set" and become useless.

4. *Frame and Boxing.*—Cut common 3x4 scantling two feet longer than you wish your highest story to be; set up double row, with the lower end resting firmly upon the edge of the hardened cement in the bottom of the trench; range them true and "plumb" them, letting stand three or four inches farther apart than you desire your wall to be in thickness; then nail cleats across, above and below, to keep them in place, adding also "stays" or "braces," driven slantingly into the ground and nailed to the scantling at the upper end. Your skeleton or frame-work of scantling being all set up and "stayed" firm and "plumb," proceed to arrange your "boxing" for holding the concrete, and keeping the walls in shape. This is done by cutting sound inch or inch-and-a-half plank of ten inches or a foot wide, so as to fit inside of the two rows of scantling and form two sides of a box. Movable pieces the thickness of the wall are dropped in between, at intervals, to keep the box of the proper width and wedges driven in between the boxing and scantling, on the outside, prevent spreading by the pressure of the concrete. Wooden "clamps," to slip down here and there, over the upper edges of the boxing, will also be found very serviceable.

5. *Mixing Concrete, Laying up, etc.*—It will be well to have at least four large mortar beds, one on each side of the house, made of strong plank, in the usual way. These should be surrounded by casks of water (oil casks cut in two are excellent), piles of rock, sand, gravel, etc.—the lime, of course, to be kept under cover, and used as wanted. Slack up your lime till it forms a thin, smooth creamy mass; add 4 or 5 parts of sharp, sand, stirring and mixing constantly, and using water enough to bring the whole, when thoroughly mingled, to the consistency of a thick batter. Into this batter mix coarse and fine gravel (that has previously been screened) until the mass is thick enough to be lifted on a common shovel. [The proper and thorough mixing of the sand with the lime, and the gravel with the mortar afterward, are very important, and should only be intrusted to your most careful hands.] Having one or two "beds" full of this mixture, you are ready to begin your wall. Wheel the mortar to the foundation in common railroad wheelbarrows, letting the common hands shovel it into the bottom of the trenches, while the superintendent or "boss" workman spreads it evenly with his trowel. When the bottom layer of mortar, three inches thick, is laid in, wheel large and small rock (previously sprinkled with water) to the wall and press it into the soft mortar at every available point, leaving a small space between each piece of rock, and working the soft mortar against the plank boxing, to preserve a smooth surface on the wall. When you can press no more rock into the mortar, pour another layer of the latter over and through the rock, then add a layer of rock, as before, and so on, until your boxing all around is full. You have now ten inches or a foot of wall, all around built; and if the lime is good and weather dry, it will be hard enough in twenty-four hours to raise your boxes another tier. This is readily done by knocking out the wedges between the plank and the scantling, raising up the plank and sustaining it in place by "cleats" nailed on the scantling. In raising the boxing, begin at the point where you commenced laying up the day previous, as that portion of the wall will, of course, be the hardest. It is not necessary to raise all the boxing at once, or go entirely around the wall in a day. A foot or yard of the wall can be completed at a time, if advisable; but if the complete round can be made, so much the better. Planks to cover up with, in case of a sudden shower, or when a storm is apprehended, should be provided, and placed within reach.

6. *General Details, Floors, Windows, Doors, etc.*—We prefer a cement floor for the basement, on many accounts; but those who desire a wooden floor should leave air-holes in the outer walls, under the lower floor, six inches above the surface. This may be easily done by inserting wedge-shaped blocks or pins through the wall, to be knocked out afterward. When you are ready to lay the floors, level up your wall and run one course of brick all around, the thickness of the wall, for the ends of the flooring-joists to rest on—filling in around these ends with concrete, when they are fixed in their proper places. The door and window frames should be made of three-inch yellow pine, the full thickness or width of the walls, and may be set up and built around, like those in a brick house, as the wall progresses. A piece of common inch plank, "cut in" all around them, to prevent the actual contact of the damp mortar, will keep them, in a great measure from warping. Where base-boards are needed, blocks of scantling may be built in flush with the inner surface of the wall, at the proper distance apart.

The Apiarian.

SALICYLIC ACID FOR FOUL BROOD.

Foul brood in the apiary is one of the diseases which has given bee keepers much trouble, and many would be glad to know how to prevent it or effect a cure after it has made its appearance.

A German apiarian claims to have discovered an effectual remedy in salicylic acid and we are indebted to John P. Bruck of Los Angeles, Cal., for an epitome of the report of Mr. Hilbert's on the subject which is given in the Pacific Rural Press.

The author of the report is Mr. Hilbert, a well know German apiarian, who has been so successful in the feeding of milk and eggs to bees to stimulate breeding. As this report gives a more detailed description of the manner of applying the acid, I have condensed it to the narrowest limits, and herewith give the same for the benefit of those who wish to try the remedy. Proceed as follows;—Dissolve the acid in eight times its quantity of alcohol. If more alcohol were used it might prove too strong for the unsealed brood; if less, the acid would flake upon being mixed with water.

For all purposes, except the disinfection of the sealed cells, use but 32 drops of the alcoholic solution to an ounce of water. The water should be about 65° Fah; when less than 60°, the acid will flake. It should not be too warm, on account of the unsealed brood. For the disinfection of the brood, comb, frames, etc., the best instrument is an atomizer, with which be sure to sprinkle all parts. After the hive has been disinfected, hang in the brood as fast as disinfected, to keep it warm; remove all surplus honey (after disinfection) and reduce the hive to its smallest limits.

The sealed foul broody cells must be treated differently from the rest of the brood. For them Mr. H. uses a solution of equal parts of warm water and the alcoholic solution. Use a piece of wood, of the shape and size of a match; dip this in the above solution and pierce the sealed cells to the bottom, removing if possible the decaying matter and immersing the wood anew for each cell. Every other day feed about one-third pint of honey to each hive, to which add from 30 to 50 drops of the alcoholic solution according to the size of the swarm. An application of the acid should be made every week, if not oftener. From five to six applications will be necessary for the complete cure of the hive. The constant exposure to the foul vapors of the hive proves deleterious to the queen and the bees generally. And as the nurse bees, that carry off the decaying matter and at the same time feed the brood, are likely to communicate the poison affected thereby, it is well to aid them by the addition of young bees from healthy hives. It sometimes happens that after all these directions have been fully observed, foul brood will continue to make its appearance. In such cases it may be safely inferred that the ovaries of the queen have become infected. In 25 hives treated by Hilbert, three such queens were found. They can best be tested in small hives with clean comb and healthy bees. Mr. H. sums up the matter in the following words: "The absolute cure of foul brood may be effected by the proper application of salicylic acid, by the addition of healthy nurse bees, and finally by a change of queens, if necessary."

By the same method Count Kolowrat, of Hungary, has cured 65 stands. One ounce of the acid will generally cure from five to to seven hives.

BEEKEEPING IN UTAH.

J. E. Johnson of Washington Co., Utah in writing to the Bee Keepers Magazine gives a very favorable report of bee keeping in the mountains. The raising of Mignonette and other plants for bee pasturage could be practiced elsewhere and far more extensively than it is at present, with profit to the apiarian. He says:

The past winter has been a good winter for bees, or we have been more careful how we put them into winter quarters, for we have never had them come through as well before. I had an apiary of 130 colonies in Kidder hives last fall, paid no attention to them but let them remain as they were on their summer seats out doors under shades made of willows, and when the almond blossoms began to open, March 1st, I had 125 apparently strong hives, and these have ever since that date been working hard every pleasant day.

I have planted in front of my apiary about ¼ of an acre Mignonette which when in bloom will do much towards keeping my apiary busy and besides will give the honey a high and pleasant fragrance. The sweet or melilot clover and Mignonette, will I think make finer flavored honey than that from any other bloom I have ever tried, and in fact I sold my honey made from these plants last year at a higher price than any of my neighbors who failed to provide plenty of such forage near their bees. The prospect for fruit here the present season was never as good, and when fruit is nice we generally have a good honey crop, for the conditions that make good fruit, makes plenty of forage for bees. Apricots are now in full bloom (March 19) and peach trees begin to open their blossoms, —and bees continue daily to work strong, and are carrying in both pollen and honey.

COMB FOUNDATIONS.

Several of our correspondents have asked "what is comb foundation so frequently referred to of late by apiarians?" The following from the American Bee Journal for May is an explicit answer to the above question.

Take a piece of empty honey comb and cut off all the cells, until nothing is left but the division wall of wax between the two opposite sets of cells, and you have a comb foundation. The latest production, however, consists not merely of the dividing wall, but also a slight depth of the cell-walls, themselves, on each side, and these cell-walls, although slight in depth, may be of such thickness as to contain enough wax, so that the bees may work out or prolong the cells to their full depth without any additional material.

These comb foundations are given to the bees in their brood chamber, enough being put in a frame to fill it, in whole or in part, perhaps only a narrow strip being used for the bees to start upon. They are also used for surplus honey, enough being given to fill the boxes, or merely enough to give the bees a start. The object is to save the time of the bees in secreting the wax, as also, the honey used in its production. Another object is to secure all straight, worker comb, and still another to hasten the commencement of work in boxes when the bees are loth to enter them.

Thus much by way of answer to those who are asking. "What is comb foundation and what is it for?"

Domestic Economy.

A WRINKLE FOR THE YOUNG PEOPLE.

In view of the cares and responsibilities of housekeeping, a young woman cannot begin too early to cultivate an acquaintance with culinary art; and there is no better way of acquiring and retaining this knowledge than by setting up a private recipe book, in which to jot down all tried and proved recipes, worthy of such distinction, that may be met with, either at the family board, or at the table of a friend. I began the practice when about 12 years of age, at the instigation of an experienced matron, herself a model of order in everything relating to housekeeping, and subsequent observation has often made me look back on her friendly counsel with respect and gratitude, and say to myself that even in worldly things, "A word spoken in season, how good is it." That these remarks may be equally useful to some young aspirant to prospective duties, I proceed to give a few hints to those who may feel inclined to adopt the plan.

First, then, let extreme simplicity of arrangement characterize the start. In the first flush of the new idea, it may be very amusing to divide and classify, but as the novelty wears off these elaborate devices become irksome, and may tend to disgust altogether. All that is wanted is a blank ruled book of a suitable size, and after numbering the pages, and writing the name of the owner, and the date, it is ready for work, which may be proceeded with as follows:

Never take a recipe on trust, or even on the recommendation of a friend; try it yourself before entering it in your book—you will thus be saved the pain of finding out, too late, probably from an error in diction, that it does not turn out well, when by adhering strictly to the rule, to enter nothing till you have tested it, you know at once that all your recipes can be depended on, and that there is no mistake about them. How often in reading a recipe in a cookery book, you think That looks promising! I wish I knew if it would answer. With your own book you need not be at such a loss; you have there confidence that is not misplaced, and confidence in what you are about, is generally half the battle. Therefore, we would say—write down everything you can make yourself, from a water-gruel to a *pate de foie gras;* and with your book, and your knowledge, you may take the world, broadside on, and when other trades fail, you can set up a restaurant; or go out as *chef de cuisine.*

Some recommend the plan of dividing the book into departments, as we see in works on cookery—fish by itself—soup by itself, &c; but as I said before, I think that all such divisions interfere with the simplicity of arrangement, which is the surest means of encouragement in what might otherwise become a distasteful task. In preparing a work on cookery for the press, of course it is absolutely necessary that everything should be classified, and as in that case the whole is completed at once, it becomes comparatively easy. But in a private book—added to during the most part of a lifetime—it is very different, and there is no better plan than just to jot down recipes as they turn up, trusting to the index and the numbering of the pages to find what is wanted at a glance.

[We find the above in the English Ag. Gazette and we commend it to our young lady readers especially, though older ones may follow its suggestions with, we doubt not, happy results. We would add this word of advice—let the recipe book be made of strong paper and durably put together.]

ORIGINAL RECIPES.

Strawberries and Claret.—Over three quarts of strawberries pour one bottle of good claret wine; add sugar to suit the taste.

Whip Cream.—Beat the whites of three eggs to a stiff froth; add a pint of thick, sweet cream; sugar and flavor to taste; whip the whole together to a froth.

Strawberry Cream.—Mash the fruit gently; drain it on a sieve; when well drained (without being pressed), add sugar and cream to the juice, and if too thick, a little milk; whisk it in a bowl, and as the froth rises lay it on a sieve; when no more will rise, put the cream in a dish and lay the froth upon it.

Strawberry Sirup.—Make a sirup in the proportion of three pounds of sugar to half a pint of water. Boil and skim until clear. Have ready the strained juice of good-flavored strawberries. Allow two and a half pints of strawberry juice to the three pounds of sugar. Let it boil for about five minutes; then take it from the fire and pour into self-sealing glass jars. This is a fine flavoring for ice cream, and also makes a refreshing drink by diluting with clear cold water.

Velvet Cream.—In the RURAL NEW-YORKER of May 13 I saw a request for Velvet Cream. I think mine excellent, so I send it, as follows: Three pints of cream, the whites of six eggs, a half box of gelatine. Flavor and sweeten the cream to taste; then beat to a stiff froth the whites of the eggs, also whip the cream to a froth: dissolve the gelatine in a teacupful of hot water, and when the gelatine is milk warm add the cream and egg alternately, stirring it until smooth; line the mold with sponge cake and pour in the mixture.

To Preserve Strawberries Whole.—Take equal weights of the fruit and granulated sugar; lay the former in a large dish and sprinkle half the sugar over; give a shake to the dish, that the sugar may touch the under side of the fruit; next day drain the juice from the berries, add the remainder of the sugar and one pint of red currant juice to every four pounds of fruit. Boil and skim until no scum rises, drop in the strawberries (a few at a time); let them boil slowly for about ten minutes; skim out into jars. Boil the sirup until sufficiently thick; then pour it over the berries and seal while hot.

Mrs. Rustic's Strawberry Short Cake.—One large teacupful of sweet milk, one heaping tablespoonful of butter, one heaping tablespoonful of baking powder worked thoroughly through, flour enough to roll as for biscuit. Mix quickly, roll to an inch in thickness and bake in a quick oven. Two hours before wanted for use, wash and drain through a colander three pints of small-sized strawberries, put them in a dish and sprinkle sufficient sugar over them to sweeten. When the short cake is done, divide in the middle, butter the bottom layer, spread on half of the prepared strawberries and juice, invert the top, butter and spread on the remainder of the berries. Eat while warm, with sweetened cream, or whip cream.

Hygienic Information.

TAKE CARE OF THE CHILDREN.

A CORRESPONDENT of the Laws of Life, in referring to an article published in the Illustrated Christian Weekly on "Children's Blues" says that it brought to my mind the many times a dear little brother used to come to me, with a face full of soberness and anxiety, saying, "Jennie, I feel as if I had done something wrong, but I'm sure I can't think what it is." Most certainly it is true that children have their hours of sorrow and trouble. Happy are those who have careful mothers, who look into things and are in earnest to bring up their children aright. Happy are those children who early learn to know the Savior who loves them, and who will as surely answer their prayers for help as those of the oldest disciple, for while He leads His sheep, does He not tenderly carry the lambs in His bosom?

Children frequently inherit a disposition to look upon the dark side of things, and they are frequently nervous, and I am inclined to think this is very often attributable to their food. If parents would only study the real happiness of children more, they would learn that certain nice bits, which are given because they taste sweet, make a child's disposition anything but sweet and happy.

I have in my mind a dear little fellow with a happy face, to whom the world seems always a place of sunshine. He has his three meals of bread and baked apples and milk. He sleeps sweetly all the night, and wakes serenely—a joy to all who know him.

A little neighbor generally has cookies or candy every hour, he dines on meat, gravies, and all the goodies (?). His life is an April life, sunshine while devouring the dainties, showers of tears, and, I am afraid, some very ominous looking clouds at other times. His sleep is disturbed, and his mother wishes "that child would sleep two hours longer."

I know from personal observations and experience that older people's dispositions are affected by their food. How often I have heard people say, "We had fresh pork for dinner, and I don't feel good for one thing; my head aches and my stomach feels dreadfully." Little things that would not ordinarily move them, fret such people, and they have the blues. Why should not a child's delicate stomach rebel in a like manner?

When shall we learn that "all scripture is given by inspiration of God, and it is profitable for instruction in righteousness," and that not the least is the command, "Whether therefore ye eat or drink, or whatsoever ye do, do all to the glory of God."

HYDROPHOBIA.

CHINESE physicians treat hydrophobia in an original manner. Two sandstone bottles half filled with wine or spirits are placed upon a fire until the liquid boils. The contents are then emptied, and the red-hot mouth of the bottle is applied to the bite and held there until it is filled with blood, when the same course is pursued with the other bottle. A decotion of rice, in which cantharides have been boiled for an hour and then removed, is also given the patient, who is required to keep perfectly quite for eight or ten days.

GRIFFITH'S ENAMEL.

GRIFFITH'S Enamel is a recent invention which is said to be unaffected by the action of carbolic acid, and hence useful for coating the inner walls of fever wards in hospitals. Plates of iron covered with this enamel and exposed to the prolonged action of sea water are said to be kept fresh and clear from seaweed, the iron itself showing no sign of rust after the enamel is scraped off. It has been used by the British and other foreign Governments. In India it is reported that it does not blister under the sun's heat. It has also been found effectual as a protection against white ants.

DIPHTHERIA.

PHYSICIANS have determined that diphtheria is an inoculative disease, capable of being transmitted, and that physicians should therefore be careful of abrasions on the hands. There are many types of the disease, and the New York Academy of Medicine confesses that the best known remedies are powerless against the worst types. The opinion was expressed that the inflammation of the larynx or obstruction of entrance of air to the lungs, was the cause of one half of the deaths.

HYGIENIC NOTES.

A Lotion for Fetid Feet and Arm-Pits.—Bromo-Chloralum, 1 part; water, 15 parts. Bathe three or four times a day. For these and other similar cases, this formula has proven very efficacious. In many instances it has been successful when all others have failed.

Entomological.

COMBATING INSECT FOES.

PROF. F. H. SNOW of the State University of Kansas tells us how he would make war against noxious insects in one of his late educational lectures. He suggests that it should commence with:

1. Legislation to compel every man to keep his grounds free from insect pests. No one has a right to foster noxious agencies for the destruction of his neighbor's crops and fruit.

2. A bounty might be offered in certain cases, by the county, State or General Government, for the capture of injurious insects. A reward of twenty-five cents a bushel for locusts during our recent visitation by this scourge would doubtless have prevented a large portion of the damage inflicted. Such a reward would certainly be as legitimate as the customary bounty for gopher skins.

3. The introduction of parasities should be undertaken by the General Government. Many of our most destructive insects have been introduced from Europe. In the old country they have many parasities to keep them in check, but as yet few of these parasites have made their way to this country, so that our foreign foes have proved most destructive on account of the absence of their natural checks. That the plan proposed is a feasible one has been proved by Dr. Le Baron, the Illinois State Entomologist, who has successfully introduced into northern Illinois a parasite upon the apple bark-louse.

4. Every State in the Union should employ a competent man as State Entomologist, who should give his whole time to the work of investigating the habits of insects, and disseminating information among the people. Messrs. Fitch, Riley and Le Baron have saved millions of dollars to the great States of New York, Missouri and Illinois, by their indefatigable entomological labors. The salaries paid to these men have been a thousand fold returned to the States employing them.

5. The legal protection of insectivorous birds. A commission should be appointed to determine what birds are entitled to this protection.

6. The plan proposed for the appointment of a national commission for the prevention of the national calamities occasioned by insects is worthy of indorsement by every farmer and fruit grower in the land. The petition to Congress for such a commission should receive universal signature.

7. I would finally suggest that if our people were more generally familiar with the subject of entomology, and were able to distinguish between the beneficial and injurious species of insects, our universal enemies would be more intelligently and effectually resisted. To this end I would earnestly recommend the introduction into our schools of the elements of this extremely practical science. Independently of the educational advantages of natural history studies, the "practical" value of a knowledge of plants and insects should forcibly commend botany and entomology to those who determine the course of training in our common schools. If our children were taught to distinguish between their friends and foes in the insect world, a large proportion of the annual loss entailed upon us through ignorance would undoubtedly be prevented. And since the majority of those who attend our public schools will be connected for life with the pursuits of agriculture and horticulture, it is easy to understand the propriety, and even the *necessity*, of introducing into the courses of study those "practical" branches a knowledge of which is essential to success in those pursuits.

But if the "practical" nature of these studies should be conceded, it might still be objected to their introduction, that they do not furnish that training of the mind which it is one great object of an educational system to confer. A careful consideration of this question will show that this objection is not well founded, and that these natural history studies are educationally, as well as practically, the most pressing need of our common school system. As this is a subject of vital importance, it will not be out of place to devote the remainder of the hour to its discussion. I consider that to be emphatically the best means of defense against our insect enemies, which shall confer upon our people the ability to perceive and ward off impending dangers before they have assumed destructive magnitude.

In the first place, we will endeavor to show that the study of natural history should precede the study of the other sciences. It is a question of no little importance at what point instruction should begin in that broad field of investigation which includes the entire realm of natural objects, from the minutest microscopic crystal to the poderous globes in the yet unmeasured regions of space. The mind of the child would be completely bewildered if its attention should be first directed to the astounding truths of astronomy, and would be wholly incapable of comprehending the complex reasonings by which these truths have been established. In like manner, it would be worse than useless to begin the course of scientific study with the complicated combinations of chemical elements whose laws are unfolded with beautiful simplicity and clearness to the maturer minds of more advanced students. For the same reason the compound science of geology appears to be equally ill-adapted to our common schools. It is indeed true that all the natural sciences have a mutual connection and dependence, but in astronomy, chemistry and geology, intricate relations are so constantly recurring that the study of these branches should be deferred until the mind has become familiar with those sciences which naturally precede them.

Accordingly, the comparative simplicity of a science will help to determine its relative place in the course of study. If this test be applied, it will readily be conceded that the natural history sciences should first receive the attention of the young student.

The reasonableness of this view becomes still more apparent when we consider the order in which the faculties of the mind are called into action. That is the best order of arrangement for any course of study which best coincides with the natural development of the mental powers. The age of the great majority of the pupils in our common schools, comes between five and fifteen years. At this time of life, the perceptive or observing faculties of the mind are in full activity, while the reflecting and reasoning powers are comparatively listless. The studies, therefore, which should be made most prominent at this early formative period, are those which cultivate the powers of observation in the highest degree. The importance of a thorough training of these powers may be inferred from the extent to which their proper action is essential to every field of labor. Mr. Herbert Spencer has truly said that "exhaustive observation is an element in all great success. It is not to artists, naturalists and men of science only that is needful. It is not only true that the skillful physician depends on it for the correctness of his diagnosis, and that to the good engineer it is so important that some years in the workshop are prescribed for him; but we may see that the philosopher is fundamentally one who observes relationships of things which others had overlooked, and that the poet is also one who sees the fine facts in nature which all recognize when pointed out, but did not before remark. Nothing requires more to be insisted on than that vivid and complete impressions are all-essential."

It is because the powers of observation are not properly trained at the time of their great activity, that so many of our most "highly educated" college graduates find themselves far inferior to self-educated artisans, in knowledge of the common things of life. The training of the perceptive faculty begins in infancy, and should be continued through childhood and youth.

"PROGRESS AND IMPROVEMENT."

MOORE'S RURAL NEW-YORKER,

A NATIONAL ILLUSTRATED

RURAL, LITERARY AND FAMILY NEWSPAPER.

ANDREW S. FULLER, Editor.

LOSS AND GAIN.

THE story is told of two Yankee boys who were so sharp at trading that when for some cause they were shut up in a room together, they traded jack knives until, on investigation, it was found that each had made fifty cents and had his original knife beside. That may be called fancy financiering; usually there is no gain without some loss. When we hear of men making fortunes by Wall street speculations, we are likely to suspect that somebody has lost; and thus it goes the world over—gain and loss, loss and gain.

At present the cry of "hard times," "depression of business," "want of confidence," is heard all over the country, and mercantile failures are of constant occurrence. Many who a few years ago thought themselves in quite comfortable circumstances, are now unable to pay their debts and the list of insolvents is constantly growing larger. But the real property in the country is constantly increasing. There is more to-day than ever before; why then, this depression? Simply because of the inevitable law that makes in every country as it grows older—the rich richer and the poor poorer; comparatively at least, if not in fact.

We will not undertake to look for the basis of this law; too many have tried that and failed to find it, to encourage us in undertaking it; but we are no less certain that we see all around us the little property of the poor man wasting away only to swell the purses of the rich. Let us see if we can illustrate:—A friend who had by economy saved $1,000, was advised some three years ago to build a house in a location where the prospect of a speedy rise of property was flattering. His $1,000 paid for a lot, and $6,000 were borrowed with which to build a house, which was secured by mortgage on the whole. This mortgage became due last month. The property had "shrunk"—or depreciated in value—so much that the mortgagee did not consider it good security for his money and demanded payment. The house was sold for $7,500, leaving for the owner, after paying the mortgage, $1,500 instead of $4,000. Here was a loss of $2,500 to him. But who has gained? Why, the capitalist. He has no more dollars to be sure, but with those dollars he can buy as much as three years ago he could have done with $8,500.

A man who three years ago inventoried his property (mostly in real estate) at $250,000, was recently complaining that he had lost by depreciation in two years, $50,000, and was pleading poverty bitterly. "But," said a neighbor, "have you not as much in land and buildings as before?" Yes; but I could not sell it for more than $200,000." "Well, admit it. Could you not with $200,000, buy the same amount of property elsewhere as you held before?" "Yes; but my rents have fallen off 20 per cent." "Well, with the rents you receive in a given time, can you not build another store as readily as when you were getting more?" "Certainly." "Then you are no poorer but richer when compared with those who have lost the whole of the little they possessed."

He who owes a thousand dollars to-day must part with more of his property to pay it than he would have been obliged to do three years ago. The Creditor is the gainer and the Debtor is the loser. The Scripture is fulfilled which saith, "Unto him who hath shall be given and from him who hath not shall be taken away even that which he hath."

Moral—*Keep out of Debt.*

RURAL EDUCATION.

HAS not education much to do with the discontent of people in general? While not attempting to answer this question, it may be well to look at some of the various phases of society and see if a solution of what is sometimes considered a mystery cannot be discovered. We are, as a whole, an ambitious people, striving to obtain objects and positions, which are far too frequently beyond our reach, and failures, bring corresponding disappointments and unhappiness. This peculiarity of Americans, is not confined to those engaged in any particular line of trade or profession, nor is it more apparent among the rich than the poor, but it pervades all classes of society,—scarcely an individual who is not seeking something which he does not possess, but would obtain through the aid of wealth or other means.

Now ambition is a laudable attribute in a person or people, but even this may be employed for base purposes. Men and women may strive for that which will work their ruin, as well as that which brings honors and happiness, but it is only those who are born with good common sense, or have had the deficiency made good by proper education, who are qualified to obtain the greatest amount of pleasure from their own immediate surroundings whatever they may be. A man may toil for a dollar per day, and enjoy more of this world, and be far happier and greater than a king surrounded by wealth and thousands of cringing vassals, for true greatness, or capacity to enjoy, comes not from position or wealth, although both of these if properly directed, contribute largely towards the possessors happiness.

It is this mistaken idea of what constitutes greatness, nobility, and exalted human nature, which makes so many of our rural population discontented with their lot, as well as envious of the supposed happiness and prosperity of the residents of cities, but misery is no respector of position or locality, and like parasitic plants or insects, it seeks nourishment wherever it can be found. Leaving the residents of cities and villages to themselves, we have a word to say to our rural reader, residing in the country who are farmers, or in some way cultivate the earth for a livelihood, for it is from such as those that the most frequent and bitter complaints come of discontent and hardships. Now we hold that of all places where a man or woman should be able to enjoy life in the fullest sense of the term, the country ranks first and foremost, but it must be admitted, that a person who can see no beauty, and takes no interest in natural objects as they are found outside of city limits, will be very likely to find the country both dreary and uninteresting. All these lugubrious phases of rural life however, will disappear before a judicious system of education, one which points out the way for reaching the highest planes of intellectual training and enjoyment. The principle objection, which doubtless would be urged against a higher standard and more thorough education is the want of necessary means and leisure for its attainment, but this may be disposed of with the old adage of "where there is a will there is a way," besides some of the branches now taught in our common as well as high schools might be laid aside for others which are far more useful.

Natural history in its various branches must become the leading feature in the education of our rural population ere they become highly prosperous, financially and socially. The farmers' sons and daughters must each pursue some line of study which shall carry them deeper into the mysteries of nature than their parents have ever gone or thought of going, thereby finding a pleasant and profitable pastime and a never-ending source of enjoyment. It matters very little what object they may select for study—animals, minerals or plants, each one of which will furnish more material than can be investigated in a lifetime, and these are always at hand when desired.

We will suppose for instance, that one child takes up the study of *Coleoptera* (beetles), another of *Lepidoptera* (butterflies and moths), another of *Diptera* (two-winged flies), and so on through the different orders of Entomology; each would find enough work, and the results could scarcely fail to bring contentment and fame, if not great wealth. The same may be said of the study of plants, birds, minerals, shells, as well as the larger animals. Thousands of men have bred and raised horses all their lives without knowing anything of the anatomy of the animal or the structure and growth of hairs on his hide. If the farmer keeps sheep, let him encourage his sons to learn all that there is to be known about this useful animal, even to the final disposition of the fleece and the why and wherefore of the difference in value of the various qualities.

"He don't know beans," is an epithet often bestowed upon persons supposed to be very ignorant; but the man who does know beans in the fullest sense of the term is yet to be born, and he who attempts to even collect the various known species and varieties, will find he has no easy task, and this, when accomplished, would be but the first step in knowing much about beans.

RURAL NOTES AND QUERIES.

Ginseng Culture.—The Chinese have long ascribed extraordinary virtues to the root of Ginseng, it being considered almost a sovereign remedy for various diseases. It is found growing wild in the mountains of Chinese Tartary from whence the Chinese formerly obtained their Ginseng, but the constant drain upon those regions has exhausted the supply, and for many years America has been the only country from which this root could be procured, but the wild plants are becoming scarce while the demand does not abate. Here is a chance for our horticulturists to introduce a new source of revenue by cultivating this plant extensively. It has been grown in botanic gardens for the past century or more, hence there can be no question about its succeeding under cultivation.

Oleomargarine, or what may be called "Imitation Butter," which has been manufactured quite extensively of late years, is likely to become unpopular and force the Legislatures of the different States to pass stringent laws against adulteration of all kinds. The Produce Exchange of Baltimore have taken the matter in hand and exact a promise from each member that they will not sell Oleomargarine or other adulterations of butter. We must go still further in this matter of adulteration, and enact the English laws governing all articles manufactured for domestic use, compelling the manufacturer to put on labels giving the exact composition of each. This might interfere with the profits of manufacturers of adulterated spices, but the purchaser would be the gainer.

American Silver in Canada.—Our neighbors across the line in Canada, are determined to drive all the United States silver coins out of their Dominions, and to this end the merchants and traders generally are refusing to take or circulate it. In some instances the merchants bind themselves under a penalty of $50, to take no American silver except at the following rates of discount. Three-cent silver coin at two cents, five cent at four, ten at eight, twenty at sixteen, and at this rate up to the dollar. This action of our neighbors is not the kind of reciprocity that is likely to improve trade between the two countries and engender kindly feeling.

RURAL BREVITIES.

PEANUT oil, which was first made in the South during the war, is said to be taking the place of almond and olive oil. There is room for this new industry to be greatly extended.

THE Florida Agriculturist broadly hints that half the people of that State are in tears over two big onions raised by a lady near Sanford. The said onions weighed together three pounds and seven ounces.

THE Housekeeper's Companion is the name of a new eight-paged monthly, published by M. V. RICHARDSON, 340 Fulton St., Brooklyn, N. Y. As the subscription price is only fifty cents per year, it will doubtless have an extensive circulation.

ONE of our exchanges thinks "hard, horny hands, embrowned by the sun and roughened by labor, are more honorable than white ones," which may be all very true under certain circumstances, but much depends upon the man to whom they belong.

IF farmers have occasion to suspect that their dogs have been worrying sheep, they have only to give them an emetic to get at the bottom of the affair. The wool swallowed with the meat and blood will be very likely in such cases to come to light.

THE London Saturday Review has started a project for a novel society to be organized for the purpose of stocking uninhabited islands with pigs and rabbits, so that shipwrecked sailors who happen to reach them may find an abundance of food awaiting them.

IT is reported that some kind of a disease has broken out in the strawberry fields of Southern Illinois which, from present appearances, will nearly, if not wholly, destroy the crop. Can any of our readers give us any facts in relation to this supposed-to-be new disease?

SWINE with solid hoofs, like those of the horse, have long been known among the Mexicans; but for some reason, this breed has not received any attention from those who make the breeding of hogs a specialty. Would not specimens of these swine be worth exhibiting at our great Centennial Show?

OLD furniture of antique pattern is at present highly prized, and their is much searching in garrets and old lumber rooms for grandmother's or grandfather's arm-chair. Americans as a people have but little reverence for heirlooms, but our Centennial Show may be the means of making them take a look backward.

THE Chinese are giving the Californians considerable trouble, or, at least, the latter are troubling themselves a great deal about the Chinese, which amounts to the same thing. There are many persons in the Eastern States who would gladly trade off their present help for the Heathen Chinee and give something to boot.

TURKISH clover is recommended by a Western apiarian as an excellent plant for bee pasturage. We conclude, from the description he gives, that it is nothing more than the common Sweet or Tree clover, (*Melilotus alba*) which has become naturalized over the greater portion of the older States. To call this old plant Turkish clover, would doubtless lead many persons to think it something new, and give somebody a chance to sell the seed at an advanced price.

WE are in the receipt of an anonymous letter which, from the handwriting and post-mark, we should think was from JONES of Binghamton, did we not know that the worthy gentleman was just now busily engaged in proving to his brother Grangers that their cattle, horses and farm machinery and outbuildings should all be weighed twice a day, and that his *scales* are the only ones to use for that purpose. Then, too, the extreme modesty of the epistle is so like him. "JONES!" the Detroit Free Press man would say to you, "Yum! Yum! Yum!"

WE have before us an illustrated pamphlet from RUSSELL & Co., Massillon, Ohio, who manufacture the well-known "Massillon" Thresher. It is a most seductive little book, replete with pictures, that we can easily believe will appeal direct to the minds of those who are interested in the subject. The text accompanying the illustrations is solid "machine talk," and those who wish to post themselves on the subject will scarcely find information in a more compact and readable shape. R. & Co. have been in the business since 1842, which is an earnest that they have profited by the experience of a career so long and successful.

THE First Medal at the Centennial was taken by Mr. H. G. HOTCHKISS the great Oil of Peppermint man, and this is how he got it. Visiting the Centennial with some of his New York City business friends, he stepped up to one of the peripatetic segar vendors and asked for segars "two for a quarter" as only he can ask. He handed the merchant a silver half dollar in exchange for which he received two "rankapee" segars and what he supposed to be a silver quarter until some time afterwards when one of his friends discovered his silver quarter to be one of those worthless Centennial medals so common outside the grounds. This is how HOTCHKISS got the first medal at the Centennial.

BUSINESS NOTICES.

THE "Phœnix brand Pure White Lead," made by Eckstein, Hills & Co., is the most economical paint you can use. Every keg warranted.

GRASSES.

O, LIFE! that lideth in the sod,
How sweet and bountiful thou art;
Like Aaron's mystic almond rod,
By miracle the grasses start.

They creep about the naked land,
In silence shod they nimbly run;
They clothe the rock and deck the sand,
And spread their velvets in the sun.

Upon a mighty loom they ply,
With shuttle flying far and wide,
And woven in this tapestry
See buttercups and daisies pied.

O, sweet this green and humble home
For all earth's young that skip and play,
This dewy footstool 'neath the dome
Where low at eve the cattle pray.

O, sweet this fond, maternal care,
For nameless weeds that flower and fade;
And teeming millions flourish there,
The weakest races God has made.

O, sweet to think when day is done,
And tired we seek the common breast,
Like all that gaze upon the sun
Our frames beneath this cloak shall rest.

[*Augusta Larned.*

The Story-Teller.

THAT AWFUL SMITH.

[Continued from page 352, last No.]

CHAPTER III.

I KNEW it, in that moment when our eyes met. I knew that I, Francis Drasdyl, world-worn, case-hardened cynic of seven-and-twenty, was to love this woman—that I did love her already.

Rather tall, graceful as Diana in her statuesque summer draperies, a

"Helen of the low-areth'd brow,
And amber hair, and dewy violet eyes;"

this was Mrs. Wybrowe as I saw her that day.

My Fate was speaking to me—half a dozen words—of course; and I was drawling commonplace in answer; and then we were all three strolling on—I beside her.

If I had been blind I should have loved her for her voice—her voice that, with its weird, thrilling, ineffable sweetness, sent the blood with a long-forgotten shiver through my veins as I listened to it.

Side by side with my Fate, oblivious of Aunt Medusa and Miss Boodle, I lounged down that pleasant, shady walk.

I loved this Helen Wybrowe, this woman with a strange history, whom I had known barely five minutes, as I had never loved woman before, as I never should again.

It was sudden enough and absurd enough in me this passion that I felt. All the more reason for hiding it jealously.

Presently we came to a little round-point where, under a big tree, there was a provision of garden-chairs. "Shall we rest a little, Amy?" Mrs. Wybrowe said, "it's too hot to keep walking."

So we all three sat down under the big beech.

"You know Miss Boodle?" Mrs. Oswestry asked. "I saw you with her on the croquet lawn just now. Bella Boodle is decidedly a prize match, Mr. Drasdyl."

"She will be, in a year or two," I said, thinking of the Lambertesque symptoms I had noted in the damsel half an hour ago.

"Ah! you mean when her mother dies?" said Mrs. Oswestry, agreeably misunderstanding me; and so the talk rattled merrily on until I began to wish Mrs. Oswestry at Jericho, when she suddenly cried, "Ah! there's Gordon Murray! The very man I've been wanting to see all day."

And she made signals with her parasol to an individual in the distance, who perseveringly declined to see them.

"How stupid he is!" she cried, at last, provoked; "he's actually moving away. I must catch him. I'll be back in a moment, Helen."

And, heedless of my (not very strongly urged) offer to bring the recalcitrant Murray to her presence, Mrs. Oswestry set off in immediate pursuit toward a corner, and disappeared.

I don't remember what Helen and I talked about when we were left alone, or how long we sat under the big beech.

I know she spoke, and that every now and then the great violet eyes turned slowly upon me; and, when she was silent,

"Filled with light
The interval of sound,"

I was in Elysium, and lost the count of time. A step soft and cat-like, that neither of us heard, came down the walk. A dry branch cracked under the cautious tread, and then we both looked up. A man passed us. I knew him instinctively. The fierce black eyes, contracted in their wrath, which met mine in one brief, vindictive glare, could only belong to one man.

That lithe, dark personage with the feline tread and the ugly yellow physiognomy, must needs be the hero of Charlie Twistleton's story, the man who had bought up the arbitrament of Helen Wybrowe's fate—Alvarez Smith.

He never looked at her this time, only at me. I wonder whether the man's instinct told him, even then, that I loved her?

He went slowly by. I am not the least given to superstition; but I perfectly understood, in that moment, the Italian theory of the *mal occhio*, and the balmy summer air seemed purer when my enemy passed out of my sight.

For I felt that Alvarez Smith and I were foes, and mortal foes, from that hour; that a duel—it might be a duel to the death—had commenced between us. You laugh at this, perhaps, who read it, tranquilly skeptical of anything in the shape of melodrama in this age of realism.

Reading it too, I might do the same; but that day, I had heard and seen sufficient of Helen Wybrowe's rejected pretendant to be convinced that this was as absolute a fact as that I drew breath.

Mrs. Wybrowe rose a little pale; the dark circle under her eyes more plainly visible; a sort of *hunted* look upon her face that made my pulse throb angrily.

"Amy seems to have forgotten me," she said; "let us go and look for her."

We walked across the croquet-lawn, for a while silently.

Then she said, "You know that man who passed me just now?"

"I know him *now*," I answered; "I never saw him before, and only heard of his existence two hours ago."

Her pale cheek flushed painfully.

"Then you have heard——?"

"Everything," I answered, stopping her. "There is Mrs. Oswestry yonder."

So she was, with the unhappy Gordon Murray and Aunt Medusa.

Mrs. Wybrowe quickened her pace and said nothing more till she was safe under Amy Oswestry's wing again. Then a knot of men gathered round her and Aunt Medusa bore down upon me and carried me away captive.

"Where is Bella, Frank?" she said.

"Eating strawberries and ice cream over there," I answered, nodding towards the tent where the croquet players were.

"Ah! and what do you think about her?"

"How *can* I think about her?" And in truth it did seem preposterous. Fancy a human intellect occupying itself about Bella Boodle!

Aunt Medusa hadn't the faintest notion of what I meant.

"She will be just the girl for——" she began.

"For Cousin Tom," I interrupted. "Yes; the two champions will pair admirably. She'll be Mrs. Thomas Claypool before the croquet season is over."

I was longing to get back to that group round Mrs. Wybrowe from which Aunt Medusa was bearing me away; and I dare say something of the impatience I felt manifested itself through the elaborate languor of my tone; and so my captor on a sudden conceived, a wildly-vague notion that I was inclined to be envious of Cousin Tom.

"There's no fear of that," she said. "You must go to their country place when you take your vacation. Mrs. Boodle will send you a special invitation. I knew you would like Bella. And now take me to get an ice."

She was positively hugging herself in the success of her little game!

I let her continue that exercise to her heart's content without any further attempt to demonstrate to her that it was by no means called for, and took her away, as I was bid, to get an ice.

She ate three large ones. Then Mrs. Boodle came up and glared apoplectically at me through her double eyeglass when I was presented to her. Then *she* ate ices, which I had to fetch for her. When they had both tried their digestion sufficiently in this way, the two went off together to another tent to eat more ices, and I was set at liberty.

The croquet lawn was nearly deserted when I crossed it. Valse music floating out in the still air through the open French windows of Mrs. Huntingdon's drawing-room explained this phenomenon. Near the doorway, with a fresh knot of men about her, stood Mrs. Wybrowe. Just as I entered, some man asked her for the valse they had just commenced. It was Gordon Murray, an admirable performer. I was near enough to hear her refusal; but, making as though I heard it not, proffered a similar request the next moment.

The same refusal was on her lips when the angry blood rushed swiftly into her face; she bowed her head silently and put her hand upon my arm. As I turned, I saw Alvarez Smith watching us. The next moment my arm was close about her and we were swinging around the valse circle. I quite understood to what I owed that valse; she had read a threat in her persecutor's eyes and had rebelled against it.

As we had passed the place where I had seen Alvarez Smith standing the second time, her hand closed suddenly on mine.

"You are tired. Shall we stop?"

"No, no!" she murmured. "Don't stop. Keep on."

And we kept on, till the "Soldaten-lieder" came to an end.

"That fellow annoys you," I said, as we whirled by him again. "I believe he has the evil eye myself."

"Don't talk of him!" And again she trembled.

"If you bid me not—no. But it is intolerable, you know. And quite preventible. Why should you permit——"

"Hush!" And as she spoke she lifted her eyes in that slow, languid fashion she had, up to mine.

"Hush! Don't let us speak or think of him *now*."

There *is* something stronger than ice water in the veins even of a cynic of seven-and-twenty, after all. A fire shot through mine at her delicious emphasis of the "now." Her head drooped towards my shoulder again, and she seemed to nestle like a tired bird in my arms.

"What a valse this is!" she said presently. "I think no one has my step like you."

"You will trust yourself to me again, then?"

"If you choose."

The valse ended, we went away into the conservatory to sit out the square dance that followed. We sat out a good many there.

The evil eye lit on us once or twice. I think we were both too happy to trouble ourselves much about that.

"Only this dance, Amy," Mrs. Wybrowe said, presently, when Mrs. Oswestry had unearthed us and was proposing departure. And we had "only that dance."

I was wrapping her cloak about her in the hall.

"That rose will be dead before you get to Park Avenue, Mrs. Wybrowe," I said. "Will you give it me to mark to-day with?"

It was the white rose she wore in her hair that I asked for. She gave it me without a word. Then Mrs. Oswestry swept by us to the carriage; we followed.

I held her hand in long, close farewell clasp; then the carriage door was shut upon her; and Alvarez Smith and I were standing side by side on the gravel, watching her drive away.

CHAPTER IV.

The season was over; New York was emptying fast; dunns pressing; the heat intolerable. Howbeit I abode still in the Sahara of Bond street. Aunt Medusa had gone into the country with the Boodles, having extracted from me a promise to follow I only intended to keep it——

The "it" was in Park Avenue. Mrs. Oswestry had not yet made her move, hesitating between Long Branch and Saratoga, and I was watching the turn of the scale. For with Mrs. Oswestry would go Helen Wybrowe. And where Helen Wybrowe went I meant to follow. I had not spoken yet, though nearly a month had passed since that day at Astoria I had marked with a white rose. She had hardly given me a chance. And yet she knew, who knew me as I was, that I loved her—had loved her from the very moment our eyes met for the first time. And I knew my strange, willful, passionate darling—my darling Helen, who was like no other—I knew she loved me with the one love of her life. Only between her loving me and my winning her there was much. Nevertheless, the mask we both wore, before each other as before others, was getting too stifling to be worn much longer. It fell from both of us at last.

I had been sitting with her in Mrs. Oswestry's morning-room, under the shelter of the sunshades, among the flowers, one day for nearly an hour. Commonplaces had languished and died. There had been a silence, which these heavy violet eyes filled divinely enough, but which both of us knew must be broken; and only in one way.

I looked up into her face. In its passion-pallor, in the trembling lip, in the scarce-restrained tears that had gathered slowly to the eyes, I read what made me take her swiftly in my arms; and then the silence was broken by the sweet sound of her own name. "Helen!"

She trembled—but not with fear. And her head, with its diadem of amber hair, sank down upon my breast; and I bent mine till my lips touched hers and clung to them. I had won her! Not yet.

The next moment she had freed herself.

"Oh! why have you done this?" she sobbed—wailed almost.

"Why? Because I love you, Helen. Because you love me. And because you and I know this is so."

"Yes," she murmured; "yes—you love me. I know that. I knew it that day at Astoria. As no one ever has loved—ever will love me. I know that."

"And you love me, Helen. You know that, too."

"Yes; I love you!" she cried, passionately. "I know that, too."

"And yet you ask me"—I began, so far off my head as to be going to argue with her.

"Because this should never have been. All between us must end here, and now."

"In heaven's name, why?" I broke in, rather mad with this piece of feminine cruelty. "Why must it?"

"Frank," she said, coolly now, "Frank, this is folly. You know my story. You cannot marry a beggar as I shall be."

"Nor you, it appears."

"Selfish and cruel!"

Even at that moment I couldn't but admire that truly feminine retort.

She went on.

"I? Am I thinking of myself? And yet this is my fault. I knew what has happened must happen. Yes; it is I who have been selfish. I knew it; and I ought. But—oh! Frank, I knew you loved me; and my loveless life seemed so bitter—so bitter! And——"

And here she broke down, sobbing.

My willful, passionate darling! She was trying to persuade herself that she was acting nobly and disinterestedly; and, being noways fitted for such self-martyrdom, was failing signally. She ought to have nipped this love of mine sharply in the bud, but lacked the will. And now she was trying to sacrifice it and her own love on the shrine of duty—now when she was my own, when she had rested her head upon my breast, when she had given her lips to mine.

And so my Helen—who was, indeed, my very own—told me I was not to marry a beggar; told me that for my sake, our love story was to end here—in short, told me all a woman tells a man in like case.

But she told me, too, by every word and look, unwittingly but unmistakably, that I should be a triple fool if I lost her now—this be-all and end-all of my life; this woman who would make my life worth the living. I didn't repeat my folly of attempting to argue with her. Her hand was strong enough against me as it was without such strengthening. I didn't take her in my arms again and stifle her feeble special pleading with kisses. I let her say her say. And then, when she had sunk back into the low, deep chair weak and trembling and defenceless again, I knelt beside her; and holding fast in mine the soft little hand I never meant to let go, I told her how it must needs fare with me if she had her way. And I was conquering what I knew all along was my own of right; the violet eyes were full of happy tears; the words I looked to hear already trembling on the full lips that had grown meek again, when—there was a rustle of woman's draperies and Mrs. Oswestry bore down upon us.

And Helen rose; and, before I could stay her, had fled away swiftly upon her feet, leaving me to face my lady alone.

The which I did as best I might.

For a while Mrs. Oswestry looked grave and judicial; then, by degrees, benignant but mildly reproachful; when I took my leave, protective and honestly propitious. It was arranged between us that I should come to Park Avenue early the next day.

At a frightfully undue hour I drove there. A coupe had just pulled up at the door; the late occupant was speaking to the servant in the hall. I was just in time to hear the functionary's answer to the question put to him.

"No, sir. They left town for the country last evening."

The other swung round on his heel with a fierce "*Carajo!*" and again I stood face to face with Alvarez Smith, the man with the evil eye.—[Concluded next week.

THE BRIDE'S TRIAL.

IT is strange what different estimates people will put on a man's character, according to the eyes with which they may view him. In the opinion of some Mr. Benjamin Benedict—not our hero exactly, but the next thing to it, his uncle—was a gentleman, a scholar and a philanthropist; while others, quite as well qualified to reason and decide, wonder that such a monster was allowed to walk the earth unchallenged. For old Ben Benedict was just the sort of man to provoke and please in alternations—a human March day, with streaks of sunshine and chilling gusts sandwiched through his nature. People who knew him liked him passing well, but it sometimes took a life-time to know him as he really was.

"You will be sure to like my uncle, darling," said Hugh Benedict to his young wife. "He is eccentric, but he is sterling."

Rachel did not answer, but her blue eyes were wistful and full of perplexity. Uncle Ben, whom she had never seen, but of whom she had heard much, was to her an inscrutable riddle, whom she feared more than she was willing to acknowledge. For Hugh's future depended to a certain extent upon Uncle Ben Benedict, and with Hugh's future her own was bound inseparably.

She was a fair, fresh-looking girl, with velvety cheeks, bronze-bright hair, and features as correct and delicately cut as a cameo. Hugh was quite certain that Uncle Ben could not see her without loving her; but then these young husbands are not apt to be impartial judges!

She was sitting in the fire-light, at their lodgings, when the old gentleman first beheld her; and the only warning she had of his presence she saw reflected in Hugh's eyes.

"My dear, how do you do?" said the old gentleman, kissing Rachel on both cheeks.

And she thought he was not so terrible, after all!

He turned to Hugh when he had thus unceremoniously made himself acquainted with his new niece-in-law.

"Well, young man, are you ready to leave these lodgings and go to your new home?" he asked; for be it known that the old gentleman had given Hugh and Rachel a wedding present of a new house, wherein they were to live.

"Quite, sir," Hugh answered, cheerily.

"Shall it be to-morrow?"

"Yes."

"All right."

And Mr. Benedict sat down to spend the evening and enjoy himself.

"Well, sir?" said Hugh, when his uncle was taking leave, and paused on the front door steps to light a cigar.

"Well, sir?" said Uncle Benedict, calmly.

"How do you like her?" asked Hugh.

"How can I tell?" demanded the old gentleman, irritably. "She's pretty to look at; so is a china doll or a white kitten! It isn't always the prettiest callows that wash the best. Good evening!"

And Hugh Benedict, albeit he was very fond of his uncle, did not know whether to be vexed or not.

Early the next morning, however, Uncle Ben made his appearance before the young couple, breathless and eager.

"Trunks packed, eh?"

"All but the last one, uncle;—and Rachel lifted her pretty head out of the tray, as you may have seen a red clover blossom rise up from beneath a child's footstep.

"I'm going to take you down to Bloomdale myself, my dear," said Uncle Ben. "Hugh, I want you to go off to Canterbury with these letters. They're of importance. I'd go myself if I were ten years younger; but sudden journeys don't agree with old bones like mine."

Hugh looked aghast at the proposal. Rachel turned pale.

"Cannot the business be postponed, sir?" said Hugh hesitatingly.

"No, it can't!" replied Uncle Ben, curtly. "If you don't want to go, say so. I dare say I can find some one else to oblige me!"

"Of course I shall go," said Hugh. "But about Rachel——"

"I suppose I'm old enough to take care of a lit-

tle girl like that," said Uncle Ben, in an aggrieved tone. "You'll find us both in the new residence, with the table laid for dinner, when you come back to-morrow."

So there was nothing for it but for Hugh to kiss his little bride a half score of times, and commission Uncle Ben to take the best possible care of her until he should return.

"Foolish children!" said Mr. Benedict, as he saw Rachel sobbing on Hugh's shoulder. But there was a cheery twinkle in his own keen gray eyes, nevertheless.

Poor little girl! the atmosphere had lost somewhat of its sparkle, and the world looked less bright, as she journeyed in Uncle Ben's barouche towards her new home, with Uncle Ben's newspaper rattling at her side. As the autumn twilight began to fall, her thoughts became busy, as a woman's will, at times.

"Uncle," she said, turning suddenly towards the old gentleman, "what sort of a house is it? Ours, I mean!"

"Well," said Uncle Ben, reflectively, "it's a cottage, I should say."

"A modern cottage?"

"Well, no; rather of the antique order than otherwise."

"Oh," cried Rachel, "I'm glad. I despise those new, stiff, formal places, that look as if they were merely to be admired, not lived in and enjoyed. Uncle, what are you laughing at?"

"At your curiosity, my dear," replied the old gentleman.

"Then I won't ask you another question," said Rachel, resolutely.

But she fully atoned for that deprivation by sketching on the tablets of her own fancy an endless variety of little Gothic structures, with bay-windows and trellises covered with climbing roses and honeysuckles; while Uncle Benedict watched her from behind the screen of his newspaper, with the queerest of expressions on his brown old face.

"I'm almost sorry I commenced the thing," he said to himself. "If I *should* be disappointed in her! But, pooh! it's the only way to find out if she is worth my boy's love."

Presently the lumbering old chariot came to a stand-still; but to Rachel's surprise, in front of no fairy cot, or low-eaved edifice surrounded by verandahs and flower parterres. A tumble-down, unpainted farm-house stood a little back from the road, with its shutters hanging loosely by one hinge, and one or two scrubby lilac bushes forlornly tossing their foliage in the wind!

"How dreary it looks!" thought Rachel, with a little shudder, as she wondered whether the coachman had really meant to stop there. But Uncle Ben at once seized her carpet-bag and umbrella.

"Come, my dear," he said to Rachel.

"Is this the place?" she asked.

"This is the place," Uncle Ben answered, with a sudden paroxysm of coughing. "Gate's a little out of order," as that useful mode of ingress became suddenly detached from its sole remaining hinge, and fell with a crash to the ground; "but that's soon set right with a screw-driver and half a dozen screws."

Alas! poor Rachel! What were her sensations as she looked blankly around the neglected, dismal spot which was the sole realization of her fairy dreams? This the home Uncle Benedict had given them! And for an instant our poor little heroine felt as if she could repel the unwelcome gift, and tell Uncle Benjamin plainly that she could not spend her days in a hovel like this.

But then came sober second thoughts. Uncle Benedict had meant kindly; they were poor, and could not afford to dispense with even the meanest of roofs over their heads. No, she must gratefully accept the present in the spirit in which it was given, and check in the bud all her rebellious and unamiable repinings.

"I told you it was a cottage, you know," said Uncle Ben, keenly scrutinizing her face, as they stood on the doorstep waiting for the door to be opened.

"Yes, I know," said Rachel, glancing round with brightening eyes. "That is a very choice climbing rose over the window if it was only properly trained."

"It's rather lonesome," said Uncle Ben.

"I like the country," Rachel answered hopefully.

As she spoke a slipshod old woman appeared to let them in, and led the way to the best room, a green-curtained apartment, with a shabby carpet on the floor, and a fire in the grate that emitted far more smoke than caloric.

"Smoky chimneys, eh?" said Uncle Ben.

"The draught seems to be poor," said Rachel, "but I dare say it can be altered."

"I hadn't any idea the ceilings were so low," grumbled the old gentleman.

"It's partly the effect of the large pattern of the wall paper," said Rachel, with a glance at the red and green monstrosities. "A narrow-striped pattern will improve it."

"What queer little cupboards by the sides of the mantel!" said Uncle Ben.

"Oh, they will be nice for our best china," said Rachel.

"My dear," said the old gentleman, "I believe you are determined to be pleased. Do you really think you shall like this place?"

"I shall like any place where Hugh is!" said Rachel brightly.

She went all over the house with the old gentleman, planning improvements and suggesting and contriving until he really began to think she would make an Arcadia out of the tumble-down old farm. And if she shed a few tears on her pillow when she went to rest under the eaves of the roof, in an apartment which must have been built for Tom Thumb, Uncle Ben Benedict never suspected it.

There was the chariot at the door when Rachel rose from her breakfast of bread and butter and coffee the next morning.

"Come, my lass," said the old gentleman, "I want to show you a place further up the road, which has been taken by a friend of mine."

The drive and the delicious September air were like an invigorating tonic to our wearied little bride; and a picture after the style of Watteau awaited them, in the exquisite villa, with its rose-clad bay windows and picturesquely sloping roof. Rustic iron chairs stood under the bowing branches of the elms on the lawn, and a marble Cupid, holding up a carved conch-shell, scattered bright rain into a flower-bordered basin directly in front of the gates.

"Oh, how beautiful!" cried Rachel. "I never saw such superb scarlet geraniums in my life; and what a lovely marble-paved hall!"

"You like the appearance?"

"Oh, yes; 'tis beautiful."

"Come in, my dear, and see how you like the interior," said the old gentleman, serenely.

It was perfect, from the drawing-rooms, with their superb Brussels carpet and exquisite silk hangings, to the chambers, all in white and pink, like the inside of a rose's heart, and the fairy conservatory, all stocked with camellias, heliotrope, and rare fuchsias, at the south end of the house.

"It is like fairyland!" cried Rachel, enthusiastically. "Do tell me, Uncle Ben, who is to live here?"

Uncle Ben turned round and faced her.

"You, my dear."

"And Hugh, of course?"

"To be sure!"

"But, uncle," gasped little Rachel, quite overwhelmed by this unexpected good luck, "the other house——"

"That's only a little joke of mine. This is the real home, and I give it to you with all the more pleasure that you were disposed to make the best of the bad bargain you thought you were in for. My dear, the contented mind you possess is worth a thousand houses!"

And Rachel felt something warm and wet upon her cheek, like a tear, as the old gentleman stooped to kiss her.

When Hugh came home, to find his little wife upon the verandah, all welcoming smiles to greet him, he exclaimed, "Why, Uncle Ben, this is a perfect casket!"

"But none too good for the little jewel that inhabits it," Uncle Ben answered.

And Hugh read in the tone that his young wife had won the capricious old gentleman's heart.—*World.*

"POINTS."

He was a large man, except in his ideas and in the manner of his speech. His face was as grave as the Chinese problem, but there was a quizzical cast in his left eye, and his tongue was rich and heavy with a foreign accent, albeit as rapid as the running waters of the River Dee. Leaning against the frightful head of one of the iron lions in California street, with the general appearance of being ready to either brace up the market or stand from under, he voiced this idyl: "It's a fine thing to dale in stocks when you know you're right. I get all my points from Flood, Misther Flood's a friend o' mine. I make all me money through him. He's a kind adviser. A few days agone I went to me friend Flood, and sez I, 'Misther Flood,' sez I 'would I be best buying a few shares of Savage? It's goin' chape,' sez I, 'an' the Lord knows but it'll get out of me rache soon,' Me friend Flood looked up from his writin' (he was signin' a chick for an orphan asuylum), an' sez he to me, shakin' his big head betimes, 'Don't touch it,' sez he. 'Divil a thing is there in the mine but wather, an' it might hurt ye,' sez he. 'Thank ye, Misther Flood, sez I. Thin I wint and tuck 700 shares. I got all me points from Flood. It was goin' at $17. Betimes it rose to $22, an' I wint to his office. He was glad to see me. He was spakin' to his chafe clerk about kapin' the assessments from gettin' mixed wid the dividends, but kindly stopped and gave me a nod and a wink. 'Good mornin,' Misther Flood,' sez I. 'Savage is a square stock; it's lapin' about like a dog wid a male o' poison,' sez I. 'Wouldn't I best sell a trifle of it short?' He looked at me kindly, and sez he, 'Lave it alone for awhile, it's risin' like a full moon,' sez he, 'widout signs of stoppin', an' I couldn't advise ye to sell.' 'Thank ye, Misther Flood,' sez I. Thin I wint an' sold me Savage to Keene. He had a trifle already, but was frindly to take it an' give me the profit of $3,500. I get all me points from me frind Flood; but don't be talkin' about it; he might change his system some thine and break me."

JOSH BILLINGS ON STRAWBERRIES.

The strawberry is one ov nature's sweet pets. She makes them worth fifty cents the rust she makes, and never allows them to be sold at a mean price.

The color of the strawberry iz like the setting uv the sun under a thin cloud, with a delicate splash uv rain in it; its fragrance iz like the breath uv a baby when it furst begins to eat wintergreen lozzingers; its flavor is like the nectar an old-fashioned goddess used to leave at the bottom uv the tumler when Jubiter stood treat on Mount Ida.

There is many breeds uv this delightful vegetable, but not a mean one in the hull lot.

I think I have stole them, laying around loos, without any pedigree, in somebody's tall grass, when I was a lazy school boy, that eat dredful easy without any white sugar on them, and even a bug mixed with them in the hurry uv the moment. Cherrys iz good, but they are too much like sucking a marble that has got a handle tow it. Peaches iz good, if u don't get enny uv the pin feathers into your lips. Watermelons will sute ennybody who is satisfied with half-sweetened drink; but the man who can eat strawberryies besprinkled with crushed sugar, and bespattered with kream (at somebody else's expense), and not lay his hand on his stummak and thank the author uv strawberryies and stummaks, and the phelow who pays for the strawberryies, is a man with a worn-out conscience—a man whose mouth tastes like a hole in the ground, and don't care what gets down.

A SIOUX WARRIOR'S DIARY.

Among the interesting relics brought back by gentlemen connected with Gen. Crook's recent expedition against hostile Indians, and found in the village of Crazy horse, after it was abandoned by the band, and previous to its destruction by Gen. Crook's soldiers, was a book full of curious drawings, which appear to be the military record, expressed in picture form, of some one of the young warriors belonging to the Indian band. We have seen the book, which contains many sketches remarkable for bold delineation and truthfulness to nature, bearing in mind, of course, that the same is the work of an untutored Indian artist. The pictures represent attacks on American wagon-trains, parties traveling along the highway. In a few instances female figures occur The victims are pictured as being scalped, shot with rifles and arrows, and stabbed with lances. In some of the pictures the parties attacked are Indians of other tribes, Crows and Pawnees being especially noticeable. Nearly all the scenes are painted in bright colors; the blue uniforms of the murdered soldiers and the red trappings of the Sioux braves are especially vivid. It is quite certain that every scene so pictured was an actual occurrence. The warrior to whom this book belonged has a very sanguinary record, if that is true. The book itself appears to have been an account-book that was stolen from some post-trader. It bears date 1869.—*Omaha Rep.*

THE LARGEST SWAMP IN THIS COUNTRY.

The surveying party sent out to survey the Okefenokee Swamp report that it measures 142 miles in circumference, and with the sinuosities, 180 miles around. This vast formation, 30 miles long and 27 miles wide, is the largest swamp in the United States. It lies in the Southeastern part of Georgia, but partly in North Florida. Here is the Suwanee River, made famous by the old negro melody of "Old Folks at Home." It traverses a large section of upper Florida, is bordered with valuable cypress and other timber, and empties into the Gulf at a point about eighteen miles above Cedar Keys. Okefenokee Swamp was, for generations, a refuge for runaway slaves. Indians have lived there until recently, cultivating gardens; and in the depths of the jungles and forests are thousands of bears and a great many Florida "tigers"—the couger, or American panther. One curious experience of the surveying party was to find themselves at one time, while in the midst of a great swamp, suffering for water. The discovery of a number of mounds, "probably built by a race of men existing before the Indians," is also reported. Several skeletons were taken from them, but some crumbled as soon as exposed to the air.

Among the ridiculous patents that have been granted at Washington are a trap for catching tape-worms, a combined plow and cannon, a patent brick to be tied to a cow's tail to keep her from switching her natural appendage, a house on rollers that deaden the shock of an earthquake, and a combined trunk and house. The person afflicted with tape-worm starves himself until the worm, attracted by the delicious bait in the trap, is readily caught. The combined plow and cannon is for frontier farmers, and is intended for mowing down the savages. The combined trunk and house is adapted to persons of small means, and can be extended or contracted, as they may have occasion to use a house or a trunk.

All we can say of the most original authors nowadays is not that they say anything new, but only they are capable of saying such and such things themselves "as if they had never been said before them."—*Sterne.*

A timid person is frightened before a danger, a coward during the time, and a courageous person afterward.—*Richter.*

BOOKS RECEIVED.

From T. B. Peterson & Brothers, Philada.:

Self-Raised; or, From the Depths. A sequel to Ishmael. By Mrs. Southworth. [Cloth.—pp. 658. Price $1.75.]

Broom Corn and Brooms. Illustrated treatise. [Paper.—pp. 57. Cloth, 75 cts.; paper, 50 cts.

Chas. P. Somerby, 139 8th St., New York:

The Historical Jesus of Nazareth. M. Schlesinger, Ph. D. [Cloth.—pp. 98. Price $1.]

T. B. Peacock:

The Vendetta and other Poems. By T. B. Peacock. Published by the author. [Cloth. pp. 161.]

Magazines for June:

Wide Awake, Domestic Monthly, Demorest's.

Sabbath Reading.

THE MODEL CHURCH.

Well, wife, I found a model church! I worshiped there to-day!
It made me think of good old times, before my head was gray;
The meetin'-house was fixed up more than they were years ago,
But then I felt when I went in, it wasn't all built for show.

The sexton didn't seat me away back by the door;
He knew that I was old and deaf, as well as old and poor:
He must have been a Christian, because he led me through
The long aisles of that crowded church, to find a place and pew.

I wish you'd heard the singing, it had the old-time ring:
The preacher said, with a trumpet voice, "Let all the people sing!"
The tune was Coronation, and the music upward rolled,
Till I thought I heard the angels striking all their harps of gold.

My deafness seemed to melt away, my spirit caught the fire,
I joined my feeble, trembling voice with that melodious choir,
And sang as in my younger days, "Let angels prostrate fall,
Bring forth the royal diadem, and crown Him Lord of all."

I tell you, wife, it did me good to sing that song once more;
I felt like some wrecked mariner, who gets a glimpse of shore;
I almost wanted to lay down this weather-beaten form
And anchor in the blessed port forever from the storm.

The preachin'? Well, I can't just tell all that the preacher said;
I know it wasn't written; I know it wasn't read;
He hadn't time to read it, for the lightnin' of his eye
Went flashin' 'long from pew to pew, nor passed a sinner by.

The sermon wasn't flowery; 'twas simple gospel truth;
It fitted poor, old men like me; it fitted hopeful youth;
'Twas full of consolation for weary hearts that bleed,
'Twas full of invitation to Christ, and not to creed.

The preacher made sin hideous in Gentiles and in Jews;
He shot the golden sentences down in the finest pews;
And—though I can't see very well—I saw the falling tear
That told me hell was some ways off, and Heaven very near.

How swift the golden moments fled within that holy place;
How beautiful beamed the light of Heaven from every happy face;
Again I longed for that sweet time when friend shall meet with friend,
"When congregations ne'er break up, and Sabbath has no end."

I hope to meet that minister—that congregation, too—
In the dear home beyond the stars that shine from Heaven's blue;
I doubt not I'll remember, beyond life's evening gray,
The happy hour of worship in that model church to-day.

Dear wife, the fight will soon be fought, the victory be won;
The shinin' goal is just ahead, the race is nearly run;
O'er the river we are nearing they are thronging to the shore,
To shout our safe arrival where the weary weep no more.

ORNAMENTS.

We *all* prize an ornament, whether it be for our parlor, or our person, or as a gift to others. How we study our own taste, or the taste of our friends we wish to gratify. It must be beautiful, becoming to the person, and be in harmony with the style and dress of the wearer. But were we ever anxious to possess that Ornament which God, our best and dearest Friend would like to adorn us with? Unlike all others, it is perfectly becoming to the wearer, whatever may be her age. It adds grace and beauty to the possessor; is equally becoming and admired at the fireside or in social gatherings; adorns alike the richest palace or humblest dwelling place in the land. Age will not dim its luster, and I have seen it grow brighter while passing through the storm.

Women should especially prize it, for unlike their other ornaments, the *fashion* of it never changes. It is a priceless Ornament. Money cannot buy it. It is a gift. The gift of One who loves us tenderly. Let us accept it and guard it carefully, and as our little daughters early show a love for the beautiful, let us learn them, by wearing it constantly in their presence, to prize it above every other. Let love to the Saviour and to those around us be the golden chain that shall secure it to our persons. "The ornament of *a meek and quiet spirit* is, in the sight of God, of great price."

W.

How to avoid Anxiety.—Payson, on his dying bed, said to his daughter, "You will avoid much pain and anxiety if you will learn to trust all your concerns in God's hands. 'Cast your cares on Him, for He careth for you.' But if you merely go and *say* that you cast your care upon Him, you will come away with the load on your shoulders.'

A filial adoring affection on our part, uttering itself in all forms of activity, and making every work a worship; a divine benignity and tenderness on His part, replying to our love; these should mark our relation to God.—*Dr. Storrs.*

Ladies' Portfolio.

MY MOTHER-IN-LAW.

I MARRIED a woman of sweetness and truth,
And beauty without any flaw;
But over my head hung, like Damocles' sword,
That horror, a mother-in-law!

So upright and downright in person and looks,
She embodied the dismal old saw
Of a scolding and pushing and worrying and bothering
Old bore of a mother-in-law.

She decided to live with us. Chaos and wreck
Would be the result, I foresaw;
So I gave my cigars and meerschaum, with groans,
To a friend with no mother-in-law.

One night, as we sat by a blazing wood fire,
When the days had grown chilly and raw,
"How cozy and nice you would look with a pipe!
Don't you smoke?" said my mother-in-law.

Did my ears hear aright? Yes, bless her dear heart!
"Don't you smoke?" was the first happy straw
To "show how the wind blew," and clear up the clouds
'Twixt me and my mother-in-law.

And, oh, she's the kindest and dearest and best
Old darling that ever I saw!
My mother I love, and my wife I adore,
But I worship my mother-in-law!

THE GREEK BED.

THERE is no form of bedstead, from the four-poster to the French, which may not be found described by writers or represented in works of art. Ulysses manufactured one for himself of olive wood, inlaid with gold and ivory. The bed rested sometimes on boards laid across the frame, on thongs of ox-hide stretched over one another, or on a netting of cord. Plato speaks of bedsteads made of solid silver; Athenæus describes them as made of ivory and embossed with beautifully wrought figures, and Lucian has them veneered with Indian tortoise shell, inlaid with gold. In Thessaly, beds were stuffed with fine grass. According to Athenæus, effeminate gentlemen sometimes slept on beds of sponge. Fashionable people in Athens slept under coverlets of dressed peacock skins, with the feathers on. Clearchus, the author of a treatise on sleep, describes the bed of a Paphian prince in such a way that one can hardly keep his eyes open while reading of it. "Over the soft mattresses, supported by a silver-footed bedstead, was flung a short-grained Sardinian carpet of the most expensive kind. A coverlet of downy texture succeeded, and upon this was cast a costly counterpane of Amorginian purple. Cushions variegated with the richest purple supported his head, while two soft Dorian pillows of pale pink gently raised his feet."

One of the greatest improvements introduced by the Greeks into the art of sleeping was the practice of undressing before going to bed—a thing unheard of until hit upon by their inventive genius. Bed coverings were often perfumed with fragrant essences from the East. Counterpanes were not only perfumed, but embroidered with figures of animals and men.

ARTISTS' MODELS IN PARIS.

I BELIEVE I mentioned in a former letter, when speaking of artists' models, that many of them re women of undoubted correctness of life and purity of morals. An American artist told me recently that he knew of one such, a young Frenchwoman, who always prefaces the terms of her engagement with the stipulation that if one insulting word be addressed to her she will at once quit the studio and consider her contract as canceled. Her story is quite a romantic one. She came to Paris with her husband from the provinces a few years ago and they embarked in some small business; but proving unfortunate, they lost all their capital, and were forced to support themselves by their daily labor. The husband got an engagement as waiter in a cafe, and the wife went out sewing by the day, receiving sixty cents a day for her services, without board. One day a lady artist for whom she was working was so struck by the fine outlines of her seamstress's form that she paid her to sit a few hours as a model for a nude nymph. She then counseled her to give up sewing and to adopt the trade of a model, which the young woman with the approbation of her husband did. She now receives $3 a day regularly, is saving money, and contemplates taking the lease of a small shop as soon as she has laid by a sufficient sum.

A celebrated Spanish painter in Paris has recently created quite a scandal in Paris by marrying a model. This girl—she was young and very beautiful—was engaged to sit by an Italian artist for a term of months; but the Spaniard, hearing of her extraordinary loveliness, managed to tempt her away, and became so infatuated with her that he soon after made her his wife. She is said to be only sixteen years of age and as vicious as she is handsome.—*Appleton's Journal.*

TRUE LOVE NOT THE FASHION.

THE country never possessed so many beautiful and marriageable young women as it does at the present time. And why do we not have more marriages? We answer:—Because marriage for love is the exception and not the rule. The young people of this age have gone fashion and money-mad. If the dandy bank clerk, who pays one-half of his income for board and the other half for clothes cannot improve his condition, he will not marry. The shop-girl who earns good wages and cannot be distinguished by her dress from the banker's daughter, certainly will not plunge into matrimony unless she can better her condition in life. If a man is fortunate enough to possess money, it matters not how old and ugly he may be, hundreds of intelligent, handsome young women can be found only too willing to become his wife. Love is an after consideration. They marry to be supported and dressed extravagantly. How often do we hear the remark, "Better be an old man's darling than a poor man's slave!" Alas! too many of them are not satisfied to be darlings. They will persist in loving other men after they are married.

It cannot be denied that a great number of the unmarried men are adventurers looking for wives who can keep them without working for a living. The peace and contentment of a happy home is not taken into consideration.—*Argus.*

ARABIAN MEN AND WOMEN.

THE Arabs are generally handsome, with pale, oval faces, aquiline noses, and large, dark eyes. They have rather an effeminate appearance. Their dress is almost indescribable. They wear a sort of loose, baggy pantaloons, fastened at the waist by a sash coming down nearly to the knees, below which the entire leg and foot are bare. Some wear sandals. Their heads are covered with a turban, and when walking about free from work, they wear a long flowing cloak with a hood, which is thrown not ungracefully over their shoulders. The fabric from which it is made being originally of white woolen or worsted, but is innocent of recent washings and uncertain in color as worn. The women when seen outdoors, are attired in a large white robe reaching below the knees, full white trousers fastened at the ankle, and slippers. Their heads and faces are covered, excepting their eyes. They are possessed of a reasonable share of coquetry. So far as I have seen I do not think them as good-looking as the men.—*N. Y. Express.*

FOR AND ABOUT WOMEN.

EIGHT HUNDRED girls attend Baptist colleges in Georgia.

WOMEN will hereafter be admitted as students by the university at Delaware, O.

OF the 33,000 persons employed in watch making in Switzerland, one-third are women.

IT is not etiquette for a lady to peruse an ice cream sign aloud while walking with a gent.

TO expect to rule others by assuming a loud tone, is like thinking one's-self tall by putting on high heels.

THE girl students all over the country who graduate this year are resolving to dress for that occasion in ordinary calico.

SMOKING is not a strictly masculine accomplishment in Russia. Ladies not only smoke in their rooms but join the gentlemen in a cigarette at the table.

THE following astounding item is afloat in the papers:—"The Princess Louise has launched and christened the Inflexible, and her displacement when all her weights are on board will be no less than 11,497 tons!"

THE owner of a pair of bright eyes says that the prettiest compliment she ever received came from a child of four years. The little fellow, after looking intently at her for a moment, inquired naively:—"Are your eyes new ones?"

AN Indiana farmer's wife has invented a machine that will prove of vast benefit to every woolen manufacturer in the country. It is a wool feeder and weigher, and is one of the most complete and delicate machines ever invented.

FROM Burlington comes news of a little girl, only nine years of age, who has developed a wonderful talent for sculpture. She chiseled a carbuncle on the side of her brother's head with a screw-driver so neatly that her friends think of sending her to Rome to have her learn to mangle marble in the Italian language.

THERE is a wide difference between admiration and love. The sublime, which is the cause of the former always dwells on great objects and terrible; the latter on small ones and pleasing. We submit to what we admire, but we love what submits to us; in one case we are forced, in the other we are flattered, into compliance.—*Burke.*

A BRIGHT young lady gave her slow lover a delicate leap-year hint the other evening. In the course of conversation a gentleman asked her what form of marriage she thought the most beautiful. Her quick reply was, "I should care little for form. The substance seems of more importance." That girl wears an engagement ring now.

A CORRESPONDENT says that Pittsburg has more business enterprises and successful ones, too, conducted by women, than any other city. There too, adds the writer, society kindly opens her doors to these worthy workers, and the shop woman whose brain or fingers find active employment, finds the doors of intellectual and social delights opened.

A LADY writing to the Cincinnati Gazette from Washington says:—"Did any of you Cincinnati girls ever hear of bunting dresses? If you have never worn them before, you should inaugurate the Centennial year by draping your graceful figures in the material of which your country's flag is made. The girls here have the prettiest and most serviceable of boating suits made of the blue bunting, and the softest, creamiest dresses imaginable are made from the white bunting. Fifteen yards of the blue can be purchased for only $6.50."

Reading for the Young.

NEVER GET ANGRY.

NEVER get angry when you are at play,
Good temper gains many a friend;
But sour looks and words drive companions away,
And lead to many a sad end.

Never get angry when you are at school,
If you would a rich reward earn;
Be cheerful, and practice each wise golden rule,
And soon every lesson you'll learn.

Never get angry when you are at home,
Let love and affection there reign;
Where angry words enter oft quarrels will come,
And there lead to sorrow and pain.

Never get angry when you are abroad,
Strive wisely right habits to form;
For better is he who can thus obey God,
Than he who can great cities storm.

THE "KINDERGARTEN."

AS SO much attention is directed to the "Kindergarten" system of late, perhaps the boys may take a hint from the following account in the Bulletin:

Barnes, the schoolmaster in a suburban town, read in the Educational Monthly that boys could be taught history better than in any other way by letting each boy in the class represent some historical character, as if he had done them himself. This struck Barnes as a mighty good idea, and he resolved to try it on. The school had then progressed so far in its study of the history of Rome as the Punic wars, and Mr. Barnes immediately divided the boys into two parties, one Roman and the other Carthaginian, and certain of the boys were named after the leaders upon both sides. All the boys thought it was a big thing, and Barnes noticed that they were so anxious to get to the history lesson that they could hardly say their other lessons properly.

When the time came Barnes ranged the Romans upon one side of the room and the Carthaginians on the other. The recitation was very spirited, each party telling about its deeds with extraordinary unction. After a while Barnes asked a Roman to describe the battle of Cannæ. Whereupon the Romans heaved their copies of "Wayland's Moral Science" at the enemy. Then the Carthaginians made a battering ram out of a bench and jammed it among the Romans, who retaliated with a volley of books, slates and chewed paper balls. Barnes concluded that the battle of Cannæ had been sufficiently illustrated, and he tried to stop it; but the warriors considered it too good a thing to let drop, and accordingly the Carthaginians sailed over to the Romans with another battering ram and thumped a couple of them in the stomach.

Then the Romans turned in and the fight became general. A Carthaginian would grasp a Roman by the hair and hustle him around over the desks in a manner that was simply frightful to behold, and a Roman would give a fiendish whoop and knock a Carthaginian over the head with Greenleaf's Arithmetic. Hannibal got the head of Scipio Africanus under his arm, and Scipio, in his efforts to break away stumbled, and the two generals fell and had a rough-and-tumble fight under the blackboard. Caius Gracchus tackled Hamilcar with a ruler; and the latter, in his struggles to get loose, fell against the stove and knocked down about thirty feet of stove-pipe. Thereupon the Romans made a grand rally, and in five minutes they ran the entire Carthaginian army out of the schoolroom and Barnes along with it, and then they locked the door and began to hunt up the apples and lunch in the desks of the enemy.

After consuming the supplies they went to the windows and made disagreeable remarks to the Carthaginians who were standing in the yard, and dared old Barnes to bring the foes once more into battle array. Then Barnes went for a policeman, and when he knocked at the door it was opened, and all the Romans were found busy studying their lessons. When Barnes came in with the defeated troops he went for Scipio Africanus, and pulling him out of his seat by the ear, he thrashed that great military genius with a rattan until Scipio began to cry, whereupon Barnes dropped him and began to paddle Caius Gracchus. Then things settled down in the old way, and next morning Barnes announced that history in the future would be studied as it always had been, and he wrote a note to the Educational Monthly to say that in his opinion the man who suggested the new system ought to be led out and shot. The boys do not now take as much interest in Roman history as they did on that day.

LORD DERBY TO THE BOYS.

IN his speech to the Liverpool lads Lord Derby said:—"You live in an age of inquiry, of doubt, of mental restlessness, when more than ever men are unwilling to accept traditional solutions of the great mysteries which surround our life and when many brains are bewildered and many hearts are made to ache by the vain effort to solve problems impenetrable to human reason. You cannot escape the common destiny. Those of you who reflect—and I hope they will be many—will inevitably have times of mental perplexity when the very purpose of existence seems obscure and doubtful; when traditions appear to fail and reason is baffled and when men ask in bewilderment, 'What does it all mean?' I am not here to deal with these high matters; it is not my duty, nor is this the place. Only so much I tell you—I believe that there are ideas implanted in us which, in a sound mind, no merely intellectual disturbance will long affect, and of which, in the deepest darkness, we may always, if we will, keep hold. Right and wrong, honor, duty and country, benevolence toward men and responsibility toward the unseen Power by which human actions are guided and controled—these are not idle phrases. In all countries and ages they have retained their meaning. They are realities which correspond with the deepest wants and feelings of our nature, and no man will feel himself utterly cast down who can say in his heart what the wisest and best of the human race have proclaimed in the whole tenor of their lives. Whether I am happy or unhappy is not my chief affair; what most and first concerns me is to find my work in life, to recognize it and to do it."

THE LIBERTY CAP.

WHEN a slave was manumitted by the Romans, a small red cloth cap called pileus, was placed on his head. So soon as this was done he was proclaimed a freedman (*libertinus*) and his name duly registered. When Saturnius took the capital, in the year 263, he hoisted a cap on the top of his spear to indicate that all slaves who joined him should be free. Marius employed the same symbol when inciting the slaves to take up arms against Sylla; and when Cæsar was murdered the conspirators marched forth in a body with a cap elevated on a spear as a token of liberty. The Goddess of Liberty in the Aventine Mount was represented as holding in her hand a cap, the symbol of freedom. In France, the Jacobins wore a red cap (*bonnet rouge*), but in England the cap of blue, with a white border, is the symbol of liberty, and Britannia is sometimes represented as holding such a cap on the point of her spear. The American "cap of liberty" is also of blue, with a white band or border on the bottom, upon which thirteen stars are placed, and has been adapted from the British. There is no absolute or positive regulation in regard to this cap beyond its shape and color, so far as America is concerned. It is in shape of an old-fashioned nightcap or truncated cone.

WHO WILL MISS ME?—A little girl once expressed very decidedly her expectations of going to heaven. One of her friends thought her over-confident, and told her so. But the little one still held on to her firm confidence. She said, "I know that I am only a very little girl; but when they are all singing so sweetly up there, I think the Lord Jesus will miss me if I am not there singing too!"

The Puzzler.

BIBLICAL ENIGMA.—No. 6.

I AM composed of 32 letters:
My 4, 14, 31, 28, 8, 24, 3, 9 is an Egyptian vegetable.
My 13, 30, 7, 23, 12, 9, 30, 2 was a queen of Persia.
My 17, 15, 30, 15, 22, 6, 23, 21 was a prisoner with Paul at Rome.
My 23, 10, 3, 32, 16, 11, 21, 1 was a precious stone in the high priest's breastplate.
My 26, 14, 23, 15, 27, 25, 20, 12 was a city of Macedonia.
My 29, 5, 18, 10, 29, 27, 5, 19 is a bitter herb.
My whole is a verse of Psalms.
☞ Answer in two weeks. ISOLA.

GEOGRAPHICAL ENIGMA.—No. 2.

I AM composed of 33 letters:
My 17, 4, 21, 15, 8, 10 is a city in Maine.
My 5, 8, 23, 18, 1, 6 is a city in Massachusetts.
My 10, 20, 27, 28, 2, 16, 25, 18, 30 is a city in New York.
My 12, 29, 7, 11, 31 is a West India Island.
My 16, 32, 1, 8, 9, 13, 16 is a city in Missouri.
My 30, 4, 6, 22, 24, 15, 26 is a city in North Carolina.
My 19, 29, 33, 3, 20, 14 is a city in Ohio.
My whole is a verse in 1st Corinthians.
☞ Answer in two weeks. BERBIX.

CHARADE.—No. 2.

My first oft with the gay will mingle,
For 'tis a lady who is yet single;
My second I presume you know
Means beneath or down below;
My third is an article of furniture
Most people have, I am quite sure;
My whole at present I will not send,
But will say that 'tis *not* comprehend.
☞ Answer in two weeks. C. S.

CROSS-WORD ENIGMA.—No. 12.

My first is in small but not in big,
My second in waltz but not in jig;
My third in garret but not in house,
My fourth in rat but not in mouse;
My fifth in death but not in life,
Then guess, my friends, a patriarch's wife.
☞ Answer in two weeks.

PUZZLER ANSWERS.—May 20.

CROSS-WORD ENIGMA No. 11.—Waste Basket.

SYNCOPATIONS No. 2.—1, Pine—ple; 2, Bread—head; 3, Cord—cod; 4, Pearl—peal; 5, Stream—steam; 6, East—eat; 7, Horse—hose; 8, Rood—rod; 9, Acre—ace.

MISCELLANEOUS ENIGMA No. 3.—Pittsburgh Exposition.

PUBLISHER'S SPECIAL NOTICES.

The Rural is a very good present to send to a friend, and it pleasantly reminds the recipient of the donor fifty-two times a year—this year fifty-three times. Any *subscriber* can send it to a relative or friend as a present, at our lowest club rate—only $2.15, including postage.

Back Numbers of this Year (from Jan. 1) can be furnished to all new subscribers, but we shall not send them hereafter unless specially requested. Those who desire can begin with any number, however.

Officers of Agricultural Societies and Clubs, Granges, &c., can, if they will, materially aid in augmenting the circulation of the RURAL. Scores of such are already forming clubs; how many others will kindly do likewise?

Select Your Premiums.—All persons entitled to Premiums will please designate what they prefer and notify us how and where to forward—whether by Freight or Express—if articles are not mailable.

The Best Paper, and the Best Premiums to Agents, is our motto. We ignore Chromos and all other cheap colored pictures, preferring to put our money *in the paper*, and in Premiums to Agents.

Act as Agent!—Reader, if there is no agent for the RURAL in your locality please become one by forming a club. *It will pay.*

At Our Risk.—You can remit by Draft, P. O. Money Order or Registered Letter *at our risk.*

News of the Week.

HOME NEWS PARAGRAPHS.

THE N. Y. Chamber of Commerce has given its 108th annual banquet. Present Gov. Tilden, ex-Gov. Dix and others. Speeches, wine, dyspepsia.

The Chalybeate spring water on the premises of Dr. Crain, near the Spring House, at Richfield Springs, has recently been analyzed, which reveals the fact that it is one of the richest iron springs in the State.

The Cazenovia Lake Camp Meeting Association have decided to put a new steamer on the lake this summer. It is to be a side-wheel steamer, capable of carrying 300 passengers. It is to be built in time for the Sunday School Assembly, which is to commence July 6th and continue ten days.

The Fall River, (Mass) Board of Trade are considering the alternative of half time or a complete shut down.

Nine hundred more Chinese coolies have arrived at San Francisco.

Mrs. Fortune and two young children were drowned in Pigeon Lake, Ontario.

The Windsor (Canada) authorities have extradited Meraine Smith, accused of the murder of McKeen in Detroit.

The police of Portland, Maine have $300 worth of unclaimed gold chains taken from two pickpockets convicted there of larceny. The thieves claim to have come from Philadelphia. The police invite the owners to claim the property.

In the center of the highway, near North Conway, N. H., there is a snow drift three feet in depth.

By an explosion in the powder works at Drakesville, N. J., on Tuesday, two workmen were blown to atoms.

The action of the House Judiciary Committee in regard to the proposed Sinking Fund for the repayment of the Government mortgage on the Pacific Railroads, is not final.

The Erie Railway Company announce that the laying of the third rail between Buffalo and Elmira was completed recently and test trains now run in both directions over the entire distance. The completion of the third rail enables Erie to run narrow-guage cars between all points of the West and Philadelphia without change.

John Biglin offers to produce a man to row with him for the pair-oared championship against any other two men in America for $2,000 over a three mile course.

The four-oared race over the Charles River near Boston, Mass., was won by the Faulkner-Regan crew.

It is expected that Major-General Schofield will make radical changes when he assumes the Superintendancy of West-Point. The Cadets will spend 10 days at Philadelphia during the Summer.

Counterfeit gold coin, made of platinum plated heavily with genuine gold, has of late been circulated in California. It is exceedingly deceptive, being of the right weight, color, and feeling. The platinum is worth half as much as gold, making these counterfeits costly of production.

This year Louisiana will have the largest banana crop ever grown. The winter has been so mild that the fruit continued to grow throughout the season, and while the leaves were badly burned by the ice, yet the fruit was entirely uninjured, and large clusters of half-grown bananas can be seen on many trees.

It is a good year for marvels. Large quantities of wheat have been destroyed by fish this winter in California, this singular fact being explained by the submersion of the fields by high water, during which the fish luxuriated on the tender grain shoots.

They have rated a tax of $5,200, to becomingly celebrate the Fourth in Oswego, N. Y.

The wife of Samuel Rheubart of Theresa, Jefferson County, ran away with George Thayer on Sunday last. Tayer, as well as Mr. and Mrs. Rheubart, have been living and employed at the Shurtliff ore bed for the past three years. Mrs. Rheubart took her children and left them with their grandparents.

In Volcano, Cal., the other day, a laborer found a piece of quartz rock among the rubbish he was wheeling in a barrow. On the rock being broken up it was found to contain pieces of gold, the aggregate value of which was about $1,000.

By the reorganization of President Grant's Cabinet, Edwards Pierrepont, late Attorney-General, is made Minister to England. Judge Taft, late Sec. of War, becomes Attorney-General, and J. Donald Cameron, son of Simon Cameron of Pennsylvania, is appointed Secretary of War.

The south wall of Frazee's flour mill, at Baldwinsville, Oswego County, has fallen, and seven thousand bushels of oats, twenty tons of feed, and 200 barrels of flour were precipitated into the river.

An Iowa court has decided that if a man engages himself to be married and then commits suicide, the defrauded party can proceed against his estate for breach of promise. Thus is destroyed the last hope of the bachelor of this Centennial leap-year.

The committee sent to Mississippi to investigate alleged outrages has reported.

The States of Nebraska, Missouri, Minnesota, Illinois, Kansas, New Hampshire and Alabama have held nominating (Republican) conventions, as have also Michigan and California Democratic conventions.

The judges, 125 in number, have been announced by the President of the Centennial Commission. The Committee on Animal and Vegetable Products are—Julius Weigler, Germany; M. Martell, France; Don E. Loring, Spain; Dr. Nicolau S. Moreira, Brazil; M. Jayme B. Reis, Portugal; Mr. Ikeda, Japan; E. Olebdorf, Argentine Confederation; E. Hoon Bumhauer, Netherlands.

The U. S. Senate has passed a resolution asking the President to act in the case of the Fenian prisoner Congdon, and spent five hours on the Belknap impeachment case.

Speaker Kerr, having recovered his health, has again assumed his position in the U. S. House of Representatives. A report unseating Mr. Morey (Rep.) of Louisiana was made, but no action taken.

We copy from advance sheets of the new edition of Colton's General Atlas of the World the following extract of the population of the world:—The entire land surface of the globe is estimated at 51,787,730 square miles, and the number of its inhabitants at 1,398,662,856, divided as follows:

Grand Divisions.	Sq. miles.	Population.
North America	8,062,190	59,682,342
South America	6,846,977	26,537,015
Europe	3,900,687	301,843,169
Asia	17,119,365	708,499,980
Africa	11,534,535	201,471,005
Australia	3,423,106	4,638,286
Polynesia		

Probably the most important peremptory auction trade sale of dry goods that ever was effected in the United States was that in Townsend, Montant & Co.'s store in New York City. Six thousand packages of domestics were offered, and the sale was attended by upward of two thousand gentlemen from all parts of the country. About twenty mills and manufacturing corporations were represented.

The Senate Committee on Appropriations have considered the Legislative, Executive and Judicial Appropriation bill, and acted on the portions which relate to the Senate and House of Representatives. The Committee will pass upon the remaining items of the bill separately and with regard to the individual merits of the various items of reduction in salaries and clerical force proposed by the House, but will refuse concurrence in any reduction of salaries fixed by law unless the appropriate committee of the Senate charged with the subject affected shall recommend concurrence.

A controversy which has recently arisen between certain officers of the Engineer Bureau of the Army and Capt. Eads, who has a contract with the United States to improve the South Pass of the Mississippi River by the construction of jetties, has led some to suppose that these officers are opposing him in his work.

Piper the belfry butcher has been hanged at Boston.

The acreage of oats in Georgia is 135 as compared with last year, or 35 per cent increase on the acreage of last year's crop.

The first sack of Texas flour shipped from Dallas to Galveston was sold at auction Friday last, for $305, and was purchased by Brazilian coffee importers, who will send it to Dom Pedro.

About 200 miners in the Ohio mining districts have resolved not to go to work till a general mass meeting is held, and it is thought it will practically end the strike.

Mr. Orth, Minister to Austria, has resigned.

The new Cabinet officers will not act for some days.

In the Senate a number of bills were placed on the calendar; the question of printing the resolves of the Confederation and Continental Congress was referred to a Committee; impeachment occupied most of the day.

The Navy bill received the whole attention of the House; Mr. Harrison of Illinois kept the House in a roar a long while by a speech on the Marine Band; the abolotion of certain navy-yards was referred to a committee to report.

Chas. S. Cushing, the pedestrian, accomplished at Syracuse, N. Y., the unprecedented feat of walking for 130 consecutive hours, deducting five minutes out of each hour for rest.

Amos Lord of Biddeford, Me., obtained a verdict of $2,000, at Alfred, Me., against the Boston and Maine Railroad, for injuries received in getting off a train.

The House Committee on Commerce Saturday heard an argument from Representative Page of California in advocacy of the concurrent resolution recently introduced by him, requesting the President to propose an additional article to the treaty with China, which shall reserve to each country the right to regulate, restrict or prevent the immigration of subjects or citizens of one country into the other.

Work has been resumed in the International Company's coal mines in Cape Breton.

The jury for the Extraordinary Circuit Court, in which the canal suits will be tried, was drawn in Albany on the 28th ult.

On petition of its creditors W. Whitman, Esq., was appointed receiver of the Chicago and Pacific Railroad upon filing a bond of $10,000.

A fire in Bay City, May 28, destroyed two warehouses owned and occupied by Guster and Morrell. C. Schuerman, William Drake, and others lose stock and property by fire, and stock also damaged by smoke and water. Total loss, $20,000 nearly covered by insurance.

A fire at Midland, Mich., Saturday week, destroyed four entire blocks and several buildings on others. The total loss is estimated at $150,000.

A fire broke out in the upper story of the Anchor Flouring Mill, at the corner of Franklin Ave. and Twenty-third St., St. Louis, owned by the Yaeger Flouring Company, and almost the entire property was destroyed. The loss on the mill, warehouse, and machinery, including about 2,000 barrels of flour, was $110,000.

Walking tours by amateur pedestrians are very popular in New York and vicinity.

By the marriage of Miss Yzanaga to Lord Mandeville, America supplies another Duchess to England, as Lord M. will be Duke of Manchester on his parent's death.

The Erie Railway Company declare that reduced fares by other lines to the West really discriminate against New York, and accordingly "protects New York" by a further reduction of its own rates, both on through and local travel.

There arrived at this port last year from the West Indies 22,500,000 oranges, about 600,000 bunches of bananas, 5,250,000 pineapples, and 7,500,000 cocoanuts.

The reduction of bank loans reflects the dullness of trade in New York.

Mr. Dawes of Massachusetts, made a lengthy argument in favor of jurisdiction in the Belknap case.

A letter from San Quentin, Cal., reports great excitement in the penitentiary over an alleged discovery of rich gold prospects by laborers while excavating a new workshop.

The will of the late A. T. Stewart, it is said is to be contested by the Turneys, a family claiming to be blood relations.

The first through train from Denver for several days passed through Lawrence, Kan., on May 28. Heavy storms on the Denver division of the Kansas Pacific road are causing trouble.

A large and enthusiastic meeting of many prominent citizens of Philadelphia was held at Musical Fund Hall, in favor of opening the Centennial Exhibition on Sunday. An outside meeting was also held and speeches made, the hall being inadequate to accommodate the assembly.

The new game of Polo, so long popular in India and England, is being introduced in this country. It is played in the field, the players being mounted on ponies and hitting the ball with long mallets.

A dispatch from Cheyenne dated May 28, says: Crook's expedition will leave Fort Fetterman in the morning, and will camp on Sage creek, fifteen miles out. Gen. Crook will follow in the evening. Col. Royall will command the cavalry and Col. Chambers the infantry. All the supplies are across the Platte. Indians in considerable numbers are in the neighborhood of Fort Fetterman, but are keeping it quiet. A man, named Murphy, came into Fort Fetterman to-day from the Black Hills and reported that the Indians are very troublesome in that vicinity. He also reports having assisted in the burial of a number of persons who have been killed by Indians. His companion is among the victims.

On Sunday, May 29, there was a "Theosophist" funeral in New York City. The obsequies of the deceased, Baron de Palm, were conducted on the Egyptian plan. It was, probably, the first instance in this country of a purely pagan funeral.

A fire in Providence, R. I. destroyed the barn of Frank Slearin, with three horses, one of which was the trotting horse Long, who had a record of 2:20, and was valued by the owner at $10,000; the other two animals were a colt valued at $700 and a mare at $500.

Some days ago George A. Cowles filed with the Chairman of the Committee on Expenditures in the War Department a sworn affidavit, in which he seriously reflected upon Donn Piatt in connection with the contract of Cowles & Co. for preserving army clothing from the ravages of the the moth. The committee, however, have decided not to receive the affidavit as testimony, but to permit him to answer such questions as they may deem necessary to ask him.

G. M. D. Bloss, one of the editors of the Cincinnati Enquirer, who is widely known throughout the country, was instantly killed while walking on the track of the Little Miami Railroad, near Branch Hill station, where he resided.

And now Speaker Kerr is on the rack. Charges of a grave nature are being circulated.

Probably the quickest change of gauge on record was that made by the Delaware, Lackawanna and Western Railroad employes, as the following dispatch shows:—The gauge of the Delaware, Lackawanna and Western Railroad was narrowed between 6 o'clock A. M. and 6 o'clock P. M. to-day, May 28, from Hoboken to Scranton, Pa., Binghamton, Oswego, Rome and Utica, and narrow-gauge trains passed over the whole line without interruption. About 2,000 men were employed on the work.

FOREIGN NOTES.

MR. DISRAELI refused amnesty to the Fenian prisoners.

Prince Napoleon accepted the Republic "loyally and unreservedly."

Victor Hugo advocated general amnesty in the French Senate.

Queen Dowager Maria Christina returned to Spain.

Premier Canovas del Castillo has presented a bill in the Senate abolishing the fueros and establishing in the Northern Provinces military service and taxation as elsewhere in Spain.

The Times (London, Eng.) reviews the text of Secretary Fish's dispatch of March 21, and comes to the conclusion that America is justified in saying that according to England's own law Winslow must be given up without any promise respecting his trial.

A special dispatch from Berlin says intelligence has been received in official quarters there from Constantinople, which indicates that the Sultan will probably be compelled to abdicate the throne very shortly.

A loan of $10,000,000 guaranteed by the Cuban customs is being negotiated by Spain.

Augusto Desmoulins is appointed by the French Government to report on education in the U. S.

Turkey has resolved to entertain the Berlin scheme.

The Spanish Constitution was adopted.

The French, Austrian and Spanish legations in Rome will soon be raised simultaneously to the rank of embassies.

A special dispatch from Alexandria, Egypt, says a rumor is current that another battle has been fought in Abyssinia, and that the remnant of the Abyssinian army succeeded in cutting its way through the Egyptian lines.

The insurgents in Herzegovina and Bosnia have resolved to demand absolute freedom.

Winslow was again remanded for eight days.

Polonaise won the Great Northern Handicap at York.

The Chinese Six Companies have prepared a memorial to be forwarded to the President, giving argument on their side of the question of Chinese immigration.

One of the rumors circulated on the London Stock Exchange says the attack with which the Prince of Wales is suffering is more serious than the announcement indicates. Another rumor is to the effect that the Rothschilds are sellers of consols to the amount of nearly a million pounds sterling, which transaction is supposed to be based on knowledge that the political situation in Europe is likely to grow worse.

At a meeting of delegates from forty-four workmen's societies in Paris it was resolved not to accept the subvention for the expenses of the visit to the Centennial Exhibition at Philadelphia, subject to the condition that the Government shall select the delegates.

The announcement of the election of Mr. Goulding (Conservative) as member of Parliament from Cork is officially confirmed. Mr. Goulding succeeds the late Mr. Romayne, who represented Cork in the Liberal and Home Rule interest.

The first of the riflemen matches for the selection of an Irish team to go to Philadelphia was had at Dundalk on the 27th ult. The weather was boisterous. The best scores were as follows: Rigby, 190; Johnson, 193: Goff, 152.

Judging by the following, England is preparing for war:—One hundred tons of gunpowder and a million cartridges have just been dispatched from Woolwich to Gibraltar, Malta and the Mediterranean fleet. This is independent of the ordinary supplies. It was said in Portsmouth on Saturday that all available workmen are to be placed at work on the ships which are nearest to a sea-going condition. The turret ship Thunderer is understood to be the first whose completion will be thus pushed forward.

The English Patent Journal describes a combination of a foot warming apparatus with a boot The heel of the boot is of metal and hollow, and contains a supply of artificial fuel. The heat from this is made to pass through channels in the inner sole, a part of which is placed upon a spring, so that the action of the foot in walking acts like a bellows, drawing in the cold air by an aperture in the heel, and driving the heated air into the boot. A modification of the apparatus can, it is thought, be applied to horse shoes.

General Quesda has proclaimed martial law and a state of siege throughout the Basque provinces and Navarre. It is also reported that a rising has taken place at Tolosa, the capital of the Spanish province of Guipuzcoa, to the cry of "Long live the Republic; long live the Fueros."

Official information has been received at Washington that the Turkish Government is punishing persons who participated in the riot at Salonica about a month ago between Turks and Christians and in which the French and German consuls were killed by the Mohammedan populace, notwithstanding the efforts of the Government to protect them. The Governor-General of Salonica, Echref Pasha, and the High Commissioner of the Sublime Porte, Vahan Effendi, have sent the following telegram, dated Salonica, May 27, to the Turkish Minister at Washington:—"Eleven additional sentences were rendered yesterday, two of which are for capital punishment, eight for forced labor for life or limited, and one to three years' imprisonment. The instigators of the riot will be tried to-day." The Turkish Minister received the following telegram dated Salonica, May 28:—"Yesterday nine additional sentences were rendered, two of which are to capital punishment, five to forced labor, and two to three years' imprisonment." These dispatches are signed by the Imperial Commissioners.

THE MARKETS.

PRODUCE AND PROVISIONS.

NEW YORK, Saturday, May 27, 1876.

RECEIPTS.—The receipts of Produce for the week were as follows:

Flour, bbls	88,250	Molasses	—
Whisky	3,150	Rice, bbls	346
Corn meal, bbls	2,345	Cut meats, pkgs	9,590
Corn meal, bags	1,403	Lard, pkgs	5,470
Wheat, bush	1,213,850	Tobacco, hhds	2,016
Corn, bush	857,675	do. cases	4,061
Oats, bush	391,700	Butter, pkgs	31 922
Rye, bush	28,000	Cheese, bxs	21,425
Malt, bush	48,700	Cotton, bales	8,694
Barley, bush	58,900	Rosin	5,856
Beans, bbls	5,930	Spts. turp., bbls	—
Grass seed, bush	175	Dried Fruits, pkgs	81
Beef, pkgs	2,502	Eggs, bbls	17,618
Wool, bales	1,350	Peanuts, bags	1,215
Hops, bales	351	Leather, sides	77,766
Pork, bbls	1,000	Sugar, hhds	—
Tallow	1,853	Oil cake	9,101

HINTS TO SHIPPERS.—Pack produce as firmly as its nature allows; otherwise many items suffer in appearance, if not in quality, through the jostling incident to transportation. Do not mark packages with any material that will smudge. A good paint for marking purposes can be made of bichromate of potash and extract of logwood. Nailed cards are very insecure. For long lines of goods a marking plate or brand is preferable to ordinary lettering. At the time of shipment put a complete list of the lot into one of the packages if it can be done; but be sure to mail to consignee a full list, naming date, style of packages and contents. Aim to have each parcel of uniform quality as far as possible; mixing always injures sale. Roll butter should be wrapped in clean white muslin. Dressed poultry should be packed in well shaken dry straw. When poultry sweats in boxes straw-dust gives a mean look. Break off nail points from the inside of old barrels when they are used in order to prevent property from tearing. Short cut dry straw is better for packing eggs than anything else. Try and avoid the arrival of summer items here on Saturday.

BEANS AND PEAS.—Exports of beans past week, 2,060 bbls.; since Jan. 1st, 27,363 do.; same time last year, 10,085 do. Exports of peas past week, 10,130 bush.; since Jan. 1st, 391,256 do.; same time last year, 206,863 do. Medium beans continue dull and prices for best marks are shaded, even for the regular demand, which is not large after warm weather sets in. In marrows the trade has been very active and prices are a little stronger. Holders, however, are not over firm. A large quantity has been taken from store to fill out the orders, but a lull is expected after the very liberal export. Pea beans are scarce and firm for Eastern use. Kidneys of all kinds are dull; prices almost nominal. Canadian peas are easier. Green peas are a drug and prices are further in buyers' favor. We quote:

Beans—Prime pea, $1.30@1.35; fair to good, $1.00@$1.25; prime mediums, $1.10@1.15; fair to good, 85c.@$1.00; poor, 50@60c.; prime marrows, $1.85; fair to good, $1.55@1.55; prime white kid., $1.40@1.45; other, $1.15@1.30; prime red kidney, $1.20@1.25; other, $1@1.10; Lima (Cal.), $3.00. Peas—Canadian, bbls., free, $1.18@1.20; do., in bulk and bond, 95@96; green, $1.15@1.20; Southern B. E., 2-bush. bag, $2.65@2.70; split, ₱ bbl., $6.

BEESWAX.—There is but little doing, and supplies are not excessive; sales at 34½@35c. for Western, and up to 37c. for best Southern. Exports since Jan. 1st, 36,200 lbs.

BROOM CORN.—The market is still lifeless, and to make sales lower prices are necessary.

We quote Hurds, short green, 8½@10c.; hurl, green, 8½@10c.; green, medium, 5@6½c.; red and red-tipped, 3@4c.

BUTTER. The week has been a dull one, and with trade falling off just at the time when Western began to come forward freely, prices for both State and Western fell off considerably. Since our last, the decline in State is fully 1@2c. even on best styles. Western has ruled very unsettled, and all of the under grades have been more or less optional with the buyer. The general receipts are unusually large, adding up 31,600 pkgs. Of course there are a good many small packages, but there are enough half tubs and firkins to make the supply oppressive when the market runs dull for several successive days. There is a marked falling off in fine buying for market use this season, and unless it can be resumed the second grades of stock, especially Western, will hold an undecided position. Very good serviceable lines are offering at 20c., with but little attention. There is some inquiry for firkins, but they must be all yellow to suit best buyers. Strictly fancy pails are quoted in a small way at 30c., but buyers at the price are few. We revise quotations:

New butter, Pails, State selected, 25@27c.; do., other 20@26c.; creamery, 26@28c.; half firkin tubs, prime, 26@27c.; fair to good, 23@25c.; Welsh tubs selected, 25@27c.; Welsh tubs, prime, 22@24c.; fair to good, 21@23c.; Pails, Western creamery, prime, 25@26c.; fair to good, 22@24c.; Western tubs, dairy, good to prime, 21@22c.; fair to good, 15@19c.

Western factory, choice, 20@21c.; do. fair to good, 18@19c.; poor, 15@17c. Some low grades of State, 18@20c. Old Western, 15@—c.; State firkins, all yellow, 28c.; Western firkins, all yellow, 20@22c.; other, 15@18c.

CHEESE.—Exports past week 20,702 boxes. Early in the week with the interior markets running up sharply there was an advance of at least one con ₱ pound demanded here, but little doing, however, subsequently yielding a trifle from the extreme figures but closing about steady. This sharp rise in prices was wholly unexpected by the trade here, and led to a demoralization. Shippers seem disposed to await further developments. The main reason for the improvement was the sharp bidding by a Canadian operator on competion for the best stock. The movement has been light this week, generally at 12c. for fine, although some exceptional lots run up to 12½@12¾c.

New at 12@—c. for fine factory; 10@10¾c. for good; 10@10¾c. for fair; do., half skimmed, 8@9c.; do., skimmed, 1@6c. Old, nominally as follows: State fancy factory at 12@12¾c.; do. fine, at 11¾c.; do., good to prime, at 9¾@10¾c.; do., fair to good, at 8¾@9¾c.

COTTON. Prices are now lower than at any period for a number of years and the market closed depressed. The stagnant condition of the manufacturing interests both here and abroad is the basis for the exceptionally low prices. The closing prices are:—May, 11 17-32c.; June, 11 17-32@11 9-16c.; July, 11 11-16@11 23-32c.; August, 11 13-16@11 27-32c.; September, 11 27-32c.; October, 11 21-32@11 11-16c.; November, 11 9-16@11 13-32c.; December, 11 9-16@11 19-32c.; January, 11 11-16@11 23-32c.; February, 11 13-16@11 27-32c.; March, 11 29-32@11 15-16c.

Quotations for spot cotton, based on American standard of classification:

DRIED FRUITS.—Apples are firm and moderately active; otherwise very little doing and prices badly settled.

Apples—State, sliced, 10@10¼c.; do., quarters, 10c.; Western quarters, —; Southern sliced, 9¾@10c. for prime; fair lots, 8@9c.; Tennessee quarters, 8¾c. Blackberries, 10½@11c. Peeled peaches, good and prime Georgia, 12@12½c.; do. fancy, 15@16c. Unpeeled peaches, new, 12@12½c. for halves, and 10@11c. for quarters. Plums, 15@19c. Raspberries, 26c. Cherries, 20@21c.

Exports of dried apples since Jan. 1st, 1,483 bbls.; same time last year 9,215 do.

EGGS.—The market is lower. Trade has been very slack, and at this season eggs are not the property to stand a lull in the demand. It was thought when they went at 14c. for Western that the bottom was touched but 13c. is the extreme figure at the close and not much movement at that. Southern eggs are now precarious stock. Buyers are beginning to call for loss off in Western and sellers generally submit. Near points are in fair demand owing to freshness. Canadian for the moment are doing better than best Western. We quote:

Near points, ₱ bbl., 17@17½c.; State and Penn., 14@11¾c.; Western, prime, 13c.; do. fair marks, 12@13¾c.; Southern and Southwestern, 12c.; Canadian, 13¾c.; duck, 17@18c.; goose, 20@23c.

ESSENTIAL OILS.—Oil Peppermint, in glass, $3.75 ₱ lb.; in tin, $3.25. Spearmint, in glass, $3.50; in tin, $3. Wintergreen, $3. Sassafras, 55c.

FEATHERS unchanged. We quote prime live Western geese, 52@55c.; mixed, do., 35@45c.

FLOUR.—Export trade has been brisk, the advices from abroad favorable, and prices strong.

Superfine State, $4.10@4.30; extra do., $4.20@5.30; superfine Western, $4.10@4.50; extra do., $5.00@5.75; round-hoop Ohio, $5.00@5.25; trade brands do., $5.30@7.00; white wheat extras, $5.50@7.00; St. Louis, $5.20@9.00; City Mills extra, $7.50@9.00; St. Louis, $5.20@5.50 for common to fair extra and $5.50@9 for good to very choice; Minnesota "straight" at $5.25@7.25, and patent at $6.25@9.50; unsound stock, $3.75@5.75; No. 2, $3@3.50. Southern at $5@5.25 for common to good extra, $5.30@6.15 for good to choice, $6.20@8.50 for family extra, and $8@9 for choice to fancy new prices. Rye flour at $4.75@5.20. Corn Meal is selling at $3.85@4.30; for yellow, Western, Jersey and Penn. and $3.50 for Brandywine.

FOREIGN DRIED FRUITS.—Layer raisins, $2.75; Valencia do., 10¾@10½c. Currants, 7¾@7¾c. Turkish prunes, 5¾@5¾c. Sardines, 11½@15c. currency, for quarter boxes.

FRESH FRUITS.—Strawberries are now the chief attraction. The bulk of Norfolks have been shipped. Maryland sell well and prices are generally popular. It is said the river gardens do not look well, but New Jersey will send large quantities. Southern cherries quoted at 15c. Apples are dull; only the best are selling. Gooseberries dull at 2@$1.50 ₱ bush. Hot-house peaches, $3@5 ₱ doz.; do. Hamburg grapes, ₱ lb., $1@1.50. Peanuts are fairly steady. Norfolk strawberries, ₱ quart, 15@20c. (one steamer load sold at a loss); Maryland, 20@25c.; a few Charleston remain, 20@25c. Peanuts—Virginia, ₱ bush., $1.60@1.70; Wilmington, $1.80@2.10; do. Tennessee, 85c.@$1.15. Hot-house grapes, ₱ lb., $1.50@3.

FURS AND SKINS.—We quote:

Otter, ₱ piece	$6 50@ 8 00	$1 00@ 5 50

GINSENG.—Southern, $1.15@1.20; Northern, $1.15@1.20; Seneca root, 75@80c.

GRAIN.—The advices from England and the Continent have been encouraging, and a large trade results in wheat and corn, the former at high prices, but for the latter with full receipts at a decline.

Latest sales of wheat at $1.10@1.11 for No. 3 Chicago spring; No. 3 Milwaukee spring, $1.15; No. 2 Chicago spring, $1.20@1.22; ungraded spring, $1.13@1.23; No. 1 New York inspected spring, $1.21@1.23; No. 3 Milwaukee spring, $1.25@1.26; No. 1 spring at $1.30@1.33; for amber State, $1.45; No. 1 Shaboygan spring, $1.31; white Canada, $1.30, and winter red Western, $1.40. Rye at 85@86c. for Western, 90 for Canada, and 95@95½c. for State. Corn at 57@61c. for mixed Western; 62c. for Western yellow. Oats at 36@41c. for mixed Western and State; 38½@43c. for white.

HAY AND STRAW.—Shipping grades hay are wanted at full prices. Prime lots plenty and dull.

Bale hay is quoted:—Shipping, 80@85c.; retail qualities, $1.00@1.10; clover, 70@75c.; salt, 60@70c. Straw is quoted at $1.00@1.10 for long rye; 75@80c. for short rye; 65@70c. for oat.

Exports past week, 3,830 bales. Since Jan. 1st, 25,221; same time last year, 15,390.

HIGHWINES selling at $1.12.

HOPS.—No exports this week. The export demand has entirely ceased and brewers are buying sparingly. There is considerable interest now watching developments of the new crop, particularly advices from the other side as much depends upon the yield there, as affecting our export movement. We quote:

N. Y. State, 12@18c.; Eastern, 8@15c.; Wisconsins; 8@15c.; Yearlings, 8@10c.; Olds, all growths, 4@6c.; Californias (nominal), 15@18c., ₱ lb.

LEATHER.—Hemlock sole at 20@21c. for light; middle, 21½@23c.; heavy, 21½@23c.; good damaged, 18@20c.

MAPLE SUGAR.—Dull at the old low prices.

Choice new sugar bricks, 10c.; small, 11c.; fair, 8@9c.; old, 6@7c. Syrup, ₱ gallon, 75c.@$1, which is relatively lower than crystallized.

OIL CAKE.—Western brings $40 (currency) per ton.

POULTRY AND GAME.—A little good Vermont frozen is still in market. Prime turkeys bringing 15@17c. Capons are out of season. Philadelphia dressed or other near points, ice packed, are not of special interest. We quote fowls, good to prime, 17@18c.; fair to good, 15@16c.; spring chickens, 28@30c.; other, 20@26c. Turkeys, 14@18c. The market has been gold for live poultry, and has easily recovered from a few days of over stock. Geese are higher. We quote spring chickens, ₱ pair, 50c.@1.

Fowls, N. J., lb, 16c.; do. Western, 15@16c.; Roosters, 8@9c.; Turkeys, N. J., 13@16c.; do. Western, 13@15c.; Ducks, N. J., pair, $1@1.25; do. Western, 75@80c.; Geese, N. J., $1.75@2.50; do. Western, $1@1.50.

Wild pigeons are doing rather better. Stall fed now quotable. We quote:

Wild pigeons, feathered or dressed, ₱ doz., 90c.@$1; do., stall fed, $1.75@2; English snipe, ₱ doz., $2.00@2.25; plover, ₱ doz., $1.12@1.25; sand snipe, 40@50c.; wild squab, ₱ doz., 75c.@$1.00; tame do., $2.50@2.75.

PROVISIONS.—Hog products are very much lower and depressed. Mess pork at $20 for spot lots; June, $20; July, $20.15; August, $20.40. Bacon at 10¾c. for Western long clear. Western steam lard at $11.30 for spot lots; $11.80 for June; $11.95 for July; $12.12½ for August. Stearine at 13½c. for Western. Beef hams at $23@24 for Western. Tallow at 8¾@8 11-16c. Beef—Extra mess, $13; do. plain, $12.00@12.50; tierced at $21 for prime mess, and $24 for India mess. City extra India mess at $24 and Philadelphia mess at $23.

SEED.—Grass dull; clover is quoted at 16; timothy, $2.75.

TOBACCO.—Kentucky leaf is favoring the seller, with a good export demand. Seedleaf very quiet.

KENTUCKY LEAF—NEW CROP.

	Cents.

SALT.—Ashtons at $2.50; Deakin's at $1.40@1.50; Marshall's at $1.40@1.50.

VEGETABLES.—Exports of potatoes past week, 2,300 bbls.; since Jan. 1st, 79,919 do.; same time last year, 14,426; onions, since Jan 1st, 5,432 bbls.; same time last year, 1,275 do. Though the advance comes late we can report better prices for old potatoes this week. Asparagus is abundant and cheap. Green peas are in good supply and prices are easy. Southern produce will soon lap on the Northern and prices cannot be expected to rule steady.

Early Rose, bulk, ₱ bbl., $1@1.37; Peach Blows, $1.25@1.50; Prince Alberts, 87c.@$1.12; common, 50@75c. Bermuda, $6@7; Florida, $2@3.50. Southern cabbages, ₱ bbl., $1@1.50. Florida tomatoes, ₱ crate $2@4. Bermuda, do., 5 qt. box, 60@70c. Md. green peas, ₱ bbl. $4.40@5. Norf. do., small, $2@2.50. Norf. marrowfat, $3. Fla. string beans, $1@1.25. Charleston, $1.25@1.50. Fla. cucumbers, crates, $2@3. Bhns. do., $3.50@4. Asparagus, per doz., 75c.@$2. Nor. cauliflower, ₱ bbl., $1@1.50. Red onions, ₱ bush, $1.50@1.75.

WOOL.—There is still a very depressed feeling. The new clips are arriving at some of the Western and Southwestern points; but little being marketed, however, on account of the full rates asked. The impression of the trade here is that a dragging market will prevail on the first offerings of the various new clips, as it is presumed full rates will be asked, while the present condition of the goods market, it is claimed, will not admit of free purchases.

ROCHESTER, May 27.—Flour market dull; spring, $6.75; amber winter, $7.00; white winter, $7.25; double extra, $7.50. Rye flour quiet at $5.00. Wheat lower: Milwaukee club, $1.25@1.30; amber winter, $1.20@1.25; white winter, $1.25@1.35. Oats, nominal at 35@40c. Corn quiet at 70@75c. Corn meal, $1.50@1.75. Butter, 20@22c. Cheese, 12@14c. Eggs, 13@14c. Lard, 14½@15c. Apples, bu., 75c.@$1.75. Potatoes, bu., 25@30c. Beans, ₱ bu., 60c.@$1.10. Mess pork, $23.50. Wool, 25@40c. Hay, $10@15. Straw, $6@10. Timothy seed, $2.75@3.00; clover, $9.50@9.75. Mill feed dull at $16 for shorts, $18 for shipstuffs, and $23 for middlings. Railroad Freights—Flour to Boston, 40c. ₱ bbl.; to New York, 30c.; to Albany, 25c. Wood, hard, ₱ cord, $8@9. Coal, $6.05@6.45 for stove.

COUNTRY CHEESE MARKET,

LITTLE FALLS, N. Y., May 27, 1876.

TRANSACTIONS in cheese this week have been brisk and prices have improved. The weather and the country roads have been bad, but there was a large representation from factories, and the offerings have been over 5,000 boxes. The delivery from farm dairies was about 200 boxes, and sales were made at 5¾@9¾c., according to quality, and 10c. was reported for a few extra lots.

Factory cheese has improved in quality, and the delivery this week was the best of the season, being largely free from badly skimmed lots. Prices ranged for every day cheese at 10@11¾c., and the bulk sold at 11@11¾c. A few badly-skimmed cheese were sold below 10c. Dairymen are now quite encouraged, the prices ranging higher than were expected, and as cheese improves in quality, still better rates are anticipated.

The delivery of butter is declining, and less than 100 packages were on the market last week. Sales were made at 22@24c., a few tubs, partly grass make, reaching 25c. The herds are now out to grass, and we shall have a decided improvement both in butter and cheese, especially the latter, as the factories do not now allow skimming.

The weather is warm, and grass is now making a rapid growth. Cows are reported to be making good returns in milk.

We have advices from abroad. Our London correspondent says there has been a good sale for English and American cheese, especially for low quality American, of which the market is nearly cleared. Dutch cheese is slow of sale.

The prices are for extra American, 63@65s.; fine, 62@63s.; good, 58@60s.; secondary and common, 35@45s. English cheddar brings 80@90s.; Wiltshire double, 70@80s.; Cheshire medium, 61@63s.; fine, 75@80s.; Scotch, 66@70s. Dutch cheese—Edams, 74s.; Gondas, 56@62s.

The supply of butter is not equal to the consumption. Oleomargarine is also short.

Dorsets brings 150s.; Jersey, 120@132s.; Danish and Swedish, 120@150s.; Normandy, 120@150s. No American or Canadian butter in market. Oleomargarine sells at 100@115s. ₱ cwt.

LIVE STOCK MARKETS.

NEW YORK, May 27, 1876.

RECEIPTS OF LIVE STOCK.

	Beeves.	Cows.	Calves.	Sheep & Lambs.	Hogs.

Totals this week	9,989	24	3,977	21,580	20,516
" last week	9,735	92	4,093	11,768	20,044

BEEVES.—On a heavy run of generally fair quality horned cattle, with a good top trade on Monday last, was extremely slow at ½c. ₱ lb. reduction on the closing rates of the previous week. When the markets closed at noon several carloads remained unsold at noon. Prices were at 9@12½c. ₱ lb.; weights, 6@9¼ cwt. Wednesday, trade extremely slow and off another ½c.; quality coarse; prices at 9½@10¾c.; weights, 6½@8¾ cwt. Thursday, trade small at 8¾@10¾c.; weights, 5@8 cwt. Friday the markets closed weak; sales at 9@10¾c.; weights, 5¾@7¾ cwt. General sales at 56 lbs. net. Still-fed Illinois and Kentucky steers sold at 9@10¾c.; native, 8@11c.; grade, 11¼@12c.; the best herds to hand were shipped for Bermuda or slaughtered for the London market. Bulls on live weight, $4.37 ₱ cwt.

COMPARATIVE RATES.

Quality.	This week. Cents.	Last week. Cents.
Good	12 @12¾	12 @12¾
Fair	11 @11¾	11 @11¾
Poor	10 @10¾	10 @10¾
Poorest	8 @ 9¾	8 @ 9¾
Gen. selling rates	9¾@10¾	9¾@10¾

MILCH COWS.—Trade easier on a light run of rather better quality animals; 16 cows sold at $55@70 ₱ head; 13 at $45@60; 5 at $00; 10 at $10@60—calves always included.

VEALS AND CALVES.—There have been no smooth quality veals to hand. Buttermilk-fed calves sold at 4½@5c. Calves from coarse and lean to ordinary quality sold at 6@8¾c. General sales at 6¾@7¾c.; State calves, 4¾@7¾c.; Jersey, 6@8¾c.; Pennsylvania, 6¾@8¾c.

SHEEP AND LAMBS.—Trade slow in sheep and still less demand for lambs. Monday sheep sold at 5@7¾c.; lambs, 8@13c. Wednesday, sheep, 5¾@7c.; lambs, 8¾@12¾c. Thursday, sheep at 5¾@6¾c.; lambs, 8@10¾c. State sheep sold at 5@7¾c.; Ohio, 5¾@7¾c.; Michigan, 6¾@7¼c.; Kentucky, 6¾@7¾c.; Tennessee, &c.; Tennessee lambs, 8¾c.; Jersey, 8¾@13¾c.; Pennsylvania, 11¾c.; Kentucky, 9c.

HOGS.—There have been no live hogs on sale since our last weekly report. Trade in city dressed remains dull and depends largely on local demand. Extreme range of prices, 8¾@9¾c. ₱ lb.; general sales, 9@9¾c. Quality decides the price.

HORSE MARKET.—Stylish carriage horses generally held on sale; only 3 pairs reported as sold; rates, $1,000@1,300 ₱ pair; 11 pairs of family, $450@700; 3 pairs heavy draft horses, quality coarse, $375@425; 2 pairs do., quality choice, $550@725 ₱ pair; 20 head of poor quality light harness horses, $60@79 ₱ head; 42 ordinary, $100@150; 15 roadsters, with moderate trotting action, $275@325 ₱ head. Ninety-three horses arrived per Erie Railway, via Oak Cliff Station direct from Texas. These animals have been shipped Eastward on speculation of their proving good Polo ponies. At present held on sale.

AN INDUCEMENT!

A Good Way to Secure a Practical and Scientific Library.

WE have made a selection from our Publications of the following Standard Works, which we offer to subscribers in conjunction with the RURAL NEW-YORKER, at the extremely low rates below. These works are by men who have a national reputation in their various specialties, and we feel sure that we are conferring a double service when we offer the best Agricultural and Family Journal, *and* a Valuable Book, at little more than the cost of either alone.

We will send one year (postage prepaid on both) the

Rural N.-Y. and Willard's Dairy Husbandry, for	$5 00
" Randall's Practical Shepherd	4 00
" Allen's American Cattle	4 00
" People's Practical Poultry Book	3 50
" Quinn's Money in the Garden	3 50
" Willard's Practical Butter Book	3 00

MONEY IN THE GARDEN.

A Vegetable Manual, Prepared with a view to Economy and Profit.

THIS Work upon Kitchen and Market Gardening and the Field Culture of Root Crops, is by P. T. QUINN, Practical Horticulturist, (Author of "Pear Culture for Profit,") and should be owned and studied by every one interested in Gardening. It is an able, practical, profusely illustrated work of 332 12mo. pages. Sent, post-paid, for $1.50. Address

RURAL PUBLISHING CO.,
78 Duane St., New York.

PERSONAL ITEMS.

THE King of Dahomey wants a white man for military leader.

BEECHER lectures to thin audiences. How do they sort 'em, by turnstiles?

ULYSSES S. GRANT, Jr., was recently admitted to the bar in Supreme Court, General Term.

WHEN a rough says, "You ain't no gentleman," the best way is to parse the remark in silence.

A FASHIONABLE London preacher recently said: "St. Paul remarks, and I partially agree with him——"

FIVE Senators are already booked for speeches at the impeachment trial, and yet the ventilation of the Capitol is imperfect!

GOV. TILDEN has accepted the escort of the Albany Zouave Cadets for the Fourth of July celebration at Philadelphia.

KATE RANDOLPH ROGERS, the successful actress, now playing in Boston, says that Anna Dickinson has genius and that she will succeed.

THE rates of fare are posted in the Philadelphia street cars in five languages. The conductors knock down fares in every known language.

A GRANGER writes to a rural paper to ask "how long cows should be milked?" Why the same as short cows, of course, adds another rural editor.

"THERE are 586,193 silver dimes in a barrel.' We are going to hunt for that barrel.

Does any one know how many an old stocking holds?

JOHN ECCLES of the South Wales Survey Department has invented a lithographic process which is said to be a great improvement on the common practice.

STANLEY WATERMAN WATERLOO, one of the editors of the St. Louis Republican, will run for Alderman in the Seventh ward of that city.

Why don't Alderman run?

BOATING is reported backward at Vassar. Boating always did have more pull-backs at Vassar than at the other colleges.

Immaterial, they do it with skulls up there.

SPEAKING of a new club "with home comforts," some one asks, "Why not have a home with club comforts?"

We do, but it's a secret organization, only known by its ear marks.

IN Corsica the octopus is an esteemed article of food, in fact, a "great delicacy." It is first boiled, and then roasted.

The great objection is, that you can't eat them on the half-shell.

THE parents of the Louisville boy who swallowed a slate and pencil feel certain that he is destined to "figure" in the world.—*Cincinnati Enquirer.* That is, of course, provided he don't throw up the sponge."—*Com. Adv.*

CARLYLE thinks that doctors who practice surgery on live animals should be indicted.

And as he has cut and punctured live animals about as much, and more disagreeably than doctors let him be the first.

M. BARTHOLDY, the French sculptor who modeled the colossal statue of Liberty for New York harbor, has arrived in this city.

We have had enough accidents lately, we don't want any man around who makes faces and busts!

THE Egyptian Khedive's son is expected to visit our Centennial. Strange that they should allow a mere youth so far away from his Mummy's apron-string.

No danger, he will meet his ancestor Faro in Philadelphia.

No nocturnal visitors are admitted to the Centennial grounds. And yet they expect a great many Knightly visitors, shortly.

Yes, but they do the *mason* work, you know. This will be a grand display of elegantly mounted "dead heads."

THAT "low type of malarial fever" which has prostrated Mr. Blaine tells the true story against the charming early spring weather of Washington and Philadelphia.

If it's a low type, leave the "early spring" and take another font.

A STONE ax of granite weighing thirteen pounds, very perfect and symmetrical in form, was recently plowed up on a farm in Marshall County, Illinois, near an old Indian trail.

The party don't state what he did with the scalp of the other man.

DONN PIATT is now under the investigation harrow, a fact which will be of exceeding comfort to those who have suffered from the pricks of that virtuously virulent journalist's pen.

No fear but that he will be well *raked* at least. Heth moth exthisterminated already.

DR. J. G. HOLLAND has volunteered to lecture for the benefit of the Easthampton (Mass.) village improvement society, and the offer has been accepted.

As there have been recent floods, the lecturer will practically dam the village.

WM. H. BARNUM was, on Tuesday week, elected U. S. Senator, by the Connecticut Legislature, for the unexpired term of the late Senator Ferry, which ends in 1879.

This is not the B. who has the "Congress of Nations," but a member of the Nation's Congress.

THE Prince of Wales has, in seventeen weeks, traversed 7,600 miles of land, 2,300 of ocean, seen more of India than any man living, and enjoyed more fun than all the Kings of England, from the conquest downward, put together.

We would take our chance as Henry VIII. for example, if it was a matter of choice.

EDMUND YATES always dictates his novels, and has for amanuensis an exceedingly grave and unimaginative man. On one occasion, when about to begin his day's work, Mr. Yates inquired: "Where did we leave off?" "Where we were pressing her lips, sir," replied the Secretary, in a matter-of-fact way, and yet he left off!

ANSWERS TO CORRESPONDENTS.

Willard.—1. How are the weather prophecies calculated for almanacs, or are they guessed at? Sometimes they are quite correct.

2. What is the cause of the new moon lying horizontally, with the horns sticking up, indicating what moon savants call dry weather? The last new moon was a very dry one, but we had some rain every day.

ANSWER.—1. "Old Prob." finds it troublesome enough to foretell the weather 48 hours in advance, with all the facilities of modern meteorological science. Upon the face of it, then, are not the minutiæ of almanac weather predictions absurd?

2. Judging of the future by the past, it will yet be many years before the maze of foolishness ascribed to the moon's influence will have passed away. The moon has no "horns" and it never "lies horizontally." Whether we see much of it or little depends upon its relative position with regard to the sun and earth. Being a dense body and shining by the reflection of the sun's light, when it is between the earth and the sun we see it not. When the earth is between the sun and the moon, the moon's illuminated face is presented toward us and we see it at the full. Intermediate shapes are caused by intermediate positions. If the moon has any influence upon the weather, such as that to which you refer, astronomers have not yet found it out.

A. E. M. B.—The corms of gladioli may be cut in halves if "eyes" be apparent in both. If of medium or half size, each half will bloom and new corms will form; but we believe just as many new corms would form if planted without division. "Gladioluses" is not permissible. Gladiolus is the Latin diminutive of *gladius*, meaning a small sword, and its nominative plural is *gladioli*.

C. A. C., Berlin, Wis.—Wishes to know how she may treat a Portulaca bed that is "full of weeds, grass and stones, so as not to harm the Portulaca seeds."

Skim off the surface soil with a sharp spade and sift it. The bed may then be dug over, weeded and pulverized as you choose. Replace the sifted earth, containing the seeds, evenly. Press down gently and, if the earth is dry, water through a fine rose. It is now too late for this season.

E. M. T., Queens Co.—Up to the present time, Paris green is the best known exterminator of the dreaded potato beetle. Of the many other substances and compounds recommended, the present summer will test the efficacy. We may hope that some application or method of treating them will ultimately be discovered or invented that may prove just as efficacious and less dangerous to have about a place. From many and trustworthy experiments, it has been ascertained that potatoes are not in any way affected by Paris green. It is usually mixed with flour, and sprinkled or sifted over the leaves while the dew is still upon them.

To A. R. of Broome Co.—The Wheeler & Mellick Co. of Albany, N. Y., are the manufacturers of the Ithaca Hay Rake for Eastern New York, Eastern Pennsylvania, all the Eastern States (excepting Vermont), New Jersey and the Southern States.

L. J.—Sacharrinum officinarum is the common sugar cane of the Southern States and tropical countries generally, but you leave us in the dark as to the object of asking the question. We will add, however, that it is a tender plant, will not succeed except in very warm climates, and produces no seed under cultivation. Put no faith, therefore, in parties advertising "sugar cane seed," warranted to thrive in the Northern or Middle States. The Aylesbury and Rouen ducks are probably the two largest breeds, but it would be difficult to determine which among the various breeds is the most prolific.

S. L., Jacksboro', Texas.—The wild plants you send are:—No. 1, *Claytonia Virginica*, usually called Spring Beauty. No. 2, *Allium striatum*, or wild striped onion. No. 3, *Nemastylos geminiflora*. No. 4, *Brodiea grandiflora*. No. 5, *Lithospermum longiflorum*. No. 6, *Actinella scopara*; variety *glabra*. No. 7, *Oxytropis Lamberti*. No. 8 we cannot make out from the imperfect specimen. No. 9, *Verbena aubletia*. This last is the celebrated Mountain Verbena which certain parties have tried to palm off upon the public of late years under the name of *Verbena Montana*. It grows wild from the Rocky Mountains to the Atlantic coast, and is abundant in Southern New Jersey.

A Subscriber.—We cannot give you any better remedy to prevent the "cockerells" of your Houdans from disturbing the hens when on the nest than to keep more hens. The cockerells are doubtless lonesome and want company.

C. McNaughton, Jersey City, N. J.—The book you need is—"How Plants Grow," by Dr. GRAY.

A. B., Bristol.—The plant which you send us is *Prunus Japonica flore albo plena*—usually called Double Flowering Almond.

Traveler's Guide.

JOHN CRUMP, - - Proprietor,
Chestnut St., cor. 15th,
PHILADELPHIA.

CALIFORNIA.

Have you any thought of going to California?
Are you going West, North or Northwest?
You want to know the best routes to take?

The shortest, safest, quickest and most comfortable routes are those owned by the Chicago and North-Western Railway Company. It owns over two thousand miles of the best road there is in the country. Ask any ticket agent to show you its maps and time cards. All ticket agents can sell you through tickets by this route. Buy your tickets via the CHICAGO & NORTH-WESTERN RAILWAY for San Francisco, Sacramento, Ogden, Salt Lake City, Cheyenne, Denver, Omaha, Lincoln, Council Bluffs, Yankton, Sioux City, Dubuque, Winona, St. Paul, Duluth, Marquette, Green Bay, Oshkosh, Madison, Milwaukee, and all points west or northwest of Chicago. If you wish the best traveling accommodations, you will buy your tickets by this route, and will take no other.

This popular route is unsurpassed for Speed, Comfort and Safety. The Smooth, well-Ballasted and Perfect Track of Steel Rails, Westinghouse Air Brakes, Miller's Safety Platforms and Couplers, the celebrated Pullman Palace Sleeping Cars, the Perfect Telegraph System of Moving Trains, the regularity with which they run, the admirable arrangement for running Through Cars from Chicago to all points West, North and Northwest, secures to passengers all the COMFORTS IN MODERN RAILWAY TRAVELING. *Pullman Palace Cars* are run on all trains of this road.

This is the ONLY LINE running these cars between Chicago and St. Paul or Chicago and Milwaukee. At Omaha our sleepers connect with the Overland Sleepers on the Union Pacific Railroad for all points west of the Missouri River.

For rates or information not attainable from your home ticket agents, apply to

MARVIN HUGHITT, Gen'l Superintendent. W. H. STENNETT, Gen'l Passen'r Agt.

Sample churns sent to towns where we have no Agents, on receipt of 25 per cent. less than our retail price.

TRY THE CORTLAND PLATFORM SPRING WAGON.

USE ONLY THE BEST.

THE RUBBER PAINT
IS THE

BEST PAINT IN THE WORLD.

There is no Paint manufactured that will resist water equal to it. It is Smooth, Glossy, Durable, Elastic, Beautiful and Economical; and of any shade from PURE WHITE to JET BLACK; and as evidence of its being the *BEST PAINT* the necessity of their establishing the following Branch Factories will abundantly testify.

BRANCH FACTORIES:

506 West St., New York. 83 West Van Buren St., Chicago, Ill.
210 S. Third St., St. Louis, Mo.; and a Wholesale Depot at Wm. King & Bro., No. 2 North Liberty St., Baltimore, Md.

Sample Card and numerous Testimonials sent FREE on application.

ARE YOU GOING TO PAINT?

USE NONE BUT THE

Averill Chemical Paint.

It is the Original and Only Reliable Mixed Paint, Mixed Ready for Use.

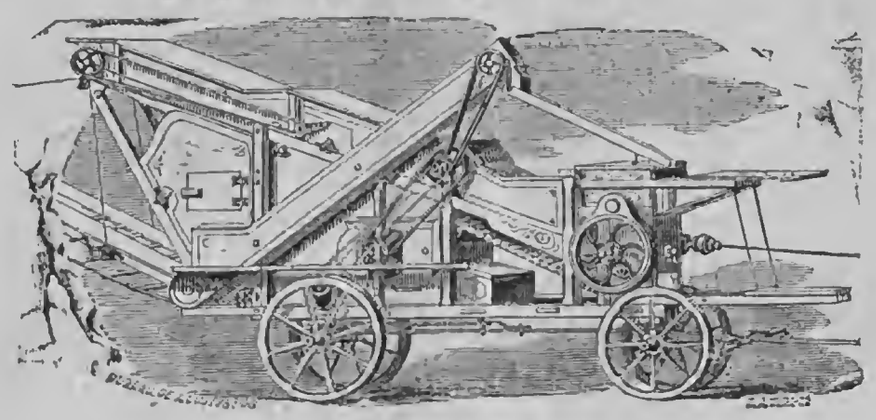
It is the most *Durable*, the *Handsomest* and most economical paint made. Send for sample card, with testimonials from owners of the finest residences in the country. For sale in every section of the country.

AVERILL CHEMICAL PAINT CO., 32 Burling Slip, N. Y. City.

The Buffalo Pitts Threshers

AND

HORSE POWERS.



MANUFACTURED AT

The Pitts Agricultural Works, Buffalo, N. Y.,

Have been known throughout the United States for over thirty years as the

MOST PERFECT AND LIGHTEST-RUNNING THRESHERS

in the world.

FOR THE HARVEST OF 1876

I am offering a large assortment of these Celebrated and Popular Machines, adapted to either Steam, Water or Horse Power.

They combine all the latest improvements which are to be found in other threshers, and some which are found in the Buffalo Pitts alone.

They are built under the direct supervision of PRACTICAL THRESHERMEN (who have followed threshing as a business), and all changes made are the suggestions of experience in the field, and are thoroughly tested there before adoption.

Threshers will appreciate the great advantage of this over

Theoretical Threshing Machine Building.

The greatest care is given to using the very *best material* and to having the work done in the *most thorough* manner.

My facilities for purchasing materials at lowest figures and for economical building are surpassed by none and the machines are offered at the lowest prices at which

The Best Material, put up in the Best Manner, can be Afforded.

In comparing prices Threshers will please note differences in material, workmanship and finish and bear in mind that

The Best is the Cheapest in the end, even though the first cost is greater.

Various sizes are made:—24-in., 28-in., 32-in., and 36-in. Cylinder Threshers and 4-horse, 8-horse, 10-horse and 12-Horse Powers.

Repairs are for sale in almost every county in the wheat-growing country, *at my list price.* For Catalogues, Prices, &c., &c., address

JAMES BRAYLEY, Buffalo, N. Y.,
or 44 South Canal St., Chicago, Ill.

SEND your address for the "Agricultural Economist," descriptive and illustrated, BRADLEY MF'G CO., Syracuse, N. Y.

SEND TO AULTMAN & TAYLOR, Mansfield, O., for a picture of their Rooster, *free.*

"THE VIBRATOR."

1,000 SOLD LAST SEASON
WITHOUT ONE FAILURE OR REJECTION.

This is the famous Threshing machine that has "swept the field" and created such a revolution in the trade, by its MATCHLESS GRAIN-SAVING AND TIME-SAVING principles.

THE ENORMOUS WASTAGE of grain, so *inevitable with other styles* of Threshers, can be SAVED by this Improved Machine, *sufficient, on every job, to more than pay all expenses* of threshing.

FLAX, TIMOTHY, MILLET, HUNGARIAN and like seeds, are threshed, separated, cleaned and saved, as easily and perfectly as Wheat, Oats, Rye or Barley.

AN EXTRA PRICE is usually paid for grain and seeds cleaned by this machine, for extra cleanliness.

IN THE WET GRAIN of 1875 these were substantially the ONLY MACHINES that could run with profit or economy, doing fast, thorough and perfect work, *when others utterly failed.*

All GRAIN, TIME and MONEY wasting complications, such as "Endless Aprons," "Raddles," "Beaters," "Pickers," etc., are *entirely dispensed with*; less than one-half the usual Gears, Belts, Boxes and Journals; easier managed; more durable; light running; no costly repairs; no dust; no "litterings" to clean up; not troubled by adverse winds, rain or mouns.

FARMERS and GRAIN RAISERS who are *posted* in the large saving made by it, will not employ inferior and wasteful machines, but will *insist* on this Improved Thresher doing their work.

FOUR SIZES made for 6, 8, 10 and 12 Horse Powers. Also a specialty of SEPARATORS designed and made EXPRESSLY FOR STEAM POWER.

TWO STYLES OF HORSE POWERS, viz.: our Improved "Triple Gear," and our "Spur Speed," (Woodbury Style), both "Mounted" on *four* wheels.

IF INTERESTED in Threshing or Grain Raising, apply to our nearest Dealer, or write to us for Illustrated Circular (sent free) giving full particulars of Sizes, Styles, Prices, Terms, etc.

Consumers Importing Tea Co.,
No. 8 Church Street,
P. O. Box 5,509. New York City.

This is a combination of capitalists to supply the consumers of Teas throughout the United States on the mutual principle.

We have experienced agents in all the best districts of China and Japan to select Teas especially for our trade.

We expect every consumer of Teas to render us all the assistance they can in carrying out our enterprise, as we make a specialty of SUPPLYING CONSUMERS ONLY (and allow no middlemen to make any profit on our importations), which will enable us to supply them with Teas at prices lower than have ever been known, and of those fine qualities that seldom reach the interior, being sold only to the large cities and among the very wealthy.

Hoping the consumer will take an interest in our enterprise, and send at once for a circular with full explanations of how to proceed to obtain our goods, we remain,

Most respectfully yours,

Consumers Importing Tea Co.,
No. 8 Church St.,
P. O. Box 5,509. New York City.

Entered, according to Act of Congress, in January, 1874, by the Consumers Importing Tea Co., in the Office of the Librarian of Congress, Washington, D. C.

ABOUT GEESE AND DUCKS.

The various choice breeds of water fowls are neglected by many farmers who possess every facility for breeding them extensively, as well as profitably. While the goose and duck thrive without having access to ponds of water, still this is their natural element, and those who have these necessary aids should be the first to introduce some of these birds upon their premises.

We know of no more ornamental adjunct to a place supplied with an artificial or natural pond and a running stream of water than a handsome flock of water fowl, even if the profits derived therefrom are not very large. But the experiences of a majority of breeders go to show that our web-footed fowls are, as a rule, fully as profitable as any other, under favorable circumstances.

Among the most popular breeds of geese, the Emden, or Bremen, white geese are great favorites abroad, as well as in this country. They grow to a large size, mature early, and their flesh is excellent. Like most other large breeds of fowls, they are docile and not given to wandering far for food or to hide away their nests. The same recommendations might be carried over to the credit of the

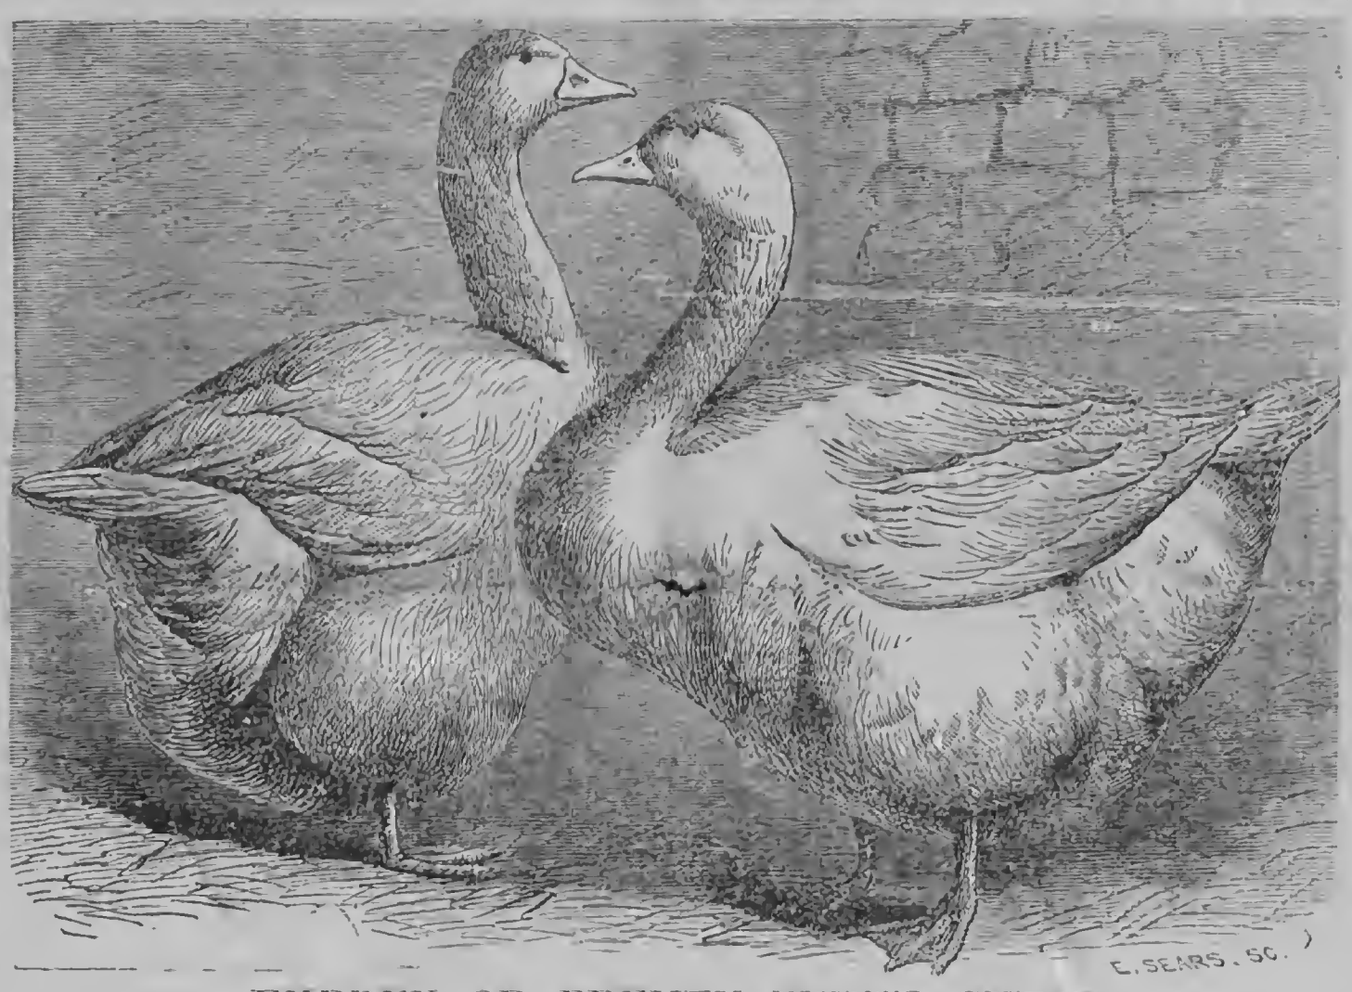
AYLESBURY DUCKS,

which rank among the largest of our domestic breeds of this fowl. They are also white, as shown in the accompanying illustration, and their flesh is highly prized on account of its possessing a smack of the wild duck flavor. They match well with the Emden geese in appearance; but if a contrast in color is desired, then the breeder should select the

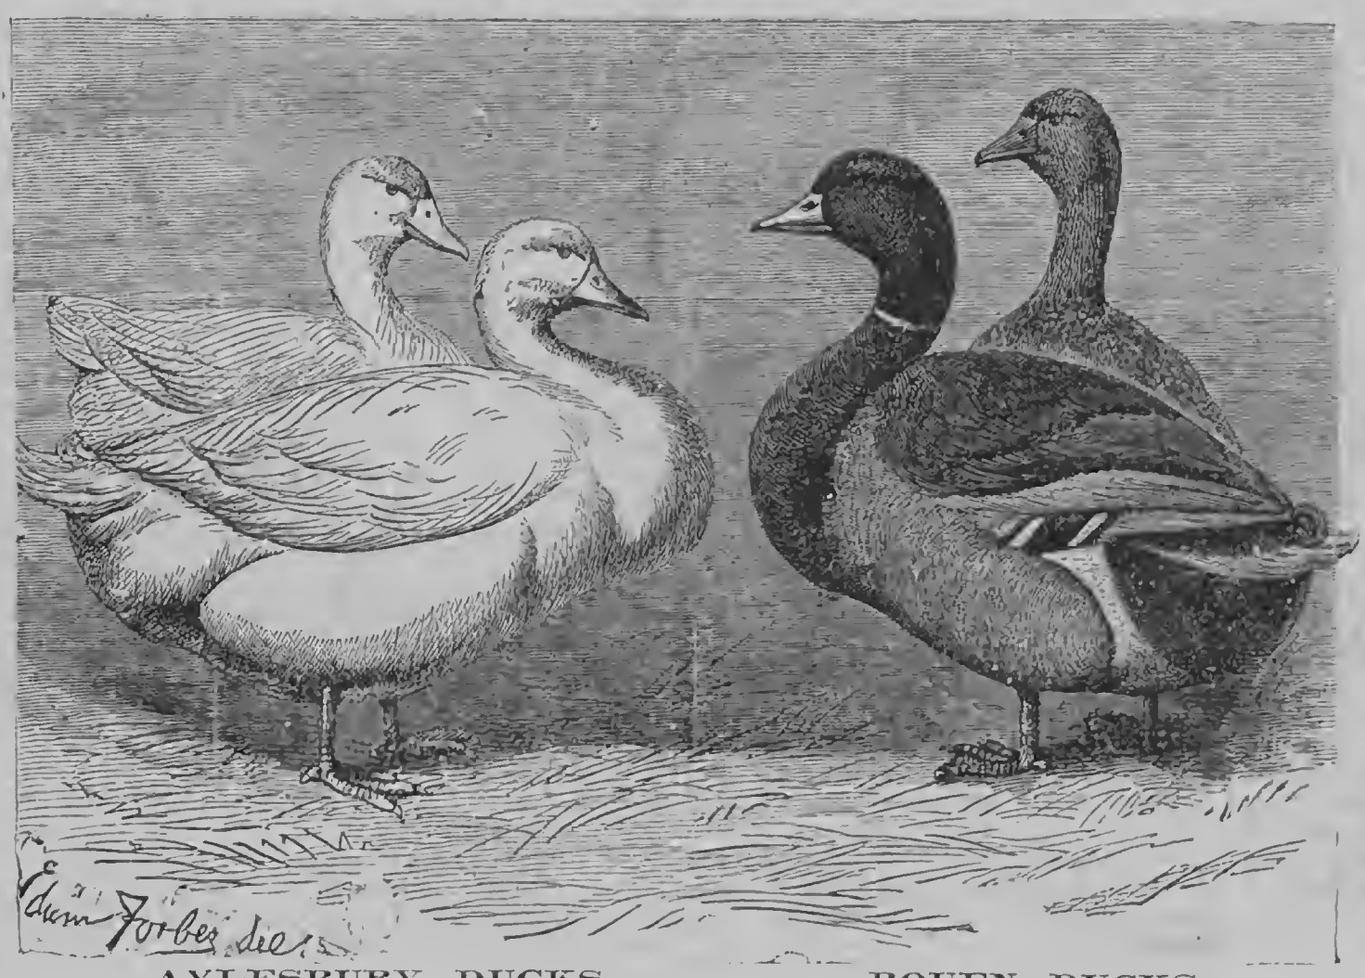
ROUEN DUCK,

which has a dark, rich plumage, resembling that of some of the wild species, perhaps coming closer to the Mallard than any other. These ducks fatten readily, and their legs are so short that when walking they seem to drag the body along the ground; but even with this awkwardness in their gait, they are really a handsome and graceful bird when seen upon the water.

Our readers who have available ponds or streams of water should endeavor to use them by keeping such fowls as we have named, or some other of the notable breeds.



EMBDEN OR BREMEN WHITE GEESE.



AYLESBURY DUCKS. ROUEN DUCKS.

TREATMENT OF SICK FOWLS.

Mr. Editor:—As I am, to some extent, in the poultry business, perhaps my experience may be of some use to those situated as I have been recently. My hens got sick, and, without making any investigation as to the disease, I took them to the wood pile and cured them "a la guillotine." I was losing them much faster than I could afford. I mentioned the matter to a friend, and he suggested that I had better find out the disease and possibly a remedy might be discovered.

So I began to examine the sick ones, and I found that their mouths and throats were filled with a cheesy formation and their breaths extremely offensive. My friend was better acquainted with the diseases of poultry than I was, and he at once pronounced it canker or diphtheria, and suggested treating them as follows:

Remove with a hard wood sharp stick the matter which forms in the mouth and throat, and then wash with strong alum water, using a small syringe to inject it into the throat, and in some cases use borax after removing the offensive matter. It is necessary to cram them while they are laboring under the disease, as they cannot eat while their mouths and throats are so filled up?

After trying his remedies for some days with partial success, another friend, hearing of the case, visited me and went into my hospital, examined the inmates and recommended the use of salt, after the stick had been applied, and raw meat and onions chopped very fine to cram them with, for they require stimulating while they are sick. It struck me at once that this was a simple and cheap remedy, and so I treated them in that way, although I had always heard that salt would kill hens I did not hesitate to give them a good liberal pinch. They improved rapidly under this treatment. At this writing, or rather time, I have only three fowls on the sick list.

Sometimes it affects the eye and not the mouth or throat. In which case, I wash the eye with salt and water, giving them, however, the doses of salt. They may lose the eye; but, if the hen is valuable, that may be endured.

I hold, however, that as a rule, it is much better, or perhaps I should say safer, to cut their heads off at once. Of course the wisdom of this every one must judge for himself.

I hope that my friends will not accuse me of using their thunder to their injury. They did not appear to be willing to communicate the above facts to you, so I have done it, and if they think that I ought to publish their names, I hold myself in readiness to do so.

I do not know that you will think this of sufficient importance to publish; but you are at liberty to throw it into the waste basket, if that is the proper place for it. I have no doubt but that it could be put together in a much better shape by those who are in the habit of contributing to newspapers; but, if it is not artistically done, I hope that it will be easily understood, at least. B. Z.

Ridgewood, N. J.

[We are much obliged to B. Z. for the above, and hope to hear from him again, and from all of our readers who can give us the results of practical experience in anything pertaining to rural affairs.—Ed. Rural.]

THE HEN'S NEST.

While there may be good reasons for treating fowls somewhat differently in different climates, still the general principles of food and care are the same all over the world, consequently we think the following from the English Agricultural Gazette may contain some valuable hints to our poultry breeders:

There is much to be said on this subject, and there may be a diversity of opinion, but on one point poultry keepers are well agreed, viz., that "stolen" nests generally answer the best, as far as a good hatch is concerned, and with the fact before us, it is evident that many of the ideas, and much of the practice we hear of and see, must be altogether wrong. Occasionally a hen will choose to make her nest high up in the roof of an old barn, sometimes the spot selected may be even outside, on some hollow of the thatch, with very little overhanging shelter, and there, in due time, she brings forth a large and healthy brood; or the favored position may be low and damp, under the seeming protection of a little overhanging grass, which, however much it may tend to screen the nest from curious eyes, can afford no real protection to the sitting bird from heavy storms and winds. Yet there she sits, and thence she emerges with a chick for every egg she has been covering.

It is clear, then, that there are feathered bipeds, as well as others, with high and low proclivities, and it is also clear that believers in boxes placed many feet from the ground, as well as believers in nests upon the cold earth may found some argument on the instinct and natural habits of the bird in support of their preference. We like to afford our hens an opportunity and the liberty enjoyed by young women, and allow them to choose for themselves. We have neat boxes, and also convenient nests on the floor. For people who are careless and forgetful,

and who consequently are not so likely to remember the day when the brood may be expected, we have no hesitation in suggesting a row of nests upon or very near to the ground, as hens are sometimes found to place themselves in the same fix as they are sometimes forced into by human thoughtlessness; in other words, the bird may be in the position of the old lady of bygone days, who, having set her face against "tips" to coachmen, upon arriving at her journey's end, and inquiring how she was to get off the coach, was answered by the suggestion of "the same way you got on."

Every owner of poultry should guard against compelling his hens to that which exceptionally is done by the bird without cause, and as we say without reason or instinct. Therefore he should either be in place to assist to put the young chicks on *terra firma*, or he should set the eggs there. Another reason for the selection of a nest on the ground is that our experience goes to convince us that a smaller number of chicks die through sticking to the shell, and also through their inability to effect a full and satisfactory exit from the egg. On the ground we never moisten or sprinkle eggs; they seem not to require it. The greatest objection to nests placed very low in the poultry house may be that the hen is to a very considerable degree deprived of quiet: she is annoyed by her neighbors looking down upon or into her nest, consequently we advise a different kind of nest-box for the ground; a reversion of the same box may very probably answer the purpose in either case.

Whether on the ground or in a box, the nest when once used, should be destroyed. The amount of filth and the number of insects which collect is almost beyond belief, even after sitting has been going on for a week only. We are disposed to try the effect of a little carbolic acid as beneficial both to the old bird and to the little strangers as they arrive. To form some idea of the number of fleas in a hen's nest, let any one observe the life there is upon a young chicken of only an hour old; take a dead one as it is beginning to get cold see the swarms of black spots, which produce life as well as death.

A great top to the boxes should never be allowed, as other fowls roost upon or leave a large accumulation of dirt, which is highly objectionable for every reason. We would also utter a word of caution against a continuous ledge reaching in front of the line of nests, and allowing an inquisitive bird to walk along and disturb the occupants of the partitions. Stops should be placed here and there, if not on each side of every nest. Straw we also choose in preference to hay, but not too much of that—anything long and possessing a tendency to hang or entwine around the leg of a sitting hen should be discarded, but straw chaff, as suggested by some authorities, we never use.

It is desirable to allow a nest to settle when a nest is made, and a hen is removed from what is considered an insecure to a safe place. Occasionally people place a hen on a mass of hay, and find to their surprise broken eggs, which have been dragged out by even a careful mother. When a hen is out of the nest, and a good sitter will in general leave at the regular time of feeding, we advocate an examination of the nest, otherwise, our idea is to leave the bird as much as possible to herself, and, if the nest be suitable, to hope for the best.

Field Crops.

GERMINATION OF SEEDS.

It is a great puzzle to many persons to know how certain plants become distributed over the country, or why they spring up all of a sudden where none were ever seen before. S. B. PECK of Muskegon, Mich., who appears to be a very close observer, gives his views of the distribution and germination of seeds in the Weekly Sun as follows:

There are many unaccountable facts in relation to the distribution and vegetation of seeds which are yet, and perhaps always will be, mysteries. With our common cultivated crops we expect to reap such as we sow and plant, because such has been our observation and experience, and we who have helped clear up and settle new countries have learned that after the first fires to get rid of the refuse wood, there generally spring up a variety of plants that seem not to generally vegetate under other circumstances, and the unavoidable conclusion is that the seeds of these plants have remained in or on the soil for years, ages, or centuries, awaiting favorable circumstances to bring them into life. Such are the common blackberry, the wild cherry, the wild poplar, and the fireweed. The seeds of the first two are doubtless distributed by birds and small animals only, while the latter two are provided with egrets, or wings, evidently for the purpose of distribution, and all four are stimulated into action by the ashes or the heat of the fires. The distribution of the acorns, which produce the oaks that cover such extensive tracts of new land in some of the Western States, is a greater mystery for it can hardly be supposed that they can, like the seeds of berries, pass through the stomachs of the birds and beasts harmless. A still greater wonder is the fact that while the old oak trees that produce the seed are mainly of the white variety, the young ones are mostly of the black, red, or yellow kinds. We can only explain this on the theory that nature thus illustrates the principle of "rotation of crops."

There are many other plants, the seeds of which are rarely known to vegetate, except under peculiar circumstances other than fire. The sycamore or buttonwood tree, producing an infinity of seeds, which are blown by the winds over large tracts, I have never known to vegetate except where the subsoil is brought to the surface, either by artificial excavations, the upturning of trees, or the abrasion of the banks of streams. Thus we find the young trees along our canals and railroads, and seldom anywhere else.

The common mayweed is peculiar to highways, and though producing an abundance of seed, we rarely see it in fields, but is abundant in roads where the ground is stirred by travel, while just under the surface the earth remains frozen; thus we see it following the sleigh tracks where teams have in spring turned out of the main track to reach snow upon the sides of the streets. But examples of the idiosyncracies of plants more familiar to us who have emigrated from the older to the newer countries, are the springing up in the wake of settlements, without any intentional agency of man or any known cause, of such plants as burdock, catnip, motherwort, plantain, and many other plants to me nameless, which are seldom seen except around the habitations of man, and never appearing till the premises have been occupied for some years. Can we resist the idea that these seeds are stimulated into life through the emanations from the body of man?

That many hard shelled small seeds, like turnip and mustard, will sometimes remain uninjured in the soil ten or twenty years, has been repeatedly demonstrated, and if so, why not 100 or 1,000 years? And on the clearing of new lands grasses spring up, the seeds of which we have every reason to believe have lain dormant during the growth of a heavy burden of timber. On the soil of this region sorrel occupies the ground wherever the timber is removed, and if the land is cultivated a few years and a coat of manure is applied purslain springs up on every square inch, and it seems hardly possible that the seeds of this plant could have been in the manure, for the plant is not gathered with any of our crops. We cannot resist the idea that the earth as it now is teems with myriads of seeds, patiently awaiting the time and the circumstances that favor their springing into life.

One of these small hard shelled seeds, tenacious of life, peculiar to new lands, and not often vegetating, except under peculiar circumstances, is the chess plant, and the pabulum which it seems to require for its vegetation and prosperity is the dead and decaying wheat plant. The evidences of this are, that whenever and wherever the wheat flourishes, the chess does not; but where circumstances have caused the destruction of the wheat either in the seed or plant, there and then the chess flourishes, if so be that there are dormant seeds in the ground, for it does not always follow the destruction of the wheat. There are several instances on record of the roots of chess being found permeating the shell of the wheat kernel, seeking there (like the roots of many other plants) the food best suited to its taste. If I am asked how came the seeds of chess in the soil I can only answer it by asking the same question in relation to the seeds of the other plants named. To those who know from their own experience that "wheat does turn to chess," I can state a case established by similar evidence, a man knew there were such things as ghosts, for he "had seen them."

WHAT IS TOBACCO?

If any of the readers of the RURAL NEW-YORKER should ever feel disposed to answer the above question, we would refer them to a late article which appeared in the Florida agriculturist, written by an M. D. E. R. C. S. etc., etc. He tells us "that several varieties from America, Cuba, Mexico, Turkey, China, and the Indies were experimented upon, and each was found to contain more or less of celluline, lignine, albumen, starch, gum, gluten, resin, bitter extract, water, tannic acid, citric acid, nitric acid, silicic acid, malic acid, malate of ammonia, malate of lime, malate of potassa, carbonate of potassa, chloride of potassium, sulphate of potassa, carbonate of lime, phosphate of lime, crystalline sand, sulphate of alumina, camphorated nicotine, and the oil of nicotine. The sum total of all these chemical compounds consists of the monadic molecules, aluminum, carbon, calcium, chlorum, hydrogenum, nitrogenum, oxygenum, phosphorium, potassium, silicum, and sulphurum in varied proportions, but the tobacco most prized for its flavor, aroma, and richness of juice was found, by repeated trials, to contain an unusual quantity of potassium, an element superior in vital forces to all the other fifteen orders of organo-monadic-molecules that constitute the life, nerve, force, and the individual, *est ego*, of every being, plant, and animal that lives on the face of the earth, or that exists in the bosom of the seas."

After committing the above to memory no one would ever be at a loss to answer the question, what is tobacco? Then, after repeating the above rigmarole we might be counted very learned among these who did not understand what it was all about?

MORE POLLEN NEEDED.

THE Western *Rural* tells of a man who plants, two or three weeks after the corn is planted, a new hill of corn every fifteenth row each way. And this is the reason: If the weather becomes dry after filling time, the silk and the tassel both become dry and dead. In this condition, if it become seasonable, the silk revives and renews its growth, but the tassels do not recover. Then, for want of pollen, the new silk is unable to fill the office for which it was designed. The pollen from the replanted corn is then ready to supply the silk, and the filling is completed. He says nearly all the abortive ears, so common in all corn crops, are caused by the want of pollen, and he had known ears to double their size in this second filling.

THE Michigan Farmer says the Peachblow Potato is dying out. This will be news to our more Eastern farmers, especially to those residing in New Jersey and Pennsylvania, as well as those dependent upon the city for a supply of this wholesome tuber. New-Yorkers, who find the old Peachblow Potato abundant in the market and on every table in saloon and hotel, and, in fact, about the only potato seen in such places at this season, will be somewhat surprised to learn that this old favorite is dying out anywhere.

The Horseman.

A PARSON'S METHOD OF COLT-BREAKING.

A MINISTER writes his practice of breaking and harnessing colts as follows, to the Golden Rule:—When the foal is fifteen months old we begin to educate him to harness. Most colts, remember, are timid; they are born so. The first day, we simply put saddle without the back-strap on, buckling up the belly-band loosely. This is done many times, increasing the pressure. Then we take the neck collar, and put it over his head, first permitting him to smell of it, and touch it with his nose, until he is entirely convinced that it is not calculated to hurt him. In like manner we add part to part until the colt is fully harnessed. He is then allowed to stand with the harness on until he has had time to reflect upon the whole matter, and become accustomed to the pressure of the harness against his sensitive skin; for we must remember that all this performance seems very queer to him, and startling. When he has fully composed his mind, and settled down into conviction that everything is all right and as it should be with him, he is then walked about, the harness still on, and brought back every few minutes to the spot where he is to be unharnessed, and taught to stand as long as it would naturally take to remove the harness. Straps are loosened, buckle-tongues started, saddle and collar eased; in short, everything done that would be done in unharnessing, save removing the harness. After several times, this standing still while being unharnessed has come to be, in his mind, a part of the programme, and he understands it and assents to it as such. Once learned, in the case of an intelligent horse, always learned. This same process should be gone through with in the case of a high-spirited valuable colt, once or twice each day, for a week at least. And remember that he is learning many lessons in one, including that, the greatest of all a colt can learn, viz.; to have confidence in and yield his will to man. Have great patience at this point of his education, and proceed step by step, advancing no farther than your pupil's success justifies. During the harness exercises, accustom the colt to pressure against breast and shoulder by tying long cords into the buckle either side of the collar, and pulling gently, causing him to brace himself, as he would naturally do, against it. This gives him the idea of drawing weight somewhere behind him, and, by permitting him to pull you along, he will grow to feel that he can pull anything.

BREAKING COLTS.

THERE must be a good deal of misunderstanding and some ignorance about the handling of colts. I have seen hundreds of Welsh colts brought into England which were foaled on the mountains, and never touched in the way of breaking, and they are haltered in the fairs by the drovers, hauled out of the drove and pulled about by main force, and there is no danger apprehended from falling.

In England, the nag colts, sired by thoroughbred horses, which farmers breed to sell as carriage or lighter horses, and also those intended for saddle exclusively, are generally broken by men who make a living at the work, and these men, who are termed "colt breakers," will all say they can get on much better and bring a colt to a good mouth and to his paces much better when he has never been handled by inexperienced people.

Colts with good blood, that is, of the "nag" species, as it is termed in the Middling counties, are always broken to the saddle first, for riding on horseback is universal there, and a nice mouth is of as much importance in every horse as "good hands" are in every rider. There was no intention of saying the correct method was to let all colts run till three or four years' old, the most meant was to show there was no necessity to halter them where it was not always convenient to do so before they were required for work.

DIFFERENCE OF OPINION.—Let people agree to differ. One set of men believe in the moon having influence on vegetation, on rain fall and on the blood of animal life, and on the preserving and keeping of meat, etc. Some believe that two-year old colts, or any young males, cannot get as good stock as when older, and there are many absurdities about influence of high feeding of males on their offspring, when the truth is, every male of every variety is more certain to get stock and continue to do so when he is fed plainly and is not allowed to have much flesh on him.

Then there are those who believe that grazing pastures with sheep is injurious, and cannot understand that there are pastures which will improve without any kind of manuring, beyond what the animals drop in the shape of dung and urine.

I know a man who will not have any poultry about his farm buildings, yards, etc., and thinks it proper to confine all fowls in places especially erected for them. I know men who have not brains enough to save any manure from cattle fattening to a very fine quality of beef, and actually throw it all in the river.

BIG-HEAD IN HORSES.

THIS disease which has attracted so much attention of late is nothing new, but one that appears to follow the westward march of corn culture. The Western Rural seems to favor this idea in the following:

The disease commonly called big-head is an enlargement of the bony structure of the face, commencing from the hollow beneath the eyes, and running nearly to the junction of the nostrils. The opinion is that it is caused by the mastication of too much corn when young, which produces ulceration of the roots of the teeth, when they are not fully filled or set. The convincing evidence of this fact is that big-head is seldom exhibited in any other part of the country, except in the States, more especially in the Western States, as more corn is fed there. The symptoms are the enlargement of those bones of the face that are of a spongy character, and if allowed to proceed, breaks out in small holes, and runs a thick secretion. Treatment: Apply in the first stage an ointment composed of strong mercurial ointment, 2 ounces; mix. Apply twice a day, and give broken doses of calomel and tartar emetic, or iodide of potash, in moderate doses, but never the two together. This is thought to be a radical cure, as there are cases under observation daily that have been cured by the same process. Secondary: By syringing the holes with a solution as follows: bromine, 1 ounce; water 1½ pints, and give alterative treatment as above.

In a book before us, published nearly forty years since, there is a recipe for curing this disease, which was then known in Tennessee under the same name as at present. The writer says that he has seen a number of horses affected with this disease, but never a mule. As the early settlers in Tennessee fed whole corn almost exclusively to their horses, as many of them do at this day, we can readily understand how the disease has been kept alive, if not perpetuated, by direct hereditary descent.

Our veterinarians of to-day, however, would scarcely indorse the treatment recommended for big-head forty years ago, for the hot-iron was their only recourse, a cruelty which was once quite in vogue among our farmers for various diseases.

FISTULA.—Fistula on a horn is but the result of an injury and when once started is likely to spread unless treated in a radical manner. Every fistulous passage must be opened with a knife and the pus removed; then treat the wound with nitrate of silver or chloride of zinc, one dram of either to an ounce of water. Inject into and wash the wound thoroughly and frequently.

Dairy Husbandry.

THE CHAUTAUQUA EXPERIMENTS IN FEEDING DAIRY COWS.

The report of the Committee appointed by the Western N. Y. Dairymen's Association on L. W. Miller's experiments in wintering cows exclusively on meal during the past season is before us. The Committee consisted of E. L. McCullough of Stockton, N. Y., Chairman; Dr. Geo. S. Harrison of Sinclairville, Philip Lazell of Stockton, Chauncey Warren of Stockton, Dr. D. G. Pickett of Stockton, and O. C. Blodget of Pomfret.

We give the leading points of the report, or such as will be of interest to dairymen. The Committee visited Mr. Miller's herd from time to time during the winter while they were being fed on meal and after they were put back again to hay. The herd was an average lot of Chatauqua County cows, the live weight being about 900 pounds. They were fed for seven weeks on corn meal exclusively, the average quantity per day being about three quarts for each cow. The Committee observed the following points:

The cows did not ruminate; they were very quiet; did not evince any inordinate desire for food when hay was shown them, and not so much as when cows are fed on hay alone in a little less quantity than they will eat. They were more quiet than cows fed on meal and a small feeding of hay—say four or five pounds per day. No signs of suffering or unrest were discovered; no loss or gain in weight of flesh was noticed from the time they were put on a meal diet to the time of going back again on hay. Thirteen days after being put again on hay the Committee could not discover anything about them that would denote that they had been wintered in any other than the usual way—on hay. They were filled up like other cows fed on hay; their stomachs were sufficiently distended for digesting hay, and they were ruminating in the usual manner. The calves dropped from these cows were of more than ordinary size, fleshy, strong, active and healthy, and in parturition cases of retention of the placenta were unusually rare.

The Committee state further that these cows have been treated in this way for several winters at a greater or less length of time each year, and by referring to notes from cheese factory reports it is found that these cows sometimes produce more milk per day than any other herd of the factory. During July last, for instance, the daily yield per cow was 29 pounds 3 ounces, or 1 pound 11 ounces more than any other herd. And, from affidavits of persons who have observed the point, it appears that such meal-fed cows, when turned to grass, take on flesh faster than those wintered in the usual way, other conditions being equal.

The Hon. Flint Blanchard, President of the Association, a gentleman who is well known for the part he has taken in dairy matters, says he has met with the Committee several times and fully concurs in their report. As to the practical side of this question, he says:

"Should I find in the fall of 1876 that I lacked feed for thirty or forty cows for thirty or forty days, I should not sell off a per cent. of those cows, nor should I buy hay, nor should I cut down on their daily feed of hay and add a little daily ration of grain with the hay to make it go further; but when my cows were all dried off, I should keep them on meal exclusively for thirty or forty days, and then go back again to hay.

"Other ways of making this method useful to us will readily occur. Thus we may keep more stock with a given amount of meadow land, or we may utilize the corn crop in the place of hay at any time when the meal would be cheaper than hay. Many ways will occur to us as to how to utilize a fact in nature when it has once been discovered."

Again he says:—"I am of the opinion that when Mr. Miller's rules are followed in this matter, as laid down in his treatise on "Meal Feeding and Animal Digestion," that not only is meal feeding cheap, safe and reliable, but we have some evidence to show that the treatment goes to improve the after-milk production of the cow."

He then refers to Miller's herd of cows (though only an average lot in appearance) as often outstripping other herds of his town (Stockton), also to Thomas Lyne's experiment in meal feeding exclusively, as pointing in the same direction; and he thinks the logical conclusion cannot be resisted, that exclusive meal feeding has a tendency to influence the animal both to milk production and her capacity for laying on fat when changed back to other feed, after she has ceased to give milk.

We have had occasion heretofore to refer to Mr. Miller's experiments in exclusive meal feeding. The facts given differed so widely from what was supposed to be required in maintaining the life and health of the cow that many were inclined to have but little faith in Mr. Miller's theory. The report of this Committee, composed of gentlemen of well-known integrity and standing, must be of interest. It seems to corroborate in all essential particulars the statements which have been previously given by Mr. Miller. Those interested in this system of meal feeding will do well to obtain that gentleman's pamphlet on the subject.

FODDER CORN FOR THE DAIRY.

Fodder Corn can be put in as late as the 20th of June and even up to July. Late crops make excellent fall feed for dairy stock when grass begins to fail and deteriorate on account of frost. It is a great saving to the hay crop, and many dairymen are enabled to carry stock along until the middle of January without feeding hay, sole reliance being placed on corn fodder which is properly cured and shocked in the field, whence it is used from week to week, as wanted.

In raising corn fodder, good, rich, mellow soil is required. There is no crop that will bear manuring better than corn; but in late sowings well-decomposed manures, well-incorporated in the soil, are best, unless the weather happens to be moist, as fresh barn-yard manures are liable to become dry and of little use.

We have grown good crops of corn fodder on sod in old meadows, the crop of grass being taken off in June, the land immediately plowed and sowed with corn. And in seasons when there has been a light hay crop we have known many dairymen to resort to this method to obtain the requisite amount of fodder for carrying their stock through the winter. The best way to grow this crop is to drill in the seed, and if large drills are not at hand, it will be found more advantageous to use small ones rather than to sow broadcast. We like the rows to be at least twenty inches to two feet apart, as it allows the air and light to be properly distributed through the plants, while the wide space will admit of horse-hoeing, which will add to the growth and value of the crop.

From two to four bushels of seed are used; the latter quantity when sown broadcast; but we prefer not to have the stalks grow too thickly together, as by excluding the sunlight the stalks are apt to be weak, liable to be prostrated by winds, and are less nutritious than when the seed is not so thickly sown.

Much has been said, first and last, concerning the value of corn fodder for the production of milk, and some have urged that it is of little or no account. This latter opinion, if it does not originate from prejudice, must have come from the manner in which the crop is grown—by being sown too thickly, thereby obtaining plants that could not properly mature, and in consequence lacking the nutritive elements of a well-grown crop.

We have used fodder corn for many years in our own dairy, and always with the best results. It promotes a flow of milk and keeps up the supply at a time when it would be difficult to obtain any other crop to take its place for this purpose. And it produces a milk of good quality, as we have repeatedly demonstrated by resorting to the proper analysis of different samples. We urge, therefore, upon all dairymen to grow a patch of fodder corn, and, even if it should not be wanted for soiling, there will be no loss, since the crop can be used for corn fodder, thus not only increasing the supply of good milk at this season, but taking the place of hay and making an important saving in the more expensive kinds of cattle food.

PRESERVED MILK.

Among the earliest experimenters in preserving milk we find Mr. Newton of London, who, in 1835, originated the following process:—He added about a fiftieth part in weight of pulverized sugar to the milk, and evaporated it slowly by subjecting it to a gentle warmth. When it was evaporated only to the consistency of sirup he bottled it; but if made as thick as honey, he put it into pots; and if the mixture was evaporated still further until it became as thick as paste, it was made into lozenges, or reduced to a powder and combined with other matters, such as tea, coffee, or chocolate.

We believe the late Gale Borden of White Plains, N. Y., was the first to conceive the idea of employing the vacuum plan for eliminating a large percentage of water from milk. Of the various methods which have from time to time been invented for condensing milk, we believe Mr. Borden's is the only one that has stood the test for making a good product—time, labor and cheapness being taken into account.

We should be glad to see the business so extended and simplified that what is called "plain preserved milk" (milk not treated with sugar) could be put on the markets in all our cities and villages at comparatively cheap rates.

VALUE OF MILK FOR MAKING FLESH.

Experiments have been recently made to ascertain the quantity of different foods which needs to be eaten to make one pound of flesh. The conclusion arrived at is that it requires 25 pounds of milk, 100 pounds of turnips, 50 pounds of potatoes, 50 pounds of carrots, 8 pounds of oatmeal, 7½ pounds of barley meal, and 3½ pounds of beans.

The Swine-Herd.

BERKSHIRE SWINE.

The American Berkshire Swine Association about a year since offered a prize of one hundred dollars for the best essay on the above named breed. The award has lately been made to Hon. A. B. Allen of Flushing N. Y., a gentleman whose name is familiar to the readers of the Rural New-Yorker. This valuable essay has just reached us, published in pamphlet form, in advance of its appearance in Vol. 1 of the American Berkshire Record.

We make some extracts from this paper which will doubtless interest many of our readers. The essay itself is well worth the careful perusal of every breeder in the country:

FORMATION OF THE IMPROVED BERKSHIRE SWINE.

Tradition tells us that this was made by a cross of the black or deep plumed colored Siamese boar, on the old unimproved Berkshire sows. Other traditions assert that the black and white spotted, and even pure white Chinese boar was also sparingly used to assist in the same purpose. I can well believe this; for I often saw swine in Berkshire spotted, about half and half black and white, in addition to the reddish brown, or buff and black, and so on almost up to a pure plum color or black. The produce of the above cross or crosses was next bred together, and by judicious subsequent selections, the improved breed, as we now find it, became in due time fixed and permanent in all its desirable points.

Another feature, aside from the half and half black and white spots hitherto occasionally found to mark the improved Berkshire Swine, which may be adduced in support of the supposition of a sparing cross with the white and light spotted Chinese, is the shape of the jowls. All these which I have bred in my piggery, or imported at different times direct from China, or have seen elsewhere, had much fuller and fatter jowls than the Siamese. Some of the breeders in England preferred the fat jowls, because carrying the most meat; others the leaner, as they said that gave their stock a finer and higher bred look in the head.

THE SIAMESE SWINE.

In the same volume of Professor Low, which contains the Berkshire portrait as described above, is a colored plate of a Siamese sow. She is a dark slate, varying to that of a rich plum color. The two hind feet are white; the fore legs and feet white, shaded in front with plum. The face is dished; head fine, with short erect ears; shoulders and hams extra large; back broad, with a deep, round and longish body. This sow is represented with a slightly swayed or hollow back, at which we need not wonder, considering its length, and that she has a litter of nine great, fat pigs tugging away at her dugs. These Prof. Low says were got by a half-bred Chinese boar, which I presume, from the color of the pigs, was white; for some of them were pure white, while others are mixed slate or plum and white, and one is a buff, with black spots, like the original Berkshire.

CHARACTERISTICS OF THE BEST OF THE IMPROVED BERKSHIRE SWINE AT THIS TIME.

Snout and head fine and rather short, but larger in proportion to the body in the male than in the female, and with a bolder and more determined expression; face dished and broad between the eyes; jowls full or thinner, according to the fancy of the breeder; eyes bright and expressive; ears small thin and upright, or inclining their points a little forward, neck short, rather full in the throat and harmoniously swelling to the shoulders; chest broad and moderately arched; rump nearly level with it; well let down in the twist; body of good length and depth, round with well sprung ribs, and straight along the sides and under the belly; shoulders above all, in the boar, extra thick, yet sloping smoothly to the body; hams broad, round, deep and so thick through from side to side, particularly in the sow and barrow, that, standing directly behind, except when pretty fat, the sides of the body are scarcely seen between them and the shoulders; legs fine, strong, of moderate length and set rather wide apart; feet small, with clear, tough hoofs; tail slender and well set, with a handsome curl near the rump; bones fine and of an ivory-like grain and hardness; offal very light in comparison to weight of carcass; hair fine, soft and silky; no bristles, even on the boar; skin thin and mellow, with elastic handling of the flesh beneath; quick and spirited in movement; stylish in carriage and, in the boar, more especially, bold and imposing in presence.

COLOR AND MARKING.

The most favorite color among the best breeders in Berkshire, in 1841, was a deep rich plum, with a slight flecking on the body of white, or a little mingling with it of buff; a small blaze in the face; two to four feet white, and more or less white hair in the tail. The plum color was preferred to the black or slate, because it carried rather higher style and finer points with it, a superior quality of flesh, softer hair and thinner skin.

The above is no ideal description of choice improved Berkshire swine, for I found several such in traversing the country, and purchased and sent them home to grace my own piggery.

The Apiarian.

EXPERIENCE WITH BEES.

Julia M. Wheelock, in writing to the Patron's Helper on her experience with bees, says:

Many persons who have kept bees on the old plan have a strong impression that they should not be meddled with, and think that the little workers can and will do all their "house cleaning" in spring, attend to all their family matters, increase at their own pleasure, and lay up stores for future need, better without any assistance than with it. A case of this kind came under my observation this season, the relation of which may be of benefit to some of your readers. Neighbor A. had, by the advice and success of his friends who were controlling their bees advantageously, been induced to adopt such hives as were convenient for examining bees, and really seemed to feel that he was trying the "new way" of bee-keeping, but for some reason, he had not visited them this year, and it was then near the middle of June. He had walked near the hives, and discovered that some of them were not so busy as were some others, and wisely mistrusted that there might be one hive at least without a queen, in which case, as apiarians well know, the whole family must sooner or later die.

At this time we were induced to examine neighbor A.'s bees—some less than fifteen swarms—and found many swarms apparently doing well as to honey, and raising brood, but having never "cleaned house" this spring. The dead bees were from one to two inches thick on the bottom of most of the hives, in the midst of which were brown moths, cockroaches, ants and some other insects, drawing sustenance from this filthy mass, which the bees had not been able to remove. The hives were then carefully cleaned, but this is not the object I had in telling this, but simply to urge upon those who think that bees should never be disturbed, the importance of ascertaining whether they need assistance or not. In the case referred to, the bees could not have removed the rubbish, however annoying it must have been to the little laborers, whose strength is limited, except in self defense. They undoubtedly, in some cases, throw dead bees and other filth from the hives, but they do not always do it, even when they are strong in numbers and rich in stores. I have seen many colonies this year which had dead bees still clinging in the comb, where they had died last winter or spring, and, contrary to our general supposition, had not been removed by the living bees. Whether the honey came earlier in flowers, and they considered their time demanded in the field or not, we cannot tell, but suppose the labor requisite for house cleaning must have been beyond their abilities, as they are supposed to have a just estimate of what they can perform. In raising brood, they have such correct estimates of their strength and capacities that the increase of honey will cause the queen to lay more eggs, or a decrease of honey will cause her to diminish the quantity. And in cases where dearth of honey comes suddenly, from drouth or grasshoppers, or other cause, bees have been known to destroy some of their brood, where they had more than they could feed and take good care of.

The bee-keeper should always carefully examine his bees in spring, and remove all dead bees (or any thing else) which may become offensive, from the hives. Sometimes it is best to remove moldy combs as worthless, although the bees sometimes clean such combs; but it is a question whether they could not build new comb nearly as quick, and with more safety to themselves, as mold is known to be very poisonous, and must have a deleterious effect on the bees, while removing it from their combs.

Lucerne Clover for Bee Pasturage.—It seems rather late in the day to proclaim the merits of Lucerne as a forage plant or for bee-pasturage, considering that it has been cultivated by agriculturists for twenty-five centuries or more. Still, as every generation have to learn some things from practical experience, perhaps ours may be, in a measure, excusable for not knowing that bees can, and do gather honey from the flowers of this ancient plant. But it is not advisable to create a "Lucerne mania," in order that some one may make a fortune in selling the seed under some one of its many names.

Farm Economy.

"CURSED BE HE THAT REMOVETH HIS NEIGHBOR'S LANDMARKS!"

When, after their forty years of wandering in the wilderness, the children of Israel had at length reached the river Jordan and the promised land was in sight, Moses, that model lawmaker, called them together and expounded to them, in the name of the Lord, the "Statutes of Judgments" that were to govern their lives and conduct when they should have entered upon their inheritance. These laws, on the day when they crossed the river, they were to write very plainly upon stones that he directed should be properly prepared for the purpose.

To impress more effectually upon their minds the duty of keeping these laws, certain Levites were appointed who should stand upon Mount Ebal and pronounce, in a loud voice, curses upon the violators thereof; and so, in the hearing of all the people, they were to say, "Cursed be he that removeth his neighbor's landmarks!"

We know of nothing that engenders more bitterness of feeling, anger, hatred and contentions among neighbors than boundary lines. The value of the premises in question is often insignificant, and it is only the right of way of the matter that is considered, while at other times the removal of a line a few feet, and sometimes a few inches, is a matter of considerable moment.

We are not willing to believe that many of our fellow-citizens are so lost to every feeling of justice and self-respect as to do an act that would so lower them in the estimation of their neighbors, and the few exceptions that have come to our knowledge are not sufficient to shake our faith in the general rectitude of the community.

But the fact remains, nevertheless, that there is constant quarreling among neighbors as to boundary lines, and, particularly in the older States, it is often very difficult to tell who is right and who is wrong. The proportion of conveyances of land in these States (and particularly in New England) in which definite boundaries are stated is very small. The description is usually quite as vague as to say, "North on John Smith's land, east on highway, south on Thomas Brown's and west on William Jones', containing 50 acres, 'more or less.'" This more or less is a saving clause, and in a majority of cases it doubtless ought to be more, the number of acres in an unsurveyed farm having a natural tendency to decrease as taxes increase.

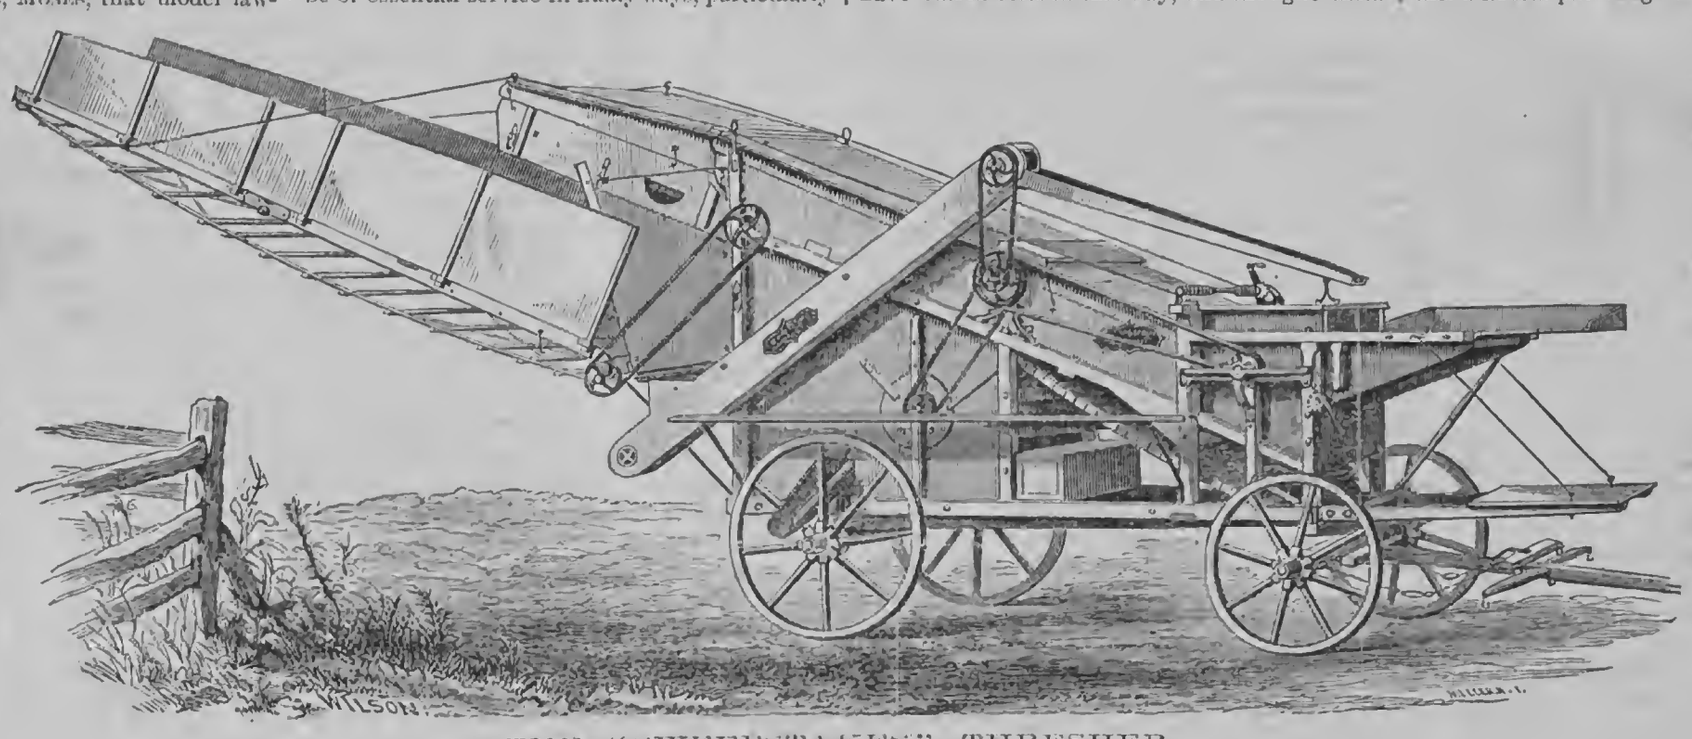
We heard a conversation last year between neighbors the lands of whose ancestors, now in their possession, had been separated by a highway, which formed their landmark. This highway had been closed for fifty years or more. No record of it had been preserved, and in the words of one of the parties, "there is not a surveyor in the State who can locate it." During the fifty years trees had grown rapidly, and the strip of land three rods wide and forty rods long which fifty years ago was not worth five dollars is now worth five hundred. Probably every reader may know of similar instances.

Now, the way to get out of these difficulties may not be clear, but how to keep out of them is plain. Never buy a piece of land except it be described by metes and bounds by actual survey, and make an examination to see that the boundmarks are where they should be. You are entitled to what you pay for and no more, neither should you be content with less.

Many have a mistaken idea that if their fence encroaches upon a neighbor's land and has stood there a number of years, it must be allowed to stay there thereafter, and that a title by possession has been gained. Any competent lawyer could soon convince them that it is not possession only, but *adverse* possession—that is, possession with some published claim—that is necessary to give title.

There are many causes of difficulty which arise where neither party is in fault. Perhaps a fence blows over in the fall. A laborer is sent in the spring to repair it, without definite instructions. The old post-holes are obliterated, and if he uses his best judgment, it is usually poor enough to make an error; or if, to avoid a stump or a stone, he varies the line two or three inches, which may in the end make as many feet, he gives it no thought, and the mistake remains undiscovered.

It will well pay the owner of a farm to have a survey made, not only of the boundaries of the whole, but of the different sub-divisions as well, and a map made of the whole; and if the topography was well delineated on the map, it would be of essential service in many ways, particularly as a guide to drainage. But of this more hereafter.



THE "SWEEPSTAKES," THRESHER.

SOILING STOCK.

Much has been written on the economy and advantages of soiling, comparatively few farmers can be persuaded to give the system a trial. A correspondent of the Southern Planter and Farmer writes:

This is a subject that will engage the special attention of farmers and breeders for some years to come. I do not say that the system will be generally adopted; but I believe that, as it becomes better known, it will meet with more favor, and be found to exactly suit the circumstances and wants of a large class of the farmers and breeders of this country. By "green soiling," or "soiling," I mean the practice of keeping animals in pens or barns, and feeding them on green food grown and cut for the purpose, instead of allowing them to run in pastures. The advantages of this plan are being freely discussed among the most enterprising, practical farmers and breeders, as well as by the leading agricultural writers. I have before me a valuable little work by Josiah Quincy, Jr., of Massachusetts, who, with his father, may be considered the pioneers of this practice in New England. I will make a few extracts. Mr. Quincy says:

"My farm being compact the annoyance of having fifteen or twenty head of cattle driven night and morning to and from the pasture; the loss of time in often turning the team and plow, owing to the number of interior fences and the loss of surface of good land capable of being plowed; owing to them and the many head lands, all drew my attention to the subject of 'soiling' and its effects. All the European writers maintained that six distinct advantages were to be obtained by the practice of 'soiling' over that of pasturing cattle in the summer season:

"1st. It saves land.

"2d. It saves fences.

"3d. It economized food.

"4th. It kept cattle in better condition and greater comfort.

"5th. It produced more milk.

"6th. It increased the quality and quantity of manure.

"Satisfied in my own mind of the beneficial effects of the practice, I adopted it, keeping some fifteen or twenty head of milch cows, with some other stock, and with entirely satisfactory success. Since then I have kept from thirty-five to fifty cows in this way; so that, in my mind, my experience is conclusive on the subject."

He says that one acre "soiled" from will produce at least as much as four acres pastured in the usual way, and that "there is no proposition in Nature more true than that any good farmer may maintain upon thirty acres of good, arable land twenty head of cattle the year round, in better condition and greater comfort to the animal, with more profit, less labor, less trouble and less cash advanced for himself than he, at the present mode, expends upon a hundred acres." He further says:—"My own experience has always been less than this, never having exceeded seventeen acres for twenty head."

Most farmers could, by this process of feeding, soon make their farms rich by the application of the manure accumulated from their stock, and there would be no necessity of purchasing artificial fertilizers. That, and the amount saved in the way of fencing, would more than pay twice the amount of any farmer's taxes. Some will ask whether "soiling" is consistent with the health of the animals? "No confinement prejudicial to the animal's health is necessary. We have animals that have been "soiled" from six to thirteen years. One cow now sixteen years old, has been thus fed for thirteen summers, and has always been healthy. We have raised colts in this way, and thought them more thrifty and quite as healthy as those raised on pasture. We regard it as promotive of health, as the animal has more equal diet—not subjected to such fluctuations of abundance and scarcity, as in pasture. It requires less food, because the animal gets all it wants without foraging sixteen hours a day over short pastures."

I feel confident, if more of our Virginia farmers would adopt this mode of "soiling" (if only for a short time), they would never want to go back to pasturing their lands again.

Owing to the scarcity of timber in many portions of Virgina, we will ultimately have to resort to some mode of enclosure other than the old fence system. And the sooner we make this change the sooner prosperity will reign triumphant.

HOW MUCH LIME PER ACRE?

Another correspondent asks: "How much lime can I apply on an acre of sandy soil with benefit?" This question admits of no more definite answer than the one published last week in regard to the application of ashes, although the two materials are entirely different in their nature and action upon the soil.

Lime, in itself, is not generally considered a fertilizer or food for plants, while potash is. Carbonate, or quicklime, as it is usually called, when applied to sandy soils, does little more than hasten the decomposition of whatever vegetable matter it contains, rendering every particle useful to the plants growing therein, and, as one of our noted agricultural writers long ago remarked, "the principle functions of lime as a manure appear to regulate the condition of the organic matter in the soil, and to facilitate its healthy decay."

Good judgment is required in all cases where lime is applied, else it may do more harm than good; but upon a light, sandy soil, containing a moderate amount of vegetable matter, five bushels of freshly-slaked stone lime would be sufficient, or ten to fifteen of air-slaked or gas lime, evenly distributed over the surface. It is better to apply lime in small quantities and frequently, than in large doses and at long intervals.

Industrial Implements.

THE "SWEEPSTAKES THRESHER."

If a man concludes to adopt threshing as an occupation, we must say we do not envy his lot when he falls into the hands of the Phillistines, or thresher manufacturers, as by the time he carefully weighs all the arguments for and against various patterns he will have arrived at a state of mind bordering on lunacy, and almost ready to buy a wheelbarrow if an enterprising agent should chance along. Sewing machines are mere child's-play by comparison, and just here is where his journal comes to his partial relief by reminding him that there are five points that go to make a good implement, and they should be constantly kept in mind, viz.:—fast threshing, thorough cleaning, superior separation, durability and adaptation. Farmers of the present generation, unlike their forefathers, don't seem to have been born with a hinge in the middle of their backs, and consequently look on a flail with that lofty pity that seems to say: "You might have been very good in your day, but the world moves."

The advantages gained by thorough threshing and cleaning of grain are so great that the wonder is farmers for a moment entertain the idea of using any but the most improved methods. They must, at no distant day, wheel into line and utilize all improvements, in order to hold their own with more progressive neighbors. To do this a liberal patronage of good threshers is imperative.

We give in this issue an illustration of the "Old Reliable" Sweepstakes Thresher, manufactured by C. Aultman & Co., Canton, O. This firm has been established since 1850, and during this period given the closest attention to the manufacture and improvement of agricultura implements. The mechanical parts of the "Sweepstakes" are made most thoroughly and substantially, and the makers claim that its utility and practicability place it among the foremost in this class of implements.

The cylinders are so spiked, that in connection with the spiked and adjustable concaves, every grain is detached from its connection with head and straw, leaving the grain perfect and uninjured. To accomplish this, a very important improvement has been made in the concave, by which it can be raised or lowered at pleasure by a crank moving and holding it at all points equidistant from the cylinder. Separating the grain from the straw and chaff without loss of grain, is one of its merits. The fan mill of the "Sweepstakes" possesses changeable wind-board, by which with a thumb-screw the direction of the blast can be changed at pleasure, adapting it to the different conditions and kinds of grain and seed.

By means of a windlass, rope and rollers, the Stacker can be hoisted and lowered at will. Instead of disconnecting the second Carrier, and laying it on the top of the machine, or elsewhere, it is now arranged to be stationery. So also of the Stacker; instead of detaching it and carrying it in some other way, it is now folded up and carried in a leaning position against the second Carrier. The "Carey" mounted power is used in connection with the "Sweepstakes."

In conclusion we may add, that many who are fond of an agricultural life, but have more mechanical than farming genius, will find that managing a thresher is not only a fascinating pursuit in itself, but it amply rewards the time and labor exponded. Not infrequently the profits of a single season make up the whole original outlay.

The Naturalist.

BEARS AT HOME.

A writer on the Zoological Gardens in London writes:—"A pretty, winding path through the shrubbery at the left of the terrace brings us down a slope to the place where the pair of white bears live. They have a beautiful stone house, covered with flowering vines, and in front a pond with a flagged path around it, on which, as we approach, the huge creatures are pacing up and down, waiting for dinner, growling savagely every now and then at the visitors who stand in tantalizing nearness, just out of their reach. Their whole domain—house garden and pond—is not only fenced in but roofed over with the strongest iron bars. Once, they say, it was only fenced: but, though the top of the fence was made of pointed spikes, turned inward, one of the bears got out early one morning and nearly killed a blacksmith who happened to cross his path; and after that they were roofed in. The white bear and his wife once had two little ones, soft, pinky creatures, but the unnatural mother killed her own children, much to everybody's disappointment. The mother bear's fur is purer, softer, whiter than the father's, whose hair looks rather yellowish when he stands close to his great snow-ball of a wife, and she seems to be generally in a fit of sulks, while he tramps about in a chronic state of active fury. They suffer terribly from the heat of an English summer, and great blocks of ice are constantly kept in the pond to make the water cool enough for their bath."

Sparrows.—A note in the Gardeners' Chronicle says that London sparrows are proverbially amongst the most "cheeky" fellows in existence, and to keep them from eating up newly-sown grass seed is an almost hopeless task.

Floricultural.

ROCKERIES.

Rockeries, as they are called, should never be placed in narrow grounds or in any grounds of quite limited extent. Not unless they can be made to mingle, so to speak, with other surroundings; not unless the beginning or ending can be made to conceal their glaringly artificial character, should they be placed in *any* grounds whatever. There is nothing that strikes the observer as so ludicrously spurious as an attempt to render objects shapely and beautiful, that in nature we behold only among the rudest, most rugged scenes. A rockery is therefore never ornamental—nay, it is never anything but a monument of untutored taste, unless unstudied clumps of vines, shrubs—or natural breaks or hills—the banks of streamlets or of lakes suggest at least the possibility of the rocks in whole or in part having existed there in a state of nature.

For those, however, who do not agree with us in these views—and that there are those who do not is shown from the many lugubrious mounds and circles of rocks to be seen in the front gardens of cities, villages and country dwellings—we desire to name a few plants which we know to be well adapted to rockeries, as well as to suggest a mode of constructing them that shall absorb the rain and in a measure retain it for future use instead of throwing it off, forming cavities and ruts between the rocks, washing away the surface soil and exposing the roots of the plants—while, except in long storms, the moisture penetrates to an inconsiderable depth and artificial watering is again required in a day or so. A rockery may be so constructed as to hold water as well as the level earth—and either this must be done or only those plants used which do not mind drouths. Such plants, however, are generally those of low stature and of a confined leafage that are late in clothing the rocks with a mass of verdure upon which in all rock-works their attractiveness chiefly depends.

As to construction—let us select flat or flattish stones as large as are available. These answer every purpose of round or thick stones and allow of greater contents. Besides, they are more easily handled and fewer go further. Mark out upon the surface of the ground the outline desired and set the stones perpendicularly, or with the tops inclining inwards, on the broadest edges so that the most acute angle shall point upwards. Let each one overlap the preceding a little. These may be held in place by sticks driven inside for them to rest against. When we have thus completed the first tier of stones (let us suppose them to average two feet in hight) fill in over the apertures and cracks between the stones or lappings with matted grass, moss, old carpets or oilcloths, and then throw in the soil (muck is excellent), making it most compact against the moss or other lining and loosest toward the middle. When we have filled in to the hight of 18 inches, place the second tier of stones (half the size of the first) so far within as to allow a sufficient margin for the first tier of plants. Proceed with the second and third as with the first—not forgetting the lining—until the last and highest surface has become so narrowed as not to admit of another tier, and the rockery is ready for the plants.

It will be observed that, constructed in this manner, the rain will freely make its way through the more porous middle soil instead of running off; that it will be held somewhat by the rubbish lining which further acts as a non-conductor to the heat from without, and that a degree of moisture may in this way be provided which removes at least one of the foremost objections to these, at best, objectionable structures that, viz., with occasional watering, they need never dry out.

The surfaces of these rockeries before they are covered with verdure or during the cold months, however constructed, are extremely unsightly. We know of one instance, nevertheless, in which this unsightliness has been in a degree mitigated by the use of paint—paint applied in the rudest manner. First the surface was given a coat of drab and before drying, was splashed, veined and inoculated with black and many colors. In a short time the weather so bedims the garishness of the coloring as to impart a natural appearance, inducing many to ask in all sincerity (as we have been assured), "Where did you procure those rocks?" Oil paint upon rocks in dry places will endure for many years.

Let us plant in the earth close to the base of the rocks, swift-growing vines. Of these we should choose first the Madeira or Mignonette Vine, *Boussingaultia basseloides*, (the tubers of which may still and even later be obtained,) whose fresh, crisp leaves, branching habit and sweet blossoms, though late, render it everywhere the most prized of half-hardy vines. Next the plain *Cobaea scandens* which, for size of leaf, affluence of flowers and rapidity of growth is not—so far as we are aware—equaled. Young potted plants may be obtained of any florist up to the 1st July or later. *Tropæolums*, *Thunbergias*, Balloon Vines, (*Cardiospermum halicacobum.*) *Clematises*, are all well adapted to our purpose. Among hardy vines for the same purpose we may mention the Honeysuckles (especially *Lonicera Belgica* and *L. aurea reticulata*). Wistarias, the blue Passion Vine, (*Passiflora cœrulea*), which, however, is *not* hardy—and *Vitis heterophylla variegata*, one of the finest ornamental vines in cultivation. The variegation of its leaf—white, rose, green—is beauty enough, and its light-blue waxen berries that mature in the fall are a rare and additional charm. The vines are more or less killed by severe cold but the roots we have never had injured—and its spring growth is so rapid that the winter destruction of the top need not be considered against it. We do not know of a prettier hardy vine or one that thrives better in rockeries whether planted at the base or among the rocks themselves.

Such hardy vines as *Aristolochia*, *Akebia*, *Tecoma*, *Periploca*, *Celastrus*, etc., etc., are not selected because they seldom make much growth the first season after transplanting and, besides, are better suited to greater hights and areas than those of the rock-works of which we are speaking.

For the pockets and crevices of the rocks in the way of vines, we should select the Cypress (*Ipomœa quamoclit vulgaris*) Vine in its three colors—white, rose and red. Cypress seeds well soaked in boiling water and planted in wet sandy earth exposed to the full heat of the sun will, as we have before stated, germinate in two or three days and, as they love heat, will soon overtake those started earlier. Nothing is prettier than their light, airy foliage or better adapted to our purpose. *Plilogyne suavis* is of late introduction and, if judged from the engravings and comments of those who offer it for sale, would also prove satisfactory. Such plants of a more or less vine nature as *Saxifraga sarmentosa*—*Tradescantias* (green, purple-variegated, white and green)—*Sedum Sieboldi*—plain and variegated *Sedum acre*—*Lysimachia nummularia* and *L. n. aurea*—*Linaria cymbalaria* and the *Vincas* need only to be named.

For the marginal tiers, we should use *Phlox subulata*—*Plumbago larpentæ* and *capensis*—a few *Portulaca* (these last may be transplanted even in midsummer)—*Polypodium vulgare* and other hardy Ferns for the shady portion—*Lobelia*—*Panicum variegatum*—*Gnaphalium*—*Koniga maritima var.*—*Aloe* and succulents, such as *Echeveria*, *Pachyphytum*—*Klenia*—*Mesembryanthemum cordifolium* and *M. c. variegatum*.

For the surface in the top of the rockery where the most striking specimens should be employed, *Agave*—*Beaucarnea*—*Aspidistra*—*Cactus*—*Yucca*—*Dracæna* would prove effective, one, several or all, according to the area to be planted.

Those who have "a good mind" to arrange a rockery, can do so now as well as at any time, and the above-mentioned plants may be easily obtained in pots—thumped out in their respective places and know not of the change.

We are not willing to offer any encouragement to the erection of rockeries—the most nondescript things ever introduced for garden ornamentation. But for the many of different and possibly better tastes, we have told (so far as space permits) what we know about them.

MISCELLANEA.

For six new plants not in commerce, says the Gardeners' Chronicle, Mr. Bull of Chelsea was placed 1st. Mr. Bull's plants were Pritchardia grandis, from the Solomon Isles, a beautiful bright green Palm with roundish, concave, plaited leaves, having a doubly-toothed edge and flat, spiny leaf stalks; Dieffenbachia Shuttleworthi, from Columbia, a small habited species, with spreading, lanceolate-oblong leaves nine inches long, of a satiny green, with a silvery central bar an inch wide; Croton elegantissimus, from the New Hebrides, a finely colored plant with yellow and red stems, long, dark green, drooping leaves half an inch wide, the basal portion of which on the costa is of a deep golden yellow; Dieffenbachia Chelsoni, with ovate, yellow, blotched leaves; Aralia splendissima, from New Caledonia, a densely leafy plant; the leaves pinnate, 1½ foot long, with about 11 pairs of opposite lobed leaflets; and Alocasia Johnsoni, from New Guinea, a species having purple, mottled stalks, furnished with short prickles arranged in groups and arrow-shaped, erect, dark-green leaves veined with red.

Swamp Azaleas (*A. nudiflora*) are now in bloom. Go and take a look in the highland woods as well as in the swamps. We knew of a lady who, though, as might be said, living in the midst of wild Azaleas, asked what they were upon seeing them in full bloom, growing in the sandy soil of a garden. She knew the flowers well—but was surprised beyond all knowledge of the plant by their beautiful display in masses under cultivation. If any kind reader wishes to place himself or herself under obligations to us, let him go to the woods and secure a load of "Pinksters" for his garden. If procured now with earth about the roots and cut down to six inches of the ground, they will form stocky plants and bloom next spring.

Novelties.—*Gustavia gracillima.*—Mr. Wm. Bull of England has succeeded in flowering this superb plant of which a sketch is given in the Gardeners' Chronicle, May 6. It is a stove flowering plant—leaves 13 or 18 inches in length by ¾ths or one inch in diameter. The flowers, remarkable for their botanical structure as for their great beauty, are four inches in diameter and of a rose-red color.

Have any of our readers ever tried to cultivate the charming little flower *Polygala paucifolia?*

The Garden.

MUSK-MELONS—NOVELTIES.

Melons thrive on hill-sides and in sandy soils. If the best results be sought, a small quantity of guano mixed with a shovelful or so of old manure and covered with soil in the hills, should be used. As soon as the seed-leaves are well developed, plaster is generally used to protect them from the melon beetle; and this is thought to act as a stimulant to the plants as, from time to time, it is washed by rains into the ground and about the fibrous roots. Mixing a little flour of sulphur with the gypsum is a more effectual protection against the melon beetles—or, indeed, sulphur may be used alone. In the first instance a much smaller quantity suffices, and in the latter, a pinch will go as far as a teaspoonful of plaster. In the same way we may use *hellebore*, tobacco ashes or aloes.

The following novelties in the way of musk-melons are offered this season accompanied by the usual high-sounding phrases. Sutton's Tom Thumb is described as the smallest yet handsomest melon in cultivation—marked with stripes of orange and claret—flesh green, juicy and delicious.

Green Climbing. This melon requires a trellis. Further, "deponent saith not."

Composite is a favorite Paris melon, netted and deeply-ribbed—orange-scarlet flesh, "sweet and brisk."

Prescott Cantaloupe. Also popular among Paris gardeners—large—thick flesh, fragrant.

Orange Cantaloupe. Medium size; productive.

Tours Sugar. Light green flesh, netted, sweet.

Algiers Cantaloupe. Hardy and productive.

We have procured the above among a goodly assortment of vegetable novelties—planted them with the consideration due to distinguished foreigners and will give our readers next Fall an impartial account of the respect to which they are entitled.

KILLING RED SPIDERS IN HOT-BEDS.

A correspondent of the Journal of Horticulture gives the following directions for killing the Red Spider either in greenhouse or hot-beds:

One of the best means of eradicating this pest, and one which I have successfully practised for many years, is by creating fumes of sulphur with the aid of heated furnace shovels. If the operation is performed with due care every spider will be killed, and not a leaf of either vines or cucumbers will be injured. If, however, the work is loosely or carelessly done injury will inevitably be committed. But of this there is no real danger, for a safety valve is always present, which if regarded will lead to satisfactory results. My mode is as follows:

On the evening of a still day, and after the house containing the spider has been closed, I secure the aid of two assistants. One heats a shovel at the fire, and runs with it to the door of the vinery. Here is placed a careful man with a pot of sulphur, which he sprinkles very slightly on the shovel, and the sulphur at first burns with a flame. That is the danger signal. In a few moments, however, the shovel cools and the sulphur smoulders, showing no incandescence whatever—that is the safety valve. At that stage he hands it to me inside the house, and I sprinkle it freely, and continue to do so as long as fumes are emitted. In the meantime other shovels are being prepared outside. In a quarter of an hour I have a light blue atmosphere, and as soon as my eyes commence smarting I leave the house.

In the morning I have invariably found every red spider dead, and every leaf alive and uninjured. The slightest incandescence of the sulphur inside the house will cause injury to the foliage, but I have never found the slightest harm result if the precautions named have been duly carried out. It is a matter on which none need err, for it is easy to perceive when the sulphur does not show a flame outside, and as easy to know when one's eyes smart inside the house. I have practised the plan for more than twenty years, and always with the same result of killing the spider and not injuring the foliage of vines, cucumbers, or melons.

CARBOLATE OF LIME FOR CURRANT WORMS.

Currant worms are still quite plentiful in many localities and should be destroyed whenever they appear. The Weekly Herald refers to the use of carbolate of lime and says now is the time to examine your currant bushes and destroy the pestiferous worms. White powdered hellebore will be found sure death to them, but Dr. E. Worcester of Waltham, Mass., states that the currant worm, so destructive to a favorite fruit, may be fully and almost immediately destroyed by the use of carbolate of lime. The doctor tried the powder in many instances during the past summer, and found that while it was fully as effective as hellebore, it was less disagreeable, less costly and perfectly safe. The method of using it is to sprinkle it over the bushes as soon as the worm makes its appearance, bringing it well in contact with the leaves, and soon the insect is destroyed. It will need but two or three applications and the work is done. In this way, for a few cents, large quantities of currant bushes may be saved and the fruit allowed to mature, and no danger whatever incurred. Neither the foliage nor the fruit is in any way injured by the carbolate of lime. A friend who tried carbolate of lime last season tells us that he found it quite effectual as long as the worms were young, but not after they had attained their full growth, while the hellebore seemed to be certainly fatal in all cases. He found that it was not necessary for the hellebore to come in contact with the worms, but when some was placed on the upper surface of a leaf it not only caused the worms on the under side to fall off, but killed them. Still, we should prefer to use the carbolate of lime, and we advise our readers to destroy all the worms with it before they get large.

DRAINING THE GARDEN.

I have two gardens—one with eastern exposure, soil rather clayey; the other nearly level, soil coarse, sandy, rather damp—land originally in pine—subsoil of both stiff clay. In wet weather soil is soggy—very cold and vegetation always backward. Base of the section granite, some flint rock and much silica. Both have been highly manured with barn-yard material—ashes, lime, cotton-seed, guano, etc., yet the land remains unproductive. In early spring and all summer a little white worm (like a maggot) is abundant in the soil and sucks the sap of all vegetables as turnips, cabbages, beets, radishes, potatoes, etc.; grass grows rank, corn, cotton and okra do tolerably well. Would like to know what treatment would be beneficial and especially how to get rid of the worm.—Sub., *Lee Co., Ala.*

Your garden evidently needs underdraining. Put in the drains at least three feet deep and about thirty feet apart. Arrange the drains so that there will be a free outlet into one pipe or open ditch, and we think there will be a decided improvement observed the first season. The small white maggots are doubtless the larvæ of some small insect, but what kind of course we cannot say. If you cannot get tile near by, stone or even board drain will answer for a few years, but the first are the best and will be the cheapest in the end. Sometimes trenching such land as you describe will prove highly beneficial, but considerable manure is required to make the surface soil rich if the land is inverted to the depth of eighteen inches to two feet.

SELECT THE BEST FOR MARKET.

In the report of the Texas State Horticultural and Pomological Association we find the following good advice to Southern growers of fruits and vegetables which is alike applicable to cultivators in other localities:

Let us commence at home to make inquiry. Are our fruit and vegetables of the very best varieties, and such as are best adapted to our soil and climate? Have we properly cultivated them, and was the season such as to bring them to the greatest perfection? Did we select only the best, (such as we would be willing to pay top prices for,) and carefully pack and ship them without delay, so they might reach market fresh and perfect? If all this has been done, and results were not satisfactory, then we must look elsewhere for the cause, feeling satisfied that it is not with the producer. But, rest assured, that just in proportion as you cannot answer the above questions, affirmatively, to yourself, just in the same proportion the fault is your own, and the remedy should begin at home.

TRAINING CUCUMBERS ON TRELLISES.

We fully agree with the New England Homestead in the following, and would add train the tomatoes on trellises also:—Cucumbers are generally permitted, or compelled rather, to grow flat upon the ground, but vines have been trained upon trellises with the very happiest results. Indeed nature never intended the cucumber for a mere surface runner, else it would not have been provided with grasping tendrils. A low trellis, keeping both vine and fruit off the ground, add largely to the yield and the quality. When space is an object, a great saving of ground may be accomplished by training upon high trellises.

The Centennial.

CENTENNIAL CORRESPONDENCE.

ATLAS HOTEL,
PHILADELPHIA, June 3, 1876.

As I begin to write, my attention is called to the acres of hotel of which my little room is a part, and I am led to wonder where all the people come from to fill it! And filled it certainly will be most of the time, for it is not only convenient to the Exposition, but very moderate in charges—two prerequisites for many of the visitors.

Strolling around the Centennial Grounds, I espied a member of the Centennial Guard, whose face indicated that he could answer a civil question in a polite way, and fell into conversation with him upon the organization of the body to which he belonged. Finding me really in quest of bottom facts, he referred me to the commanding officers, Col. CLAY and Major ALBERGER. The former was absent from his office, but the handsome Major was found at home, and from him I gleaned many interesting facts.

This Guard does the police duty on the grounds of the Exhibition, and, as near as may be under the civil law, is organized in true military style. Perhaps a good idea of its magnitude and importance can be obtained from the statement that it consists of one colonel, one major, seven captains, fifteen lieutenants, and one thousand and fifty-three non-commissioned officers and privates. It embraces about thirty experienced American detectives, and, in addition to that, has connected with it corps of detectives supplied by the English, French and Italian governments. Over three hundred men are on duty all the time, changing off by reliefs as is done in the army on guard duty. This may be a singular commentary upon the people who visit the Exhibition, but it is found to be quite necessary; and so efficient is this force and so watchful that, of the hundreds of instances where thefts have taken place and been reported, so far they have failed but in two instances to recover the stolen property. Among the privates are many men of education and refinement, and all are intelligent and well-behaved. One of the privates speaks thirty-two languages and formerly held the rank of Major-General in the Cuban army.

Of course many laughable incidents come under the observation of this force. While Major ALBERGER was recruiting his men, it was suggested to him that a drummer would be a good thing to have in the camp, and he accordingly sent his men out among the candidates awaiting examination to get one. A jolly-looking fellow was brought into the room, and replied to the Major's question that he had been a drummer for the last five years.

"Do you thoroughly understand drumming?" asked the Major.

"Why, certainly I do!" replied the man.

"Where and under what circumstances have you been drumming for the last five years?" added the Major.

"Oh!" replied the man, "through the Western States. I have been drumming for a large dry goods house!"

As that was not the exact kind of drummer he wanted, the man had to take a position as private.

One very well-dressed and respectable-looking woman, with a year-old infant in her arms, entered the gate one day, and, walking up to one of the guards, handed him the baby, asking him to hold it for her a few minutes till she came back. He held it, and kept on holding it, and would have held it till this time, I presume, if it had not been sent to some asylum by his commanding officer.

The detective part of the force is constantly on the lookout for thieves and pickpockets, many of whom are well known to all the experienced detectives. Not long since a lady had her gold chain cut and watch stolen in the Main Building, and did not miss it till one of the guards called attention to the hanging piece of chain. As was his duty, the guard immediately reported the case to Head Quarters, and the detectives were stationed at the various gates or turnstiles to catch the thief. In less than an hour one of them saw a notorious pickpocket passing out, whom he tapped on the shoulder, saying: "Here, give me that watch with the piece of chain hanging to it." Without a word, the thief handed over the watch. He was then taken before the Philadelphia "His Honor" and, with the aid of the Centennial "Bijah," obtained board at public expense for three years.

Apropos of the Police Court, two notorious Italian pickpockets were seen by one of the guards attempting to pick a lady's pocket and were arrested when, in very good English, they protested their innocence. The next morning before the magistrate they could neither understand nor speak a word of English, and two more stupid-looking men than they appeared to be, during the examination, could not be found. The judge seemed to think that the evidence was not very strong against them, and that a mistake had been made in arresting a couple of unfortunate foreigners who did not understand the language sufficiently to protect themselves. He was on the point of discharging them, when the commanding officer, who was in Court watching the cases that day, said quietly to His Honor: "Let me ask them a question or two and I think I can prove to you that they understand English perfectly." Upon receiving the Judge's assent, he turned to the prisoners and said in distinct English: "That's all—you can go," whereupon the two unfortunate foreigners picked up their hats and started for the door. It is almost unnecessary to say that the Judge called them back and gave them full sentence.

Many of the RURAL readers are familiar with the manner in which an army Quartermaster gets his supplies for the soldiers of the command to which he is attached, viz., by a requisition, and in the same manner the supplies for the Centennial Guard are obtained. During the early days of the Exhibition, Major ALBERGER, who was then acting as Quartermaster, walked into the office of the Centennial Commission, from whom his supplies were drawn, and handed to the dignified chief clerk a requisition. He examined it closely, read it through, and handed it back, saying that it was of such a singular character he could hardly act upon it without referring it to some one higher in authority than himself. The Quartermaster then took it to the higher authority, who scanned it closely several times, and turning to the unfortunate officer, said:

"Major, I always had an idea that you were an efficient officer and a good man; but, sir, when you hand in a requisition to me for fifteen cats, I think you need rest—a change of air! Would you like to have a furlough for a little while, Major?"

The Major, with one of his luxurious, Floridian smiles, replied:

"No, sir; I don't need a rest, nor a change of air, nor yet a furlough; but in the haste of unpacking the foreign pictures in Memorial Hall, many of them have to be left sitting against the wall while waiting for their turn to be hung, and the rats are eating them. They have already done some damage, and may do much more. If you cannot get me the cats, sir, I can procure them myself in a little time."

After looking sharply at the Major, hesitating a moment and finally comprehending the full situation, the Commissioner simply remarked: "You shall have them, Major." In less than forty-eight hours he did have them, and any of our rural visitors can see some of them around Memorial Hall when they go there. The rats disappeared and the pictures were saved, all by the remarkable requisition for fifteen cats.

When you go to the Centennial, please think well of those Guards, for they are a fine body of men and were picked out from many thousand applicants. They have severe labor to perform and so far have done it well. They have nearly broken the back of thievery and pocket-picking on the grounds, and will eventually render the Exhibition the safest crowded place in the United States.

SHORTHORN.

CENTURY BLOSSOMS.

THE grand exhibition of Dairy products is to take place June 26 to July 6, when the prizes will be awarded.

THE Executive Committee of the American Dairy Society will meet at the Dairy Exhibition Building, Centennial grounds, Wednesday, June 7th.

AMONG all the live stock to be shown at the Centennial Exposition, the Alligator Department is likely to be the most complete, as 350 specimens are on the way, and of all sizes from 6 inches long up to 13½ feet.

OUR old friend HARDER of Cobleskill, N. Y., has added a new name to his well-known Threshers. They are now called the "Fearless." Visitors to the Centennial will find him at M and N 7 Agricultural Hall, with machine in full operation.

Pomological.

PROTECTION FOR ORIGINATORS OF NEW PLANTS.

I CLAIM that the work of the originators of new plants is not exceeded, if equaled, in utility by that of the author or inventor, and that he is entitled to the protection of the Government for quite the same reasons. The new variety owes its origin to him, and any desirable peculiarity it may possess is precisely as much his property as the ideas of the author or the device of the inventor are theirs. Free dissemination enables others to appropriate the benefit of the variety without compensating the originator, which is unjust. He should have the exclusive right to grow, disseminate and sell his production, and this means, in reference to certain annuals, to disseminate and sell to be grown.

New varieties should be subjected to examination and trial by a competent committee, in order that "protective letters" might not be given for old sorts, worthless new ones, and those not sufficiently distinct to be identified. It would be necessary to classify plants in the statute protecting them, according to the purpose for which they were valued, and apply the protection accordingly. Thus:

Class 1. Perennial plants, valued for the seed or fruit.

Class 2. Perennial, biennial, annual plants, valued for ornament.

Class 3. Perennial, biennial vegetables, and such annual vegetables as are produced from the seed proper.

Class 4. Vegetable fruits.

Class 5. Cereals, tubers, and other annuals valued as edible and marketable products.

The purchaser of an individual right to grow a protected variety would not possess the right to sell the means of propagation, unless such means were the product for which the variety was valued. For instance, such purchase would not confer the right to disseminate plants or cuttings of varieties belonging to class 1, nor plants of perennial and seed of biennial and annual sorts included in class 2, although the flowers and foliage could be sold as ornaments. With class 4, such purchase would not confer the right to disseminate the seed apart from the product containing it. These requirements may seem arbitrary, but they are no more so than the patent laws; besides, no one would be compelled to grow the sort.

It must be borne in mind that *growing the plant* constitutes *manufacture* both of the plant and its marketable product, and the facility with which an article may be manufactured does not invalidate in the least this exclusive right of the patentee. The party, therefore, to whom the lawful disseminator sold plants, cuttings, seeds, etc., of the variety would receive from the latter a conveyance of the right to grow the sort and to sell the marketable product. If any one procured the sort elsewhere, that person could not show such conveyance when called for and would have to pay the penalty which the law imposed.

The right to propagate to obtain the marketable product would be included in the right to grow the plant, in all cases, as propagation is growth with the majority of plants, and is part of the use. Of course, growers of protected varieties could transfer the right to grow them with the real estate on which they were situated.

Originators of sorts belonging to other than class 5 would make their own royalty. The latter class comprise marketable products which are staple articles of food and the sole means of reproduction. The statute should, therefore, specify a small amount (one or two dollars would suffice) as the price to be paid the owner of the protective right for an individual right to grow a sort belonging to this class, unless that right should be purchased with seed from said owner, such amount to be paid previous to growing the plant. It should also be provided that, when the marketable product of a variety was also the means of reproduction, a sign bearing its name and the words, "Protected according to act of Congress," must be placed with such product when exposed for sale; such requirement to be enforced by a fine for its neglect.

This system of protection, while giving the people all the privileges they ordinarily want, would prevent professional propagators from despoiling originators of the pecuniary results of their labors, as they now do. The introducers of new productions would have the exclusive right to appear in print as the disseminators, and, if real acquisitions, this advantage alone would enable them to secure ample compensation. If others attempted to disseminate them under new names, they could soon be detected and made to pay a heavy penalty.

You may say, "The originators of new fruits can hold the stock as long as they choose to do so and then part with it at prices fixed by themselves." Those who have tried this plan think otherwise, and know that the originators of new fruits cannot hold the stock as long as they choose, nor part with a sufficient number at prices fixed by themselves.

A person so disposed can easily find access to another's grounds and carry off seed or cuttings of a new sort, which can then be propagated and disseminated with impunity. The Early Rose Potato is said to have been stolen and disseminated in this way. For this kind of stealing there is no remedy "short of a Congressional statute which can be enforced over the length and breadth of the land."

We have laws for the protection of birds; laws for the protection of fishes; laws for the prevention of cruelty to animals; but not one line in the whole system of American jurisprudence protecting the originator in the possession or sale of his production. You may say that this wish for protection comes from the desire of originators to put money in their pockets. Are they at all peculiar in that respect? All must acknowledge that they (the originators) have put money in the pockets of others, and especially in those of some of the noted horticulturists, and provided food which has *built up the bodies* of the nation. And what are they told is their proper and sufficient recompense? The *thanks* of the public!

JACOB MOORE.

RELATION BETWEEN CAUSE AND EFFECT.

DURING the last session of the American Pomological Society, Mr. MEEHAN related an anecdote that aptly illustrates our rashness in jumping at conclusions:

He was walking near Pike's Peak, in Colorado, when he met a fair lady with a wreath formed of a male hop vine entwined around her brow. He had never before seen the hop vine look so beautiful, and he was led to get a root to grow expressly for its beauty, and having no pole to train it on that would be enduring, he planted it at the base of a large Prince's St. Germain pear that never bore anything but hard, knotty, worthless fruit. The vine was now on the top of the tree, and to his astonishment the tree had this season borne the most perfect pears one could desire. He could not understand the influence of the hop on the health of the tree, till he looked around him on that large class of our fellow-citizens who used decoction of hops freely and as a beverage. "Then," said Mr. MEEHAN, "I understood the whole thing. Here I saw men who were always healthy—never know what disease is—hardly die, but dry up naturally and almost blow away, and then I could see how the hop had also saved the poor. [Laughter.] Don't you believe it? [Renewed laughter.] No? Well, neither do I, of course, and I offer it simply as a sample of the reasoning of the people about these very things, and of which one can hear nearly every day."

What we looked for while reading the above was that Mr. MEEHAN would find some analogy between the improvement of his pears and the hop-vine wreath about the brow of the fair lady.

Insurance Department.

CONDITION OF THE INS. COMPANIES.

THERE are quite a number of reasons for believing that the year 1875 was not propitious to the insurance interests. The official reports of the various States show that, as a whole, the companies have done a smaller and less profitable business than usual. The life companies have issued very few new policies—that is, have attracted few new members, though they have issued many small policies in exchange for old policies discontinued. There are fewer policies and less insurance in force than last year and a more marked retrogression than has been heretofore experienced. Much of this is no doubt due to lack of money and hard times; but more is, perhaps, just attributable to the conduct of a class of companies that have, for the sake of temporary gain, misused the confidence of their policy-holders. This has been done in nearly every case of re insurance and amalgamations where an exchange of policies has been required. The consequences to public confidence in the integrity of the management of life insurance will not be easily or speedily repaired. It is perhaps only just to say that the business of the really reliable companies is little affected and that they are worthy of all possible confidence.

The business of the fire insurance companies was less than in 1874, their income smaller and their losses in most instances larger. A few companies doing a local business met with few and small losses and improved the opportunity to make larger dividends to their stockholders instead of increasing their surplus. As a general rule, the "farmers' companies" have not made much money. They had always used a very low rate of premium based upon the absence of *moral hazard*—that is, the improbability that a tiller of the soil would burn his own property. This was a well deserved compliment to the farmers; but the companies had not calculated aright the chances that others might burn it for them. The carelessness, recklessness or malignity of "tramps" has, it is said, caused a great increase of loss of farm property and compelled the companies, for the sake of self-preservation, to increase their rates of premium, a requirement with which every one who wants reliable protection should cheerfully comply.

In times of commercial insecurity like the present, when the condition of a company is not readily known to any farmer, great care should be exercised in dealing with companies not vouched for by competent and disinterested parties. It is the duty of a farmers' paper to do this when required and the RURAL will do so without charge. A great number of people have been imposed upon by traveling agents who produce partisan and false statements of the financial condition of their companies, in order to foist worthless policies upon the unsuspecting. A little trustworthy advice is always the best protection and it may be had for the asking.

Domestic Economy.

FRENCH COOKERY.

MEATS should be selected with a view to the methods of cooking to be adopted. The French never boil meats unless for the purpose of making soups. They regard boiled meats as comparatively worthless and never serve them unless in some prepared form, to restore flavor and lost nutrient principles. We forget in this country that to boil food, be it meat or be it vegetables, is to extract from it, first, its volatile aroma, then its essences or juices, its nutritive power; and these go out into the hot water which is stupidly thrown away. Boiling meat or vegetables in France is to make soup, and so saving are they that even the water in which beans and cauliflowers have been boiled is always kept to serve as a basis for vegetable soup. Every liquid which has received the extracted flavor of a boiled substance is looked upon as precious, and is employed again in some form, so as not to waste the properties which it has acquired. The entire system of French cooking, both in form and practice, is to save the whole nutritive elements of every substance, to pass into the stomach, instead of allowing it to be poured down the sink spout or sending it to the pigs. The lesson taught us in this regard should be heeded. Butchers' bones, and those of fowls, which here go to the waste bucket or to the soap boiler, covered with fragments of meat and loaded internally with rich suet, are in France carefully sought for and employed in making soups. Nothing is wasted which can be used for human food. Soups are so common it may be said the nation lives on them. The average earnings of laborers in France do not exceed 30 cents a day, and yet from this pittance they continue to live comfortably. The average of health in the population is much higher than in most countries, and the average length of life is as high as 38 years.

KEEPING CIDER SWEET.

THE editor of the New England Farmer endorses the following mode of preserving cider sweet for five years:—"Leach and filter the cider through pure sand, after it has worked and fermented and before it has soured. Put no alcohol or other substances with it. Be sure that the vessels you put it in are perfectly clean and sweet. After it is leached or filtered, put it in barrels or casks filled, leaving no room for air; bung them tight and keep it where it won't freeze till February or March, then put it into champagne bottles filled, drive the corks and wire them. The best cider is late made, or made when it is as cold as can be and not freeze." We drank some cider from a barrel, filtered as above mentioned, within an hour of this writing, make in the interior of New York, which was as sweet as if only made the day before.

ORIGINAL RECIPES.

An Excellent Cake.—A half pound each, of sugar and flour, a quarter of a pound of butter, three eggs, five tablespoonfuls of sweet milk, one teaspoonful of baking powder worked thoroughly through the flour. Mix the sugar and butter to a cream; add the eggs, beat briskly for three or four minutes, then add the flour and milk, stir until smooth. Flavor to suit the taste. Bake in a moderate oven.—MRS. RUSTIC.

SELECTED RECIPES.

Rice Muffins.—To one quart of sour milk, three well beaten eggs, a little salt, teaspoonful of soda and enough of rice flour to thicken to a stiff batter. Bake in rings.

Puff Cake.—Two cupfuls of sugar, one of butter, one of sweet milk, three of flour, three eggs, one and one-half teaspoonfuls of yeast powder, extract of lemon. Bake quick.

Corn Cake.—One quart of sour milk, three well beaten eggs, one teacupful of flour, yellow corn meal enough to make a batter as thick as for pancakes. Bake quickly in pans well buttered.

Rice Custard.—Into a quart of boiling water stir in two tablespoonfuls of rice flour, dissolved in a little cold milk; add two well beaten eggs to boiling mixture; sweeten and flavor to taste.

Butter Scotch Candy.—One cup of molasses, one of sugar, and one-half a cupful of butter. Mix them together, and cook until it will stiffen when dropped in water. When done pour in pans and let it cool.

Cocoanut Pudding.—To the grated meat of a cocoanut take six eggs, six large spoonfuls of sugar, half a teacupful of butter and a little soda. Line a dish with puff paste and fill with the mixture. Bake in a quick oven.

Iceland Moss Jelly.—Soak for an hour four tablespoonfuls of the moss in cold water enough to cover it. Then stir it into a quart of boiling water, and simmer gently till it dissolves; strain, sweeten to taste, flavor with juice of two lemons, and a little cinnamon if agreeable, and a glass of wine; strain into molds, and cool before using.

Gold and Silver Pudding.—One quart of milk, 6 eggs, 2 wine glasses of Sherry wine, 3 flat tablespoonfuls of flour, 1 cup of pulverized sugar. Scald the milk. Mix the flour with a little cold milk and add to it. Add beaten yelks of 6 eggs and whites of 2. Bake this as you would a custard. When cold beat the whites of 4 eggs to a stiff froth, stir the sugar in lightly, add the wine, put the frosting on the custard, brown slightly. To be eaten cold.

Boston Baked Beans.—One quart small white dried beans; parboil in salt and water. Remove from the fire as soon as they come to a boil. Then pour off all the water, put them into a stone crock, add one tablespoonful molasses, a little pepper and salt, and lay upon them a pound of nice salt pork, well scalded. Then put over the crock a tight-fitting cover, and bake in a slow oven twelve hours. When done they will be brown all through, and every bean will be distinct, without being dry.—*A. S. Blake.*

Curry Powder.—The following is the recipe furnished by a native Hindoo, according to the Chemist and Druggist, and is said to yield a fine product. The powders must be fresh and of the best quality: Coriander, fresh seed, roasted but not burnt, and finely powdered, 8 parts; Turmeric, fresh root, treated in the same manner, 3 do.; Fenugreek, fresh seed, do., 2 do.; Mustard seed, do., 2 do.; Cumin seed, do., 3 do. To this add Cayenne pepper to taste. Preferable, however, is the Indian Chili pod, a much larger species than that sold in our shops, and not nearly so hot.

Sweeping Carpets.—If brooms are wet in boiling suds once a week, they will become very tough, will not cut a carpet, but last much longer and always sweep like a new broom. A handful or so of salt sprinkled on the carpet will carry the dust along with it, and make the carpet look bright and clean. A very dusty carpet may be cleaned by setting a pail of water out by the door, wet the broom in it, knock off the drops, sweep a yard or so, then wash the broom as before and sweep again, being careful to shake all the drops off the broom, and not sweep far at a time. If done with care it will clean a carpet very nicely, and you will be surprised at the quantity of dirt in the water. The water may need changing once or twice if the carpet is very dirty.

Hygienic Information.

INFLUENCE OF VEGETATION ON HEALTH.

THE principles which the following article would inculcate are doubtless correct, but the influence of many of the plants named is purely imaginary especially that of the Upas and Eucalyptus for it has long since been proved that they do not possess the poisonous properties formerly ascribed to them, neither has the latter the antiseptic influence upon the atmosphere which many theorists would have us believe.

Our instinct leads us to delight in flowers. Their beauty and perfume have irresistible attractions for us. We have little dreamt we were thus led to surround ourselves with objects which most powerfully conduce to health. No doubt there are certain members of the vegetable kingdom which are exceedingly deleterious; for, not to speak of the dreaded *Upas*, the West Indian Manchineel, and some species of the American *Rhus*, there are some of our common sweet-scented flowers, such as the Mezereon, which have very injurious properties. But recent investigation has proved that those adornments of our gardens for the presence of which we so crave are, as a rule, endowed with health-preserving qualities. Oxygen, when highly electrified and so rendered especially vitalizing, has in recent times been distinguished by the name of ozone. This is one of the chief elements of a healthy atmosphere. Now, centuries ago it was known that certain plants acted as powerful disinfectants. Thus Herodian tells us that when, in the second century the plague raged in Italy, the physicians recommended those who crowded into Rome to go to Laurentum, because there the sweet bay-tree (Laurus nobilis) grew in great abundance and the inhalation of air impregnated with its odours was a strong preservative against infection. And the disciples of Empedocles were wont to grow aromatic and balsamic herbs around their dwellings, from the belief that they were thus guarding themselves against fevers, agues and such like. Has not, too, among us the tradition of its fever-dispelling power given the name of Feverfew to one of the strongest-scented of the composite?

Recent investigations, especially those of Professor Montegazza of Padua and Dr. Cornelius Fox, have shown that these old ideas were based on scientific truth. It is now ascertained that the quality of ozone is materially increased by the exposure to the rays of the sun of various plants, among which the most common are the Lavender, Musk, Cherry, Laurel, Clove, Fennel, Narcissus, Heliotrope, Hyacinth and Mignonette. It is interesting to know that the Sunflower, which will grow almost anywhere and could be turned to various useful purposes, is one of the most valuable of sanitary agents, since not only is it ozoniparous, but also destroys deleterious miasmata. It should be noted, as a further proof of the good influence of plant-culture on health, that, while the manufacture of ozone is an independent work carried on by the flowers alone, the green leaves are peforming their sanitary function by extracting carbonic acid gas from the atmosphere, and helping to preserve that proportion in its elements which makes it healthful. More remarkable perhaps than all is the Eucalyptus, of which we have recently heard so much, and of which we shall, probably, soon know more.

Thus the cultivation of flowers is a work not merely delightful and humanising in itself, but one which, in a way most beautiful and picturesque, confers a positive benefit on society, so great that it can hardly be overrated, especially in large towns, where there must necessarily be so much to poison and deteriorate the air we breathe.

A SIMPLE DISINFECTANT.

ONE pound of green copperas, costing seven cents, dissolved in one quart of water, and poured down a water-closet, will effectually concentrate and destroy the foulest smells. On board ships and steamboats, about hotels, and other public places, there is nothing so nice to purify the air. Simple green copperas, dissolved in anything will render an hospital, or other places for the sick, free from unpleasant smells. In fish-markets, slaughter-houses, sinks and wherever there are offensive gases, dissolve copperas and sprinkle it about, and in a few days the smell will all pass away. If a cat, rat or mouse dies about the house, and sends forth an offensive gas, place some dissolved copperas in an open vessel near the place where the nuisance is, and it will purify the atmosphere. *Then*, keep all clean.

A CURE FOR CORNS.

THERE is but one cure for corns, and that is: Take a lemon and roll it until soft; cut a thick slice and bind it on the corn on retiring at night. In the morning, if the corn is white and disintegrated pull it out with your finger nails—never cut a corn. Sometimes several applications of the lemon slices will be necessary, but the corns are bound to succumb, and you can dance the next night if you like. After you remove the corns wear shoes that fit and are not too stiff in the soles.

HYGIENIC NOTES.

For Weak Eyes.—Bathe night and morning in a solution of salt and tepid water.

A simple remedy for neuralgia is horseradish. Grate and mix it in vinegar, the same as for table purposes and apply to the temple when the face or head is affected, or the wrist when the pain is in the arm or shoulder.

A simple and effectual remedy for ivy poisoning is said to be sweet spirits of nitre. Bathe the affected parts freely two or three times during the day, and the next morning scarcely any trace of the poision will remain.

For Freckles.—Dissolve a little borax and sugar in some lemon juice and apply to the face, then wash in castile soap. The quantity of borax should be that which will cover the point of a pen-knife to the juice of one lemon.

A Cure for Pimples.—Wash the face in a dilution of carbolic acid, allowing one teaspoonful to a pint of water. This is an excellent and purifying lotion, and may be used on the most delicate skins. Be careful about letting this wash get into the eyes.

Flaxseed Lemonade.—The following receipe will be found very good for a cold:—Pour one quart boiling water over four tablespoonfuls of flaxseed. Steep—not boil—three hours; cover closely while steeping; then strain, sweeten to taste, and add the juice of two lemons, putting in more water if too thick to be agreeable.

Remedy for Earache.—The Journal of Health gives the following:—There is scarcely any ache to which children are subject, so hard to bear and difficult to cure, as the earache. But there is a remedy, never known to fail. Take a bit of cotton batting put upon it a pinch of black pepper, gather it up and tie it, dip in sweet oil, and insert into the ear. Put a flannel bandage over the head to keep it warm. It will give immediate relief.

Scientific and Useful.

WHAT CHEMISTRY HAS DONE.

DR. J. L. W. THUDICHUM, in a recent lecture "On the Discoveries and Philosophy of Liebig," delivered before the Society of Arts in London, referred as follows to the position which this latest born of the sciences has already attained:

"The youngest of the sciences or the youngest branch of science is chemistry, founded by Lavoisier and Dalton; developed by thousands of clear heads and nimble hands, it has in half a century become a recognized power in the affairs of man. It has materially improved his estate, and enlarged his mind to conceptions of an elevating nature; it has become the handmaid of almost all the elder sisters: of astronomy, teaching the composition of distant stars; of geology, teaching the composition and changes of strata and minerals; of physiology, vegetable and animal, teaching about food, nutrition, growth, changes, death and decay; of the healing art, teaching the nature of evils in the shape of disease, and the means of curing or mitigating them. This science, too, was developed by work—work physical and mental; its ways were often rugged, its endeavors misapprehended, opposed, suppressed. And the great men, whose names are inscribed upon the roll of its principal promoters will be considered by posterity as benefactors akin to Hercules, removing evils, establishing the good and true. If we cannot now inscribe their names and likenesses among the stars, and transfer them to an Olympian abode, yet we can honor them by admiring their works and lessons, by sharing and continuing their work, by, as it were, living their lives with them over again, and thus prolong their memory forwards while we prolong our own in the inverse direction. We ought to honor them out of gratitude no less than out of the desire to benefit continuously man's estate."

MEASURING INACCESIBLE HEIGHTS AND DISTANCES.

A CORRESPONDENT of the London Academy thus describes an ingenious invention of Prof. E. C. Pickering, of our Massachusetts Institute of Technology:—"It is designed for measuring the distances and hights of mountains. It consists of a common telescope, with a level attached, a scale of equal parts in the eyepiece, and with a mirror of plate-glass fastened to the object, so that it can be set at any angle. Two images are seen, one through the glass, and the other by reflection from its surface, and any two objects may be made apparently to coincide by turning the mirror through the proper angle. Selecting as our object the mountain whose distance is to be measured, and as the other any convenient, well-defined point, the telescope is moved through a known distance, and the apparent change of position is measured by the scale. From this the distance may be determined with all the accuracy needed by an ordinary map. The altitude is then determined by leveling the telescope and reading the apparent elevation from the graduated scale, which is now turned round. By a second inclined level, higher mountains may be measured. It will probably equal in accuracy a large theodolite, with the advantage that it does not involve a finely graduated circle or delicate mounting, it is therefore inexpensive, light and easily used. It could be carried by any traveler, and would give the hight of a mountain much more accurately than a barometer. Further, a whole range of mountains might be measured in a few hours by this instrument, while with the barometer a single ascent often occupies several days.

BUCKLAND'S CEMENT.

THE following recipe is that used by Dr. Buckland, the famous geologist, and was employed by him in preparing a cement for uniting parts of broken fossils and for attaching specimens to blocks and trays. The ingredients are to be found in every village, and the cement is excellent, as we know by experience, having used it for years. The credit of devising it has recently been attributed to several different persons. The recipe is as follows:—Take 4 parts gum arabic, 3 parts starch and one part sugar. Reduce to a fine powder and mix well. The powder should be kept in a well-corked bottle, and when required for use mix a little of the powder with water to every ounce of which ten drops of glycerine have been added.

SUPERIOR CEMENT FOR FINE GLASS.—For mending valuable glass objects which would be disfigured by common cement, chrome cement may be used. This is a mixture of 5 parts gelatin to 1 of a solution of acid chromate of lime. The broken edges are covered with this, pressed together and exposed to sunlight, the effect of the latter being to render the compound insoluble even in boiling water.

"PROGRESS AND IMPROVEMENT."

SATURDAY, JUNE 10, 1876.

A GLANCE AT WHEAT.

The long reign of cotton as king of field products is yearly diminishing in brilliancy and the time seems fast approaching when wheat will wield the commercial scepter of American agriculture. There is at this day no production of the land that contains such elements of trade-vitality as the single item of wheat. It has survived the most severe financial depressions in this country and Europe and has steadily encouraged the farmer to enlarge the yield. The capitalist here and abroad is ever ready to give a solid indorsement to its value by the most liberal investments. It is of course subject to phases of inactivity and the consequent fluctuation in price, but the inevitable demand which is bound to follow consumption in any indispensable food-item, always safely adjusts this special one; a fact that is rapidly establishing a feeling of unwavering confidence among all operators in breadstuffs.

Knowing the many resources that are naturally developing the greatness of this country, it is glorious to contemplate that we are destined to become the chief custodian of "the staff of life," that the enterprising producers will thereby be the recipient of worthy remuneration. It is certainly a gratifying fact when we see the United States in only their Centennial year looming up in competition for European supplies against the historical prominence of old Egypt and the Black Sea.

For present practical purposes one point has been very strongly brought out by the previous course of the wheat market, which is that wheat is not a commodity that need be hastily parted with. "As good as gold" and "as good as wheat," are terms becoming synonymously significant. In evidence of increased cultivation, it is estimated that two and a half millions of acres of wheat are maturing for harvest in California, with a product of nearly 50,000,000 bushels expected. In the last California crop 30,248,500 bushels were harvested. Advices from other home wheat growing districts indicate both thrifty condition and promise of abundance. In the Old World the weather for the coming crop has not been generally propitious and it is conceded by the trade that a material deficiency will have to be supplied from our storing and crop. The gleam of possible national conflict in the East already lends some brightness to speculative feeling here and has had a trifling influence in the recent upward turn of quotations. Outside of such bearings, however, the situation of wheat is regarded as perfectly secure and nothing at present portends that an owners' year will be interrupted. Foreign buyers are thus early showing their confidence. The sales of the past six days—and we are just opening the period of free receipts—have largely exceeded the deliveries, amounting to about 1,500,000 bushels, chiefly for export.

This is important, inasmuch as the vigorous movement has been free from restrictive haggling. Sellers have been seldom required to press samples upon purchasers and our advanced quotations—printed elsewhere—have ruled with satisfactory steadiness. Fine quality has had much to do in quickening transactions. We are glad to see that farmers are becoming progressively alive to the fact that choice quality is the strong lever in starting an active movement in field, dairy or orchard produce; and whether prices are low or high, excellence of stock invariably furnishes easy momentum when a preponderance of low class would drag heavily.

In this connection, special attention to white wheat is being given by some of our enterprising farmers. The tendency of white to run into amber shades by repetition in same locality, has prompted the distribution of seed in various sections of the country, with the aim to obtain a reliable crop of this reliable and always best priced cereal.

THE LABORER AND HIS HIRE.

It is an old saying, that "It takes two to make a bargain." And while the truth of this is universally acknowledged in theory, how often in practice is the attempt made to abrogate it and have the bargain conform to the wishes of one—and nowhere is this more noticeable than on a farm. When a laborer engages to serve a farmer for a certain sum per day or a month, he contracts in effect if not in words, to give for the sum agreed upon his best and entire services. He makes a complete sale of his faculties and powers of mind and body so far as they can be employed in the business for which he is engaged to work. If a man is a machinist by trade, while he would not be expected, if hired as a farm laborer, to go to work in a shop as a mechanic, it would be his duty to use his knowledge and skill as a machinist so far as he could in keeping in repair the tools and machines of the farm—plows, harrows, rakes, reapers, mowers and steam engines, if such there were. If it is claimed that one capable of doing this is entitled to higher pay than an ordinary farm hand who can at best plow and hoe and drive the team afield, we assent; but assert that the claim should be advanced when the contract is made. Every one has a right to his own labor, to use it for himself and receive directly the avails of it, or to sell it to another for such a sum as is agreed upon; but when the contract is made and the labor is sold, he has no more right to withhold anything he can do than he would have to withhold any portion of a hundred bushels of wheat or a thousand pounds of cheese that he had agreed to deliver for a certain sum of money. Neither should the laborer think to quiet his conscience with the thought that he can do a fair day's work without giving his best efforts; nor that if he hoes his row as well and as quickly as his companions in the field, no more should be expected of him. What he is to do or not do is not to be measured by the doings of another, unless it be so stipulated in the bond. If his bargain is that for two dollars a day he will work as many hours at the same kind of labor as TOM, DICK or HARRY and will perform as much and as well as they do, it will be his business to see that he does just that and his employer will have neither reason nor right to ask or expect more. If you sell a day's labo and perform in the day only what you could without extra exertion do in half a day, you have stolen the value of half a day's labor from your employer just as truly as if you had taken the same value in money from his purse.

The other party to the bargain—the employer—has his duties beside the mere paying of the sum agreed. He is in duty bound to see that the labor he requires shall be performed with as much ease and as little waste of physical force as possible; and to this end the tools and implements he furnishes should be of the best quality and most improved patterns and he will find his interest promoted by having thought for the comfort of all in his employ. But the bargain made between the employed and the employer concerns them and them only. It is well, perhaps, that none other should know what it is lest there be petty jealousies aroused, as in the parable of the laborer in the vineyard, where those who had borne the burden and heat of the day complained that others who had worked less time received the same pay, seeming to forget that they had contracted for a certain sum. Very just was the reply:—"Friend, I do thee no wrong; didst thou not agree with me for a penny? Take that thine is and go thy way. Is it not lawful for me to do what I will with mine own?" These grumblers were of the class that will have but one party to a bargain and that party themselves. The family is a large one and some of its representatives are to be found in almost every neighborhood.

RURAL NOTES AND QUERIES.

Centennial Rhododendron Show.—The rose-tree or Rhododendron show at the Centennial Exhibition is a very fine one just now, and it is a pity that it will be over so soon. Mr. ANTHONY WATERER of Knapp Hill, Surrey, England, exhibits some 1,200 finely-grown plants from his nurseries and they attract much attention from visitors. They are shown under a large tent erected for the purpose of exhibiting such plants, and are a credit to the exhibitor, inasmuch as they had to be brought over in boxes, and after their long voyage have bloomed as freely as though growing in their native soil at home. There is an extensive variety and of several species, the flowers of all shades of colors from a pure white to a dark rich crimson. Mr. W. deserves, not only much credit for his enterprise, but the thanks of all visitors to the Centennial grounds. Mr. PARSONS of Flushing, N. Y., also makes a fine exhibition of these plants and in great variety, which are planted out in groups where the diversified colors of the many varieties add much the beauty of the grounds.

Knights Templar.—The troubles of the Crescent, are in marked contrast to the prosperity of the Cross. The Masonic fraternity have reason to feel proud of their Grand Centennial Reunion, held in Philadelphia, June 1st, to fittingly celebrate the one hundredth year of our country's independence. Sir Knights from all quarters appeared in brilliant uniforms. The number assembled can best be appreciated when we state that the procession was one and a-half hours passing a given point. To mention the names of the chief participants, would be to call the roll of honor of the most distinguished men in the Order. The exercises were concluded at the Academy of Music, by the installation of the Grand officers of the Grand Commandery of Pennsylvania, with the most imposing ceremonies. Fair women lent the charm of their presence to this assemblage of brave men.

Profit in Farming.—There is but one way to make farming profitable and that is to find out how to produce an article for less than the price it commands in the market. While every farmer will admit the truth of the above proposition, not one in ten keeps any record of expenses in order to ascertain exactly what it costs to produce a bushel of corn or other grain or a pound of meat. When as accurate and thorough systems of bookkeeping are practiced among agriculturists as in mercantile pursuits, we shall have a better basis to make estimates of the comparative profits between the two in proportion to the amount of capital and labor expended.

Points of the Compass in Arboriculture.—The Builder revives the old and we had hoped obsolete but absurd claim, that in transplanting trees it was necessary to place the sides in exactly the same position as regards the points of the compass, and recommends that persons who transplant trees should mark the north sides of each before taking up and replace it in its natural position. "A large proportion will then live as, by ignoring this, transplanted trees generally perish." We confess to be somewhat at a loss to determine which of the two assertions made in the above note, are the most surprising, or display the greatest ignorance, the one attributing any influence to the preserving of the natural position, or that the millions of trees annually removed by our nurserymen, who pay no attention to points of compass, "generally perish."

Carbolic Acid Paper.—According to the Engineer, the carbolic paper which is now used in such quantities for packing fresh meats, &c., for the purpose of preserving them against deterioration by atmospheric or other influences, is made by melting five parts of stearine by gentle heat, and then stirring in thoroughly two parts of carbolic acid, after which five parts of paraffine in a melted form are added. The mass thus prepared, is then to be well stirred together, until it cools, after which it is applied with a brush to the paper.

RURAL BREVITIES.

IT is estimated that fully 200,000 head of Texas cattle will be pastured in Kansas this summer.

COULD a better name be invented for a boot and shoe firm than the one advertised in one of our London Exchanges, WAUKENPHAST & Co.?

TEXAS has two and a half millions of sheep and only one mill to work up their wool. Home manufactories need encouraging in the Lone Star State.

NEW varieties of potatoes are still in order, but one with leaves which would resist the attacks of the potato beetle would just now be extremely valuable.

AT a recent sale of horses at Louisville, Ky., 22 head brought $9,240, or an average of $420 each, which cannot be considered as indicating very hard times among horsemen.

TURFMEN are talking of a "coming trotter," named Billy Long, a four-year-old, who has done some fine stepping, besides having a noted parentage to back him.

AMONG the stated displays at the Centennial are Strawberries June 7-15th. Early Grass Butter and Cheese, June 13-17 and Mowing Machines, Tedders and Hay Rakes to commence June 15 and continue ten days.

IT is proposed to raise an inter-State fund by the Granges of Pennsylvania, Delaware and New Jersey of not less than $50,000, for the purpose of establishing a wholesale Grange depot.

THE larva of the Asparagus Beetle is a small, blackish, slug-like worm, and is readily destroyed by dusting with freshly-slaked lime. We say this after a ten-years' experience with the pest.

STRAWBERRY culturists should not forget the show of this favorite fruit at the Centennial from June 7 to June 15, for it will be a long time before another such opportunity occurs to compete for such honors on a like occasion.

MICHIGANDERS are in high glee over the honors received at the Centennial on their apples; but as there were no competitors, we fail to see where the "glory" comes in. Still, the few varieties exhibited were a credit to the State and her pomologists.

IT has been frequently stated that the farming lands of the New England States were decreasing in value; but the census returns assert the contrary, showing that even in much-slandered New Hampshire the valuation of such lands has increased thirty million dollars in the past twenty-five years.

OUR poultrymen having tried the virtues of red pepper to make hens smart at laying, are now turning their attention to nettling them for the same purpose. The idea of feeding the leaves and seeds of nettles to fowls is said to have originated in Denmark; the climate being cool, stimulating becomes necessary to provoke productiveness.

IT is generally supposed that China and Japan were so thickly settled, it was difficult to procure food enough from the land and sea belonging to those countries to support their inhabitants; but now we are informed that not long since there arrived in San Francisco a full cargo of Japan rice, containing some 1,250,000 pounds. This does not show very well for rice culture in America, but does speak well for the industry of the Japs.

LINNEUS said in his time that the cow eats 276 plants and refuses 218; the goat eats 449 and declines 126; the sheep takes 387 and rejects 141; the horse likes 262 and avoids 212; but the hog, more nice in its provision than any of the former, eats but 72 plants and rejects 171. But since his day the number of species of plants discovered would more than double each of the above, both as to the likes and dislikes of the animals named.

BUSINESS NOTICES.

ECKSTEIN, HILLS & CO.'S "Phœnix Pure White Lead" is the whitest, finest; has the best body and most covering capacity of any lead in market.

THE SPARROW'S NEST.

BY F. H. W.

Have you seen a sparrow's nest
Hidden in the grass away,
Lined with feathers from her breast?
Such a nest I found to-day.

It is down among the moss
Where the tallest grasses grow,
And the clover leans across
For a little roof, you know.

When the sparrow flew away,
In the soft and downy nest
Four blue eggs I saw to-day,
Speckled as the sparrow's breast.

Low and sweet the mother sings
As she guards her treasures well,
Of the little unfledged wings
Folded in each speckled shell.

In each tiny shell to-day
Songs are hidden, like the tree
That the acorn hides away
In its folded mystery.

We shall hear these songs in May,
When we see the glancing wings
That are folded close to-day
In these little, prisoning things.

The Story-Teller.

THE CUT FINGER.

Henry was an orphan boy. His father was a fisherman, who was lost one stormy night at sea. He then went to live with his grandmother in her old-fashioned cottage. As the son of a fisherman, he always took a delight in real boats; but there were none to be seen in any direction of the village where he had come to live, so he resolved to make some. With a bit of wood and a knife he sat down, and soon had carved and rigged an entire fleet, one of which was duly launched on a bowl of water. But, alas! before the ship-building operations were complete, the knife slipped, and Harry's finger was severely cut. Like other little boys in trouble he ran to his mother, with cheeks pale from fright, though making very manly struggles to keep in the tears. A few kisses and a little soothing sympathy were very useful, and then the cut finger was shown to the house surgeon, who was no other than grandmother herself. She pronounced it very bad indeed, and prescribed the dockyards should be closed for the present, and boat-building suspended, in order that the wounded hand might get a rest and its owner a sleep if possible. But Harry did not want to go to sleep; he wanted a story, which he declared would be a great comfort to him. So when the cut finger was properly closed and bound up, the little boy lay quietly in grandmother's arms, telling his mother that he was a sick sailor in hospital, going to listen to a long story. By this gentle hint the grandmother was reminded of his wishes, and, after a lengthened pause, she began:

"Harry, I cannot tell you a story about boats, but I can tell you a little one about sheep and lambs. There was once a very good man who had a great many sheep and lambs; he was very fond of them, and showed by his kindness how much he loved them. Every morning this shepherd led his flock into a beautiful green field, where the grass was very soft and pleasant. On three sides of this field there was a thick hedge, and on the fourth a lovely clear stream ran. The only entrance was a very little gate in one side of the hedge. The shepherd did not wish any of his flock to go through the thorny hedge, knowing that the lambs especially were delicate, and that their soft wool would be torn by the briars. One day, however, when the sun was shining very brightly, a little motherless lamb began to complain in a most disconsolate manner; he was much too warm, and thought that he would try if there was any nice cool spot where he might rest at the other side of the hedge. So, preferring his own way, the foolish little lamb pushed through the bushes, the sharp thorns of which tore his white wool and hurt him greatly. He wandered on, still expecting to find the shade he had wished for, until he was suddenly stopped by his leg being caught in a snare set by some cruel boy to catch weasels.

"Now he began to be very sorry that he had disobeyed his kind shepherd: he cried and moaned, and every moment he was becoming weaker and weaker from pain. The good shepherd heard the cries, and pitied his poor little wandering lamb. He said, 'I love that lamb still: I will go and bring him *home* again.' The kind, forgiving shepherd went to the same spot in the hedge through which the little lamb had passed, and pushed his way through the thorns. The thorns tore his hands and feet, and some even pierced his forehead, and the blood streamed down his face. However, he went on because he wanted to save his little lamb. When he came to the place where the lamb was, he saw it could not stand, for its leg was broken. He therefore took it up in his arms, and, pressing it to his heart, seemed to say, 'I forgive you all.' Then the gentle shepherd set the broken leg, and put a soft ointment on the wounds of the lamb, and said, 'You will soon be well again.' The little lamb now loved his shepherd even more than before he had left the green field; and it gave him deeper grief to see the blood streaming down the shepherd's face than to bear the pain of his own wounds. The shepherd quite forgave him, and then he placed the happy lamb on his shoulder, and took him into the green field again; not through the thorny hedge, but through the beautiful little gate, and then the gate was closed that they might go out no more."

"Harry, do you know who I mean by the good Shepherd?"

"The Lord Jesus, I am sure, grandmother."

"And can you tell me any more about this good Shepherd, Harry?"

"Father used to talk to me a great deal about him, and how He once walked on the water by night and stilled a storm. Oh! if He had only come again that night to dear, dear father; but perhaps He did. . . . And father told me about the fishes that were caught, ever so many, without breaking the net; and another time about the wandering sheep. I used to say a long hymn: may I repeat a little bit for you, grandmother?"

"I shall be very glad to hear it, Harry."

So, sitting up in her lap, he began in a low, steady voice:

"Jesus my Shepherd is,
'Twas He that loved my soul;
'Twas He that washed me in His blood,
'Twas He that made me whole;
'Twas He that sought the lost,
That found the wandering sheep;
'Twas He that brought me to the fold,
'Tis He that still doth keep.

"I was a wandering sheep,
I would not be controlled,
But now I love my Shepherd's voice,
I love, I love the fold!
I was a wayward child,
I once preferred to roam,
But now I love my Father's voice—
I love, I love His home!"

"And how may we show our love to the Saviour, Harry?"

"Father used to say, by trying to obey what He tells us in the Bible."

"Just so, Harry; and if we love and obey the good Shepherd, He will guide us while we are on earth, and when we die He will take us to be with him forever in heaven, where all is lovely, and glorious, and bright; and we shall be perfectly happy there, for God will wipe away all tears from our eyes."

Little Harry now got a good-night kiss, and was carried off by his mother to the white-curtained cot in the next room, where he was soon dreaming grandmother's story over again with numerous variations, and quite forgetting the cut finger.

THE CUT FINGER; OR, A GOOD GRANDMOTHER'S STORY.

THAT AWFUL SMITH.

[Concluded from page 365, last No.]

CHAPTER V.

That night, some twenty minutes past eight, my cab charged furiously down Bond Street.

I was bound for the Grand Central Depot, *en route* to the Springs in the track of Mrs. Oswestry and Helen Wybrowe. A man in a traveling suit, with a peaked cap pulled over his eyes, took a ticket after me, and followed me on to the platform, half a dozen yards behind.

I heard him hurrying after me, and, on turning, saw that we occupied the same car and—alone!

I had dropped into one corner; my companion rolled himself into the opposite one. I lit a cigar; so did he. It was some time before I looked at him again. I was thinking what Helen's sudden departure boded me; whether I was sure of winning her, after all; and, deep in speculation of this sort, I had no eyes or thoughts for anything else.

Besides, that shapeless traveling robe, and that peaked cap that kept his face in an impenetrable shadow, would have puzzled me, even if I had had a suspicion as to who the man in the opposite corner was. And in the preparations for my sudden departure I had forgotten all about him.

So that it was not till he tore off his cap and flung aside his wrapper that I knew that Alvarez Smith and I were alone together in the car; and that he was glaring at me with all the furbons hate he felt for me in his evil eyes.

I looked at him tranquilly enough, I think; but I couldn't help feeling that the meeting was by no means an agreeable one; and that Alvarez Smith was probably as mad as any lunatic of Bloomingdale.

However, I am not easily put out, and, as I say, returned his glare with a tranquil stare, and went on smoking.

Whether he had expected his melodrama to produce more effect, and was disappointed; whether my calmness irritated him afresh, I don't know. Certain it is that he rose and came towards me with an oath.

It struck me forcibly that he was dangerous; and I gradually slipped my hand into the inner breast-pocket of my traveling-jacket, and unfastened the loop which kept a useful little revolver steady there.

There seemed likely to be a necessity, disagreeable but imperative, for shooting this man before long. And it so happened that I felt in no humor to run any risk by the exercise of an unwise forbearance towards a mad brute like this, if it came to a fight.

It appeared, though, that he had something to say before he began; for he seated himself again exactly opposite to me, and muttered hoarsely:

"So we are alone at last; you and I."

"So it seems," I returned. I saw that, if he meant to have a row, he didn't feel quite up to the mark yet, and wanted to *talk* himself into the necessary fury; so I thought I might venture to light another cigar.

He actually gnashed his yellow teeth at me. He looked so unutterably hideous, and at the same time so intensely ludicrous while he was doing it, that I laughed.

"Take care!" he screamed, shivering with wrath. "You laugh now, let him laugh that wins! *Caramba!* you have not won yet."

"No?" I inquired, insolently.

"No! curse you! you never shall."

"Bah! who says so, my good man?"

"I! I have sworn it!"

"*You?*" I sneered, rather enjoying his fury and with no mind to spare him any stab I could give him. "You? You are madder than I thought you were."

"You shall never have her! *Madre de Dios!* never!"

"You're wrong. I *shall*."

He smiled in a ghastly fashion with his white, dry lips.

"No," he said; and if his tone was calmer it was twice as *dangerous* and threatening now. "No; I shall keep my oath—be sure of that. Listen!" he went on, after a pause, and with that same forced calmness; "from the day I saw her first and each day more and more, I have loved her—this woman, who——"

"Who, from that same day, and each day more and more, has loathed and hated you," I struck in. "Well?"

I could see his yellow face turn the ashen hue of a dead man's, as that cruel taunt of mine hit home.

He covered his face with his hands, and uttered a faint, dull moan, as though he had, in very deed, got his death-hurt.

Yes; and through those quivering fingers of his, tears, that must have been wrung from him like drops of blood in his agony, forced themselves slowly, one by one. He sat there, rocking himself to and fro, saying no word for a while, but making that low moan more than once.

Thinking this matter over since, I have learnt to pity this man. Thinking of my darling's worn face and the hunted look he had brought there so often, I was pitiless enough then.

I smoked on, watching him. Presently he spoke again, as though he had only just heard those last words of mine.

"Yes; she hates me—hates me, who would fling down my life—lose my salvation for her!"

"I've no doubt. Unfortunately, neither sacrifice happens to be required. Have you anything else to observe?"

"She hates me," he went on, as though he were talking to himself and unheeding what I said. "I could bear that, though it kills me. But to know another man call her his—to know she loves this man! ah, no!"

I was beginning to get rather tired of the thing by this time, so I said:—"Don't you think we've had about enough of this? Quite, it seems to me. You've thrust yourself into a matter with which you have no earthly concern and, as you were rather amusing, I listened to you; now, you bore me; let us drop the subject."

"Not yet," he said, with a strange sort of smile; "you and I have something more to say to each other. Listen!"—for I was going to interrupt him—"you will give me your word of honor never to see Helen Wybrowe again. It will be better, believe me."

"Hang your insolence!" I said, fairly angry at this; "what do you mean?"

"Remember, you can never marry. I have sworn it."

"Bah! You mean you can beggar her? Try it."

"I mean," he said, more calmly than he had spoken yet, "I mean that sooner than you should marry Helen Wybrowe I would kill you."

"Try that, too, if you like."

"But you will promise me what I ask? You must. See; we are alone, you and I. You are in my power; nothing can save you if——"

He paused here, leaning forward toward me with his elbows resting on his knees and his evil eyes looking into mine. I smiled when he said nothing could save me from him; for I had considerable faith in the miniature six-shooter my right hand was closing on while he spoke.

"I know you would follow her," he went on. "I saw you at the station; I was behind you when you took your ticket, and I got in here after you, knowing that the hour I had longed for had come at last—when you should swear to me never to see her face again, or when I should have your life."

He ground the last three words out between his teeth with ferocious emphasis. The crisis was evidently approaching—the madman could hardly contain himself much longer. In another minute he might be at my throat and then, disagreeable as it would be, I should inevitably have to shoot him. Alvarez Smith was by no means the sort of person to stand on much ceremony with when the instincts he inherited from that Spanish creole or a mother of his were in the ascendant; and it was his life or mine, I began to think. I drew the revolver quietly out of my pocket and covered him from my knee in anticipation of his rush.

"Now," he hissed, "will you promise what I ask?"

"I'll see you in Gehenna first!"

"You will not?"

"Confound you, no! But I'll promise you this," I added, as I saw him crouching like a jaguar for his spring at my throat, "that, madman or no madman, if you lay a finger on me I'll shoot you in your tracks without further warning."

Raising my right hand quickly I covered him fairly, now. My amiable companion dropped back into his seat with a hideous Spanish blasphemy; most unexpectedly baffled and beaten.

"That's right," I said, considerably relieved to find he was not *so* mad as to have lost all fear for himself and put me under the painful necessity of slaying him; "of course you didn't expect me to be so well able to take care of myself and I suppose you've only a knife. I don't much think you'll kill me to-night."

"Oh," he snarled, "I shall kill you yet!"

"I differ with you there. My own impression is that you'll be in Bloomingdale before long. Meanwhile, let me advise you not to try this again. If you do, remember, I've warned you."

He flung a curse at me and, turning away, rolled himself up in his cloak and never moved again till the train ran into the station. Then he rose suddenly, opened the door, sprang on to the platform and disappeared.

CHAPTER VI.

"And so you ran away from me, Helen?"

It was some three or four hours after my arrival in Saratoga. I had carried the garrison by the suddenness and vigor of my assault, insomuch

that after a brief, hopeless struggle, it surrendered at discretion. My darling had spoken the words that bound her life to mine for ever. Under the summer stars, in the hush of the summer night, she and I were sitting on the balcony, I at her feet, as I loved best to sit and watch the great violet eyes turn slowly on me—at her feet, with her hand in mine again.

"And so you ran away from me, Helen?"

"What else could I do? I was so weak with you, Frank; so weak against my love. And for your sake, I felt it ought not to be. So I ran away. It was terrible work to get Amy to start that night, though! She was horribly cruel to me; she fought for you. How I loved her when she did! But I would go; and so we went."

"And then you thought you were safe?"

"Safer. Away from you, I was strong."

"And did you think you would be out of my reach long?"

She gave me a smile, delicious as a caress. Then she said:

"I thought you would come but not so soon. Not till I should have had time to harden my heart. I knew I was doing right, Frank. But I thought, too, that I might never see you again. And then —"

Her face told me the rest.

"What had you to do with right or wrong if you loved me? You were mine. How could you ever think I should let you go? Let you go, who have given me new faith, new hope, new life—made life precious to me, now—how could I? Helen, my Helen, nothing can take you from me now. You cannot take yourself from me."

From my arms where she had nestled, on a sudden she started.

"There!" she whispered, "there! Did you not see him?"

On her face, yet wet with happy tears, had come the hunted look once more; in her voice was the old fear, though my arms and my love were about her. I knew what had done this; the sight of a man for whom I was beginning to feel something of the hate that kills.

"Did you not see him?" she whispered again, shuddering even in my clasp.

"Whom?"

I knew what she would say before she said it.

"No," I answered, "I saw no one. Are you sure you recognized him?"

"Sure?" she repeated, "I saw him plainly. He stood full in the moonlight against the background of the trees. And he lifted his hand as though it held a knife. It was a threat. Frank, that man would kill you."

"Bah!"

"You don't know him."

It struck me rather forcibly that I did.

"I tell you he would kill you."

"Well, I dare say he would, if I let him. But life has grown too dear to me this last hour or two for me to let a madman rob me of it very easily. I shall take care of myself. Besides, I fancy you must be mistaken."

"Impossible, I tell you."

"I saw no one, you know. And if Alvarez Smith wants to do me a mischief, why on earth should he turn out and do melodrama in the moonlight—threaten with imaginary daggers and that sort of thing—to put me on my guard?"

"I saw him standing there," and she pointed again, straight before her.

"And how was he dressed?"

"In a sort of cloak, it seemed. I saw him throw it back when he lifted his arm."

"And then he disappeared—where?"

"Into the shadow of the trees."

That was perfectly possible. A couple of strides would take any one out of sight who had stood even in the center of the broad pathway.

If Helen had really seen Alvarez Smith, he might be hidden in that shadow even now, watching us. My blood began to stir at this.

"Some perfectly inoffensive party, I should think," I said, taking a pinch of snuff or something of that sort. However, we'll see about Alvarez Smith in the morning. Mrs. Oswestry has woke up at last; we must come in, I suppose. Don't say anything to her about this notion of yours, mind."

"Oh, Frank!" she murmured, "take care. It *was* he I saw. And he hates you."

"My darling, don't you think I shall take care for your sake, now? There! be quiet, and don't let idle fancies disturb your rest." A piece of advice which I fancy Mrs. Wybrowe hardly followed as she ought to have done.

Whether it was Alvarez Smith whom she had seen or not, and what that individual's presence in Saratoga meant, I did not waste much time, as I sat smoking far into the dawn of the coming day, in considering. After my own experience of him I felt that he was not altogether unlikely to keep his word and put a knife into me in the dark if he got the chance; but it was just that chance I did not mean him to get. I made up my mind to have five minutes' conversation with the Chief of Police next morning and then fell a-thinking of more pressing matters than Alvarez Smith—of the woman I had won and the future that was before us both; of Aunt Medusa sleeping peacefully in her catafalque at Boodle Park and dreaming of my marriage with Bella, and of how Aunt Medusa might take *this* match, of my own entanglements of all sorts and how they were to be got out of.

And satisfying myself over my last pipe that things would probably go pretty straight, I went to bed about the time the sun had risen and dreamed of Helen till Ward, who had followed me with the heavy baggage, came in just as he was wont to do in Bond street with my coffee.

I had my five minutes' conversation with the Chief before I went to breakfast. No one answering to my description of Alvarez Smith was known to have arrived at the Springs; but inquiries should be set on foot and the individual in question kept under proper surveillance, the urbane official assured me.

I greatly, though not altogether, relieved Helen's anxiety on my account by a report of my interview. She was still positive that the man she had seen in the moonlight was Alvarez Smith. Two or three days passed by however and the man in the cloak who flourished imaginary daggers was neither seen nor heard of further by us. The detective had nothing to tell me about any such person and Mrs. Wybrowe would at times half admit that she might have been mistaken after all. And then she and I had so much else to think of that she soon learned to banish her misgivings almost entirely.

It seemed, though, she had reason for them. I had been just a week in the place when the *denouement* of this story came about.

We had gone to the lake and strolled away out of sight of the boatmen, along the bank, down to which extended the low scrub and brushwood of the forest.

We had sat down on a sort of little crag which overhung the water and from which Helen had discovered a view which she was doing her best to sketch under an organized series of interruptions from me. Lying there at her feet, watching her eyes and drinking in her voice, thinking of that new life she had given me and that was precious to me for her sake, I was terribly near my death.

There was hardly a breath of air astir and yet, all at once, my hat, that was tilted over my eyes to keep off the sun-glare, rolled away lazily across the turf, flipped so neatly and lightly that I hardly felt it, off my head.

A sharp crack and a little puff of white smoke rising above a clump of brushwood, explained this phenomenon.

I saw at once what this meant. I was on my feet and half way across to the cover which sheltered my would-be assassin in a couple of bounds. Another bullet whizzed by my ear and then I had sprung into the thicket struck, by one lucky blow, a smoking revolver from the shaking hands and flown at the throat of—Alvarez Smith.

It was as well I had lost no time; he got no chance of using his knife.

I heard Helen scream and then saw her fall lifeless on the turf where we had been sitting and then I was wrestling for dear life with a madman. He had no science but he held me like a fiend. I cut him off his legs again and again; but he clung so desperately to me that I couldn't drop him. Each fresh struggle brought us nearer and nearer the edge of the little crag. I guessed what he wanted to do and put all my remaining strength into one fierce, desperate effort to fling him.

This time he went down; but my foot had slipped on the dry short turf and he managed to pull me down upon him.

I felt his arms close round me in a grip of steel as he twisted and writhed towards the edge; I heard his yell of diabolical triumph in my ears; knew that we must roll over; felt the earth slip away from me; felt a shock that seemed to stun me—and then, locked in each other's arms, the water closed over us like a thick darkness.

He must have struck against something in the fall and have been dead or stunned when he reached the water.

In a second I had wrenched myself free from that deadly grip, had risen to the surface and was striking out for the bank. Ten minutes more and I was kneeling beside Helen.

The body of Alvarez Smith was picked up next day. He had disguised himself so well while waiting his opportunity to settle matters with me as to have eluded detection by the police; but I was able to swear unhesitatingly to his identity and did, with some pardonable satisfaction.

He is believed to have left no one to exact the forfeit from Helen Wybrowe when she marries me.

"I'LL TAKE THE SHORTEST, PAPA."

BY MRS. M. S. STONE.

ONE day a gentleman entered a store, accompanied by his two little daughters.

"Buy us each a lead pencil, papa," said ADDA.

"Yes, do, papa," said MAY, entreatingly.

He studied a moment and then said, "I'll get one and divide it between you." Which he did, but contrary to his intentions one piece was longer than the other. Laying the two pieces together, he said, "One piece is smaller than the other, daughters. What shall I do?

I expected to see the pink lips pout, but instead the clear voice of little MAY, the younger of the two, rang cheerily, "*I'll take the shortest, papa.*"

The tears glistened in more than one eye for a moment, and many times since have her unselfish words echoed in my ears.

Afterward a lady came in with a little daughter. "Buy me something, mamma," said the little girl.

The frugal mother bought two figs. "One is for you," she said, "and the other is for MARY."

I knew that poor MARY'S lot in life was a sad one. All winter she had been helpless with inflammatory rheumatism, and when spring came we feared quick consumption was on her track.

The little girl eyed the figs, and as she went out filled her mouth full with one—fuller than it ought to have been.

"Why, you have taken the biggest," said the mother.

"There is hardly a bite in the other," said the girl.

"But MARY is sick," replied the mother. Yet the selfish little girl was not sorry at all.

My thoughts went back to little MAY: "I'll take the shortest, papa."

SOME characters are like some bodies in chemistry—very good, perhaps, in themselves, yet fly off and refuse the least conjunction with each other. —*Lord Greville.*

The Literary World.

RECENT LITERATURE.

Reading and Elocution, Theoretical and Practical. By ANNA T. RANDALL. [Cloth.—pp. 450.] New York and Chicago: Ivison, Blakeman, Taylor & Co.

Choice Readings. By A. T. RANDALL. [Cloth.—pp. 405.] Phila.: Remsen, Claxton & Haffelfinger.

MRS. RANDALL-DIEHL has had the rare fortune to induce two large publishing houses to produce a brace of books that are in all material respects identical. It is one of the curiosities of literature and a slur on the profession of elocution that a lady so crude in her ideas should be in a position to influence the youth of the country. Her exposition of the science is about as useful to young people as a dissertation on the differential calculus; and the so-called "principles" of no value whatever in forming a correct method. For instance, the writer propounds the wonderful dictum that "quality is the kind or tone of voice used in expressing sentiment," when tone is as different and distinct from quality as hyperion to a satyr. It would be an idle task to point out various blunders of a like character. The selections are mostly old and many entirely inappropriate for elocutionary purposes. In New York the book has no standing of any professional importance, and its ability to keep before the public is only another exemplification of the poetic brook, of which it is said:

"Men may come and men may go,
But I go on forever."

The mechanical execution of the books is worthy the reputation of the houses that issue them.

Ishmael; Or, Out of the Depths. By Mrs. E. D. E. N. SOUTHWORTH. [Cloth.—pp. 718.] Phila.: T. B. Peterson & Brothers.

Self-Raised; A Sequel to Ishmael. By Mrs. E. D. E. N. SOUTHWORTH. [Cloth.—pp. 658.] Phila.: T. B. Peterson & Brothers.

Washington and His Men. By GEORGE LIPPARD. [Paper.—pp. 188.] Phila.: T. B. Peterson & Brothers. Price, 75 cents.

MRS. SOUTHWORTH has given in the two books above a story that will prove to those who admire her writings, of great interest. We cannot truthfully say that her work is of a character to transport us to the happy realm indicated by her initials; but her publishers have ample proof that a large majority of the reading community are on an intellectual plane that enables them to thoroughly enjoy mediocre writing. May they rise above it!

MR. LIPPARD has given us historical incidents in a most attractive form, and "Washington and His Men" should be extensively read by those who do not feel equal to reading in more ambitious works a less fascinating account of heroic actions. The price at which the book is issued makes it a marvel of cheapness.

Second Appendix to Second Revised Edition, Downing's Fruit and Fruit Trees of America. [pp. 18.] New York: John Wiley & Son.

THERE are few men who possess both the ability and inclination to work as faithfully for the science of pomology as CHARLES DOWNING, the veteran pomologist of Newburgh, N. Y. He has not only revised and greatly enlarged the work left by his lamented brother, A. J. DOWNING, but continues to place our pomologists under lasting obligations by publishing these supplemental lists of new fruits, and additional information in regard to many of the old. The Second Appendix contains the descriptions of nearly one hundred varieties of new or little-known sorts, with additional synonyms to many. The list of new peaches, pears and plums is also quite extensive; all of which must be of great value to our pomologists generally.

The Scientific Monthly Magazine. Devoted to the Natural Sciences. Edited and published by E. H. FITCH, Toledo, Ohio.

No. VIII. of this new and interesting monthly is fully equal if not superior to previous issues, and well worthy of careful perusal by all students of natural history. We bespeak for it a successful career, as there is a great lack of knowledge among the masses of the very subjects treated in this new claimant for public favor. Let it be widely circulated and carefully studied, thereby filling its true mission as an educator.

MATTHEW 14: 27.

THE lone and toiling voyagers
Whose bark was on the sea,
When night hung dark above the wave
Of stormy Galilee,
In terror gazed on what they then
But dimly could descry,
Until they heard those cheering words:
"Fear not, for it is I."

The dearest, truest Friend on earth,
In that dark hour of gloom,
Seemed some pale phantom come to tell
A dire and dreadful doom;
And then from each affrighted lip
There burst the trembling cry,
That naught could still but those sweet words:
"Fear not, for it is I."

'Tis often thus with voyagers
Across life's stormy main,
Who strive to stem its rushing tide,
Yet seem to strive in vain;
The waves are white with spectral fears,
And darkly frowns the sky,
Till some sweet voice speaks softly out:
"Fear not, for it is I."

Oh, ever thus, my sister dear,
When life seems dark to thee:
When clouds enwrap a starless sky,
And storms are on the sea—
In fearless faith and joyful hope
To Christ lift up thine eye,
And heed the gentle voice that says,
"Fear not, for it is I." [*Selected.*

THOUGHTS FOR THINKERS.

Extracts from the Writings of Rev. Thos. Brooks, an English Divine of the Sixteenth Century.

AFTER much praying, waiting and weeping, God usually comes with his hands and his heart full of mercy to his people. He loves not to come empty handed to those who have sat long with tearful eyes at mercy's door.

GOD will ever keep house with the humble soul. When once they meet they never part. There is no such way to be rich, as to be poor and low in our own eyes. This is the way to enjoy His company, in whom all treasures are.

EVERY Christian has three advocates pleading for him. The first is that divine love which is in the bosom of the Father, the second is the Lord Jesus, who is at the right hand of the Father, and the third is the Holy Spirit who is one with the Father.

GOD is never better pleased than when his people importune him in his own words, and urge him with arguments taken from his own promises. "He that spared not his own Soul, but delivered him up for us all, how shall he not with him also freely give us all things."

A SOUL that is rich in grace says, "Well, ordinances are not Christ, reflections are not Christ, enlargements are not Christ. They are sweet, but he is more sweet; they are very precious, but he is more precious." And thus those who are spiritually rich do outreach all others.

WEAK Christians are apt to sit down troubled and disheartened by the sin within; but they should strengthen themselves by remembering that their persons stand before God clothed in the righteousness of their Saviour. So God owns them, and looks upon them with great delight.

A HUMBLE heart cannot be satisfied with just so much grace as will bring it to glory—with just so much of heaven as will keep it from dropping into hell. It is still crying out, "Give, Lord, give; give me more of thyself, more of thy Son, more of thy Spirit; give me more light, more life, more love."

NEGLECT of private duties is the great reason why the hearts of many are so dead and dull, so formal and carnal, so barren and unfruitful under public ordinances. Oh! that Christians would lay this seriously to heart. Certainly that man's heart is best in public duties who is most frequent in private exercises.

AN idle life and a holy heart is a contradiction. A lazy Christian will always want four things: comfort, content, confidence and assurance. Assurance and joy are choice donations that Christ gives to laborious Christians only. The lazy Christian has his mouth full of complaints, when the active Christian has his heart full of comforts.

'Tis the duty to perform closet duties, but it is thy sin to rely on them, or to put confidence in them. Do them thou must, but glory in them thou must not. He who rests in his duties makes a saviour of them. Let them lead thee to Jesus, and leave thee more in communion with him, and in dependence upon him, and then thrice happy shalt thou be.

BELIEVERS, you cannot have too frequent intercourse with Jesus; you cannot have your heart too frequently filled with joy unspeakable, and full of glory, and with that peace which passeth understanding. You cannot have heaven too often brought down into your heart, or your heart too often carried up to heaven, and therefore you cannot be too frequent in closet prayer.

WE walk by faith and not by sight. Christians, you must remember that it is one thing for God to love you, and another thing for God to tell you that he loves you. Your happiness lies in the first, your comfort in the second. * * He who makes sense and carnal reason a judge of his condition, will be happy and miserable, blessed and cursed, saved and lost, many times a day—yea, within an hour.

Ladies' Portfolio.

LINES

Affectionately Inscribed to Mrs. L—Furguson.

BY KATE MERIDEN.

Not for the beauty of thy form and face,
Though these indeed to me seem very fair;
Not for thy manner, though so full of grace,
Or the dark tresses of thy wavy hair.
'Tis not for these I love thee most and best,
But for thy noble spirit true and kind,
So free from envy, and the jealousy
That works confusion on the narrow mind.

'Tis for thy soul that can appreciate
The good and great in nature and in man,
Which can amid the dust and dross of earth
Gather the pearls cast by our Father's hand.
These virtues made me prize thee first, my friend,
These were the charms that drew my heart to you;
In the Hereafter, when this life shall end,
May you still find the beautiful, the true.

MAPLE BUDS.

No. IV.—The Grumbler.

BY MAY MAPLE.

Some people seem always to be "blessed" with bad luck. For instance, there is Ezra Ezekiel; he never has any streaks of *good* luck, like his next-door neighbor, who fell heir to several thousand dollars. Ah! no. Such luck never comes to him. Instead of that, his wife and children are always sick and he seldom sees a well day himself; consequently, he finds it a hard matter to drag himself out of bed in the early morning and set about business in a right earnest way. The fact is, he is *constitutionally* tired.

He is constantly meeting with losses that try him "outrageously." No one else ever has such a time as he does, trying to keep his head above water. The horse that broke his halter and walked into the open granary and ate an overplus of grain and then laid down to die, was *never* like any other horse; he was always breaking his harness. Ezra Ezekiel knew the halter and harness were weak and untrustworthy. And *sometime* he was going to have it repaired. Of course it was not done till the best horse was dead.

Then his finest cow must get mired—just as though there was not water enough a half mile further on that she could get without trying to wade into the marsh. He always intended to build a fence around that miry place; but no one had ever lost any cattle there and he did not know why he should just now. Only that it was just his luck.

If there comes a frost in early summer his crops are always nipped a little worse than any others. If a freshet, his garden and farm are the worst overflowed; if a drouth, his crops show the bleaching and drying process the earliest.

His clothes never wear smooth and fine like other men's wardrobes. Merchants always take it for granted that he is of no consequence and so manage to pack their shoddy or second-hand clothing upon him at enormous prices.

If there ever was an unfortunate person, that one was Ezra Ezekiel. He never had anything he liked; he is always building air castles and making great bargains that are to bring untold wealth. But he is sure to fail in his undertakings. It never rained diamonds unless his tub was bottom upward and his hands tied behind him.

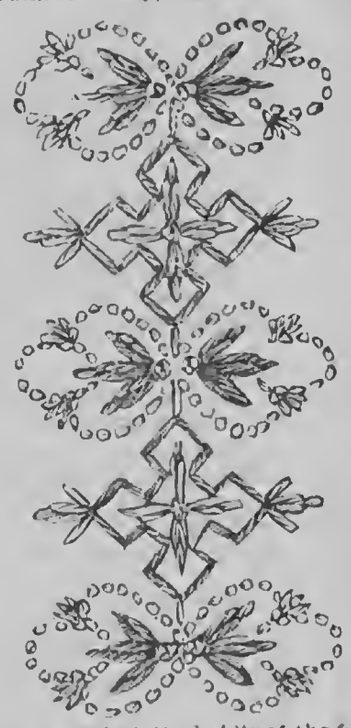
And so he must needs go through the world grumbling at his ill fortune. Thus he makes himself and all around him uncomfortable by his complaining, aimless life.

VISITING.

There are three essentials which must be understood and acted on before visits and visiting will ever fulfill the idea of the pleasure they ought to be and to give. First, nothing must be done for parade or show. No matter how rich a man may be, if he sets on his dinner table one thing, either to be eaten or to be looked at, simply for show, it is a challenge and offense. Of course, nobody is so absurd as to maintain that the rich must make dinners of herbs because the poor cannot afford stalled oxen. A very feast of good things, both for the eye and the palate, can be set out without any attempt at or any suggestion of mere parade, mere display. There are plenty of ways in which a man may advertise his wealth if he likes, without doing it in his hospitality. To do it there, or even seem to do it there, is the very essence of vulgarity and real inhospitality. To avoid, by every possible device and by the utmost tact, the bare suggestion that the guest is the recipient and not the conferrer of favors, is the first principle of entertainment. To ask a man to your house and treat him as if he were inspector of wines or tax gatherer on silver, is a piece of very coarse stupidity; and to make a very great difference between the way you live when you are alone and the way you live when you have friends under your roof, is surely a very direct way of injuring one's own self-respect, of casting an unpleasant reflection on one's own personal standard of taste.

The second essential of the ideal visit and visiting is, that the host, not the guest, set the limit of the visit. There is so false a notion in this country on this point that it almost seems as if it must spring out of a national lack of directness and sincerity. Everybody knows when he asks a friend to his house, how long he wants him to stay. There may be fifty reasons combining to make him very glad of a visit three days long, and very much inconvenienced by one longer. Honest people ought to find no difficulty in saying this and honest people take no offense at hearing it. This does away with all possibility of misconstruction on either side, with all uncertainties as to welcome, with all fear of intrusion.

A third essential of ideal visits and visiting is that there be on the part of the host no strained effort to entertain or amuse the guest, on the part of the guest, no expectation to be amused or entertained. Simply to meet for the interchange of good will and cordiality, the usual current of life



going on undisturbed, the habits of the family remaining unchanged—that is the true social visit. The man who knows how to "drop in" of an evening draw his chair up to your hearth as if it were his own, and fall into the usual evening routine of the household as if he were a member of it—how welcome he always is! The man who comes to stay under your roof for a season, and who, without being intrusive or familiar, makes you feel that he is at "home" with you, and is content in his usual fashion of occupation—how delightful a guest he is! And the houses—ah, how few of them!—into which one can go for a day or a week, and feel sure that the family routine is no wise altered, the family comfort in no wise lessened, but on the contrary, increased by his presence—what joy it is to cross their threshold! What good harbors of refuge they are to weary wanderers!

When the world mends its ways in these regards, when these essentials are fulfilled, the lost art of conversation will revive; hospitality will be worthy of its name; and housekeeping and housekeeping become, as they ought to be, the greatest pleasure a man can have.—*H. H. in the Independent.*

BORDERS—EMBROIDERY.

The two borders will be suitable for ornamenting children's frocks, aprons, &c. They may be

worked with silk or cotton, according to the material. Holland or alpaca aprons look well with borders of the kind worked with Andalusian or Shetland wool.

Reading for the Young.

WHAT THE PRIMROSE SAID.

Now, who that is wise and witty,
Will tell this little maid
The thought—(it must have been pretty)—
And what the primrose said? [*Rural, May* 13.

ANSWER.

The primrose peeped from its fragrant bud
One dewy morn in May,
To see the white clouds sailing
Like ships on the sunny bay;
But a fairer sight than snowy clouds
Or ships on a summer sea,
Was that which greeted the primrose bud
With a smile of winsome glee.

A blue-eyed maiden with golden hair
And cheeks like the rose in June,
Was smiling down on the opening bud
And singing a happy tune.
And the primrose said "What a lovely world
Were it always sunny May;
If flowers could blossom forever fair
And hearts be always gay.
But the sweet blue eyes must learn to weep
And hearts must break with woe
Till they reach the blessed summer land
Where the fadeless roses grow."

Richmond, Ind. Mrs. D. M. Jordan.

LETTER FROM UNCLE MARK.

My Dear Girls and Boys:—Having just returned from the Centennial Exhibition, I must tell you of some things I saw there. One of the most attractive features is the immense number of beautiful flowers and plants around the grounds and in Horticultural Hall. The products in Floriculture of nearly every nation in the world can be seen there, and some of them are of such a curious and singular nature and present such an unusual appearance that you would wonder how they could grow. There is the "Natural Bug Hunter" or Pitcher Plant (a great favorite with Old Daily Rural Life), which consists of a number of green, upright pitchers or hollow leaves catching water, into which various insects are lured or lure themselves and are drowned. Then there is the Cork Tree, from the bark of which our bottle corks are made; the Banana Tree, from which we get the delicious fruit of that name; the Nutmeg Tree, upon which grow the nutmegs used for flavoring our puddings and cakes—and the latter are not natives of Connecticut, as some might suppose.

In addition to these, one can see the Palm Tree, from which our palm-leaf fans are made, and still another kind of palm from which Panama hats are manufactured. Of this Panama Hat Plant there will probably be a picture in next week's Rural, so that you can see just what it looks like. Another curious thing I noticed: Many of the small plants from foreign countries (where, I suppose, they have no flower-pots) were growing in cocoanut shells, the effect of which was very pretty. Mr. Waterer, of England, has brought over an immense collection of Rhododendrons, or Laurels, of almost every conceivable color, size and shape, which occupy a separate building beside of Horticultural Hall.

To see the whole of the Exhibition in one day is an impossibility, so that I was obliged to omit going into the Main Building altogether. You will not be surprised at this, when I tell you that this one building is more than one-third of a mile long, four hundred and sixty-four feet wide, covers a little over twenty acres of ground, and is as full of curious and beautiful things as an egg is of meat. I *did* take a peep into the Ladies' Pavilion; but the flutter of laces and the rustle of silks gave my heart such a palpitating feeling that I considered it unsafe to enter. Some day I will screw up sufficient courage to go in, I hope.

I took a hasty run through Machinery Hall and saw the immense Corliss engine which drives the various machines on exhibition. It had the same effect upon me as being in Chattanooga would and seeing Lookout Mountain. Whichever way I turned it loomed up before me and was always in sight. Find out how high the house is in which you live and then, knowing this grand engine to be thirty-nine feet high, you can, by comparison, form an idea of its size. I should like to tell you much more of what I saw; but the Editor says to me in no very pleasant tones that, notwithstanding his love for the Girls and Boys, he cannot fill his whole paper with Uncle Mark's productions. So, knowing that he has much to worry and harrass him, I will forgive him for speaking sharply and save the rest for another time, when you may expect to hear more from Uncle Mark.

LETTERS FROM BOYS AND GIRLS.

"Cheek" as a Fine Art.

Dear Uncle Mark:—I'm fourteen years old. That is, when people ask me, I say I'm fourteen, and then add "going on fourteen"—so as not to tell a story—for in fact I am only two months over thirteen. But I have had more experience than most boys of this age. My mother tells people I'm not afraid of anything. I like this reputation, though it is not true. I make believe I am not afraid. I put on a bold, independent way, but look out to keep away from real trouble. I will tell the Rural Cousins that what merchants call "cheek" is one of the greatest things in life. If you don't run over people, they will run over you. The way to get the best of an argument is to talk loud—to break in upon the boy you are arguing with just before he makes a point—to insinuate, in a bold but sort of polite way, that he don't know what he's talking about, and to ridicule him when he's getting the best of you. Look a boy right in the face and make gestures when you talk. Tell him what you have studied and how much you have watched things, and frighten him into thinking you are awful smart and that he is nowhere. Modest people are soft; they never get anywhere or amount to anything. When I was nine years old, I used to be bashful and to feel ashamed when a girl spoke to me—but I began to watch the actions of men and found out that it was cheek that did it all. Shakspeare or some other poet said that "Faint heart never won fair lady"—and he was right. I think he meant to say that cheek is the great thing.—Joe. Steele, *Lake Tedehsor.*

From a Tioga Co. (N. Y.) Girl.

Dear Rural Cousins:—Having a little leisure, I thought I would have another visit with you. Our spring term commenced about the middle of April. I am attending as usual. The farmers about here are having the blues badly. It rains so much that they don't have a chance to get in their grain. I have sown nearly all of my flower seeds, and have transplanted my plants. The grass in the meadows and yard is getting real green. They are thinking of having a Centennial tea party here; I guess I shall dress in costume. It is growing late and I must close. M. A. B. are my true initials. My name is a long one, and I often wonder how I came to grow up so tall under it—there, that was a "slip of the pen," but I won't tell anything more.—M. A. B., *Richford, N. Y.*

From a Virginia Girl.

Mr. Editor:—I have been thinking of writing to the Rural for a long time, and have resolved to put it off no longer. May I be one of the Rural Cousins? I am twelve years old, and live in the village of Berkley. I go to school in Norfolk. We have a teacher for the Modern Languages, one for Music, one for Latin, one for the common English branches and one for the Preparatory Department. Who of the Rural Cousins are going to the Centennial? I want to go very much, but cannot do so. Even if there was no Centennial, I should like very much to go to Philadelphia, as it is my birthplace and my father's grave is there. —Clara C., *Berkley, Va.*

From a Pennsylvania Boy.

Dear Editor:—I have long thought I would write and tell you how we like the Rural. We have taken it one year and have commenced another. I live in the northeastern part of Pennsylvania, about a mile from a thriving village. I live on a farm. We keep some cows and sheep and young cattle. I went to school last winter. Our Sabbath school opened the first of May. We had a very promising one last year, and hope to have this.—Young Jack.

Short, but to the Point.

Mr. Editor:—This is the first year we have taken your paper, and I think it is very interesting. I have been reading the Boys' and Girls' Letters, and I thought I would try and write a few lines to the Rural Cousins. We live five miles from the Ohio River. I go two miles to school, and in stormy weather it is very unpleasant walking so far.—F. S. C.

The Puzzler.

CROSS-WORD ENIGMA.—No. 13.

My first is in come but not in go,
My second is in ice but not in snow;
My third is in lend but not in borrow,
My fourth is in glad but not in sorrow;
My fifth is in nose but not in eye,
My whole is a city in Italy.

☞ Answer in two weeks. C. C.

MISCELLANEOUS ENIGMA.—No. 4.

I am composed of 53 letters:
My 14, 22, 3, 9 is affection.
My 21, 21, 18, 8, 11, 21, 2, 26, 15 is wedlock.
My 19, 15, 4, 41, 27 is a wild animal.
My 7, 23, 13, 10, 5, 39, 20, 1, 15 means exactly.
My 6, 15, 25, 3, 31, 12, 28, 33, 30 is a man's name.
My 1, 48, 16, 42, 44, 5, 34 is a woman's name.
My 52, 47, 49, 51, 17, 41 is a man's name.
My 36, 50, 26, 35, 34, 14 40, 43 was a son of Jupiter.
My 46, 51, 40, 29, 18 is a kind of fish.
My 32, 33, 9, 15 is a part of milk.
My 53, 45, 30, 39, 13 is an animal.
My whole is a quotation from Balzac.

Botanical Enigma No. 1.—

"We may shut our eyes, but we cannot help knowing
That skies are clear and grass is growing."

PUBLISHER'S SPECIAL NOTICES.

The Rural is a very good present to send to a friend, and it pleasantly reminds the recipient of the donor fifty-two times a year—this year fifty-three times. Any *subscriber* can send it to a relative or friend as a present, at our lowest club rate—only $2.15, including postage.

Back Numbers of this Year (from Jan. 1) can be furnished to all new subscribers, but we shall not send them hereafter unless specially requested. Those who desire can begin with any number, however.

Officers of Agricultural Societies and Clubs, Granges, &c., can, if they will, materially aid in augmenting the circulation of the RURAL. Scores of such are already forming clubs; how many others will kindly do likewise?

Select Your Premiums.—All persons entitled to Premiums will please designate what they prefer and notify us how and where to forward—whether by Freight or Express—if articles are not mailable.

The Best Paper, and the Best Premiums to Agents, is our motto. We ignore Chromos and all other cheap colored pictures, preferring to put our money *in the paper*, and in Premiums to Agents.

Act as Agent?—Reader, if there is no agent for the RURAL in your locality please become one by forming a club. *It will pay.*

At Our Risk.—You can remit by Draft, P. O. Money Order or Registered Letter *at our risk.*

News of the Week.

HOME NEWS PARAGRAPHS.

MESSRS. JARRETT & PALMER, the lessees of Booth's Theatre, New York, have organized and started a lightning train to San Francisco. The train consisted of locomotive, baggage and hotel car, and was to make the distance in 84 hours. Correspondents of divers English, French and American journals accompanied the expedition, so that the stranger will have abundant opportunity to descant on American enterprise. The route was over the Pennsylvania Central to Pittsburgh, Pittsburgh & Fort Wayne to Chicago, the Chicago & Northwestern to Omaha, and thence by Union & Central Pacific to 'Frisco.

The train accomplished the run in the remarkable time of 80 hours, 20 minutes.

The Bonanza Kings, Fair, Mackey, Flood and O'Brien, have a net income of $36,000,000 per annum only.

The following from Pennsylvania is a sample: The beetle which did so much damage to potatoes and other vegetation through the States last year, are already appearing in immense numbers along the Delaware and Lackawaxen rivers, and have begun their work of destruction. The injury to potatoes thus far, however, is not very great, as very few have been planted; but vegetation in general has been considerably injured.

A great conflagration in Quebec destroyed about 700 houses, and rendered thousands homeless. The St. Louis quarter is nearly demolished. The money loss is very heavy. The fire is said to have originated by children playing with matches.

Some of the tobacco-growers of Allen County have plants enough to set an average crop this year.

The third annual fair of the Kentucky Industrial Association commences at Frankfort on Tuesday, September 12.

The Madisonville Southwest says the prospect for a tobacco crop in Hopkins County is growing more favorable.

New Iberia (La.) Sugar Bowl: Such a thing has hitherto been unknown in the history of orange culture in Louisiana, but the fact is that, while on most trees a few blossoms of December and January grew into fruit and are now hanging ripe upon the trees, surrounded by half-grown green oranges, those of the size of a marble and even blossoms, on the Orange Island, the property of Mr. Joseph Jefferson, the actor, a very considerable crop has been the result of the unusual mildness of the winter.

A gold mine has been discovered on the lot of a Mr. Dickson, in the town of Spartanburg, South Carolina

A resident of Franklin Co., Tenn., recently exchanged his wife with a friend for $3, a quart of whisky and two pounds of leaf tobacco. As soon as he lost his money at a game of seven-up, drank the whiskey and chewed the tobacco, he wanted her back, but didn't get her.

The bones of a mastodon have been found in San Saba Co., Texas. It is estimated that the animal when alive must have been twenty feet high and twenty-eight feet long, with tusks sixteen feet in length.

J. B. Jones of Western New York writes us as follows:—By comparison, we find we have reason to be thankful for the outlook. Winter left us with the ground very full of water, which delayed the putting in of crops on the heavy soils of Western New York, but never have we had finer weather for the gradual drying and fitting of the soil to work. Labor has been plenty and at lower rates than heretofore. Horses, cattle and sheep are keeping up pretty well in price, as well as most farm crops, except potatoes, which hardly bring enough to pay for handling, and great quantities have been fed to cattle and horses. Wheat promises only a light crop. Oats and barley come up well, and doubtless will be heavy. Less potatoes will be planted than usual, while corn planting is going on quite extensively. The grass crop looks well, and fruit of all kinds promises a full crop. Nurserymen have made lighter plantings than usual, some not planting at all, the price of trees being below cost of production for the quality required by planters at present. Yet what seedlings have been put out seem to have started and promise well. Times are not hard, although we do not have war times and need not expect such soon again; but there is no cause for the complaints we hear of the times being hard.

Decoration day was very generally observed throughout the country.

The Dublin University crew will be represented at Saratoga.

The Martha's Vineyard camp meeting this year opens August 21.

The impeachment trial will probably be postponed until November.

April railway earnings are reported for twenty-four railroads, with about one-sixth of the total mileage of the United States. The results cannot be called favorable, as they show but a small increase over the unfavorable returns of last year. This increase is nearly 5 per cent. in the total, but less than 3 per cent. in receipts per mile of road, which were $482 last year, and $496 this year.

Mr. Henry Raworth of Aiken, S. C., is in all probability the oldest locomotive engineer in the United States, if not in the world. His first trip was made on the South Carolina Railroad out of Charleston, in 1831, and he has been on the same road ever since, a period of forty-five years.

The Florida orange crop for the present season is 25,000,000, worth on an average at the groves $15 per thousand, making $375,000. It is estimated that there are now not more than 3,000 acres of young trees from four to six years old from the bud, some bearing as many as 100 oranges the past fruit season. For the next five years it is believed the crop will gradually increase from growth of trees to 150,000,000, yielding a product of $2,250,000, or about one-seventh of the product of Palermo.

The citizens of Thomas County, Ga., propose to send an intelligent, capable man to the Northwest, who, by lecturing and the free distribution of printed information as to the resources of the country, will bring about immigration to it.

Fort Valley (Ga.) Mirror: There is a negro woman living on Mr. Glenn Vissacher's place who is 128 years old. She plowed corn during the time of the Revolutionary war; cooked for Gen. Jackson during the French and Indian wars, and is now ready to chop out cotton this centennial year.

The Vermont Democratic Convention has selected delegates for St. Louis.

Mr. Blaine is the subject of continued investigation.

The bill to reorganize the army has passed the house.

The Indian war progresses. The latest news is the massacre of a party of Cincinnati gold hunters bound for the Black Hills. Forty-nine were killed.

The business of "Spiritual Medium" is not as flourishing as it might be at present. Unfeeling, practical men have applied to the New York City Courts, praying that these persons may be compelled to take out licenses as jugglers.

The iron and steel industry of this country for the past two years is shown in the annexed table:

Products.	—1874— Tons.	—1875— Tons.
Pig iron	2,689,413	2,266,581
All rolled iron, including nails	1,839,569	1,893,379
All rolled iron, including nails and excluding rails	1,110,147	1,097,867
Rails of all kinds	729,415	792,512
Bessemer steel rails	142,914	200,863
Iron and other rails	581,469	501,649
Street rails	6,739	16,340
Kegs of cut nails and spikes	4,912,180	4,726,831
Crucible cast steel	36,323	39,401
Open-hearth steel	7,000	9,050
All other steel	6,453	12,607
Blooms from ore and pig iron	61,670	49,243

The decrease in the production of pig iron was all in anthracite and charcoal pig iron, there being a slight increase in bituminous and coke. The stock of unsold pig iron at the end of the year was 760,908 tons. The total value of imports of iron and steel during the year was $16,273,315, being a decrease of $9,327,405 from that of 1874.

Tennessee has forty cotton mills, employing 56,358 spindles, and consuming 14,443 bales of cotton.

A bill has been introduced into the Texas Legislature declaring drunkness to be a misconduct, and making it punishable by a fine of $100.

To the list of recent murders is now added that of a boy of 14 by his playmate of the same age. The murder seems to have been intentional, if not deliberate.

Sing Sing, N. Y. is becoming famous for convicts' escapes, and its prison should be a favorite with the criminal classes. The seizure of a locomotive by the runaways was better managed this time than last; instead of trying to run it themselves they compelled the engineer to do them this service. As a result two-thirds of the party made good their escape, despite urgent pursuit and much telegraphing, which, however, helped to make it an exciting affair.

Daniel Webster's estate known as "Marshfield," was sold for $5,520.

Governor Tilden has signed in all 449 bills. Last year the number was 633.

The amount of tolls received at the Albany, N. Y., Collector's office from the opening of the canals to June 1 was $8,156.76—an increase of $1,700 over those for the corresponding period of last year. It is thought the season will be a prosperous one throughout. The receipts from lumber have been very large.

All the conferences between the puddlers and the manufacturers at Pittsburgh, according to a dispatch dated June 2, had failed to prevent a lock-out, and but very few of the puddling mills in that section were at work.

Gov. Rice of Massachusetts has appointed A. L. Soule of Springfield and F. W. Hurd and C. W. Clifford of New Bedford a Commission to inquire into the expediency of revising the judicial system of Massachusetts.

A young man named Geo. Boner, while plowing corn near Newark, Ohio, recently, was struck by lightning and instantly killed. A blueish black discoloration of the body extended from the neck to the hips. On his breast was found engraven the likeness of a large tree which stood within a short distance, the branches of which projected naturally to each shoulder, forming a representation so perfect as to render the leaves plainly visible.

From the State reports prepared against the inauguration of Gov. Cheney of New Hampshire it appears that the revenues for 1876 were $503,328.19 and the expenditures $391,536.23, a net gain to the Treasury over 1875 of $26,532.29. The net indebtedness of the State is $3,629,538.49, a reduction from 1875 of $111,791.96.

King Victor Emmanuel has accepted the Honorary Presidency of the Philadelphia committee for the erection of a statue of Columbus.

Dom Pedro is at Niagara trying to find out the nominal horse-power of that miniature waterfall.

A heavy thunder storm visited Lebanon, N. H., on June 4th. Three inches of rain fell in two hours, washing out highways and doing other serious damage.

The Police Department of New York City are making a serious and sustained attack on the liquor dealers who vend spirits on Sunday. The dealers are buckling on their armor and the lawyers are happy.

The Commissioner of Indian Affairs is anxious that Congress should act immediately upon the bill appropriating $300,000 for the removal of the Red Cloud and Spotted Tail bands of Sioux Indians to the Indian Territory. He is apprehensive that if their present disposition agreeable thereto is not availed of they will be induced to join the hostile tribes.

Farm hands are wanted in Michigan.

FOREIGN NOTES.

TELEGRAMS from Cuba say the insurrection in that island is increasing.

Salonica has about 100,000 inhabitants, one-half of them Spanish Jews.

Kisber, Mr. Baltazzi's horse, won the English Derby.

Winslow is still held by the British Government, pending the consideration of the American demands. Lord Cairns holds that our position is correct.

Great forest fires prevail in York and Kent counties, New Brunswick.

A special dispatch to the times from Seville says the ministerial bill abolishing universal suffrage is very unpopular there.

The harvest has commenced. Rains have destroyed the locusts, and cereals have not promised such crops for a hundred years past.

Abdul Aziz, who had been Sultan of Turkey since 1861, was deposed by his Ministers on Monday night. His nephew, Murad Effendi, being the heir presumptive, was immediately proclaimed Sultan. The immediate cause of the ex-Sultan's downfall was the discontent of the Softas (officials and attendants of the mosques), who demanded last week that the Sultan should cease to be Caliph, that is, spiritual head of the Mohammedans. The boldness of this request appears to have rendered him powerless to resist further concessions. The change is regarded with comparative favor in Europe. It is understood that the new Sultan will introduce reforms. Order is maintained at Constantinople.

Below is the official news of the death of Abdul Aziz, sent to the Turkish Embassador at Washington:

"A sad event has just painfully affected our august Sovereign and his government. Abdul Aziz Khan, the late Sultan, who for some time past, unfortunately, gave evident signs of mental derangement, having locked himself up in his apartments of the Palace of Teheragan, committed suicide by opening the veins of his arms with scissors, which he had concealed on his person.

"The Imperial government hastened to cause all the legal inquests (constation) to be made, also a detailed medical report, which will be forwarded to you very soon.

"All the Ministers, the high officers, both civil and military, will be present at the funeral of His Majesty, which will take place with the accustomed pomp and honors due to the deceased, whose body will be laid in the Mausoleum of Sultan Mahmoud."

American residents of Paris have started a subscription to raise funds for the celebration of the Centennial Fourth of July, and for placing a marble slab, with a commemorative inscription, on the tomb of Lafayette.

In the official report of Winslow's remand, the words used are "finally remanded until June 15." The use of the word "finally" seems to indicate that Winslow will be released unless the difficulty is settled by that date.

A Protestant school in the province of Ponteyerra, Spain, has been closed by order of the Minister of Justice at the requst of the clerical authorities.

The tunnel to connect England and France, under the Straits of Dover, has been commenced. The shaft on the French side has been sunk to a depth of 130 feet.

It is stated that the change of rulers is favorably received in Turkey.

The official gazette of Montenegro declares a fresh armistice is impossible, and says the insurrection will now continue in good earnest.

The Epsom Cup race, a dash of one mile, was run June 2, and was won by Dalham by a head, Wisdom second, and Mr. Sanford's American horse Mate a bad third.

News from Cuba as follows:—The town of Ciego de Avilla, in the jurisdiction of Santa Spirtu, was attacked on the night of May 26 by the insurgent leader, Maximo Gomez, with 1,000 men, most of them mounted. The place was defended by a garrison 400 strong. The insurgents were repulsed after desperate fighting, and retired without being pursued. They lost thirty killed and about seventy wounded. The Spanish casualties were two officers killed and three men wounded.

England continues to prepare for war. Ten infantry regiments have orders to be ready to start for Malta at a moment's notice.

Murad Effendi commences his royal business on a cash capital of $100,000,000, that being the amount of treasure found in the ex-Sultan's palace.

Servia thirsts for war. If gratified and beaten, Europe will exclaim: "Servia right!"

A large squadron of French men-of-war is assembled in the harbor of Toulon, in readiness to sail for the East, but no orders have yet been received for its departure.

The work of the divers at the scene of the wreck of the steamer Schiller has been given up. It was not paying expenses. Seven twenty-dollar pieces and half a ton weight of copper was recovered on the 20th of May.

The American horse, Preakness, taken to England to run in the Derby, came in a good second at the Epsom races.

There are 70,000 children living on boats in England, who receive no education.

THE MARKETS.

PRODUCE AND PROVISIONS.

NEW YORK, Saturday, June 3, 1876.

RECEIPTS.—The receipts of Produce for the week were as follows:

Flour, bbls	63,700	Molasses,	—
Whisky	3,852	Rice, bbls,	273
Corn meal, bbls	2,970	Cut meats, pkgs,	8,083
Corn meal, bags	1,450	Lard, pkgs,	8,400
Wheat, bush	1,791,000	Tobacco, hhds	2,336
Corn, bush	658,000	do. cases	4,336
Oats, bush	400,800	Butter, pkgs	32,270
Rye, bush	30,201	Cheese, bxs	41,100
Malt, bush	47,403	Cotton, bales	2,855
Barley, bush	10,000	Rosin	6,900
Beans, bbls	8,545	Spts. turp., bbls	1,112
Grass seed, bush	8	Dried Fruits, pkgs	117
Beef, pkgs	3,819	Eggs, bbls	16,421
Wool, bales	3,134	Peanuts, bags	1,227
Hops, bales	476	Leather, sides	85,483
Pork, bbls	531	Sugar, hhds	—
Tallow	1,850	Oil cake	7,803

HINTS TO SHIPPERS.—Pack produce as firmly as its nature allows; otherwise many items suffer in appearance, if not in quality, through the jostling incident to transportation. Do not mark packages with any material that will smudge. A good paint for marking purposes can be made of bichromate of potash and extract of logwood. Nailed cards are very insecure. For long lines of goods a marking plate or brand is preferable to ordinary lettering. At the time of shipment put a complete list of the lot into one of the packages if it can be done; but be sure to mail to consignee a full list, naming date, style of packages and contents. Aim to have each parcel of uniform quality as far as possible; inlaying always injures sale. Roll butter should be wrapped in clean white muslin. Dressed poultry should be packed in well shaken dry straw. When poultry sweats in boxes straw-dust gives a mean look. Break off nail points from the inside of old barrels when they are used in order to prevent property from tearing. Short cut dry straw is better for packing eggs than anything else. Try and avoid the arrival of summer items here on Saturday.

BEANS AND PEAS.—Exports of beans past week, 2,031 bbls.; since Jan. 1st, 29,000 do.; same time last year, 10,214 do. Exports of peas past week, none; since Jan. 1st, 201,290 bush.; same time last year, 205,887 do. Quotations for the leading grades of beans have been settling throughout the week. All qualities of mediums are again marked off, with no large parcels selling. Marrows have had a favorable demand for export, but buyers would not add to their former large purchases with receiving concessions; prices show they have been successful. Pea beans and kidneys dull. Green peas again lower and difficult to place; not much doing in Canadian.

Beans—Prime pea, $1.35@1.35; fair to good, $1.00@1.15; prime mediums, $1.00@1.10; fair to good, 75@90c.; poor, 50@60c.; prime marrows, $1.60; fair to good, $1.30@1.45; prime white kid., $1.40@1.45; other, $1.15@1.30; prime red kidney, $1.20@1.25; other, $1@1.10; Lima (Cal.), $3.00. Peas—Canadian, bbls., free, $1.18@1.20; do. in bulk and bond, 85@90c.; green, $1.15@1.20; Southern S. E., 2-bush. bag, $2.65@2.70; split, ¾ bbl., $6.

BEESWAX.—Offerings are larger and demand small, giving a lower range of prices. Sales at 34c. for Western and 35@36c. for Southern. Exports past week, 2,150 lbs.; since Jan. 1st, 38,411 lbs.; same time last year, 31,950 do.

BROOM CORN—Is in light demand and fair supply. We quote Brush, short green, 8½@10c.; hurl, green, 8½@10c.; green, medium, 5@6½c.; red and red-tipped, 3@4c.

BUTTER.—Trade was generally broken into by the observance of Decoration Day, and butter has had a full share of the neglect incident to such periods. Receipts have been very heavy and the weather hot and unfavorable for exhibiting stock. Few dealers can report a trade that shows a good wholesale volume and the absence of round sales when supplies arrive liberally always seriously depresses the market. This week the effect has been such as to not even allow choice quality of Western or State to have its usual steadiness in upper quotations. Fine or for that matter fancy pails are obtainable almost as low as tubs. State butter will adjust itself soon as receipts will be lighter when dairymen begin to pack. Of Western there is accumulation enough to warrant low prices for some time to come. West Indian packers are buying Western pretty freely though at low figures say 14@15c. Western firkins quoted at 13@18c, for poor to fine yellow. State firkins 18@23 for poor to fair, 24@25c. for prime. Sweet cream pails range at 23@25c.

Pails, State selected, 24@25c.; do., other 20@24c.; creamery, 23@25c.; half firkin tubs, prime, 22@24c.; fair to good, 22@23c.; Welsh tubs selected, 22@23c.; Welsh tubs, prime, 20@22c.; fair to good, 19@21c.; Pails, Western creamery, prime, 22@24c.; fair to good, 19@21c.; Western tubs, dairy, good to prime, 17@18c.; fair to good, 13@16c.

Western factory choice, 16@17c.; do. fair to good, 14@15c.; poor, 12@13c. Grease, pure, 7@10c.

Comparative receipts and exports from June 1st.

	Receipts, pkgs.	Exports, pkgs.
June 1, '75, to June 1, '76	1,187,822	35,132
June 1, '74, to June 1, '75	1,018,432	53,306
June 1, '73, to June 1, '74	997,201	33,586
June 1, '72 to June 1, '73	741,812	49,113
June 1, '71, to June 1, '72	695,821	70,755
June 1, '70, to June 1, '71	571,497	27,086

CHEESE.—Prices reacted about ½c. from the extreme figures of last week and exporters have been buying a little more freely; most of the sales have been at 11¾@11¾c. for the best lots of factories.

New at 11¾@11¾c. for fine factory; 10¾@11c. for good; 9¾@10c. for fair; dn., half skimmed, 8@9c.; do., skimmed, 4@6c. State farm dairy, fair to good, at 9¾@10¾c.; prime lots, 7@9c.; Western factory, good to prime, 9¾@10¾c.; fair lots, 8¾@9¼c.

The Producers' Price Current gives the following comparative receipts and exports from June 1st:

	Receipts, pkgs.	Exports, pkgs
June 1, '75, to June 1, '76	2,447,849	20,259,799
June 1, '74, to June 1, '75	2,041,579	100,026,701
June 1, '73, to June 1, '74	1,262,901	90,083,247
June 1, '72, to June 1, '73	1,761,221	79,180,920
June 1, '71, to June 1, '72	1,479,270	64,588,561
June 1, '70, to June 1, '71	1,369,093	53,305,475

COTTON.—Prices have been at the lowest point since the war, with a pressure to sell and generally slow export movement. June, 12c; July, 12 3-32c.; August, 12 3-16@12 7-32c.; September, 11¾@12 5-32c.; October, 11 15-16@11 31-32c.; November, 11 27-32@11¾c.; December, 11 27-32@11¾c.; January, 11 15-16@11 31-32c.; February, 13 1-16@12¾c.; March, 12 3-16@12¾c.; April, 12¾@12 7-16c.; May, 12¾@ 12 9-16c.

Quotations for spot cotton, based on American standard of classification:

	Uplands.	*Ala.*	*Orleans.*	*Texas*
Ordinary	8 9-16	8 9-16	8 9-16	8 9-16
Strict ordinary	9¾	9¾	9¾	9¾
Good ordinary	9 15-16	9 15-16	10 1-16	10 1-16
Strict good do	10¾	10¾	10¾	10¾
Low middling	11 1-16	11 3-16	11 5-16	11 5-16
Strict low middling	11¾	11¾	11¾	11¾
Middling	12	12¼	12 3-16	12 3-16
Good middling	12¾	12¾	12¾	12¾
Strict good middling	13	13¼	13¼	13¼
Middling fair	13⅜	13⅜	13⅜	13⅜
Fair	14¼	14¼	14¼	14¼

Stained.

Good ordinary	8¾	Low middling	10⅛
Strict ordinary	9¾	Middling	11⅛

DOMESTIC DRIED FRUITS.—Apples are more freely offered and easier in price. Peeled peaches unsettled and dull. Small fruits selling slowly.

Apples—State, sliced, 10@10½c.; do., quarters, 10c.; Western quarters, 9c.; Southern sliced, 9¾@10c. for prime; fair lots, 9¼@10c.; Tennessee quarters, 8¼c. Blackberries, 10¾@11c. Peeled peaches, good and prime Georgia, 13@14c.; do. fancy, 15@16c. Unpeeled peaches, new, 12@12¾c. for halves, and 10@11c. for quarters. Plums, 16c. Raspberries, 26@27c. Cherries, 19@21c.

Exports of dried apples since Jan. 1st, 1,598 bbls.; same time last year, 1,911 do.

EGGS.—The market is overstocked; heavy receipts and an accumulated storing have to compete with cheap berries and garden stuff, still we have seldom reported prices for prime Western as low as they now are, buyers insisting upon a liberal loss off at that. Southern eggs are losing so heavily that the season for them ought to be regarded as over. Held Western do not count very strong either. Duck and goose eggs are seldom quoted as late as this. The weather is turning warmer, and, with a revival of the ice-cream and pastry trade, will help to work off some stock. We quote:

Near points, ₰ bbl., 16@17c.; State and Penn., 13@14c.; Western, prime, 11@12c.; do. fair marks, 10¾@11c.; Southern and Southwestern, 10¾@11c.; Canadian, 12@12¾c.; duck, 14@15c.; goose, 19@21c.

ESSENTIAL OILS.—Oil Peppermint, in glass, $3.75 ₰ lb.; in tin, $3.25. Spearmint, in glass, $3.50; in tin, $3. Wintergreen, $3. Sassafras, 55c.

FEATHERS quiet. We quote prime live Western geese, 52@55c.; mixed, do., 35@45c.

FLOUR.—A trifle lower prices a good export trade is in progress.

For poor to very choice superfine State, $4@4.40; $4.90@5.15 for very common to fair extra do.; $5.10@5.20 for fancy do., and $5.35@7 for very choice extra; $4@4.40 for superfine Michigan, Indiana, Iowa, &c.; $4.90@5.20 for shipping extra do., the inside price for inferior, and $5.25@5.65 for choice to very fancy extra do.; good to choice white wheat extras at $5.70@7; fancy do., $7.05@7.75; winter wheat, good to choice family city mill extras, $7.50@9; round-hoop Ohio at $4.90@5.15, and trade brands of do. at $5.20@7. St. Louis, $5.10@8.25 for common to fair extra, and $6.30@9 for good to very choice; Minnesota "straight" at $5.25@7.25, and patent at $6.20@9.50; unsound stock at from $4.75@5.75. Southern at $5@5.25 for common to good extra, $5.30@6.15 for good to choice, $6.20@8.50 for family extra, and $8@9 for choice to fancy new parcels. Rye flour at $4.75@5.20. Corn Meal is selling at $2.90@3.25; for yellow, Western, Jersey and Penn. and $3.45 for Brandywine.

GINSENG.—Southern, $1.15@1.20; Northern, $1.15@1.20; Seneca root, 75@80c.

FOREIGN DRIED FRUITS.—Layer raisins, $2.75; seedless raisins, $5@5.25; loose Muscatel raisins, $2.50@3; Valencia do., 10¾@10½c. Sardines, 14½@14½c. currency, for quarter boxes. Turkish prunes, 5½@5¾c.

FRESH FRUITS.—Strawberries arrive freely and prices have ran rather unsettled throughout the week. New Jersey is shipping some. Sellers have not always sold out close and stale lots have hurt prices for several days. We quote Norfolk, ₰ quart, 3@6c.; Maryland, 5@10c.; Delaware, 6@10c.; New Jersey, 7@11c. Cherries, 5@15c. for poor to fine. Gooseberries not wanted; as they depend so exclusively upon a cooking demand are never sought for as early as this when more desirable fruit is to be had; nominally, $1.50@2 ₰ bush. Russet apples are selling at $1.50@2.50 for poor to fair and $3.50@4 for prime. A few Northern Spy have kept elegantly this season; we were shown a lot that was in as fine order as when they came from the orchard. It is rather unusual to see samples of the choice sorts of apples from the last crop on sale when fruit is not for a new season. Peanuts weaker.

Peanuts—Virginia, ₰ bush., $1.58@1.67; Wilmington, $1.80@2.00; do. Tennessee, 95c.@$1.15. Hot-house grapes, ₰ lb., $1@1.25; do. peaches, ₰ dozen, $2.50@4.

GRAIN.—Of wheat, arrivals have been exceptionally heavy, and prices have been reduced a trifle. Exporters are buying freely—largely for the continental markets. Latest sales of No. 2 Milwaukee spring at $1.10@1.11¼; No. 3 Chicago spring at $1.07; ungraded spring at $1.15@1.20; No. 1 spring at $1.25@1.29; amber Michigan to arrive, at $1.38; white, $1.35@1.55; amber, $1.35@1.45; red $1.05@1.35. Rye at 85@85½c. for Western; 95c. for Canada; and 95@98c. for State. Corn is in large supply, but wanted freely, and prices of prime stock firm: Western quoted at 57@59c. Oats are active and firm within the range of 32@43c. for mixed Western and State, and 35@47c. for white do. The week's business in wheat exhibits sales of 1,481,000 bushels. Last week the sales were nearly 15,000,000 bushels. On Monday of this week the sales were 455,000 bushels. The supply of grain is light, that is, in transit, and accumulated at the principal points of delivery, on May 27.

	Wheat.	Corn.	Oats.	Barley.	Rye.
May 27, '76	10,100,698	4,880,373	2,201,196	456,715	312,037
Same w'k, '75	11,004,061	8,139,553	2,237,043	111,043	140,575

In store in New York and Brooklyn Warehouses:

	—1876— May 27.	—1875— May 29.	—1874— May 30.
Wheat, bush	1,135,352	174,974	496,467
Corn, bush	446,103	1,305,325	125,362
Oats, bush	717,387	493,681	359,674
Barley, bush	19,715	1,163	14,410
Rye, bush	4,955	19,570	65,012
Peas, bush	7,928	.....	10,142
Malt, bush	473,906	238,628	59,702
Total grain	2,810,494	2,744,311	1,060,739

HAY AND STRAW.—Farmers are marketing surplus supplies promptly, and with the increased receipts prices are a little unsettled for the moment.

Bale hay is quoted:—Shipping, 75c.; retail qualities, 85c.@$1.00; clover, 70@75c.; salt, 60@65c. Straw is quoted at $1.05@1.10 for long rye; 75@80c. for short rye; 65@70c. for oat.

Exports past week, 710 bales. Since Jan. 1st, 26,000; same time last year, 17,000.

HIGHWINES—Held at $1.12½ with $1.10½ best.

HOPS.—Exports for the week have been only 170 bales. Brewers are buying moderately only. Prices are without change. The prospect for the growing crop in this country is highly encouraging, but reports from abroad as to the crop there are conflicting, though rather more hopeful than last year this time. We quote.

N. Y. State, 12@18c.; Eastern, 8@15c.; Wisconsins; 8@15c.; Yearlings, 8@10c.; Olds, all growths, 4@6c.; Californias (nominal), 15@18c., ₰ lb.

LEATHER.—Hemlock sole at 20@21c. for light; saddle, 21@23c.; heavy, 21@22½c.; good damaged, 18@20c.

OIL CAKE.—Western brings $40 (currency) per ton and city from East India seed at $38, gold.

POULTRY AND GAME.—Dressed poultry is not wanted above the resources of city killers. The cheapness of live has reduced prices for all dressed. Frozen turkeys still quoted at 8 to 16c.; dressed fowls good to prime 15@18c.; fair to good 14@16c.; spring chickens, best 30@32c.; fair to good 27@30c.; turkeys 15@17c. Owing to heavy supplies, live poultry has ruled easy during the week, Western and N. J. quoting alike. We quote:

Fowls, N. J., lb, 14@15c.; do. Western, 13@14c.; Roosters, 7@8c.; Turkeys, N. J., 12@13c.; do. Western, 11@13c.; Ducks, N. J., pair, $1@1.25; do. Western, 65@80c.; Geese, N. J., $1.75@2.50; do. Western, $1@1.37.

Wild pigeons are the main stay of the game market. Prime stall fed bringing good prices. We quote:

Wild pigeons dressed ₰ doz., 87c.@$1; do. unpicked, 50@75c.; stall fed, $1.37@1.50; Wild squab, 50@65c.; Tame do., $2.00@2.50.

PROVISIONS.—Hog products generally show a heavy decline, chiefly owing to the exceptionally free arrivals of hogs at the West. There has been a general pressure to sell. Mess pork at $18.80@18.90 for spot lots; June, $18.60; July, $18.75. Western tierced pickled hams, 12@13c. Bacon at 10¾c. for Western long clear; 10¾@10¾c. for city do. Western steam lard at $11.15 for spot and June; $11.20 for July; $11.32½ for August. Tallow at 8¾@8 11-16c. for prime. Stearine at 13@13¼c. Beef hams at $16@23 for Southern and Western. Beef at $11 for plain; $12 for extra mess.

SALT.—Ashtons at $2.50; Deakin's at $1.40@1.50; Marshall's at $1.40@1.50.

SEED.—Grass is dull; clover is quoted at 15@16c.; timothy, $2.75.

SUGAR (Refined).—Soft yellow, 8¼@9¼c.; soft white, 9¼@9¾c.; crushed and powdered, 10¼c.

SUNDRIES.—Maple sugar seems to be pushed aside for merely a catch trade; best quoted at 10c.; common, 6@9c.; syrup, 75c.@$1.

TOBACCO.—Exporters are buying moderately and there is a very strong market.

VEGETABLES.—Exports of potatoes since Jan. 1st, 80,300 bbls. potatoes, or 35,000 bbls. above same date last year. Really prime old potatoes are in demand at the late improvement. New Charleston are in market. Asparagus still abundant and low. Green stuff is easy and liable to sudden decline at this season. We quote:

Early Rose, bulk, ₰ bbl., $1@1.37; Peach Blows, $1.25@1.50; Prince Alberts, 87c.@$1.12; common, 50@75c. Bermuda, $7@8; Charleston, $3@6. Southern cabbages, ₰ bbl., $1.50@2. Florida tomatoes, ₰ crate, $2@3. Bermuda, do., 5 qt. box, 90c.@$1. Md. green peas, ₰ bbl. $2.50@3. Norfolk marrowfat, $1@2. N. J., $3@3.50. Norfolk string beans, crate, 75c.@$1. Charleston, $1@1.25. Florida cucumbers, crates, $1.50@2. Chas. do., $2.50@3.50. Asparagus, per doz., 75c.@$2. Norfolk cauliflower, ₰ bbl., $1.50@2. Bermuda onions, ₰ bush, $1.25@1.50. Rhubarb, 100 bunches, $1@2.

WOOL.—Prices have again been reduced, and a freer business follows. Western fleeces quoted at 38@41c. for X and XX; 46@48c. for XXX and picklock; 48@58c. for combing; 28@33c. for extra pulled; 30@41c. for superfine pulled.

ROCHESTER, June 3.—Flour market dull; spring, $6.75; amber winter, $7.00; white winter, $7.25; double extra, $7.50. Rye flour quiet at $5.00. Wheat lower; Milwaukee club, $1.25@1.30; amber winter, $1.20@1.25; white winter, $1.25@1.35. Oats, nominal at 35@45c. Corn quiet at 70@75c. Corn meal, $1.50@1.75. Butter, 20@22c. Cheese, 12@14c. Eggs, 13@14c. Lard, 14½@15c. Apples, bu., $1@1.75. Potatoes, bu., 25@30c. Beans, ₰ bu., 90c.@$1.10. Mess pork, $23.50. Wool, 25@33c. Hay, $10@13. Straw, $6@10. Timothy seed, $2.75@3.50; clover, $9.25@10. Mill feed dull at $16 for shorts, $18 for shipstuffs, and $20 for middlings. Railroad Freights—Flour to Boston, 40c. ₰ bbl.; to New York, 30c.; to Albany, 25c. Wood, hard, ₰ cord, $8@9. Coal, $6.05@6.45 for stove.

COUNTRY CHEESE MARKET.

LITTLE FALLS, N. Y., June 3, 1876.

TRANSACTIONS in cheese this week have been brisk, and prices have advanced about ½c. on the average, though buyers claim that the market is no better than for the previous week. About 300 boxes from farm dairies were on the market, of various qualities, from that which was full-skimmed to nearly full-cream. Sales were made at 8¾@10½c. for the bulk, a few lots going below the first figure, and one or two lots reaching a trifle above 10½c.

Factories were well represented, there being about 100 salesmen, offering over 5,000 boxes. Sales commenced at 10½c., and went up rapidly to 11c., and finally reached 11¾c. The bulk of sales were made at 11¼@11½c., while one lot was reported as having been sold at 11¾c. The corresponding prices last year at this time were nearly ¼c. above the sales this week—as 25 lots were sold at 11¾c., while the balance ranged at 11@11¼c.

The delivery of butter has declined, and sales have been made at 20@23c. Hay butter ranged at 20@23c.; grass made at 24@26c.

We have advices from abroad for the second week in May. Our London correspondent says American cheese, if firm and solid, are salable at full rates, and there is a good demand for mediums and low grades. The stocks of faultless Cheddar and double Wiltshire are exhausted. There is a fair demand for new Dutch, while old is slow of sale.

The prices are for extra American, 63@65s.; fine, 62@63s.; good, 52@58s.; secondary and common, 35@45s. English cheddar brings 84@90s.; Wiltshire double, 68@78s.; Cheshire medium, 50@58s.; fine, 70@80s.; Scotch, 62@68s. Dutch cheese—Edams, new, 58@62s.; September make, 68@72s.; old Gondas scarce at 58@62s.; Derby, old, 58@64s.

The supplies of butter are good and all sorts sell as landed.

Dorsets brings 130s.; Jersey, 120@130s.; Danish and Swedish, 120@148s.; Normandy, 146s.; Friesland, 132s. Corks, 124s. No American or Canadian butter in market. Oleomargarine sells at 60@118s. ₰ cwt.

LIVE STOCK MARKETS.

NEW YORK, June 3, 1876.

RECEIPTS OF LIVE STOCK.

Totals this week	9,207	59	4,216	21,265	24,703
" last week	9,998	21	3,977	21,590	20,516

BEEVES.—No improvement in trade on Monday last, the day was a Hebrew holiday, so the Jews dealt lightly in live stock. Horned cattle sold from 9@11¾c. ₰ lb., with a few head at retail on advanced rates. Weights, 6@9¼ cwt. The market closed weak, with a few car loads of beeves unsold. The quality of these herds was generally coarse, but fat. Wednesday, trade firm without any advance in rates; prices at 8¾@10¾c.; weights, 6@9¾ cwt. Thursday, trade small at 9@10¾c.; weights, 6¾@8 cwt. Friday, the markets closed firm; sales at 9@10¾c.; weights, 5¼@9¼ cwt. From 56@58 lbs. net have been allowed on the cwt. Spanish herds, corn-fed, sold at 8¾@9¼c. ₰ lb.; Native steers at 8¾@10¾c. ₰ lb.; grade, do., at 11@12c. ₰ lb.; a few top steers at 12¼c. State oxen sold at 10c. ₰ lb. Bulls on live weight, $1@4.70 ₰ cwt. Mixed herds at 8¾@9¼c. ₰ lb.

COMPARATIVE RATES.

Quality.	This week. Cents.	Last week. Cents.
Good	12 @12¼	12 @12¼
Fair	11 @11¾	11 @11¾
Poor	11 @10¾	10 @10¾
Poorest	8½@ 9¾	8 @ 9¾
Gen. selling rates	9¾@10½	9¾@10¾

MILCH COWS.—Trade fallen off since our last weekly report; quality not so good as it has been for several days past; 16 cows sold at $15@50 ₰ head; 11 at $39@72; 9 at $55@75; 3 at $63@91—calves always included.

VEALS AND CALVES.—Trade slow, on a heavy run of ordinary quality calves, some selling from 5@7¼c. ₰ lb. Buttermilk-fed calves sold at 6½@6¾c. Mixed lots at 5½c. ₰ lb. State calves sold at 3¾@7½c. ₰ lb.; Pennsylvania, 6@8¾c.; Jersey, 6¾@7¼c. There were no smooth quality veals to hand.

SHEEP AND LAMBS.—On Monday trade opened slow in sheep at ¼c. strong off ₰ lb. on the closing rates of last week. Lambs were in yet slower demand at yet further reduced rates; sheep sold at 5@7¼c.; lambs, 7@12½c. Wednesday, no improvement in rates; sheep, 5@6¾c.; lambs, 7½@9¼c. Thursday, sales slow in sheep at 5¾@6¾c.; lambs, 7@8½c. Michigan sheep at 5¾c.; Shats, 5@6¾c.; Kentucky, 5@6c.; Ohio, 5½@7½c.; Tennessee, 5@6¼c.; Virginia lambs, 8¾@9½c.; Jersey, 9@11½c.; Tennessee, 7¾@8¾c.; Kentucky, 5@9c.; State, 7@12¾c. Friday, the markets closed weak.

HOGS.—On Monday last 25 State hogs, gross weight 5,700 lbs., were sold at $7.70 ₰ cwt.; Wednesday, 218 Ohio hogs, average live weight 191 lbs., were sold at $6@6¾ ₰ cwt.; city dressed slow at 8½@8¾c. ₰ lb.; selected light weight pigs, 9c. ₰ lb.

HORSE MARKET.—City trade slow at low rates; 32 head of poor quality light harness horses sold at $11@72 ₰ head; 37 do. at $50@92 ₰ head; 51 ordinary do., $110@205 ₰ head; 11 pairs of family do., $300@550 ₰ pair; stylish do. held on sale; 11 roadsters sold at $275@357 ₰ head (these animals were not warranted sound, but had fair trotting action); 5 teamsters, not warranted sound, sold at $105@350 ₰ head; action good; city railroad horses sold at $100@175 ₰ head; city stage line horses sold at $115@219 head; a coarse quality heavy draft horses sold at $125@230 ₰ head; choice quality do. in demand, but not quoted. Seventy-eight horses arrived per Erie Railway, via Oak Cliff Station.

New Advertisements.

VALUABLE MILL AND FARM PROPERTY FOR SALE.

A splendid, solid brick Flouring Mill, three run of stone, engine, boiler and machinery in good order, having been used but two years. On the line of the Lake Shore and Michigan Southern R. R., in the finest winter wheat region of the State, with a good trade already established.

Also, a good steam Saw Mill, which supplies fuel for the flouring mill.

Price for both Mills, $16,000. We would take a stock of goods for part pay.

Also, an improved Farm of 115 acres; 80 acres improved and under good cultivation; good orchard. One mile from R. R. Station; 4 miles from the county seat. Price, $6,000.

These properties are offered at bargains on easy terms. GEO. E. POMEROY & SON,

THE "VIBRATOR" THRESHER IS KING OF ALL.

MOORE'S RURAL NEW-YORKER is one of the readable, useful, family papers, equally in demand by the lady in her conservatory, the matron with her household, the farmer in his field, the stock raiser among his animals, and the young folks around the evening lamp.—*Times of Love.*

THE COATES LOCK LEVER HAY RAKE.

K. SEARS

Manufactured of the best wood and iron, and put up in the staunchest manner. Shafts and rake head extra strong; thimble skein axles; wheels high, well built and finished; seats easy and thoroughly braced. The teeth made of **Refined Cast Steel, Tempered in Oil,** and every one tested at the factory. They readily adjust themselves to uneven surfaces. **Every Tooth is warranted.** The springs double coil, made with the body of the tooth, much stronger and better than the small separate wire coils so often used in inferior rakes. The Lock Lever has an ingeniously-contrived patented joint, which holds the rake rigid and firmly to its work, while down, WITHOUT USING THE HANDS OR FEET.

Discharging the Rake is effected by simply giving the slightest upward motion to the handle of the lever, which, unlocking it, causes the **Driver's weight** to tilt the Rake and discharge the contents. A child can operate the Rake with ease. *It is easily regulated for any kind of ground.*

Twenty Acres per Day is a fair day's work with the **"Coates."** and you can save enough grain from twenty-five acres of stubble to PAY FOR THE RAKE. Send for Illustrated Circular to the Manufacturers,

PERSONAL ITEMS.

MR. MOODY is in Chicago.

ALEXANDER H. STEPHENS is better.

RHODA BROUGHTON is engaged upon a new novel.

CHARLES DUDLEY WARNER and wife are in London, homeward bound.

THE Hon. Milo Goodrich is dangerously ill with rheumatic fever at Auburn.

A NEW edition of Starr King's book on "The White Hills" is soon to appear.

EDWIN BOOTH'S country place at Cos Cob, it seems, was sold under a mortgage.

MR. ALEXANDER STARBUCK of Waltham, Mass., is writing a history of the whale-fishery.

SECRETARY FISH'S son, Stuyvesant Fish, was recently married in New York, to Miss Anthon.

MR. D. R. LOCKE has again assumed charge of the editorial department of the Toledo Blade.

MISS COLENSO, daughter of the Bishop of Natal, is now publishing a novel in the Natal Colonist.

GEORGE WILLIAM CURTIS has been invited to act as orator at the Fourth of July celebration in Herkimer.

JAMES PARTON will deliver the annual address at the commencement exercises of Bates College, at Lewiston, Me.

A MAGNIFICENT illustrated edition of Victor Hugo's "Quatre-vingt-treize" has recently been published in Paris.

GEN. N. P. BANKS is to command the Ancient and Honorable Artillery Company of Boston at its Spring parade, June 5.

PROF. TYNDALL has received from the members of the royal institution, on the occasion of his marriage, a purse of £315.

THE Rev. Dr. Leonard Bacon has begun a series of lectures on "Ecclesiastical Law" before the senior class of the Yale Law School.

MARK TWAIN will preside at the opening of the California building on the Centennial Exhibition grounds, which takes place June 15th.

JOHN C. HALE of Hot Springs, Ark., son-in-law of Parson Brownlow, was mortally wounded by the bullet of W. P. Walsh, postmaster.

JESSE POMEROY, a rumor from Boston says, will be abandoned to his fate by the governor and council at their session on Friday next.

MISS GERTRUDE MOREHOUSE of Portland, Mich., is the first woman lawyer in that state who has received a commission as notary public.

THE Hon. Lewis S. Huntington, a gentleman well known in the United States, is likely to be the next lieutenant-governor of Manitoba.

MR. HENRY W. LONGFELLOW has rented a cottage in Bryn Mawr, Montgomery County, Penn., and will pass the summer there with his family.

BROOKS ADAMS has accepted the invitation to read the declaration of Independence at the centennial celebration of the Fourth of July in Boston.

EX-GOV. SEYMOUR has consented, it is said, to deliver the Historical Address at the Herkimer County Centennial celebration at Herkimer, July 3.

BISHOP WILLIAMS, (Protestant Episcopal) of the diocese of Connecticut, has subscribed fifty dollars in aid of the ball nine of Trinity College, Hartford, Conn.

PRINCE OSCAR, the second son of the King of Sweden, has embarked at Carlscrona for the United States. He will visit the Centennial Exhibition.

THE Rev. Charles S. Robinson will deliver an address at the fortieth anniversary of the Albany Tract and Missionary society in that city to-morrow evening.

PRESIDENT PORTER of Yale College, will address the department of higher education at the meeting of the National Educational association in Baltimore, July 10th.

MRS. BELKNAP and her little daughter, the Washington Chronicle says, will leave that city in a few days and will pass the summer in some quiet village near New York.

MICHELET'S tomb in the cemetery of Pere la Chaise, near Paris, is opposite that of Casimir Delavigne, and near the monuments of Honore de Balzac, Eugene Delacroix, Charles Nodier, Boutin, and Frederic Soulie.

A PERSON living at the West has sent a letter to President Eliot, of Harvard College, asking for back numbers of "his illustrated journal," meaning the Harvard Lampoon, the comic publication edited by the students.

DR. SCHLIEMANN writes that he has just obtained a new firman for two years for Troy, and was to proceed there on May 5, to build some frame houses, so as to be able to continue the excavations by the 21st instant.

SAMUEL F. HUNT one of the most graceful speakers among the young lawyers in Ohio, is to deliver the oration at the thirtieth annual convention of the Delta Kappa Epsilon fraternity, at the Williams college chapter, in September.

MRS. N. P. WILLIS, widow of the poet, is now living in New York with her second son and two young daughters. Her eldest son and daughter are married and settled down, the former in the interior of Pennsylvania, and the latter in Exeter, N. H.

THE life of A. T. Stewart, by General J. G. Wilson, announced by D. Appleton & Co. immediately upon Mr. Stewart's death, will not be published by that house. This is understood to be in deference to the wish of Mrs. Stewart, supplementing that of her husband, that no biography of him should be given to the public.

"	Quinn's Money in the Garden...	3 50
"	Willard's Practical Butter Book	3 00

MOORE'S RURAL NEW-YORKER became a household word and power in the land long before we quit "going to school," and, perhaps, needs no comment from us; still "its memory is ever fresh and green," and is renewed by its appearance every week, brimful of *good things* as ever. We are glad to announce that our predictions in the January number are being more than fulfilled. We have sent it more than *five hundred* names, and we learn that subscriptions have been pouring in in like proportions from all parts of the country, despite the hard times. Long may it continue to be what it is—a power for good in the land.—*Agent's Friend.*

ANSWERS TO CORRESPONDENTS.

T. D. Carman, East Rockaway, L. I.—1. Paris green is a virulent poison and should not be mixed with the hands, lest it penetrate sores or cuts upon them.

2. It has been proven over and over again that it does not in any way injure the potato.

3. A tablespoonful to 2 gallons of water is sufficient—or, if preferred dry, mix it with flour in the proportion of twenty parts of flour to one of Paris green.

4. It should be applied early in the morning. If the wind blows, be careful not to inhale the mixture. A sieve is as serviceable as anything for the dry mixture, and a flowering-pot for the liquid.

A Subscriber, Binghams, Tioga Co., N. Y.—The leading English agricultural papers are the Farmer, Agricultural Gazette, and Journal of Horticulture. You need only write to the "Publishers, London, England."

James Sproat, Mass.—Upon fruit trees we have used for two years a mixture of unslaked lime, one pint; sulphur, rock salt, aloes, one tablespoonful each; wood ashes, one pint; a piece of soap three inches square to a gallon of water—all heated to boiling and applied cold with a stick having the end bound firmly with rags. They are first painted about the 1st May, again the latter part of May, and finally in the Fall. Many other mixtures may prove just as efficacious. It is a good plan to place about the earth in contact with the stem a dry mixture of sulphur, coal ashes and salt as protection against the borer.

W. J. B.—The only effectual application for destroying the Rose Slug that we know is White Hellebore root. The bushes can be dusted, when wet, with the powder, or a solution in proportion of half a pound to a barrel of water can be applied with garden syringe or watering pot with fine nose. We have never found whale oil soap, carbolic soap, tobacco, or any other article than Hellebore of any service.

A. E. M.—Plantains can be killed out from your grass plot by using the salt and lime mixture—which is really chloride of lime, and may be prepared by dissolving as much salt as possible in water and using the brine to slake lime; sprinkle the lime thus prepared thoroughly over the grass plot. It will kill the plantain and help the grass. Where the plantain is not too abundant they can be readily removed with a knife. A lively hand can go over considerable ground in an hour.

J. A. Forney, Rutherfordton, N. C.—The leaf which you send is that of *Magnolia macrophylla*. You say the flowers, measuring 8 to 12 inches in diameter, are "perfectly white." We think you will find a purple spot at the base of the petals.

Luther Burbank, Santa Rosa, Sonoma Co., Cal.—1. The blotches or spots on the *Trillium* are not uncommon. *T. Sessile* is thus marked. The one you send is probably *T. cernuum*. We must have the flower to determine it beyond a question.

2. The wild Lettuce is *Lactuca elongata*. Your plant, however, does not belong to *Compositae*. The nearest that we can *guess* at it without a flower is *Claytonia perfoliata*.

3. Mr. B. writes:—"There is a gentleman of this town who has a pear tree (supposed to be a seedling) which annually bears a crop of pears which have neither seeds, core nor any hardness in place of a core. They ripen in the fall and are of good quality. Is it not a very unusual pear tree?"

In highly-cultivated fruits, the edible portion (the calyx, viz., in the pear,) is often improved at the expense of the seed—but the cavities of the pericarp or cartilaginous carpels still remain. We have never heard of any instance in which, as you state, the pears have neither "seeds, core nor any hardness in place of a core."

M. A. J.—1. The *Ricinus* is no protection whatever against moles. It has been shown that they prefer animal to vegetable food and their injury to plants is not wrought by eating the roots, but by burrowing underneath them and depriving the fibers of moisture.

2. It is probable there are fewer in your grounds than you suppose. We know from experience that one mole is capable of riddling an area of ground at least fifty feet square.

Inquirer, Kalamazoo, Mich.—It *is* essential that your lightning rod should go down in the earth to perpetual moisture. Water is a good conductor. Air and dry earth very bad conductors. If, therefore, the earth about your rod should be dry when the rod is "struck," the lightning would be as likely to choose the house as the ground.

J. Z.—A lady correspondent writes that those who are troubled with burdocks and other weeds in their lawns and gardens should try kerosene oil. The same fluid would probably kill Canada thistles. Unrefined coal oil would probably be equally as efficacious and cost less.

C. A. C.—*Hemerocalis lutea* is perfectly hardy. The flowers are bright, but not enduring, and the leaves are not very ornamental to associate with the *lancifoliums*.

Real Estate.

KANSAS PACIFIC
HOMESTEAD.

This paper is full of reliable information about Kansas, her climate, soil, products and progress Contains a nice map of the United States, and a fine view of a prosperous Colony from Pennsylvania.

It is a faithful guide to the best and cheapest body of lands in the West. 5,000,000 acres for sale.

WILLARD'S PRACTICAL
Butter Book

ONLY COSTS $1,

And should be in the hands of every Farmer's wife in this country. It is full of practical and scientific information upon every branch of butter making, from the care of cows to butter in the market, and should be kept for constant reference in every house where that article is made.

☞ ***This book is fully and handsomely Illustrated.***

Every one can understand it, and improve the quality and quantity of their butter by reference to its pages. Written by one who has not only made a life study of the subject, but who is himself a

Practical Dairyman,

it cannot but be thorough and useful. No book contains more solid information upon the subject in so few words. A complete index enables the reader to refer to any branch of butter making, and take in the whole subject in a very short time.

Lay it beside your churn, and apply its useful lessons each day, and your one dollar book will have yielded you fifty dollars before the end of the year.

Sent, post-paid, upon receipt of $1.

Traveler's Guide.

JOHN CRUMP, - - Proprietor,
Chestnut St., cor. 15th,
PHILADELPHIA.

CALIFORNIA.

Have you any thought of going to California?
Are you going West, North or Northwest?
You want to know the best routes to take?

The shortest, safest, quickest and most comfortable routes are those owned by the Chicago and North-Western Railway Company. It owns over two thousand miles of the best road there is in the country. Ask any ticket agent to show you its maps and time cards. All ticket agents can sell you through tickets by this route. Buy your tickets via the CHICAGO & NORTH-WESTERN RAILWAY for San Francisco, Sacramento, Ogden, Salt Lake City, Cheyenne, Denver, Omaha, Lincoln, Council Bluffs, Yankton, Sioux City, Dubuque, Winona, St. Paul, Duluth, Marquette, Green Bay, Oskosh, Madison, Milwaukee, and all points west or northwest of Chicago. If you wish the best travelling accommodations, you will buy your tickets by this route, and will take no other.

This popular route is unsurpassed for Speed, Comfort and Safety. The Smooth, Well-Ballasted and Perfect Track of Steel Rails, Westinghouse Air Brakes, Miller's Safety Platform and Couplers, the celebrated Pullman Palace Sleeping Cars, the Perfect Telegraph System of Moving Trains, the regularity with which they run, the admirable arrangement for running Through Cars from Chicago to all points West, North and Northwest, secures to passengers all the COMFORTS IN MODERN RAILWAY TRAVELING. *Pullman Palace Cars* are run on all trains of this road.

This is the ONLY LINE running these cars between Chicago and St. Paul or Chicago and Milwaukee. At Omaha our sleepers connect with the Overland Sleepers on the Union Pacific Railroad for all points west of the Missouri River.

For rates or information not attainable from your home ticket agents, apply to
MARVIN HUGHITT, Gen'l Superintendent. W. H. STENNETT, Gen'l Passen'r Agt.

A HOTEL host comes under the official head of inn specters.

A CONSE-QUENCH-ALL affair—The Volunteer Firemen's Convention.

IF a row of columns is a colonnade, isn't a row of lemons a lemonade.

AT close quarters it is yard arm and yard arm with a dry goods clerk.

THE first man that ever went round the world—The man in the moon.

"WHAT is the next thing to a hen stealing?" Why a cock robin, to be sure.

A LADY who always walks has generally a finer carriage than one who always rides.

PROFESSOR TYNDALL has been offered a baronetcy because he wrote a treatise on "Sound."

THE principal objection to female barbers is that they're too apt to turn their customers heads.

A DESPAIRING husband asks the Ledger how to elevate an ill-tempered wife. Get her ire up, we should say.

A BALD-HEADED man peddling a hair restorer was the confusing spectacle presented to Danbury recently.

VACCINATE. Politeness never hurts anybody. Small-pox will not attack you if you allow it to take your arm.

CURIOUS, but true—We know a painter whose palette has been destroyed, and yet who retains his taste perfectly.

A CELEBRATED gourmand once said, "To enjoy a stuffed turkey thoroughly, there should be only two present—yourself and the turkey."

A SANDY HILL young lady killed a polecat recently with her father's musket, and between the musket and polecat both, no young man dares to come within a mile of her domicile.

A WAG upon visiting a medical museum, was shown some dwarfs and specimens of mortality all preserved in alcohol. "Well," said he, "I never thought the dead could be in such spirits."

THE author of the following is going to Philadelphia with the log:—When Gen. Stark heard of the battle of Lexington, he was at work in his saw-mill, but he left a log half-sawed and it was never finished afterward.

A WISCONSIN editor illustrates the prevailing extravagance of the people of the present day by calling attention to the costly baby carriages in use now, while, when he was a baby, they hauled him around by the hair of the head.

PEOPLE wonder how gas companies acquire so much real estate and so many houses and buildings. Any man who burns gas understands the mystery. The company turns on the gas in a man's house, and lets it run until the gas bill gets bigger than the house; when that is accomplished the company rakes in the pile.

"Now," said the professor, as he grew animated in the discussion, "all matter constantly changes. I have changed since taking my seat here. Every single moment in my body are tens of thousands of blood corpuscles smashed to pieces and forever destroyed." Senior in the back seat (in a voice expressive of deep wonder)—"Gosh!"

A POMPOUS fellow was dining with a country family, when the lady of the house desired the servant to take away the dish containing the fowl, which word she pronounced fool, as is not uncommon in Scotland. "I presume, madam, you mean fowl," said the prig, in a reproving tone. "Very well," said the lady, a little nettled, "be it so; take away the fowl and let the fool remain."

A DOCTOR on West Adams street saved a young woman's life two months ago. When he brought round his bill the grateful father replied:—"Take her, doctor; she is yours; her heart beats only for you. Me and the old woman will come and live with you by-and-by." The son of Esculapius said he wasn't that sort of a man; that he couldn't afford it; that seeing it was him, he would take $66. "Sixty-six dollars!" screamed the pious father; "why, I could bury her for half the money."—*Chicago Tribune.*

Consumers Importing Tea Co.,
No. 8 Church Street,
P. O. Box 5,509. New York City.

This is a combination of capitalists to supply the consumers of Teas throughout the United States on the mutual principle.

We have experienced agents in all the best districts of China and Japan to select Teas especially for our trade.

We expect every consumer of Teas to render us all the assistance they can in carrying out our enterprise, as we make a specialty of SUPPLYING CONSUMERS ONLY (and allow no middlemen to make any profit on our importations), which will enable us to supply them with Teas at prices lower than have ever been known, and of those fine qualities that seldom reach the interior, being sold only to the large cities and among the very wealthy.

Hoping the consumer will take an interest in our enterprise, and send at once for a circular with full explanations of how to proceed to obtain our goods, we remain,

Most respectfully yours,
Consumers Importing Tea Co.,

SOMETHING ABOUT PALMS.

The inhabitants of cool climates know little of the value of the great family of plants known by the common name of palms. Most of us, it is true, have seen palm leaf hats and fans, but beyond this, are seldom sufficiently interested to seek further information about the plants from which they are made. But this extensive family of plants are of as much importance to the inhabitants of tropical countries as the cereals are to those of cold climates. In some tropical countries the palms supply all the necessaries of life, as well as many luxuries, such as milk, bread, wine, oil, vinegar, ink, parchment or a kind of natural paper, spirituous liquors of various kinds, besides materials for clothing and building dwellings.

The palm oil of commerce is expressed from the fruit of the Avoira palm, and there are several species which yield sago; then we have dates, cocoanuts, and many other well-known fruits which are the product of some species of palm. Abundant as are the useful species, which in some manner contribute to the necessities or wants of man, there is a still greater number that are valued only for ornamental purposes. The graceful habit and beautiful foliage of many of the smaller-growing kinds, has ever made them special favorites with those who possess suitable structures in which to cultivate such plants. In all the great botanical gardens of Europe a palm house is considered almost indispensable, and although we have no public establishments of this kind worthy of the name, still there are individuals who devote both time and large sums of money to introducing new plants of all kinds, not omitting the finest palms of the tropics.

One of the most interesting and beautiful of the ornamental species found within our territorial borders is the interesting *Pritchardia filifera*, of which we give an illustration, copied from the London Garden. It is said to grow further north than any other species of the palm tribe, and is found on the banks of the Colorado river, Arizona, also in New Mexico. It is an exceedingly graceful plant, the long, white filaments falling from the palmate leaves, not unlike, in appearance, a miniature weeping willow.

When the many merits of this fine half-hardy palm become fully known to the lovers of handsome foliage plants, it will no doubt become a general favorite, and grace many a private conservatory and garden.

PUBLIC ROADS.

It is admitted on all sides that the roads need improving, but how to go about it is the great question. It will take much labor and skill, and perseverance to make good stone and gravel turnpikes throughout the State, but it will pay in the end to build them, and the sooner we go about it the sooner we shall have them. I believe that the best plan is to make each land owner build the road across his lands, and for the following reasons:

1st. He is the most interested in that part of the road; he uses it himself more than others and would be more likely to keep it in order. It comes under his observation every day—he has a better chance to know what is wanted—he would know where to get the best material.

2d. With such a law the public highway would become one of the fixtures of the farm, and its condition would affect the salable value of the land. A good road would be a personal credit to the owner, and increase the value of his property as much as the improvement cost him.

3d. The best machines are those that are simplest in their construction, last longest, are less liable to get out of repair, are easier managed, and cost the least. I claim that it is just the same with the Road Law; the more simple it is the better for us and the road. The easiest way is to make a law requiring each land owner to build all the road across his premises—have that for a starting point or foundation, and then other provisions can be added to modify what some choose to call injustice to certain individuals, which, I think, is more immaginary than real. Still, there may once in a great while be a a case that would need to be provided for in framing a new road law. Such a rule would not be as unequal or unjust as the present one. This checks individual enterprise, while the other would give free scope to those wishing to improve their premises.

4th. There are but two ways for us to choose from; we must do the work ourselves or pay some one else to do it for us. If we build them ourselves, then we shall find employment for our teams and hands at times in the year when other work is not pressing, and, at the same time, be clearing the land of stone. We should not pay out money to strangers, but could build the road much less than for any other person. We could arrange our business so that whenever in the course of farming any stone could be moved they might be drawn and deposited in the road, and at other times these stones could be broken up and then covered with gravel. This material would be furnished by each land owner free of cost, and most men would be glad to get rid of the stone, and at the same time improve the highway. Nineteen times out of twenty, this law would equalize the road tax better than any other that has been suggested.

5th. Where there are wealthy people who own but little land, or the road does not cross their premises, then they might be assessed a money tax yearly, which should go into the town treasury, until it was needed to help others who had very much more than an average amount of road to build.

6th. All persons who now pay only a poll tax, might be obliged to work, or pay to the person on whose land they reside—the same as they now do to the pathmaster. Reader of the Rural.

PRITCHARDIA FILIFERA.

FAIRMOUNT.

The Bergen Index—a Hackensack paper—in referring to our article respecting the village that Mr. Zingsem has been for several years, and is still, erecting a short distance from that part of Hackensack, known as Upper—says:

"A representative of the Rural New-Yorker, having visited Fairmount, (the name of this village) has written of a part of what he saw there. He could justly have more fully described and more extensively praised Mr. Z.'s enterprise, for it surely is worthy, and there are few like it or similar to it in the world."

True, he *might* have. But he is satisfied with having stirred up the old-fogy, fault-finding, ride-over-each-other people of the consequential city of Hackensack to some appreciation of what this enterprising Zingsem is doing for them and for it.

WIRE FENCING.

There are many localities where no materials suitable for making fences can be obtained at a cost which will admit of their use by the farmer. Wood and stone are the materials most generally employed for this purpose, but these not being universally abundant sometimes substitutes are frequently in demand. Hedges will do, but it takes too much time to produce them, if a man is in a hurry to get a secure enclosure. Iron wire is now being employed quite extensively for fences and if not too small and then well sustained by strong posts it answers very well. Many a wire fence however, has proved to be of little use in turning stock, owing to the lack of proper materials being employed,—the idea of cheapness having led the builder to overlook the more important merit of efficiency.

We lately saw a specimen of wire fencing in Philadelphia, which seemed to combine both the useful and ornamental in a greater degree than any other which has come under our observation. It is composed of a top rail of gas pipe, iron posts and six strands of galvanized cable wire passing through the posts. This cable or double-strand wire is not only fully as strong as a single wire of the same weight, but the twisting adds elasticity which is quite important, especially when iron or stone posts are used in the erection. This cable fencing is of course more expensive than the common single wire, but it is enough better to pay for the additional cost. In answer to an inquiry in regard to the cost of this cable fencing, we have received the following reply:

Dear Sir:—In answer to your inquiry of a few days back, relative to the cost per rod of our cable fencing, if made with 2 and 3 cables high, I beg to state that the wire alone of our usual quality made of 5 strands of wire twisted into cable form and thoroughly galvanized will cost 1¾c. per foot running measure. A fence of 3 cables in hight would cost for wire cable alone 74c. per rod and the staples and screw-eye bolts for fastening to posts and straining the wire would increase the cost about 1 to 2c. per rod. If only 2 cables high the wire cable alone would cost 49c. per rod. This cable wire is heavier and of better quality than is necessary perhaps for herding purposes and is used largely for permanent fencing and when properly erected last for a life time. We could furnish a lighter article unquestionably, made of only 3 wires properly twisted, that could be sold for perhaps one-third less money, in large quantities.—Philip S. Justice, *Philadelphia, Pa.*

It is a most remarkable fact, but fact, nevertheless, that the greatest scarcity of good vegetables is frequently to be observed in farming districts. Large cities are always well supplied with the best qualities, while the rural districts are often suffering for them. This is probably owing to ignorance of the manner of their cultivation among our farmers generally, and is but a sorry commentary upon the intelligence of our rural population. Let us change all this!

Field Crops.

BLUE GRASS—HOW TO GATHER THE SEED AND WHEN TO SOW IT.

Mr. Campbell Brown has been wandering about Lexington, Ky. of late, and having picked up some information about saving and sowing blue-grass seed he writes to the Rural Sun, telling how it is done.

It is gathered when ripe by using "strippers," worked by hand or horse-power. The hand strippers are very simple, cost but two dollars and a half, and will strip from ten to fifteen bushels per day. There are two kinds of horse-power gatherers—one costing $65, gathers fifty to sixty bushels per day—the other costs $136, and gathers one hundred to one hundred and fifty bushels. The only precaution observed after gathering, is to spread out so that it may not heat in curing. An acre of fair quality yields ten to twelve, and fifteen bushels. Those with whom I talked are not in the habit of reserving fields for seed; they say it is better to let it be eaten down once, and the second growth (like clover) yields more seed. No art or skill is required in gathering. Any hand can do it.

As to time and mode of sowing, there is wide diversity of practice, each farmer claiming excellent results for his plan. One gentleman sows on wheat stubble, clover or timothy sod, *as soon as gathered*, to avoid danger of heating, relying on the fall rains to put in the seed. Another sows in the fall on clover or timothy—a third sows with timothy in the fall on wheat or other fall grain. By this method, he claims that the timothy furnishes fair pasture in the fall after wheat is cut, and during the following spring, and that the wheat and timothy shade and protect the clover while young. The oldest and most experienced man I talked with says that blue-grass will come if sowed any month in the year; he prefers fall, winter or early spring.

From a bushel to a bushel and a half is the usual amount sown—two bushels will do no harm. By sowing timothy with it, the pasture is good one year sooner.

Why can't Tennessee save her own blue-grass seed? One day's labor of one hand will save enough to sow ten acres—on this all the Kentuckians are agreed. We can never afford to buy enough from abroad to sow down all the lands that need it, though the price in Lexington, is only sixty or seventy cents per bushel.

JERUSALEM ARTICHOKES.

Our contemporary the Germantown Telegraph seems to have some personal spite against the old Jerusalem Artichoke, for it says:

"The Jerusalem Artichoke is barely fit for hogs; but this is a poor recommendation, seeing that there are plenty of cheaper and better hog-feeding articles. Even if it were much better than it is, there is still the objection of getting the roots into the ground. The frost will not destroy it, and as every piece grows, it is nearly as hard to get rid of as a lot of horse-radish."

Now, for once, neighbor, you are a little too sure of your footing, for the "frost" does sometimes destroy Artichoke Roots, even in the moderate-mild climate of New York City and its suburbs, although it is generally considered as quite hardy. F. M. Hexamer of Westchester County informed us last year that the larger portion of the Artichoke Tubers left in the ground the previous winter had been destroyed; hence he could not fill his orders for them in the spring. Hogs will not only fatten on these tubers, but stock of all kinds are fond of them; and if the potato beetle continues to increase, we may be glad to substitute the Artichoke for some of the purposes for which the *Solanum tuberosum* is now used. Then again, if the Artichoke should prove hardy in the grasshopper regions of the West, it may become a last resort in times of scarcity of other roots. It certainly is more palatable in its raw state than the common potato; and not long since we received a letter from a correspondent "out West," who said that the doctors in that section were begging for potatoes to give their patients having scurvy, brought on through scarcity of all kinds of vegetables.

There are plenty of localities where the Jerusalem Artichoke would be an almost invaluable addition to the limited list of roots cultivated, even if it is not wanted about Philadelphia.

FLAX CULTURE.

Your editorial of April 1st concerning flax culture, touches upon a matter of much interest to South West, Mo. Since the ravages of the chinch bug in 1874, but little wheat has been sown, flax being substituted therefore.

Thousands of acres were grown last year for the seed alone, the straw being used for shedding, bedding, feed, or burned to get rid of it, there being no machinery to work it up, and no market for it in its natural condition. Large quantities will be sown this season, the seed being contracted in advance, at $1 per bushel, for prime and the straw wasted, as it was last year, unless there is some way opened up for its manufacture.

Here is an opening for some capitalists to make a good thing for themselves and confer a benefit upon the farmers of the Southwest. We can supply you with flax, cheaper than Russia can, if only the machinery was here to work it up for spinning. Please call the attention of those interested in flax manufactures, to this fact. J. W. Campbell.

Bates Co., Mo.

WHO INTRODUCED THE POTATO INTO EUROPE.

Sir Walter Raleigh is generally accredited with introducing the common potato into Europe, it being supposed that he took some tubers over to Ireland on his return from this country, after visiting it, under a patent granted by Queen Elizabeth in 1584. No absolute proof however, has ever been discovered that he did take tubers or seed home with him on his return voyage from Virginia, although it has often been said that he gave his gardener tubers to plant in his garden in Youghal in the county of Cork.

Now, the only written proof of Sir Walter Raleigh having anything to do with the introduction of the potato into Europe is found in the manuscript minutes of the Royal Society of London, Dec., 1693, when we are told the President Sir Robert Southwell informed his fellows that his grandfather first cultivated potatoes in Ireland, and that he got them from Sir Walter Raleigh.

It is very strange however if Sir Walter did introduce the potato into Ireland or England in 1581 or '85, that John Gerarde, who was at that time gathering materials for his great work "The Historie of Plantes," published a dozen years later 1597, was not aware of the fact, for he gives a figure and description of the Virginia potato, but not a word about Sir Raleigh being its introducer.

The famous German Botanist Clusius obtained some potato tubers while residing in Vienna in 1588, from the Governor of Mons in the Provence Haiuault who procured them from an attendant of the Pope's legate, but none of these men mention Sir Walter Raleigh and they had probably no knowledge of him or his Virginian enterprise.

Of course it is of no particular importance to us whether Sir Walter or somebody else has the honor of being the first to carry the potato to Europe, but we mention the above facts in history to show upon what a slight foundation honors are often bestowed, especially if the recipient happens to be rated in some other particular branch of science or profession. Perhaps it is a weakness of mankind to give more than is really due to individuals who by some noble act or attribute has gained a slight distinction above his fellow laborers.

The Swine-Herd.

THE HOG PROCLAIMED KING.

"Hog and hominy," is an institution not to be despised even by those who may occasionally dine on South Down chops, and the lightest of wheaten rolls, for there is something solid and tenacious about the hog and the hominy that a laboring man can always rely upon in a case of emergency

Where there is much hard labor to be performed these two "strengtheners" of the "brawny arm," have long been popular in this country, and especially in the Southern and Western States, where working men still consider substantial food of more importance than delicacies.

Judge James H. Cox of Virginia seems to fully comprehend the situation of affairs in his own state, as well as in many other localities, in regard to the home productions of these essential articles and urges his opinions vigorously in a late number of the Southern Planter and Farmer. He says:

The opinion prevails with many—and I am sorry that it prevails with any farmer—that bacon can be bought from the Western market more cheaply than it can be raised by our farmers. I have laid it down as a settled principle, that no farmer ought to buy anything that can be raised upon his farm, and I fear that if any farmer acts upon a different principle he will in a short time come to grief. I have thought so ever since the war, and have no reason especially to change my opinion at this time, when corn can be bought at fifty cents per bushel, and we are charged from ten to fifteen cents per pound for bacon.

With good and prudent management, bacon can be raised more cheaply than it can be bought in the Richmond market, and I will tell how it can be done: The hog ought only to be allowed to pass through the farmer's hands one winter. The expensive part of raising hogs is wintering them. To do this, they should be only moderately fed with corn, but mostly fed upon brown stuff, or meal boiled with turnips or other vegetables; and in all cases the feed should be allowed, after having been boiled, to stand until it becomes sour, adding a little salt from time to time, as necessity may require. When the winter is over the clover lot must be appealed to, to be used either for soiling or being cut and fed to them in the sty. By the time the clover is exhausted, wheat will be ripe, and the scattered wheat should be either gathered with a gleaner and fed to the hogs, or they should be turned into the field to glean it for themselves. A few acres of corn ought invariably to be planted, to be fed to the hogs in the green state, so as they may have the benefit not only of the tender ear, but also of the saccharine matter contained in the stalk. This season past, and if the land will permit it, the hogs should then be turned out to gather the mast of acorns. This over, they are then ready for the fattening-pen. For fear of rogues, my hogs are kept mostly in the sty—always so at night. They are kept, in the meantime, well littered with wheat straw, pine boards, tobacco stalks, and soil from ditch banks; and after this fashion I raise more manure from 10 head of hogs than I can raise from eight horses and twenty head of cattle, and the quality of the manure is also superior. Without having made an accurate estimate, I am inclined to believe that the manure I get from my hogs will almost equal in value the feed they consume. I do not take into consideration the luxury of having my own bacon, cured according to my own taste, nor the offal arising therefrom.

What should discourage farmers from undertaking to raise and cure their own hogs? In Egypt, on the Nile, the people formerly worshipped the alligator. If we, the people of Virginia, have taste or inclination to worship any animal, it should be the hog. While as Christians we can worship nothing except the true and living God, still as Virginians we should tenderly care for the hog as the most useful animal in all our domestic economy; for his flesh, whether fresh or cured, meets our wants better than that of any other animal we can raise. He is useful from the snout to the tail, including the shoulder, the middling and the hams, not forgetting the souse from the head, or the enjoyable pig's feet. Indeed, the hog is a glorious institution, and should be lovingly regarded, and can be raised, in my opinion, with profit, and no farmer should be without him. With plenty of hog and hominy, no farmer can be in distress. Before the war it was said that "Cotton was King." The war proved, and experience since the war has demonstrated, that hog and hominy are the true kings; therefore, if homage is to be paid to any king, let it be paid to the true king.

HOGS FOR PROFIT.

Swine are usually kept for profit, even the celebrated "Learned Pig," was doubtless profitable to his owner, and it would be difficult to find any other good reason for keeping pigs, still there are various methods of reaching that very desirable point.

The Cherokee Agriculturists gives us a Southern and Western view of this question as follows:

The majority of our Southern farmers have so long accepted the belief that Tennessee and other States west of her, were the necessary source of our meat supply that it is a rare case that we meet a farmer who will admit that it is even profitable to raise his own supply, while we have substantial evidence in the thousands of tierces of imported bacon annually consumed in our section, that they are practicing this suicidal theory.

Nothing but ignorance or bad management can justify this state of affairs, for even with the commonest stock of hogs that we have ever seen in Georgia, pork can be raised on the poorest farm for 6 and 7 cents per pound, giving the farmer one-third of that amount for the labor and care necessary to keep them. We do not count the other two-thirds as an actual outlay of capital, but as merely the value of the corn fed, as it is of marketable value when gathered.

For the benefit of those who will accept reason (and those who read generally do), we propose an economical method. We first advise a good stock of hogs—the Berkshires are the best—and then by light feeding have your hogs to come up every morning and night, that you may be able to look after them, and keep them in health. If lousy, use coal-oil on them. If wormy, give them copperas, ashes and turpentine in their slop. To keep them in good health, give them salt, ashes and turpentine occasionally. Prevention is better than cure. For mange—with any kind of care, a black hog will not have any such disease.

For a permanency, every farmer should have a few acres of clover for grazing purposes, and no *farmer* will do without it. Let the hogs glean the wheat-fields, the orchards, the potato patches, the corn-fields, and in time have a few acres of peas for them to fatten on for the pen. Hogs can be porked in this section with ten bushels of corn to the two hundred pounds of meat. Tennessee or any other State cannot do better. When our farmers begin to fill their smoke-houses at home, and supply the people in town with provisions, the financial condition of the country may embarass commercial speculations, but the farmer will never lose any sleep for his part of the trouble.

FEED FOR PIGS.

A. B. Allen in his premium essay on Berkshire Swine, in speaking of the treatment and food for young pigs says:

The best food I have found for pigs for a few weeks after weaning, is as much cow's milk or whey as they will drink. Into this stir more or less, as required, of finely ground provender slightly salted, composed of six parts of oats, two of corn and one of flax seed. If the latter is not at hand, substitute oil or cotton seed meal. If milk or whey are not to be had, use pure, fresh water. If all could be cooked, so much the better.

When more convenient or economical, other food may be substituted for the above, such as pea, bean or barley meal, and unbolted wheat, rye or buckwheat flour. Shorts and bran I have found are apt to scour them at this time, especially if uncooked. The same remark will apply to vegetables, apples, and other fruit, which if fed at all, should be first steamed or boiled, and then mixed with meal. Brewers' grains and malt combs are recommended, but never having tried them for very young pigs, I cannot speak of their suitableness from my own experience. They are good for older animals.

Other kinds of food assist in producing a rapid growth of the pig, as offal from hotel tables, fisheries, slaughter houses, etc., but as few can avail themselves of these, I speak more particularly of such as is produced on the farm. Being an omniverous animal, it does not matter so much as to the kind of food given, except when put up for fattening—then it must be grain or meal of some sort entirely—provided it keeps the pig in a healthy, thriving condition. Care must be had during growth to neither stuff nor scrimp, both being alike injurious.

The Vineyard.

SUMMER PRUNING GRAPES.

Soon after grape vines have commenced growing in the spring, the first of what is generally termed summer-pruning should be done, which consists of breaking out all superfluous shoots. The shortening of the last season's canes at the regular annual pruning, in fall or winter, tends to force out latent buds, as well as to make the larger fruit buds divide—two shoots issuing from each instead of one—which would naturally be the result if no pruning was done.

Now, if this rubbing off of the superfluous shoots is neglected, we are likely to find our vines overloaded and crowded with a large number of weak, slender canes, the struggle between them for existence and nourishment being so great that none will perfect their fruit, or become strong enough to bear any the ensuing year.

Of course, all this pruning, thinning, and training is "unnatural," but we produce, by the operation, unnatural effects in enlarged and improved fruit, hence the means are justified in the result. Much as has been written of late against severe pruning in winter, or pruning and pinching of vines in summer, no system of vine culture which neglects these operations has ever proved a success for any considerable length of time with any of the improved varieties of grapes in this country or elsewhere.

The novice in grape culture, when proceeding to prune or break out the shoots in summer, has only to keep one thing in view, and that is, how many canes will be needed for next year's crop, or how many will it be safe to allow the plant to carry. As no two shoots should be permitted to start from the same point or bud on the vine, the weakest may be broken off, and the strongest, which will usually show fruit, may be left. All small, weak shoots appearing in clusters or singly on the old wood, should be rubbed off as soon as they appear, as mere number of canes or leaves does not always indicate great vigor, or tend to produce it. One good, large, healthy cane or leaf, is worth a dozen small and feeble ones. The vineyardist should keep this in view when pruning and training vines of all kinds, and try to distribute the bearing spurs and shoots as regularly as possible, in order to prevent crowding, and give each and all an equal chance to become fully developed.

This is the end sought in all the various practical and scientific systems of training vines, and it does not matter which one is adopted, success largely depends upon the equal distribution of the vital forces of the plant, and, at the same time, not overtaxing it by permitting too great a number of canes and lateral branches to remain on any one vine. It is far better to reduce the number of fruit-bearing branches below the maximum than to allow one above it to remain, for by concentration we can increase the size of the fruit enough to make up a considerable loss in numbers.

Dairy Husbandry.

EXPERIMENTS IN BUTTER MAKING.

THE following letter from Mr. H. O. FREEMAN of Chenango, detailing his experiments in setting milk on the Swedish system, will be read with interest. Mr. FREEMAN is a careful experimenter, and he has made the following record at our request:

HON. X. A. WILLARD:—When I stated to you some time since that I would give some results of the experiments in setting milk for raising cream at Ridge Mills Creamery, at which place most of my tests have been made, the promise was given in ignorance of the labor entailed thereby. But I have "bucked the tiger" and give you the report. One word in explanation, however. The object had in view has been to produce the largest quantity of butter from a given quantity of milk derived from the same herds of cows, at least expense of labor in the creamery, combined with least loss in handling the milk. With this objective point in mind, you will understand why I recommend, in places where large quantities of milk are received, the cooling of the same in vats for the purpose of raising cream, while at the same time I am satisfied that if low temperature is applied in a dairy, as under the "Swedish system" you have brought in your "Practical Butter Book" to the notice of those who read, can learn that the latter principle will produce with the care necessary to its full adoption, the most butter from the milk. You have already had explained the vats used at Ridge Mills Creamery in raising cream from milk, which are similar to those in other places where these trials have been made. In order to make the experiments *practical*, I have set not less than 3,000 to 4,000 pounds of milk at each test and carried the tests through ten days' trials, in order to meet different states of atmosphere, giving you the *average* result of these ten days.

The milk in the cooling vats that was set six inches deep required 14 per cent. more in quantity to make a pound of butter than in those vats where it was only four inches deep, in each case the vats being skimmed at the same intervals of setting, and the cream treated precisely the same in each instance.

The water used was from ample springs, the water having free access on top, sides and bottom of the milk, the latter when skimmed being perfectly sweet. The Swedish system tested at the same period was with ice water 35° Fahrenheit in temperature. The coolers used were 20 inches high by 8¾ inches in diameter, and produced 6 per cent. more in butter from a given quantity of milk than the shallow setting in vats, and as a matter of course this milk was also sweet when skimmed. But (and here comes in the "but" applicable to a large creamery) it took three hours to *properly* skim the coolers, and thereby secure all the cream, while the cooling vats were easily done in half an hour. Consequently, after trying many plans for setting milk for the purpose of raising cream, I prefer the cooling vat for creameries where large quantities of milk are manipulated; but for the farm dairy of milk converted at home into the most profitable product, I should, with ample time to devote to a methodical skimming of coolers, use the Swedish system of setting milk as you have fully explained.

Have not given the quantity of milk required to make a pound of butter in these trials, for the reason that it might appear large to some who have strictly butter cows, and have limited myself to the *comparative* production of butter under different modes of setting milk as produced in a creamery where all sorts of breeds of cattle present their milk for manufacture. I would, however, say to butter makers that, whether in the creamery or on the farm, they will be wise, in my opinion, to raise all the cream from milk while the latter is sweet. They will find the production of butter finer in quality and not less in quantity, but likely to be more, provided the cream is properly treated before churning. It is an easy matter to let the skim milk sour if so desired for hog feed, and certainly, if wanted for these, it is absolutely necessary, in my opinion, to have it sweet.

Could the same degree of cold be imparted to the milk in a cooling vat containing 1,000 pounds as rapidly as to the cooler of 25 pounds immersed in ice water, I have no doubt that the former would throw up its cream as quickly as the latter, from which I have raised all the cream in twelve hours; but I have not yet been able to reduce the temperature of milk in the vat containing 1,000 pounds as rapidly as the same quantity distributed in coolers. I am informed that patents have recently been taken out, the inventors of which claim to accomplish such a result.

I have been converted to the principle of raising cream from milk by the application of cold water applied to the shallow vats or deep coolers, and fully converted to the principle of shallow setting, as against deep setting, where ordinary spring water is used.

My conclusions are based upon *practical* experiments tested in creameries under my control in New York State and Ohio, carried through weeks of trial and upon large quantities of milk, reaching at times 12,000 pounds at a test. I, therefore, claim that they are practical. I should add, for the information of those who follow the old theory of 60° Fahrenheit for raising cream from milk wherewith to make butter (of which I was once a strong advocate), that during the tests above reported I set milk from the same herds at 60°. It took a longer time to obtain butter from such milk than the Swedish plan of setting, and the skim milk was invariably sour at the end of 24 to 36 hours, the time that most of the milk was set in the above tests.

PREPARING MILK FOR CONSUMPTION.

MR. X. A. WILLARD:—I desire to know the best way to cool milk and at what temperature for carrying around to sell. Is it advisable to cool it much below the temperature of the atmosphere, unless there are facilities for keeping it cool?

Any information pertaining to the milk business will be deemed a favor and greatly appreciated. J. P. CORBIN.

Whitney's Point, N. Y.

REMARKS:—Milk which is designed to be carried around town for sale does not require to be reduced to a temperature much if any below 60°. The more important point is to cool it as quickly as possible to this temperature, say within one hour from the time it is drawn from the cow. Milk in hot weather, unless cooled properly, decomposes very rapidly, and as cold averts decomposition, the sooner this is attended to the better condition will it be in to remain sweet and sound while being served to customers.

The practice most in vogue among milkmen furnishing milk for city consumption is to have a pool of cool water in the milk house. There is a constant flow of water in and out of the pool. The milk is placed in cans 8 inches in diameter by 20 inches deep, which are sunk in the pool, care being taken that the water comes up a little above the line of the milk in the cans. The flow of water in the pool should be sufficient to cool the milk to 60°, or a little below, in the space of one hour.

When the distance from the farm to the town is not far, we have seen milk kept in good order by being placed in the delivery can and setting it in a vat of water by the side of a penstock, the water being allowed to fall over the top of the can. In such cases the delivery cans were small. The trouble of cooling milk massed in large quantities is that the milk is not cooled evenly, the center of the mass remaining warm much longer than those portions in near contact with the water. Hence the advantage of the small cans first mentioned. By stirring the milk frequently in the larger cans, the objection referred to is partly overcome.

One of the best coolers for preparing milk for market is the English refrigerator used by brewers for cooling beer. In this apparatus a very small quantity of cold water passing upward in a very thin stream between two corrugated sheets of metal rapidly abstracts the heat from two very shallow streams of milk descending outside the corrugated metal sheets. The water is admitted at the bottom of the apparatus, and passing upward between the corrugated sheets, is discharged on the side at the top. The milk is received in a reservoir or pail provided with a faucet which regulates the flow of the milk as it falls into a metal trough perforated with holes for the purpose of distributing it along the top of the corrugated plates. In this way the milk is spread into so fine a sheet that instead of falling rapidly from step to step, it follows the corrugations of the surface, and finally at the bottom is collected in a trough and conveyed to the milk can, which is placed beneath. In this apparatus the parts coming in contact with the milk are all exposed and can be readily cleaned. If running water from springs cannot be had, well water can be used or water cooled with ice. It is a very convenient and effective cooler, simple in its construction, and is not patented. It can be made by any tinner, and will be found useful by those who are engaged in furnishing milk for village or city consumption.

In sending milk to market, either by rail or otherwise, it is of the utmost importance that it be thoroughly cooled as soon as it leaves the cow. When milk is carted from the farm and delivered to customers in town during hot weather, it is a very good plan to have the cans surrounded with coarse sacking which is thoroughly saturated with water when the teams start from the farm. The evaporation of the water keeps the milk cool, and in this way the cans are not affected by the atmosphere.

In this connection we may remark that recent experiments have shown that milk is conveyed to market in better order when the cans are completely filled, and an arrangement is now made to force the milk into the can so as to be completely full, leaving no space by which the milk can move, thereby preventing the churning so common where the cans are not completely filled.

CENTENNIAL COMMISSION — BUREAU OF AGRICULTURE.

PHILADELPHIA, June 1st, 1876.

THE American Dairymen's Association has erected, in close proximity to the Agricultural Building of the Centennial International Exhibition, a model Cheese and Butter Factory, with rooms for an extensive display of Dairy Products, and the Apparatus and Appliances used in the manufacture of the same. The Dairy House is in the form of a double L, the front portion being 116 feet long by 28 feet wide, and comprising three apartments: the center one illustrative in its appointments of the American Cheese Factory and Creamery System; the end rooms being fitted-up for the exhibition of Butter and Fancy Cheese. The wings are 64 feet in length by 30 feet in width, and are appropriated, one for the display of Foreign Cheese, the other for American. Beneath the building is a cellar of 864 square feet, for the storage of products not ready for exhibition. The whole structure is of two stories in hight, the upper floor being fitted-up with reception-rooms, offices for Committees, rooms for the storage and the preparation of products, and for restaurant purposes, it being designed to establish a Farmers' Lunch-Room in the building. Access to the interior of the exhibition-rooms will be closed to visitors, ample opportunity being given to view the display through numerous windows opening upon the veranda, which surrounds the whole structure.

Cheese and Butter will be displayed on benches, or low tables, provided free of charge. Producers may themselves assume the charge of their goods, or can place them in the care of a thoroughly capable custodian, selected by the Bureau, and paid by the Exhibitors according to a scale of prices to be established by the Dairymen's Association. The Dairy Building will be ready for the reception of Exhibits continuously from June 7th to November 1st, it being designed to have a *constant* Exhibition, a feature commending itself to the fullest support of Dairymen. To afford, however, opportunity for more active competition, it has been decided to have two Grand Exhibitions, one of Spring Butter and Cheese, June 26th to July 6th; and one of Autumn Butter and Cheese, October 17th to 21st. For the guidance of Producers, the Bureau of Agriculture has devised the following regulations:

Butter will be judged upon the relative merits as to the make, color, flavor, texture, solidity, and keeping quality. Parties exhibiting for competition must be prepared to furnish full statements as to the making of the Butter, upon printed blanks, which will be supplied.

Butter offered for competition will be in most acceptable form, if made under the following classification, applicable respectively to the manufacture of Creameries and Dairies.

Best sample of 200 or more pounds, made at any time. Best package of 35 lbs. or over, made at any time. Best package of 35 lbs. or over, made in each month respectively. Best package of 35 lbs. or over, of oldest make. Best sample of 5 lbs. in 1 lb. prints. Best sample of 5 lbs. or more, made respectively from the produce of the various breeds of cattle.

Cheese will be judged upon the relative merits as to quality, make, texture, keeping, flavor and color. Parties exhibiting for Competition must be prepared to furnish, upon printed blanks, which will be supplied, full statements as to the method of making and curing of the Cheese, and the preparation of the rennet. Cheeses must not be cut, bored, or tried in any way before being exhibited, or they will be disqualified for Competition. Awards will be made upon the various established appellations, both of Foreign and Home production. Cheese entered for Competition will be divided into Classes, respectively of Factory Manufacture, and Dairy Production of that made previous to the year 1876, and that made during the year 1876. Cheese offered for Competition will be in most acceptable form if made under the following Classifications: Heaviest Cheese of good quality. Best Cheese of 5,000 lbs. or over. Best three Cheeses of each brand respectively, between 3 and 10 lbs., between 10 and 30 lbs., between 30 and 50 lbs., and between 50 and 70 lbs. Best three Cheeses in each Class Artificially Colored. Best three Cheeses in each Class Artificially Flavored. Best Cheese in each Class of Natural Color. Best three Cheeses for Special Display in October, of not less than 40 lbs., made on the American Factory plan, in the second and third week respectively, in June, July, August and September, 1876. Best three Cheeses for Special Display in October, of not less than 20 lbs., of Dairy production, made in the second and third week respectively, in June, July, August and September, 1876.

Best Cheese of oldest make, of each appellation. Best lot of three Preserved Rennets. Best sample of Coloring for Dairy Products.

Entries for Exhibition, either continuously or at the periods of Stated Displays, can be made free of charge, upon forms, which will be furnished upon application. Producers who apply for room will receive permits for space, and official labels to be attached to the packages. Freight must be paid at point of shipment, which will secure the delivery of goods in the factory. Blank forms for the entry of products and any further information desired, may be had upon application. BURNET LANDRETH,

Chief of Bureau of Agriculture.

D. L. POPE,

Special Sup't of Dairy Section.

RELATIVE PRICE OF MILK FOR CONSUMPTION AND FOR DAIRY PRODUCTS.

A CORRESPONDENT writes us complaining that the price of milk in his village is excessively high. He says: "Milk is not worth 3 cents a quart for cheese or butter making, at present prices for these products, while the price of milk in our village keeps up to from 6 to 8c. per quart. Why is this?"

Milk cannot be furnished for consumption in villages at the same price that it nets the farmer when taken to the cheese factory. In the first place the milkman must have cows calving at all seasons of the year, for a certain quantity of milk must be supplied daily, and as cows decrease and fail in milk from time to time, fresh calved cows will be required in order to keep up the supply. The difficulty of obtaining good cows and the risk of purchasing at these different seasons must be taken into account. The milk producer must keep up his supply at whatever season, and herein lies the great advantage of the cheese maker, for the latter produces his milk at a season of the year when it can be done at least expense, and in case of drouth he is in no wise bound to keep up the supply.

Again, during the winter months the dairyman's cows can be kept more cheaply than the milkman's, as few of them will be giving milk. With the milkman a certain amount of skilled labor or business capacity will be required, even to manage a small village milk business; and if we take into consideration the cost of delivery, wear and tear of teams and implements used, bad debts and losses from milk getting sour or not taken by customers, it will be seen that milk cannot be supplied at near the same rate as at the cheese factory. The milk business is in many ways made more perplexing than that of the farmer who patronizes a cheese or butter factory, and it would seem perfectly proper that he should be paid for this extra worry and labor. And especially is this the case where the dairyman produces his milk and has the management of a "milk-walk," or the supply of village customers.

We are not prepared to say what the relative price of milk should be, as compared to that obtained by dairymen who turn it into butter and cheese; but where the milkman engages to supply his customers with a stipulated quantity both summer and winter, a price double that obtained by the dairyman who delivers at the factory does not seem to be excessive.

PECULIAR FEATURES OF MILK.

IT is well known that the specific gravity of milk from different cows varies, and this can be readily understood, since there is great variation in the quality of milk yielded by different cows. But a rather singular feature in respect to milk is that recorded by the well-known chemist, Mr. J. A. WANKLYN, member of the Royal Bavarian Academy of Sciences. Wishing to note the difference, if any, in the specific gravity of milk drawn from different parts of the bag of the same cow and at the same time, he selected cows in a dairy that were well cared for and fed on meal, clover and other food calculated to give a good quality of milk. The milk was drawn directly into the sample bottles from each quarter of the udder, and on carefully testing them to determine the specific gravity, at a temperature of 60° Fahrenheit, the samples gave the following:—Milk from the right side front quarter exhibited a specific gravity of 1020.4, while the left side front quarter gave milk having a specific gravity of 1021.3. On testing the samples of the milk from the hind quarters of the udder, the right hind quarter gave milk the specific gravity of which was 1023.0, and the left hind quarter 1023.5.

Another sample of milk, the specific gravity of which was taken on the same day it was milked, at 60° Fahrenheit was 1020.4, while two days later the same milk showed a specific gravity of 1030.2. The experimenter says:—"From the whole course of our experiments, it appears that the first change which milk experiences is a contraction. Specific gravity 1020 becomes specific gravity 1030. The next change is expansion, and this occupies some days, which is manifested by the specific gravity sometimes falling below 1000." These experiments show that there are some curious features about milk and that there is ample room yet for investigation.

The Centennial.

CENTENNIAL CORRESPONDENCE.

PHILADELPHIA, Pa., June 10, 1876.

To those who think that the American woman is a frail being, all nerves and no muscle, a visit to the Exhibition would be a revelation. The most painstaking and indefatigable visitors are the ladies. They annihilate space without seeming effort, and the note-book is in constant use. They seem to appreciate that life is short, and that another such chance for study will not occur very soon.

The average citizen of the Republic thinks differently, however, if a conversation I overheard is any criterion. A gentleman was expostulating with the gatekeeper, trying to convince the latter that notwithstanding the Exhibition was closed for the night, he (the A. C.) should be allowed to enter. The gatekeeper held his ground like a Spartan, and was as deaf as Ulysses to the most seductive appeals.

"But, my friend," cried the A. C., "you see I have just arrived, and leave by the 8 A. M. train to-morrow. I only want to run through the grounds and buildings—to get an idea of the thing."

A mere trifle of hundreds of acres!

The Exhibition daily grows more attractive, and the various departments will soon be complete. Russia is making rapid progress with her exhibits in Machinery Hall. This building is becoming very popular with the ladies, as some of the manufacturing processes appeal strongly to their curiosity. The French have a Lyons loom (Bonet's) in full operation, showing how silk is made. A complete toilet soap works pounds away, turning out neat cakes of this useful material, which are sold as fast as made to eager purchasers. Candy makers here lay bare the secrets of their trade, and, if so disposed, one may observe the various mutations to which the sugar is subjected and turn to inspect the Jacquard loom with a paper of confectionery in his pocket still steaming from the mold. England and America exhibit this wonderful loom, which weaves the most beautiful and complicated designs with as great accuracy as if it were a human being instead of a mere machine. Further on, J. & P. Coates have imported the most striking features of the machinery used in making "best six cord," and after having seen how the thread is tortured and worried until, finally, it makes its appearance on the neat spools, and then observing the intricate motions of the needle and pin-sticking machines, one's ideas of these industries is materially enlarged, and you feel a respect for "notions" out of all proportion to the size of the articles.

A newspaper man is compelled to admit that he is a tyro in the art of "puffing," after a glimpse at the extensive "blowing" machinery on exhibition. There is one engine that manufactures hurricanes at a moment's notice, and expels a column of air so powerful that it holds in suspension an iron cannon ball.

In painful contrast to machinery of a peaceful order is the exhibit of Herr Krupp, the German gun maker. The monster 81-ton gun is now in position, after having injured, true to its instincts, seven men. It gives one an exalted opinion of oneself when he gazes at the awful instruments that are designed exclusively to facilitate the journey to another world. Germans are justified in thinking that they have the implements to improvise holocausts on a wholesale scale, but, on the other hand, and as an offset to this display, is shown their ambulance system. Those not endowed with strong nerves had better pass this horrible humanitarian scheme for scientifically patching up the shattered frames of shot-riddled heroes. The whole display is the strongest possible argument in favor of the ideas of the Universal Peace Congress, and the glory (!) of war hides its diminished before the contemplation of its horrors.

One should visit Turkey, if for nothing else than to drink *moka* coffee in its highest perfection. The recent troubles in that unhappy land have so embarrassed the Commission that they cannot unpack the exhibits for the Main Building. However, the gastronomist will find in the Turkish Cafe an Oriental divan at his service, on which he can recline, drink coffee, discuss a small glass of mastic, and revel in the delights of unadulterated Turkish tobacco, smoked through the medium of a chibouk, at a very moderate expense. The attendants are attired in the national costume, but it is rather peculiar how quickly they merge the idiom of Islam into capital French, if they, for any reason, become angered. One would think, peradventure, they came from the banks of the Seine instead of the Bosphorus.

American agriculturists should take a lesson from their European co-workers in the matter of investigating cattle diseases. The Netherlands display 18 colored casts of diseased cattle, illustrating the progress and peculiarities of the Rinderpest, or cattle plague. One half hour devoted to the careful inspection of these casts, gives a more comprehensive idea of the course and peculiarities of the disease than could be acquired by months of study through the medium of books. Here can also be seen models of dwellings for the poor, which, among other things, shows the intimate relations of the cows and hogs to the rest of the family, as they are all domiciled under one roof.

The model of the city of Paris is rapidly going to grass and unless something is done to stop the growth of weeds, those who roam over the ground in search of this city will have to call in the aid of a mowing machine.

One would naturally look for a good specimen of mummy in the Egyptian Department; but Peru displays an assortment of this article, preserved in its own juices, that is calculated to satisfy anyone's idea of artistic hideousness. A lady after viewing them for a time, said, "What are those things—do they eat them?" The attendant hastened to assure her that though well spiced, they were not good to eat.

The South American Republics are generally thought to be very backward in the industrial arts; but when we see the fine display of home made fabrics such as clothing, leather, and even the extent of the art of printing and book making, one must confess that they are not on such a low social plane and that their chief occupation is not the manufacture of high-pressure revolutions.

After having worked hard at sight-seeing, the intelligent American is inclined to agree with Hood, that he has a pair of immaterial legs and it is a great relief to step on the cars of the narrow-guage railway to be whisked to any part of the grounds at a moderate charge. This road carries the traveler to nearly all the important buildings and judging by the crowds it carries is an institution that promises to be of great value. Few who ride are aware that the cars are equipped with a novel invention in the shape of a loose wheel and patent axle, which, it is claimed, will revolutionize rail road travel. The merit of the invention as regards the public is that by the use of the wheels the car rolls smoothly; does not jerk one out of the seat when going around curves and by no possibility can progress be impeded by hot journals, such a thing being out of the question when using these wheels. To the stockholder, the Miltimore patent wheels mean increased dividends, as they save oil, cotton waste, outlast three to one the old wheels and do not tear the road to pieces. Being adapted to street cars also, we may soon expect to ride as gaily and comfortably as if traveling in a rocking chair.

Next week the interest will center in the competition of mowing machines, which will be reported fully in these columns by your sprightly correspondent "Shorthorn." YOUNG RURAL.

Industrial Implements.

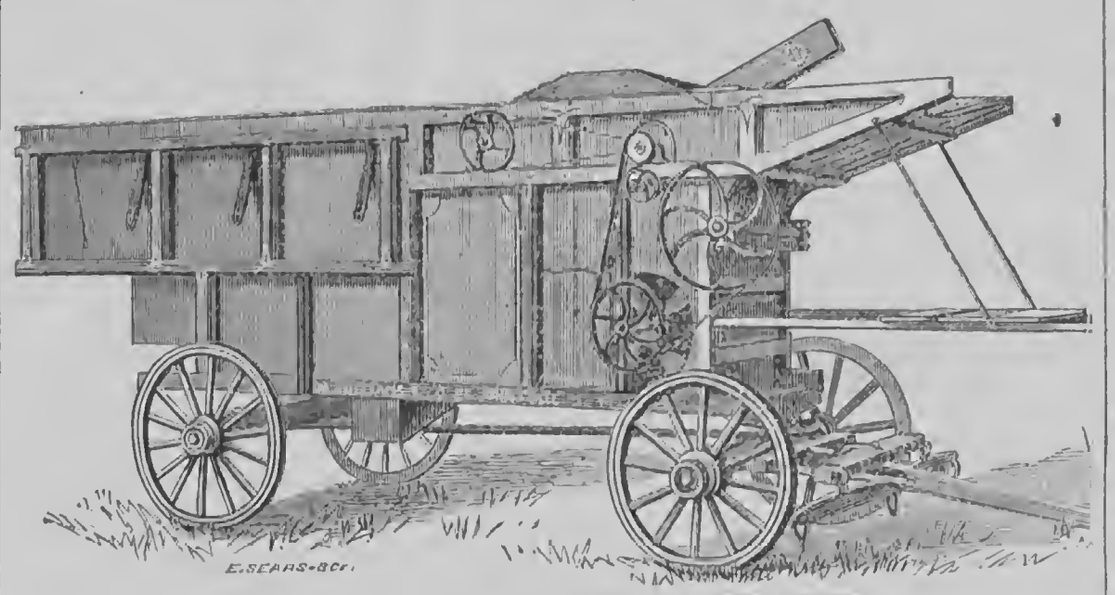
THE WILLIAMS' NOISELESS THRESHER.

THE truth of the saying, there is more than one way to do a thing, is conspicuously apparent when we consider the subject of threshing machines, or, for that matter, the entire catalogue of implements designed for agricultural uses. We have, from time to time, selected samples of threshers from among the most popular, and in this issue we give an illustration of one of two kinds made by those enterprising gentlemen, Messrs. M. WILLIAMS & Co., St. Johnsville, N. Y. Our object in these articles is to make our subscribers thoroughly familiar with the most recent improvements and progress in an industry that appeals directly to their material interests, and thus fulfill acceptably our mission as an agricultural *news*paper.

To dilate on the advantages to be derived by the use of a thoroughly efficient and practical thresher would be to cast an imputation on the good sense of farmers generally, therefore, we merely allude to this point in connection with the fact that current foreign events point to an European war, in which case, American grain will have an unusually good foreign market. The farmer, therefore, who utilizes his grain crop most thoroughly will reap the best reward. To do this, an economical thresher is the most important factor.

Our illustration represents W. & Co.'s "Undershot Thresher and Cleaner" of which different sizes are made, designed for either tread, sweep or steam power.

They call attention in their circular to the



WILLIAMS' NOISELESS THRESHER.

frame being constructed with especial reference to handling and moving from place to place. That all crank motion in the machine is counterbalanced, and does not in its movement effect the frame or interfere with mounting on wheels. This is accomplished by constructing the riddle or shaker and the grain trough or hopper underneath it so as to allow their working independent of each other, and connecting them to cranks which are opposite to each other upon the same shaft; and also adopting the same principle in the construction of the mill by dividing the labor of shaking the sieves between two opposite cranks on the fan shaft, attaching directly to the sieve, dispensing with much useless weight, admitting of a much quicker and easier motion of sieves than could otherwise be attained. The sieves have a capacity for cleaning exceeding that which the cylinder has for threshing, will run without clogging or wasting and do not require cleaning more than once in ten days when in constant use. The concave is made in sections which are fitted to slide into grooved hinges, and can be removed and blank substituted at pleasure. The toughest grain can be threshed clean without difficulty. The straw governor and sheet-iron curtain combined regulate with precision the discharge of the straw and grain from the cylinder, preventing either clogging or shooting and deliver the same to separator and tossing forks uniformly and in a thoroughly loosened condition, The governor is so constructed that there is not the least possibility of its winding with the toughest or longest straw, and works with equal certainty in every kind of grain. The separator has a perforated and slot bottom, is 12 feet long by 40 inches wide, and has a quick motion, moving straw over it rapidly and without clogging.

Two sizes, also,—30 and 34-inch cylinder—of the overshot thresher are made. In this machine the fan shaft has two cranks opposite to each other, the one moving the separator and the other the grain hopper and sieves, making a complete counterbalance of parts, and admitting of being run on wheels. The separator has a perforated bottom, is 3 feet wide by 10 feet long, and has five tossing forks. The sieves are large and roomy, are easy to adjust or change, and, it is claimed, are capable of cleaning all the grain the cylinder will thresh.

They also manufacture a three-horse power, mounted on a truck, and two-horse endless chain power. An implement for threshing grain or grass seed, and merely separating it from the straw, they make to order—a Thresher and Separator designed for farmers' use—of any dimensions required.

WILLIAMS & Co. were awarded the Bronze Medal by the N. Y. Ag'l. Society, and other prizes at different times. Any of our subscribers who send to them for information will receive it free, and of a quality and value not to be judged by its price.

WHIPPLE'S RECTANGULAR CHURN.

WHIPPLE'S Rectangular Churn manufactured by CORNISH & CURTIS, Fort Atkinson, Wis., is of recent invention and well adapted to farm dairies. It is simply a cubical box, and hangs suspended on gudgeons from the two diagonal corners of the cube. As the box is revolved the cream constantly falls from corner to corner, thus giving a more diversified agitation than when in the box churn as ordinarly arranged. It is more easily operated than the ordinary revolving box churn, and the butter forms in coarse grains, its operations in this respect being superior for a first-class product.

Around the Republic.

ARKANSAS VALLEY.

KINSLEY, Kansas, May, 1876.

ED. RURAL NEW-YORKER: During the last three months I have been examining the Arkansas Valley from the Rocky Mountains to the Mississippi River, a distance of more than two thousand miles, for the purpose of securing reliable information concerning the agricultural and mineral resources, stock raising facilities and other attractions or disadvantages.

At a certain feast "the governor called the bridegroom, and said, men generally set forth the good wine first, and lastly the poorer quality; but you have kept the good wine until now." So it has been in the settlement and development of our country from the bleak, sterile New England coast and malarial swamps of the eastern shores of Virginia, Carolinas and Florida, toward the Rocky Mountains.

The active enterprising spirit of New England and the Northwest, secured a trans-continental railway from Boston to San Francisco in their own latitude, not because it was the best route across the plains and mountains, but because it was the shortest line between the two cities. Had Boston and the everlasting Yankees been located at Charleston or Savannah, no doubt there would have been a railway from the Atlantic to the Pacific thirty years ago, through Arkansas, Indian Territory, Southern Kansas, Southern Colorado and Arizona, following the Great Arkansas Valley from the Mississippi to the mountains in Southern Colorado, through the richest, agricultural, grazing and mineral country, in the mildest, most salubrious and healthful climate on the globe. But Boston was not located at Charleston or Savannah, hence, the best wine is last—the best country on the Continent is the last to be settled and developed; and it is somewhat remarkable that Boston railway companies are doing this great work, beginning at Chicot City, a point on the Mississippi River below Napoleon, where the Arkansas enters the Mississippi, the Little Rock, Pine Bluff and New Orleans Railway will have their road completed to Little Rock within a few weeks, and beginning at Little Rock, the Little Rock and Fort Smith Railway Company will have their road in operation to Fort Smith, on the western border of Arkansas, by the first day of next July.

Then at Wichita, two hundred and twenty miles above Fort Smith, the Atchison, Topeka and Santa Fe Railway strikes the Arkansas, and extends westward up the Valley to Pueblo, about forty miles below the great Arkansas Canon, through which the river rushes down from the mountains.

All three of these Companies have their general offices in Boston. From what has been said it will be observed that the Arkansas Valley by July 1, 1876, will have railways extending its whole length, except about two hundred and thirty miles through the Indian Territory, and though the Indians are very much opposed to having a railway up the Valley, between Fort Smith and Wichita, it will doubtless be built within a year or two, because the products and wants of the country above and below render the building of this two hundred and twenty miles of railway a necessity. The State of Arkansas has not less than fifteen thousand square miles of the best pine lands in the United States, and more than twenty-five thousand square miles of excellent hard wood forests, including fine varieties of oak, walnut, hickory, maple, cypress, poplar, gum, etc., also very extensive coal fields of excellent quality.

While the vast plains country of Western Kansas, Eastern Colorado and Eastern New Mexico is almost destitute of timber, and no coal has yet been discovered in the valley in Kansas west of Osage City, yet the entire Arkansas Valley, between Wichita and Kinsley, Kansas, is the best farming and grazing country I have found on the Continent, because the soil is very rich, and both rain and sunshine are plenty: the winters are mild and short, and its altitude above the sea level secures a very bracing and healthful atmosphere; consequently, this portion of the valley is being settled and developed very rapidly, and must have the great surplus of timber and coal of the lower Arkansas.

Wheat in this portion of the Valley is believed to be an unfailing crop, as it has yielded from twenty to thirty bushels per acre every year since 1871.

There is good government lands within eight to twelve miles of Kinsley that may be pre-empted, homesteaded and timber-claimed; and the Railway Company's lands may be bought at from two to eight dollars per acre for cash or on long credit, within two or three miles of the town. The immigration to this region, with the great non-producing, mining and stock raising population of Colorado, which is in direct railroad communication with this Valley, insures a ready market and good prices for all the surplus farm, dairy, garden and orchard products of the Valley.

The United States Land Office is located about twenty miles east of Kinsley, and the Register informed me that 97,800 acres of government land had been entered at his office during the last three months. EXAMINER.

Floricultural.

THE PANAMA HAT PLANT.
(CARLUDOVICA PALMATA.)

THE Loudon Garden presents its readers with an engraving and an instructive account of this both useful and ornamental plant.

During the last twenty years it has acquired a vast importance as the source of the fiber used in the manufacture of the true Panama hat. A glance at the engraving will give an approximate idea of the beauty of the plant which is worthy to occupy a prominent position in all collections.

The Carludovica was introduced into Europe about the year 1808. It is a native of Bolivia, Peru, New Granada and Ecuador, and prefers damp sheltered positions in the deeply-wooded valleys of that part of South America. It is in general stemless, the leaf-stalks and flowers shooting directly from the roots. The leaves, which are mounted on a solid triangular petiole, are palmate and folded like a fan. As they increase in size, they split into three or more divisions. The leaf-disc varies in diameter from 16 to 30 inches and even more, the leaf-stalk being often six or seven feet in length. When carefully cultivated, the leaf is of a brilliant green. The flowers, although they do not constitute the chief beauty of the plant, are nevertheless singular in their way. They are monoecious, on the same spadix, the female flower being surrounded by four males. On reaching maturity, it breaks up, exposing the inside of the fruit as well as the axis round which it is placed. These parts are of a brilliant scarlet, which is rendered all the more intense by the strong contrast of the bright green surface of the spadix and of the leaves by which it is surrounded.

In Weddell's "Travels in North Bolivia," we find an account of the manufacture of Panama hats from the leaves. The Bolivians give the Carludovica the name of Jipagapa, a town in the Republic of Ecuador, which is the principal seat of the hat manufacture—"Panama," like "Mocha" in the case of coffee and "Brussels" in that of carpets, being a misnomer.

Before the leaf has begun to open—when, in fact, it resembles a closed fan—it is cut off close to the petiole, the base of which forms the center of the crown of the hat. It is then divided longitudinally into strips with the thumb nail, the thick part forming the mid-rib, being rejected. The number of shreds into which it is divided of course depends on the fineness of the hat into which they are to be manufactured.

The split leaf is next dipped into boiling water, then into tepid water acidulated with lemon juice, and lastly, it is allowed to soak in cold water for some time, and afterwards dried in the sun. Each hat is, or ought to be, made of a single leaf. The dampling and drying operations cause the shreds to assume a curled or cylindrical form which much increases their strength without injuring their pliancy. Before plaiting, the coarser qualities are damped with water, but the finest sorts are left out in the morning dew and worked on before sunrise. A hat of the finest quality, made out of a single leaf, will take several months to make it complete, and the plaiting will be so fine as hardly to be perceptible at a short distance.

The Carludovica Palmata is by no means difficult to cultivate and it is one of the most hardy species of the genus. It grows well in the damp heat of an Orchid-house where the temperature does not fall below 60°.

Like other Screw Pines—an order to which it belongs—a copious supply of moisture at the root is required all the year round, but more particularly when it is making its growth.

SUPERFLUOUS BOTANICAL TERMS.

Is not botany already sufficiently encumbered with technical terms?

Mr. SACHS says:—"According as the union takes place between (1) different varieties of one species—between (2) different species of one genus, or between (3) two species belonging to different genera—the resulting hybrid may be termed a variety-hybrid, species-hybrid, or genus-hybrid. When a hybrid is made to unite with one of its parent forms or with another parent form, or with a hybrid of different origin, the product is termed (4) a derivation-hybrid.

If we accept the above, there is no reason why we should not add many more. The hybrid united to one or another parent form or with another of different origin, is as well deserving of a substantive name as the union between any of those which he designates variety, species or genus-hybrids.

If we are ready to accept these practically worthless terms to express unions which, in a great majority of cases, there is doubt as to the actual parentage—to the exclusion of the old terms "hybrid" and "cross," which are well understood and which sufficiently express in a general way our ideas upon this subject—we might as well give up generic names and confer the honor of a specific title upon every shade of difference in plant fertilization.

Mr. S. would call a union between two species of different genera genus-hybrids. But why this when hybrid alone expresses it just as well? And why call the union between two varieties of the same species a variety-hybrid when the union is not a hybrid union and when the simple word *cross* with which we are all familiar expresses the relationship just as well?

We ask how many instances there are in which

CARLUDOVICA PALMATA.

it is positively known that seedlings have been produced from the union of species belonging to different genera? And in these well-authenticated instances (few or many) is it not a stronger evidence of an erroneous botanical classification than of the degree of relationship implied by belonging to different genera? Again we would ask how many instances are positively known in which such hybrids have been made to cross with parent forms; with other hybrid forms or with *any* other forms? Surely such rare instances may better be described by combining the old words, "cross" and "hybrid," properly so called, and to modify them with an adjective or so suited to the case. But scientific men—to their discredit be it said—seem to delight in conjuring up new and difficult words as if they were thus adding to the sum of information instead of muddling their books with a mass of nonsense to render thrice difficult that which is already too difficult; to confound the student and to discourage him from thorough study and investigation. Thus scientists check the progress of that which they seek to advance.

FLORICULTURAL NOTES.

Iris versicolor is now blooming in the meadows. If you stumbled upon it for the first time, it would be very likely to strike you as one of the oddest and most beautiful of flowers.

Gymnothrix latifolia.—GAMEWELL BROS. of Hackensack, N. J., left out a number of roots of this grass to determine whether they would stand the Winter or not. Last Winter was very mild, but not a root survived.

A Climbing Hydrangea.—In a late visit to the nurseries and home of Mr. S. B. PARSONS of Flushing, L. I.—to which we shall soon have occasion to refer more at length—our attention was directed to a climbing *Hydrangea* called *H. nova scandens.* It is a true climber sending out tendrils. Should its inflorescence prove like that of other Hydrangeas, it will prove a most striking vine trained over porches and the like. It was sent by Mr. HOGG from Japan.

Change of Color in Hydrangeas.—It would seem that it ought to be an easy thing to determine whether the rose-colored flowers of Hydrangeas may be changed to blue by iron, either naturally existing in the soil or artificially introduced. Some of the English horticultural journals are discussing this question and the experience of gardeners is given. As many, however, seem positively of one opinion as of the other.

We tried muriate of iron faithfully upon the hardy *Hydrangea paniculata grandiflora* without the slightest effect. Cannot some of the Rural floriculturists throw light upon this question?

Entomological.

HOW TO MAKE ENTOMOLOGISTS.

IT is well known that in agricultural districts too little attention is paid to a thorough knowledge of the structure, habits and transformations of insects. Not until the Potato Beetle had committed vast depredations could the country be aroused to a sense of its mischievous power.

In every garden and on every farm are numberless enemies to destroy the crops we have worked hard for and hoped to reap. Following their tracks are parasites that live on these same insects and help to save one's fruit or grain, flowers or root crops.

How shall we, who have so many cares, rid ourselves of the pests and encourage the useful scavengers? The question is one of importance, and my answer to those interested is: Engage the children in the matter and give them credit for any discovery they may make in their researches. In every family are surely some members who best know the use of their eyes and who have an inborn taste for natural history. Offer your children a prize for the best collection they may make during a summer, and you will be surprised to see the zest with which they will work.

There is nothing better than empty cigar boxes, a few small pieces of cork and a package of pins to make a boy's heart glad, if he is inclined to catch and classify the beautiful butterflies that flit in every sunny garden. An old broom handle and a yard of mosquito netting are all that is required for a net; and it is astonishing to see with what alacrity children will run, when once fairly interested, to get "Harris on Insects," to learn the name or destructive nature of each new captive.

An outbuilding would not be any the worse were a few well-known chrysalides to take up winter quarters therein. When the moth emerges from its prison, children look upon it as one of life's miracles and learn from the mystery a pleasant and instructive lesson. There is nothing that escapes their observation, if early taught to use their eyes in this way, and many things are saved that would be destroyed and unobserved in our busy days if we had no young entomologists.

ANNIE L. JACK.

BUTTERFLIES AND MOTHS OF KANSAS.

Catalogue of the Lepidoptera of Eastern Kansas. By Prof. F. H. Snow of the State University of Kansas.

THIS valuable list of the butterflies and moths of Kansas is certainly creditable to the State, as well as to the compiler and author. But we tender a word of caution to the learned Professor, and hope he will receive it in as kindly a spirit as it is given; it is: that he should be careful not to place too much confidence in the honesty as well as ability of certain lepidopterists who may lend him assistance. It is to be regretted, though nevertheless true, that we have among entomologists, as well as among those learned in other branches of natural history, men who are not over-scrupulous in advancing their own claims to superiority over their fellow-workers in the same field, and these men are very loth to give credit to those to whom credit is due. Of course we do not for a moment attribute any such motives to Professor SNOW in compiling the list before us, still some one who has assisted him in identifying the species has left the unmistakable "ear-marks" of jealousy of co-laborers in lepidopterology. For instance, *Catocala Levettei*, GROTE, is a synonym of *C. Judith*, STRECKER, instead of the reverse of this, as in the list. *Catocala adoptiva*, GROTE, is a synonym of *C. Delilah*, STRECKER, and should be restored to its proper position in future lists, as well as in cabinets. A reference to the works of Mr. STRECKER and to those of Mr. GROTE will settle such disputed points as to priority of names belonging to these and other species.

Farm Economy.

PARIS GREEN AND POTATO BEETLE.

OF all the poisons and destroyers used for checking the ravages of the Colorado potato beetle, none have proved to be more efficacious or cheaper than Paris green. Whether applied mixed with fifteen or twenty parts of flour, or plaster, or merely distributed over the leaves of the potatoes with water, it is certain death to the beetles or their larvæ. No matter how small a quantity the beetles consume, if the article is a good one, it will do its work quickly and surely. The fear which many potato growers have expressed in regard to injury to the tubers likely to follow the application of such a virulent poison to the foliage of the plants, is entirely unwarranted by not only what is known of the action of this mineral substance, under such conditions, but from the thousands of practical tests made in regions where it has been used the most extensively and during a number of years.

Under the circumstances we can scarcely give better advice than first to gather all the beetles found in the potato field early in spring, thereby lessening the chances for a large brood later in the season, but as more or less will escape besides numbers coming from adjacent localities, therefore as a second precautionary measure procure a quantity of pure Paris green and have it on hand ready for use at the first appearance of the larvæ or grubs on the leaves. We have received occasional statements from our subscribers, as to the failure of the Paris green to kill the grubs, or beetles, feeding on the leaves, which leads us to believe that a pure article was not obtained or the mode of application somewhat faulty. There is no doubt that much adulterated Paris green is sold, therefore those who are desirous of accomplishing a certain object such as, for instance, of poisoning potato beetles, should purchase a pure article and of reliable parties, even if they have to pay a few cents per pound more, than for an inferior and perhaps worthless compound. F. W. DEVOE & Co., whose card appears in our advertising columns are extensive manufacturers of Paris green and furnish to their customers a pure article. Prof. GEO. H. COOK, State Geologist of New Jersey, in writing of his experience with potato beetles and the best mode of destroying them, says:

"We shall plant our usual amount of potatoes this year—from four to six acres. To diminish as much as possible the expense of protecting them from the Colorado potato bug, we shall plant only early potatoes, or those that will grow and mature in the shortest possible time. The early rose potato, which was originated by Mr. BREESE of Vermont, eight or ten years ago, has the best reputation of any variety now in general use for earliness, quality and productiveness. We shall plant this kind, and I have no hesitation in recommending it for this year's crop.

"Paris green is conceded by almost everybody to be the most effective substance for destroying the Colorado potato bug. It is poisonous, of course, and if breathed or swallowed by men or animals, it may produce dangerous effects; but there is no evidence that it gets into or in any way effects the potatoes on which it has been used. And the most careful chemical analysis has failed to detect any of the poison in the potatoes grown in the ground where it has been used.

"Paris green may be mixed up in a large quantity (forty or fifty times its weight) of water and sprinkled on the vines where bugs are seen—and this method is liked by many.

"Two or three pounds, and some say one pound, of Paris green is enough for an acre. Two applications is all that is needed for the early rose potato. And the whole expense for material and labor should be less than $5 per acre.

"I hope you will not give up raising potatoes on account of the potato bug."

HARD ON THE SEEDMEN.—The Garden (Eng.) in answering the question, "What is Seed?" answers, "Something in a Bag," and then adds, "It is rarely more than this either to purchaser or salesman."

Pomological.

ABOUT PEARS.

There are but few persons who will not agree with us in placing the Pear among the very best and most valuable of all our cultivated plants. The luscious sweetness of a well-ripened Seckel or Bell Lucrative, and the sprightly flavor of a Bartlett or Louise Bonne de Jersey are not excelled by the best productions of the tropics. Although the residents of localities where the pear thrives cannot expect to see their orchards ever beautiful with luxuriant foliage, flowers and fruit, as those who cultivate the orange and lemon; still the harvest may be prolonged by an almost endless variety, and in the end a supply laid in to fill up the interim between seasons.

Much as there has been written upon the culture of the pear, the masses do not yet seem to know what they lose by not giving to this fruit more attention. A majority of those who own gardens and farms are content with two, or at most a half-dozen sorts of pears, and these, perhaps, planted alongside of a hedge, fence, or other out-of-the-way place, where they are left to take care of themselves; and this is the reason why so many persons have come to the conclusion that pears are rather uncertain and require more care and attention than most other kinds of our larger fruits, which is not true, except in a very limited sense.

HOSENSCHENK PEAR.

The pear, it is true, does not thrive quite as well in certain localities and soils as the apple, still it succeeds over a wider range of country. It is generally claimed that pears do best on a rather heavy, compact soil composed largely of clay, and this to a certain extent is true, but they also grow well in rich sandy soils, where the apple seldom succeeds. The thousands of old pear trees on the light soils of Long Island and New Jersey are living witnesses of this fact, and while the fruit may not be quite as large or as highly colored as in what are termed more favored localities, the trees are exempt from pear blight, so disastrous to pear orchards planted on clay or alluvial, poorly drained land. It may require more care and attention in the way of mulching, manuring and culture to raise pears on a light and rather poor soil than in a compact and rich one, but the loss from blight and other diseases in the latter will more than counterbalance the expense of the former, and hence the chances for success are about equal in both.

SELECTION OF VARIETIES.

The adaptation of varieties to different soils and localities is a subject which has engrossed the attention of our pomologists for many years, but to arrive at positive conclusions in regard to each and every one of the hundreds of popular sorts in cultivation will require the close observations of succeeding generations, as it has of the past and present. But this much has, however, been discovered, namely, that certain sorts succeed over a much wider range of country than others; hence those sorts have become correspondingly popular. Among the most noted of these we may mention the Bartlett, Duchesse d'Angouleme, Seckel, Beurre d'Anjou, Howell, Urbanist, and a few others which might also be named.

Doubtless there are among the several thousand varieties under cultivation a large number that will succeed over equally as wide an extent of country as the above; but merits of this kind are only to be discovered through long and varied experience. Then again, we have many valuable sorts, the success of which appears to be only local or extending over a certain period of time. The most noted example of the latter is shown in the history of the old Virgalieu, or White Doyenne of the French. This pear, which has been praised by the pomologists of France for the past two hundred years, succeeded admirably in the Eastern States for about half a century, and then commenced to decline, the fruit cracking and becoming worthless, while the trees still remained vigorous and healthy, and as no remedy could be discovered, its culture has been almost wholly abandoned in the very regions where only a few years since it was one of the most valued and popular in the list of choice sorts. But, like the "Star of Empire," its glory moves westward, and while the orchardists in the older States are compelled to abandon its culture, those of the new take it up and find the Virgalieu one of the best of pears.

The Louise Bonne de Jersey, Flemish Beauty, Beurre Diel, Bloodgood, Madeleine and Hosenschenk are some of the best known sorts which are sometimes excellent in one locality, or even garden, and very inferior in another near by. The Hosenschenk has been disseminated under the name of "Queen of August," and although not a popular sort among pear-culturists, still there are old trees of it growing in the suburbs of New York which yield their owners a good profit. It is a moderately-large variety, as shown in the accompanying outline. In color it is a yellow when ripe, with an occasional red cheek on specimens exposed to the sun.

If it were not for some of these older sorts, which are seldom named in select lists, it is to be feared that our markets would be but poorly supplied with pears, not because the better varieties cannot be successfully cultivated, but for the reason that their culture has not been sufficiently extended.

The Naturalist.

SPONGE FISHERIES OF FLORIDA.

The following interesting article lately appeared in the Jacksonville Daily Union:

It is not easy to realize that the sponge of the toilet is but the skeletons of an immense number of sponge animals, from which the life-blood and flesh have been squeezed. The belief that it was a vegetable product was dispelled alone by the microscope. They are of the lowest known organism, standing at the very bottom of the *Protozoa*. They, like many other marine plants and zoophytes, are always found attached to rocks, and consist of a framework, sometimes horney, but always elastic, filled with a glairy, gelatinous substance, which has a disagreeable, fish-like odor. Sometimes the living sponge is tinted with beautiful colors, from the presence of coloring matter in that they feed upon. Most of those found on the Florida coast have a pinkish cast, from which, when fished up, there oozes a liquid resembling blood. The surface of the living sponge is covered with minute pores, not permanent, but apparently formed for the occasion, through which they imbibe water and the organic particles for the support of life. These pores open in irregular succession, and never twice in the same spot; they remain open about one minute, and before they open and after closing there is no trace whatever of them. All those large orifices in the sponge of commerce are for the discharge of water taken in through the minute pores. The water passing out from the orifices carries not only waste animal matter, but, as the microscope shows, gemmules and ova, for reproduction.

Professor Huxley pushed his investigation of the sponge until he satisfied scientific men that there were true ova and sperm-cells imbedded in the substance of the sponge. There are but two or three kinds of sponge deemed of much usefulness, although there are numerous genera and species of them. The West India waters produce a beautiful variety, in which the siliceous matter becomes a fibrous network, as fine and transparent as spun-glass, as many of our readers have witnessed. Sponges are always found in the seas of warm climates, and grow at a depth generally of thirty to sixty feet, though they have been found over a thousand feet below the surface. The finest and best sponges come from the Levant. The Ottoman fisheries furnish employment to 600 boats, manned by 5,000 men, whose chief grounds are on the shores of Candia, Barbary and Syria. The Greeks take many in the waters surrounding their own isle. The fishermen of these two nations gather sponges valued at about half a million of dollars annually. Sponges from the West India islands and Florida are much larger than those found in the Mediterranean, but they are coarser and command a less price.

The value of the annual product of the West Indies is in the neighborhood of $100,000. In these fisheries, sponge is taken in a manner similar to that practiced on the Florida coast, which will be described further on. But in the Eastern waters the sponge is always obtained by diving. The diver takes in his hand a large stone, to which a rope from the boat is attached, and this serves to guide him directly to the spot he wishes to go. He tears the sponge from the rock, places them beneath his arm, and upon giving a signal with a cord, is hauled up by his companions. It is a dangerous business, many lives being annually lost in these fisheries. One person can go down but three or four times a day, and they are often pulled up completely exhausted, and occasionally quite dead.

A gentleman who has been down among the sponge fisheries of Florida, has discovered that the fishing grounds cover a wide extent of surface along the coast among the "keys" and adjacent islands. The principal grounds are Rock Island, a scope of land thirty miles long by seven miles broad, lying off Taylor County, and sixty miles northwest from Cedar Keys: then from the mouth of the Withlacooche, past Martin's reef to near Tampa bay, a distance of perhaps 300 miles. Sponge fishing on this coast is of much greater magnitude and importance than is generally supposed. The number of vessels engaged is between seventy-five and a hundred, with an average crew of from five to fifteen men to each, and an average of three "dinceys" to each vessel. Dincey is the small boat used to gather the sponge, and is usually managed by two men. There are about six hundred men daily engaged in gathering when the weather is fair. Quiet weather and calm sea is always taken advantage of. These "dinceys," when likely to be called into service, are towed in Indian file at the stern of the larger vessel. Each sponger is provided with a "sponge hook," made of iron with three prongs, a socket fitting on a pole one and a half inches thick and from eighteen to thirty-five feet long: also a "water-glass," a bucket with a pane of glass fitted in the bottom. This adds to the power of vision by excluding the light from behind, enabling the sponger to penetrate with the eye at least ten or fifteen feet deeper into the water. The "sculler" propels the boat along very slowly; in the meantime the sponger sits hanging over the side of the dincey with his head at the bucket held by the hand and his eye penetrating the depths below, taking in all that passes within his line of vision. As soon as he sees his legitimate prey, he raises his sponge hook with his right hand, in which he is assisted by the sculler, still keeping his eye at the glass, grapples the sponge, then puts aside the glass and hauls it in. Frequently his sight is darkened and view obstructed by the intervention of the monsters of the deep. A huge shark, a sawfish, or perhaps an enormous devil-fish—very often large schools of beautiful fish, "Spanish mackeral," "cavallie," "sailor's choice," "pompano," pass beneath him in such numbers as to seriously interfere with his occupation. Again, his sight is regaled with lovely coral formations, deep fissures and grottoes, gem-lined within. When a dincey-load is gathered, the sponge is taken to the vessel, where they are placed, roots down, eyes up, until they are dead.

This part of sponge fishing is the most disagreeable and causes the vessel to be almost unbearable, the sponge exhuming a bloody, slimy matter of most offensive odor. The vessel having secured a full cargo, puts for port, when the sponges are taken ashore and buried in the sand in a place technically called a "crawl." It is generally constructed of a paling of oak staves driven in the sand, and the lea of some island is selected as the spot. The sponges are left a week or so longer, when the slimy flesh, as it may be called, having rotted off, the sponge goes into the crawl with a "bruiser" (a small paddle); with a few strokes on the top of the sponge, clears it from the filth and skin, after which it is strung and ready for market. The sponge on the bar grows something like a bed of cabbages or mushrooms, and presents a beautiful appearance, very dark and seemingly having eyes. The sponge reefs in deep water are called "feather bars," from the feathery or fan-like appearance of the coral very often seen growing up through the sponge, and in such places the larger sponges are generally found. The different kinds of sponge found on this coast are known as "loggerhead," "sheep-wool," "turtle-grass" and "yellow." The sheep wool and yellow only are marketable. The latter is worth 25 cents per pound, sheep wool averaging $1 per pound. There are two sponge seasons proper, during the winter and summer months; should the water continue clear, however, it then lasts all through the year. The common practice is to gather sponge on shares, the vessel getting one third and the crew two thirds, the provision bill being assessed in the same ratio. The sponges gathered in Florida waters are taken from the fishermen at Key West, Cedar Keys and Apalachicola. The amount of money paid out per annum is as follows:—At Key West, $120,000; Cedar Keys, $65,000; Apalachicola, $55,000—a grand total of $240,000.

The Apiarian.

HOW TO MANAGE BEES—SWARMING.

Rev. Mr. Makin tells in the Bee World how to manage bees during the swarming season.

Much of success or failure depends upon the ability of the bee-keeper to control the swarming impulse. If increase of stocks is desired, by far the better plan, in my judgement, is to make artificial swarms. This may be done in several ways. If empty combs can be had, a very good plan is to take about four combs containing brood, and adhering bees, and put them in a hive on a new stand, giving them a queen, or a queen cell, and filling the hive with empty combs. Such a colony will build up very rapidly. The bees may be all taken from one hive, or from three or four, as the circumstance may dictate. Another way, and a very good one, is to take one comb of brood and bees from each of several hives, and thus fill the new hive. The bees that will hatch out will make the new stock very populous in a short time. Put empty frames, or frames containing combs, in the hives from which bees are taken. In this way a very large increase may be obtained, and the stocks all kept strong. Care should be taken not to allow queenless stocks to build comb, as they will usually build drone comb.

If we want to get the largest yield of surplus honey, we do not want our bees to swarm at all. We want to keep the stocks strong in numbers, so that they may avail themselves of the honey harvest. And there is no question of more importance than this:—How can the swarming impulse be restrained? In this, as in many other things, prevention is better than cure. Two things are necessary to prevent bees from swarming. The first is to give them room for breeding and the storing of honey. If they become crowded, and forage is plenty, they will be almost sure to swarm. The second thing necessary to prevent swarming is the proper shading and ventilation of the hive. The hive should be ventilated at the top, inside of the outer cap or covering. In hot weather two or three inch holes, covered with wire cloth will be sufficient. Bees will rarely want to swarm if they have sufficient room and the hive is not too hot. When the swarming impulse once takes possession of a stock, it is not very easy to control it.

Perhaps the best cure consists in the two points above named, and the removal of the old queen and of all queen cells but one.

It is said that bees will be satisfied if allowed to swarm, and they are put in a new place and their combs given to them, all queen cells being first removed. I have never tried it, and cannot, therefore, do more than to recommend it as an experiment worth trying. I have been successful, by destroying queen cells, and giving abundant ventilation.

I clip the wings of all the queens, to prevent their going to the woods. When the bees swarm, as they do sometimes, I take care of the queen until they begin to return, and then if I want to hive them I remove the old hive, and put an empty one on its place; and as the bees begin to enter, I put the queen with them, and let them hive themselves.

To hive a swarm when in an accessible place, is a very simple and easy operation, when one knows how to do it. Set the hive conveniently near, and with a dipper, or any other convenient vessel, dip the bees up, and pour them down at the entrance of the hive. This must be done very quietly and gently. One should never be in a hurry when handling bees. You will be likely to get the queen among the first bees removed from the cluster, as she is usally in the lower part of the swarm as they hang on the tree, or on whatever they have settled. If you get the queen into the hive, the bees will be sure to follow. As soon as the bees are all in, or even on the hive, it should be removed to where it is to remain, before any of the bees have marked the location and gone away to the fields. To prevent the swarm leaving the hive, give them plenty of shade and ventilation. In all my experience I have had but one swarm to abandon its home after being hived, and it had been left standing in full sunshine on a very hot day, I was away from home, or it would not have happened.

Domestic Economy.

DISH-WATER AND DISH-WASHING.

THERE are few women who have done their own house work that will fail to appreciate the following tirade on dish-washing which recently appeared in the Household:

These are the most discouraging elements of house work! I say this awful truth because I have proved it, you have proved it, your neighbors have proved it and the stranger within your gates has sighed because of the disheartening truth. Don't anybody attempt to contradict me; don't even shake your head. I know it, and it makes me cross to have anybody make the remotest intimation that my word or knowledge admits of a doubt.

The sweeping and the dusting is discouraging enough, but there is this consolation. It is not the same dirt which you swept before.

Washing is bad enough, but the dreadful monotony can be broken by high winds, broken lines, snow squalls and scrubbing. Ironing is hard enough, but the clothes are sometimes too dry, sometimes too wet, irons too hot or irons too cold.

Cooking is awfully tame, but it is not the same flour, the same sugar, the same eggs, the same soda, the same salt, and so on to the end of the endless variety of ingredients needed. There is, too, a sort of wicked solace in the thought that while you labor to use all these articles, it creates a necessity for labor to supply the new demands. Every loaf of bread and cake, pie, every pudding, every soup, every fry is not the same dead awful same.

But those dreadful dishes! you carry them to the table and put them grimly in the old set places at morn; you take them off after breakfast and set them down, poor, white, inanimate unthinking, clayey clods by the dish-pan. You rinse them in water that looks like the liquid in which you rinsed them last.

You put them one after another in the same dish-pan, you scald the same knuckles day after day, you dip them in the same dripping pan, you wipe them with a dish towel that looks like the other five, you set the mute things in the same places on the pantry shelves, you wash the same villainous looking griddles, spiders, kettles and pans, you scrape and pumice the same "catch on places," you wash the dish cloths in the same way that your mother, grandmother and great-great-great-grandmother did, hang them on the same old nails or bushes your childhood knew, wash the dish-pan inside and out in the same old wearing way, and are done in time to put them on the same old speechless places on the dinner table.

You are fortunately or unfortunately, given strength enough to play your part in the same miserable drama again, rinsing, washing, scalding, scouring, and are in time to take the miserable hackneyed porcelain back for tea, and then there they will sit on the kitchen table by the side of the almost immortal dish-pan, staring at you unblinkingly with the same white, unthinking soulless eyes.

You rinse, scald, wash and scour again, and put the dead pictures of discouragement on the same shelves and the next morning there they sit, winking, winking, stupidly and harmlessly, staring, staring, mutely and appealingly, the same white plates, cups, saucers and bowls and away you go, ferrying them over to the breakfast table; and so on and on to the end of the century, if you are unkindly spared so long.

Hence, I repeat: Dish-water and dish-washing are the most discouraging elements of house work.

There's the occasional recreation of breaking a plate, a valuable tureen, or glass, but there comes another to its funeral; it finds its place on the same pantry shelves and tables, and is prepared to stare as relentlessly as its predecessors.

There is no change, no respite. Your folks will never learn to eat from unwashen plates and so the stolid ferrying, the grave placing, the wearying rinsing, the unending washing, the aggravating scalding, the voiceless wiping, the unblinking gazing, the inanimate grouping, the changeless bush and the ever-youthful pan will live on and on from decade to century and no machine will ever come to a successful rescue, and dish-water and dish-washing must continue to discourage, dishearten, weary and aggravate girls and women who cannot learn to be content with monotony and labor which is dead compulsion—no more.

ORIGINAL RECIPES.

A Dye for Grasses Wanted.—Will some one of the lady readers give a recipe for coloring dried oats, and grasses scarlet, and oblige—M. A. H.

Chocolate Cake Recipe Wanted.—Will some one of the lady readers of your valuable paper, give through its columns a recipe for chocolate cake. —J. C.

Sweetened Rice.—One quart of milk and one small teacup of rice, boil until the rice is very soft, add the beaten yelks of two eggs, half a teaspoonful of salt, one and a-half teacups of sugar and flavoring to suit the taste. After stirring all together, turn into molds. Serve ice cold with cream. This is a cheap and delicious dessert. To obviate constant watching, and danger of burning, I put the mixture in a tin pail and set it into a kettle of boiling water renewing the water as it evaporates.—MRS. RUSTIC.

SELECTED RECIPES.

A Correction—Strawberry Short Cake.—EDS. RURAL: In my recipe for Strawberry Short Cake, I see the printers have made a great mistake, instead of a "tablespoonful" of baking powder it should have been one teaspoonful.—MRS. RUSTIC.

Breakfast Muffins.—Two eggs, well beaten with one cup of sugar and a lump of butter the size of an egg: to this, add one pint of sweet milk, with two teaspoonfuls of yeast powder worked thoroughly through one quart of flour; bake in muffin rings on top of the range or in gem pans in a quick oven.

Orange Custard.—The juice of six oranges, strained and sweetened with loaf sugar; stir over a slow fire till the sugar is dissolved, take off the scum; when nearly cold add the yelks of six eggs, well beaten and a pint of cream or milk. Return to the fire and stir till it thickens, pour into glasses and serve when cold.

A Quick Pudding.—Pour a pint of boiling milk on ten tablespoonfuls of grated bread crumbs, let them stand ten minutes; then add the yelks of four eggs well beaten, six tablespoonfuls of sugar, and two of butter, season with lemon extract. Stir well, add the whites of the eggs previously beaten to a stiff froth; pour into a buttered pudding dish and bake quickly. To be eaten with wine sauce, or cream and sugar.

Hygienic Information.

HOW TO GET RID OF A COLD.

FEW unimportant maladies are more disagreeable than a cold in the head, and how to get rid of it is a problem not always easy of practical solution. Some people resort to "sudorifics and lying in bed," others to large and frequent doses of quinine, and others to persistent and resolute dippings of their heads in cold water—the colder the better. But Dr. Ferrier, in a recent number of the Lancet, recommends a novel cure, which he has tried with excellent effect in three cases—his own and those of two other persons. The local symptoms of cold in the head—namely, watery eyes, running nose, sneezing and nasal speech—are, as Dr. Ferrier says, the chief source of annoyance and discomfort. Local treatment, therefore, seems to him to be the most rational. In the catarrh of alcoholism and in more chronic forms of gastric catarrh bismuth alone or in combination with morphia acts almost like a specific. Dr. Ferrier came to the conclusion that in nasal catarrh—*i. e.* cold in the head—the same drug by itself or with others would prove efficacious. On a certain evening recently, Dr. Ferrier says, "I began to suffer with the symptoms of cold in the head—irritation of the nostrils, sneezing, watering of the eyes, and commencing flow of the mucous secretion. Having some trisnitrate of bismuth at hand, I took repeated pinches of it in the form of snuff, inhaling it strongly so as to carry it well into the interior of the nostrils. In a short time the tickling in the nostrils and sneezing ceased, and next morning all traces of coryza had completely disappeared." Dr. Ferrier adds:—"The formula which I find on the whole the most suitable combination of the ingredients of the snuff is as follows:—Hydrochlorate of morphia, two grains; acacia powder, two drachms; trisnitrate of bismuth, six drachms. As this is neither an errhine nor a sternutatory, but rather the opposite, it may be termed an anti-errhine or anti-sternutatory powder. Of this powder one-quarter to one-half may be taken as snuff in the course of the twenty-four hours. The inhalations ought to be commenced as soon as the symptoms of coryza begin to show themselves, and should be used frequently at first, so as to keep the interior of the nostrils constantly well coated. Each time the nostrils are cleared another pinch should be taken. It may be taken in the ordinary manner from between the thumb and forefinger, but a much more efficacious and less wasteful method is to use a small gutter of paper, or a 'snuff spoon,' placing it just within the nostril and sniffing up forcibly so as to carry it well within. Some of the snuff usually finds its way into the pharynx, and acts as a good topical application if there should be also pharyngeal catarrh. The powder causes scarcely any perceptible sensation. A slight smarting may occur if the mucous membrane is much irritated and inflamed, but it rapidly disappears. After a few sniffs of the powder a perceptible amelioration of the symptoms ensues, and in the course of a few hours, the powder being inhaled from time to time, all the symptoms have entirely disappeared." This is worth knowing and remembering in the present season of hot sun and cold winds.

HEAT AND COLD IN THEIR RELATIONS TO SLEEPLESSNESS.

COLD is often a cause of insomnia. If insufficiently clad, so that the cutaneous vessels are not relaxed, sleep is rarely sound, when attained at all. It is only when stupefaction from the cold occurs that the dangerous coma-sleep comes on, which is often fatal. With many persons sleep is unfavorable if the bed be not warmed previous to their entering it. In these cases the arteriole contraction induced by the contact with the cold bedclothes does not pass readily into the opposite of relaxation, and so sleep does not come on. This state of affairs is very commonly met with among the aged, and most so in those who suffer from some form of heart disease. In such cases it is not only desirable to warm the bed and the nightclothes, but even to administer some hot fluid, all the better for containing alcohol, when the patient has got into bed, if any sense of chilliness remains. In the young and healthy the chill of getting into bed, however, is often of great service in inducing a subsequent relaxation of the cutaneous vessels, and thus conducing to more perfect cerebral anæmia and sounder sleep. Few persons will have failed to note the deep and usually refreshing sleep which follows any disturbance during the night which has exposed them briefly to cold. At other times an increase of the body-temperature is the cause of disturbed sleep sometimes amounting to sleeplessness. This is most frequently seen in febrile states, where a delirious condition takes the place of natural sleep. After the temperature has been brought down by the application of cold a fever patient will commonly fall into a refreshing sleep until a return to a fever temperature disturbs it. In slighter conditions of restlessness, associated with too great a body temperature, the dissipation of a certain amount of superfluous heat by getting out of bed and drinking a draught of cold water will usually be followed by sound sleep. At other times, throwing off some of the bedclothes will achieve the same end; though, if the amount removed be too great, wakefulness may follow from a low temperature being brought about. With some persons, if the rest is disturbed, it is sufficient to protrude an arm or a leg from under the bedclothes so as to secure more loss of heat, and sound sleep will follow

TALKING AT TABLE.

EVERY one who is at all sociable in their disposition will appreciate the following from the Journal of Health:

This is one of the very best digesters; there is no tonic known equal to it, as it is of the kind calculated to promote hilarity and good feeling generally. Most parents are prone to prohibit their children from laughing and talking at the table; it is unphysiological; it is a cruelty.

Joyousness promotes the circulation of the blood, enlivens it, invigorates it, sends it tingling to the remotest part of the system, carrying with it animation, vigor and life. The louder the little ones laugh the better: the faster they talk the better, for then they eat less in a given time, consequently chew their food more thoroughly.

Discard controversy from the dining table. Discourage all subjects which invite political or religious rancor. Let every topic introduced be calculated to instruct, to interest, or amuse. Do not let the mind run on business or previous mishaps, or past disappointments. Never tell bad news at the table, nor for an hour before. Let everything you have to communicate be, if possible, of a gladsome, joyous, hilarious character, calculated to bring out pleasant remarks or agreeable associations. On the other hand, never administer reproof at the social board to either servant or child; find fault at nothing; speak unkindly to no one. If remarks are made of the absent, let them contain some word of commendation which if repeated in their hearing afterwards, will kindle kindly feelings, and thus will thoughts of the table come across the memory in after years, when we have been scattered and some laid in their final resting-place, bring with them a sweetness of emotion which makes it a pleasure to dwell upon them.

HYGIENIC NOTES.

A Call for More Light.—A lady correspondent who signs herself "A Subscriber," would like to read more from the pen of "Hattie Hopeful" in regard to hygienic matters generally, to which we are also agreeable.

Fever and Ague.—We have heard from several persons all living in the same district—one in which fever and ague prevails—that nutmegs, from three to six, according to the age of the individual strung about the neck so as to rest upon the stomach, are used as an effective protection against this insidious, vile disease.

Scientific and Useful.

A USE FOR LOCUSTS.

PROF. RILEY assures us that the Western Grasshoppers, or Locusts, do not make a bad dish when properly cooked. But it is difficult to make our people try these insects in a culinary way, probably owing to the want of a proper education in that direction. A French physician, however, has found a new use for the Eastern Locust, which may yet create a demand for those of our own country; if so, the "Hatefuls," as the lamented WALSH used to call them, may prove a source of revenue to the Border States. The inventor of this new way of disposing of locusts is Dr. MORVAN of Dourriez, Finisterre, and it consists in preparing them in different ways as bait for fish. He also says that in America, where swarms of grasshoppers often do serious mischief, devastating large tracts of country, traps have been devised for catching these insects; but, except in a few instances, where they have been used for manure, they have not been made to serve any useful purpose. Dr. MORVAN dries the locusts in the sun, presses them into barrels, and subsequently smashes them into a paste, which is made into small balls and thrown into the sea during fishing operations. Another way is to boil the locusts before making them into a paste. This bait is of an oily nature, and is said to be eagerly devoured by the sardine or pilchard. Large quantities of cod's roe are used on the coasts of Brittany in the prosecution of this fishery; but the increasing high price of this bait has lately been a serious addition to the expenses of the fishermen, who have most eagerly availed themselves of the novel substitute. Bait is not generally used in the English pilchard or sardine fisheries, different modes of fishing being adopted by those employed in France, but in those instances where cod's roe has been tried it has been found to attract large numbers of fish. The increased demand for pilchards which the operations of the Cornish Sardine Company of Falmouth are likely to create, for the purpose of preserving fish in oil, in the manner which has found so much favor, will probably lead to the more extended use of bait, and locusts or grasshoppers will no doubt come into requisition in Cornwall, as well as in France. The experiments of Dr. MORVAN were considered so important by the French Government that 100 barrels of locusts were supplied by the Governor-General of Algeria and transported to Brittany to be tried on a larger scale at the cost of the State. The results were so satisfactory that during the ensuing fishing season the locust bait is expected to be largely used.

PEANUT OIL.

THE rapid extension of the cultivation of peanuts in North Carolina, Virginia, Tennessee, Georgia and South Carolina is due to the use now made of them for the oil they contain. According to official agricultural reports, previous to the year 1860 the whole crop aggregated only 150,000 bushels per annum, grown principally in North Carolina; last season's product reached 2,000,000 bushels, valued at $3,000,000. In a commercial point of view the oil is much more important than the nuts themselves. This oil is in large demand, and answers for many purposes as a substitute for olive and almond oils; it keeps a long time without becoming rancid. The amount of oil contained in the nut varies according to latitude and other favorable conditions and circumstances, and is proportionately large.

DAVY'S DEFINITION OF CHEMISTRY.

SIR HUMPHRY DAVY, in his posthumous work, "Consolations in Travel, or the Last Days of a Philosopher," says:—"There is nothing more difficult than a good definition of chemistry, for it is scarcely possible to express in a few words the abstracted view of an infinite variety of facts. I will give you a definition which will have the merit of novelty, and which is probably general in its application: 'Chemistry relates to those operations by which the intimate nature of bodies is changed, or by which they acquire new properties.' This definition will apply not only to the effects of mixture, but to the phenomena of electricity, and, in short, to all changes which do not merely depend upon the motion or division of masses of matter."

HYGROSCOPIC PAPER.

THE Journal of the Franklin Institutes gives a mode of preparing a useful hygroscopic paper, by PERCY SMITH. A bibulous paper is impregnated with a concentrated solution of chloride of cobalt. It is very sensitive to atmospheric variations, being blue in a dry atmosphere, changing to red when the air becomes humid. Four observations a day, made for a year, with every precaution, prove that this paper may be employed to indicate readily and precisely the hygrometric state of the air.

EXTREMES MEET.

THE zenith of popularity among the enlightened people of this world is a dangerous moment for the thing popularized. It would seem that we waste a deal of time and wealth in erecting structures for the fun of kicking out the foundation and seeing them tumble in ruins upon the ground. We are a sort of Leyden-jar which we delight in charging beyond its capacity until it is self-discharged and all is lost. In medicine one school for the time is omnipotent—all others are worthless. In politics, there is never a middle course. The extremes of perfection and corruption alone satisfy the partisan in his appreciation of his own—in his depreciation of his opponent's party. In agrienlture a new and promising theory is lauded to the skies and becomes in a twinkling a contagion that spreads like wildfire. Really valuable, possibly, as a specific, it is paraded as a universality, and failing in this, is cast into darkness among a multitude of sympathizing relatives, there to remain until a more or less distant future shall bring it again to light—shall cut off the extremes and join together and utilize a happy medium. Thus science and progress are thumped about from pillar to post—now submerged and gasping for breath—now grasping at a straw—now tossed mountain high, but reaching a calm, unruffled surface at last. We talk of progress, we believe in progress—we strut and congratulate ourselves in the arrogance of our progress, and then we compare to-day with a hundred years ago (Ah! mark the incredible changes) and proudly march on. But our march of progress is ofttimes just a little curved—so little as to escape the detection of our high heads that can not bend for trifles, until, having reached what in the rosy distance we conclude to be the pinnacle, is found upon a closer scrutiny to be something that wears a suspiciously familiar look—indeed, an old friend, our starting point. Our progress has been marching in a circle and extremes have met.

We are reminded forcibly of the extremes to which people blindly rush while reading in current literature of our horticultural progress. The art of pruning has been elevated to an art by slow, mature and thoughtful steps. Hundreds of books have been written recording the experience of pomologists and detailing the facts that diligent study and practice have from time to time revealed, until, from their unanimity, we were ready to conclude that the bottom facts were reached and that we had but to practice the accepted rules to secure for our fruit trees health, symmetry and fruitfulness, in so far as those conditions—such as climate and soil—which could not be controlled, would permit. But we must wait yet awhile. Mr. SHIRLEY HIBBERD, an English horticultural star of a formidable magnitude, utters a dissenting note. He would plant fruit trees and leave them to themselves! He sees more beauty in the ugliest tree if developed according to its nature, than in the shapeliest tree that owes its shapeliness to the pruning-knife. No less he deems that the greatest vigor, longevity and fruitfulness are thus secured! This heretical note, so at swords' points with the best thoughts of our best pomological thinkers—ought it to have been heard outside the hall in which it was uttered? It would seem not—but as if OTHELLO'S occupation were threatened—it was reverberated from every mountain and mole-hill; it was copied by almost every paper in the land and the most orthodox of the ancient and honorable Brotherhood of Pruners hastened to point out the utter senselessness of Mr. HIBBERD'S views—just as if a theory so utterly senseless *needed any* invalidation. Can it be possible that the pruning-knife-Leyden-jar is about to discharge itself? Can it be possible that our pruning science has been marching in a circular path—so insidiously circular that we knew it not—that has at length led us within sight of our ancient starting point?

Many of our readers have read of the bitter opposition which allopathic practitioners made to HAHNEMANN'S homeopathic announcements and the fight was unrelenting for many years. Now, however, a disposition is shown to blend, in a measure, the two schools; to accept the good of either—to cast out the extremes of both. This, may be, will prove the result of Mr. HIBBERD'S heretical note, as between the prunists and non-prunists. And it is to be hoped that both extremes will join hands and march on in the one straight, middle road of true progress.

WHAT'S THE USE OF IT?

ONCE upon a time we had a very excellent neighbor whose ever-ready answer to regrets that his children should be sent to school was, "What's the good of it? Haven't I got as big a farm and as much money as any of you and all without any school learning?" But we are pleased to add that some of his children thought differently and one son became an eminent and honored member of a learned profession. There is, however, a lingering remnant of this feeling of antagonism to a thorough or even moderately good education among certain classes of our people. It is difficult to make some farmers see that a knowledge of chemistry, geology, botany, or any of the kindred sciences can be of any possible benefit to their sons who contemplate pursuing agrieulture as a profession.

The perceptive faculties, which are the first to be called into play and manifest themselves in every action of the child, are frequently and by slow degrees suppressed, until the mind's natural and strongest function, which would lead it to perceive, seek after and grasp a knowledge of things in general brought within view, withdraws as it were from the contest, accepting only that which is thrust upon its attention. The girls or boys who may show a disposition to know something of the natural history of the stone, shells, plants or perhaps Indian relics plowed up on their father's farm, often find the channels for investigation closed to them; and if they seek a knowledge of these things parents and associates set them down as rather "queer," if not half demented. Should they persevere in their investigations, the first dawn of enthusiasm is checked with the silly and to them unanswerable question, "What's the good of it?"

What is the use of a farmer knowing anything of the different kinds of grasses or the adaptation of the various species to different soils and climates, except as he learns it by long and costly experience? Does it not make some difference to him whether he knows that certain species of plants are better adapted to cultivation on limestone soils than upon granitic or decomposed old red sandstone? or shall he go through life calling the different species of clover grasses, which is often done, when it would be just as easy to know that they are not in the remotest degree related to the true *graminea* but are true *leguminosæ* and closely allied to the common garden peas and beans?

But what is the use of any knowledge for the pleasure and profit to be gained therewith? As there is no one thing more wonderful in nature than another—the blade of grass being equally as much above and beyond the comprehension of the human mind as the star millions of miles distant—why should there exist such a prejudice as is often manifested against spending time in seeking a knowledge of those things which play so important a part in contributing to the welfare and happiness of the human race? There are, it is true, some things which are of more importance to man than others, even among his own immediate surroundings; but he can scarcely find one object in the whole range of natural history from a grain of sand to a mountain range stretching across a continent, which is not worthy of his attention and from the study of which more or less good will not come. Continents are made up of mere atoms of matter, while wisdom is but the accumulation of particles of truth gathered from the great, ever-varying and inexhaustible field of nature.

THE SICK MAN'S INFLUENCE UPON AMERICAN GRAIN.

"WARS and rumors of wars" are things which interest everyone because they directly or remotely affect all. Just now the Great Powers of Europe are placed in such positions relatively to each other, that few would be surprised should the Cable flash through the waters the news of the beginning of hostilities. We think it would be difficult for these Great Powers, now alternately glaring and smiling at each other, to tell just exactly how and between whom the contest would be, should it occur; but one thing they all know and we ourselves cannot fail to see. The poor unfortunate Sick Man of the East will not be the "innocent cause" of but the "guilty excuse" for it all. Turkey's days as a nation seem to be numbered and if this could be accomplished without war and its attendant horrors, we are not prepared to say that the result would be undesirable on the score of civilization and progress. But war or no war, the price of breadstuffs has advanced and will advance and there is our gain as well as the proof of the old adage that "it is an ill wind" &c. The rumors are sufficient in themselves to induce the purchasers to hoard grain which in turn necessarily produces that demand upon which a solidly rising market is absolutely dependent. This state of things cannot be ephemeral. It must last long enough to enable the producers of this country to reach the market at a good price. Don't keep your grain to catch the top of the market; but by all means don't hurry to part with it at a disadvantage.

RURAL NOTES AND QUERIES.

Minnesota Butter.—The Farmers' Union has been telling its readers some wholesome truths about the quality of Minnesota butter. There are no good reasons why butter and cheese made in the North-western States should not command as good prices as that made in the North-eastern and if it does not it is because there is something lacking in quality. When Minnesota and the farmers of other Western States learn how to turn their surplus grass and grain into first-class butter and cheese and other similar condensed products, we shall hear less complaint about high rates of freight, extortionate middlemen and hard times. Western farmers have a great advantage over their brethren of the East, even with distance to market against them; the only thing lacking is skill in turning out a first-class article and the truth of this is shown as our contemporary adds, that while Minnesota butter will not average 14c. per pound, St. Albans (Vt.) averages 35c.

The British Grain Trade.—The following dispatch to the N. Y. Herald has a strong bearing upon the grain question:—"London, June 9.—A leading grain circular says that wheat has been rather dearer in a few country markets but is generally unchanged, with an almost uniform inactivity in consequence of the Whitsuntide holidays. In our immediate district the demand for consumption is increasing and the drain would speedily make considerable impression on our warehouses but that the arrivals about equal the consumption. A number of cargoes have been taken off the coast for the continent. There was a good attendance of local and country millers at this market to-day, who purchased both red and white wheats to a considerable extent at Tuesday's extreme rates but little, if any, has been taken on speculation. Flour was steady with little doing. Corn was in fair request and quotations fully maintained."

Take a Look at the Wild Fruits.—While the various wild fruits are in season every one having the opportunity should be on the look out for choice varieties. As the greater part of all our blackberries, red and black raspberries, were found growing wild, there are good reasons for believing that others equally as good, if not better, can be discovered by a careful search through the native habitats of the plants. We would like to record the discovery of new and superior varieties of the different small fruits this summer, also choice sorts of wild plums, persimmons, crab apples, as well as chestnuts, hickory, hazel and similar nuts.

Hard Work for Boys.—There are parents, mothers especially, who are always afraid that the boys are being overworked. There is, however, little danger of this in a country like our own, where the boys partake largely of the spirit of freedom which pervades all classes from childhood to old age. Besides this, we find that the boys who worked hardest in youth not only learned to save, but reached the highest positions in society and are even more likely to live to a good old age. Hard work injures no one unless carried to great extremes.

RURAL BREVITIES.

MR. FOWLER (W. J.) writes us from Pittsford that they are having plenty of potato beetles, but are ahead of them and intend to keep ahead. The FOWLER family always have been a "leetle" ahead and we are glad to see that they intend to keep there.

DAIRYMEN should carefully read the official regulations for the Dairy Exhibition at the Centennial, on another page of this issue. Great care seems to have been taken by the managers to make it a success and it is to be hoped that the display will be in every way creditable to this growing dairy country.

THERE will be a grand field trial of harvesting machines June 27th under the auspices of the Indiana Agricultural College near Lafayette, Ind. No limit is set for the time in which the test shall be completed. The awards range from $100 to $50. The highest to be given to the best combined mower and reaper.

CHERRIES cooked with the stones in bid fair to become a thing of the past since GOODELL & Co. have placed upon the market their "Family Cherry Stoner," a neat and effective little piece of mechanism which should be in every house. The GOODELL Co. can be addressed at Antrim, N. H., or 83 Reade St., New York.

THOSE who contemplate purchasing milling property or farms would do well to put themselves in communication with GEO. E. POMEROY & SON of Toledo, Ohio, who advertise in this issue quite a selection for sale. Information on the subject would be like the old lady's pills—it would do no harm if it did no good.

S. B. JEROME & Co. of New Haven, Conn., advertise in another column small clocks for from $2 to $3.50 each. How they can manufacture good ones at that price is a mystery; but they have been well indorsed by many who have tried them and who assure S. B. J. & Co. that they are in every way equal to more expensive clocks.

Now that small fruits are abundant and likely to increase rapidly on the face of the earth it becomes a leading question, as to what kind of basket to put them in. We shall not attempt to answer this conundrum, but that sturdy gardener Mr. R. H. HAINES, Malden-on-the-Hudson, N. Y., has ideas on the subject, and what is more to the purpose he makes a basket that looks as if it must be nearly perfection. Inquiries are sure to receive a prompt and courteous reply.

BUSINESS NOTICES.

PAINT your house with the best. Every keg "Phœnix Pure White Lead" warranted fine, white, good body, and the most durable paint.

"BUSINESS" IN MISSISSIPPI.

Why, howd'y, Mahs'r Johnny! Is you gone to keepin store?
Well, sah, I is surprised! I neber heard ob dat afore.
Say, ain't you gwine to gib me piece o' good tobacco, please?
I's 'long wid you in Georgia, time we all was refugees.

I know'd you would; I alluz tell de people, white an' black,
Dat you's a raal gen'l'man, and dat's de libin' fac'—
Yes, sah, dat's what I tells 'em, an' it's nuffin' else but true,
An' all de cullud people t'inks a mighty heap ob you.

Look heah, sah; don't you want to buy some cotton? Yes, you do;
Dere's oder parties wants it, but I'd rader sell to you.
How much? Oh, jes' a bale—dat on de wagon in de street—
Dis heah's de sample—dis is cotton mighty hard to beat!

You'll fin' it on de paper what de offers is dat's made;
Dey's all de same sedtions: half in cash an' half in trade—
Dey's mighty low, sah—Come, now, can't you 'prove upon de rates
Dat Barrot Brudders offers: only twelb an' seben-eight's?

Lord; Mahs'r Jonnny, raise it! Don't you knows dat I's a frien',
An' when I has de money I is willin' for to spen'?
My custom's wuf a heap, sah; jes' you buy de bale an' see—
Dere didn't nebber nobody lose nuffin' off o' me.

Now, what's de good ob gwine dar an' a-zaminin' de bale?
When people trades wid *me*, dey alluz gits a hones' sale;
I ain't no han' for cheatin': I belicbes in actin' fa'r,
An' ebery body 'll tell you dat dey alluz foun' me squar'

I isn't like some niggers; I declar' it is a shame
De way some ob 'em swin'les—what? de cotton ain't de same
As dis dat's in the sample? Well, I'm blest, sah, if it *is!*
Dis head mus' be my brudder's sample—yes, sah, dis is his.

If dat don't beat creation! Heah I've done been totin' roun'
A sample dif'rent from de cotton! I—will—be—conform'!
Mahs' Johnny, you mus' 'scuse me. Take de cotton as it stan's,
An' tell me if you're willin' for to take it off my han's.

Sho! neber min' de auger! 'tain't a bit o use to bore,
De bale is all the same as dis heah place de baggin's tore;
You oughtn't to go pullin' out de cotton dat a way,
It spiles de beauty ob de—what, sah! rocks in da, you say?

Rocks in dat 'ar cotton? How de debbil *kin* dat be?
I packed dat bale myse'f—hol' on a minnit, 'le' me see—
My stars! I mus' be crazy! Mahs'r Johnny, dis *is* fine!
I's gone an' hauled my *brudder's* cotton in instead ob mine! [*Irwin Russell.*

The Story-Teller.

MABEL MOORE'S STRATAGEM.

It was almost like a bit of Persian poetry, that little conservatory at Bayswater, in its glow and fragrance and soft, delicious murmur of leaves. And Mabel Moore herself looked not unlike a Persian enchantress as she stood there leaning one hand on a marble vase, with the gold of the acacia plumes hardly brighter than her hair and a quiver in the heavy white lids that hid her deep-blue eyes. She was tall and finely formed, with very regular features, cheeks tinged with a faint color and an unconscious *hauteur* in the poise of her slender throat and shoulders. Mabel Moore was born to be an heiress and very gracefully she fulfilled the mission of her sunshiny life.

She was not alone, however, in the flowery fragrance of the twilight conservatory. Ernest Beckford was leaning against the door-post, twisting and untwisting a long spray of jessamine with a sort of impatient rapidity. He was a tall, manly fellow, with bright auburn hair and a face that you were involuntarily compelled to respect and like.

"Mabel," he said, almost passionately, "do you know that you are asking impossibilities?"

"Am I?"

"I cannot go to Australia without you."

"You can, Ernest, and you will."

"But, my darling, only think of it—a year's exile from you."

"Will it be any easier for me to endure, Ernest?" she asked, calmly.

"Sometimes I fancy, Mabel," he resumed impetuously, "that you don't care for me, else you would never be so willing to let me go."

"Ernest!"

"My dearest, I know I am unjust; but——"

"Now," said Mabel, "let me understand just what you wish me to do in this matter."

"I want you to marry me the day after to-morrow and go out to Australia with me in the ship that sails on Saturday."

"A very reasonable wish," said Mabel, laughing. "But, Ernest, you know I will never marry you while your mother refuses her sanction and approbation to the match."

"She does not know you, Mabel."

"That makes no difference. I shall never enter a family where I am not welcomed by every one of its members."

"But just consider how unreasonable you are, my own darling, and how entirely groundless are my mother's objections."

"She fancies me a hollow, heartless woman of the world, does she not? She is unwilling to trust her son's happiness in the keeping of a coquette, who knows nothing beyond Italian songs and French waltzes."

"Mabel, I am sorry I ever allowed you to read that unreasonable letter."

"But I am glad. No, Ernest, I have too much pride and dignity to marry you unless your mother gives her free and full consent."

"Then you do not love me, Mabel."

"I *do* love you, Ernest Beckford, better than I like to acknowledge to myself."

"Mabel," he urged tenderly, "let us cut this Gordian knot by the exercise of our own free will. Become my wife; give me the right to take you with me on the long, long journey."

Mabel Moore shook her head.

"Let us wait and see what time may bring forth," she said, archly. "And now leave me; remember that the ship sails on Saturday."

"I can't possibly go in that vessel," said Ernest; "I've many things to do."

"But if you do not go on Saturday you will be obliged to wait another fortnight and your business is so important over there——"

"Yes, I know, but——"

"Well?"

"I must get that companion for my mother—she will be entirely alone. Mrs. Carter told me she knew some one who would take the situation and I shall have to go over to Clapham to see her about it to-morrow."

"Don't let that detain you, Ernest. I think I know of a young lady who would make an excellent companion and I will send her to Beckfordville."

"Can she read aloud and has she patience and forbearance and will she be as meek as Moses?"

"I am sure she will try."

"Send her then. But, Mabel——"

"Well?"

"It strikes me you are anxious to hurry me off next Saturday."

"Ernest," she said, in a voice that quivered a little, in spite of all her self-control, "you are misjudging me. I want you to do your duty—to go and attend to the affairs of your poor uncle, whose reason has deserted him. And more than this, I want you to learn life's lesson of patience and endurance. The sunshine will come at last, if you can only wait unrepiningly."

"Little prophetess," said Ernest, drawing her fondly towards him, "I accept your auguries and I'll bear up as manfully as human nature will allow. No one ought to be discouraged who is sure of *your* love. But oh, my darling, how often I shall remember this sunset and your sweet face turned towards mine!"

"Do you think I shall ever forget it? Only wait, Ernest, and all will come right in God's own time," she answered, with her hand in his.

And thus they parted.

"Going out of town, Miss Mabel? and so early this season!"

The pretty lady's-maid stood aghast in her occupation of putting away fine laces in a satin-lined box of veined sandal wood.

"Yes. Get my trunks ready, Mildred."

"And when do we start, miss?"

"I shall not take you with me, Mildred."

"Not take me, Miss Mabel! And who is to arrange your hair and take care of your dresses?"

"I, myself."

"But, Miss Mabel—"

"I choose to go alone, Mildred," said the young lady a little imperatively. "Take away the silks and grenadines; I shall only require the muslins and one or two light wrappers."

"Miss Mabel!" exclaimed the surprised lady's-maid, holding up both hands in hopeless bewilderment, "where can you be going?"

"To seek my fate, Mildred," said Mabel, in a tone that was a curious intermingling of jest and earnest. "There—now leave me to myself."

Mrs. Beckford of Beckfordville Villa, at Richmond, was sitting alone in her comfortable parlor—musing on her far-off son with a total abstraction from all outward sights and sounds—and when all of a sudden she looked up, a pretty young person, clad in a quiet style, stood before her.

"What is it?" said Mrs. Beckford, somewhat curtly.

"If you please, madam, I am anxious to come as a companion."

"Who sent you?" demanded the lady, surveying the large blue eyes and golden bands of smoothly-brushed hair rather distrustfully.

"I learnt from a lady of your acquaintance that you wished a companion and I should like to take the situation."

"Hum-m-m," said the old lady, "what's your name?"

"Edith Moore."

"Moore—Moore? Got any relations in town—ah! at Bayswater, I mean?" demanded the inquisitress, sharply.

"No, ma'am. I am alone in the world."

"I'm glad of that," murmured Mrs. Beckford, *sotto voce*. "I couldn't stand any one belonging to the guitar-playing girl who—but never mind that just now. What are your references?"

Edith Moore drew a letter or two from her traveling bag.

"So Mrs. Carter of Clapham, knows you, eh?"

"Yes, ma'am."

"Well," commented the matron, glancing over the notes, "these recommendations seem very satisfactory—I don't know—but that you may come and stay. The only objection I can see is that you're too pretty and I don't think you are really to blame for that. Take off your things."

And the roses that glowed into Edith's cheeks at this very plain expression of the old lady's sentiments did not make her any the less lovely as she untied the blue bonnet strings and laid aside the neat but simple shawl, to enter upon her probation.

More than a year had crept over the daily current of life at Beckfordville. The trees were bare and leafless, the snow lay white and deep in all the hollows and dimples by the roadside and a sharp December wind was sweeping along the Thames as the sun glowed with momentary redness ere it sank down out of sight.

"How soon it grows dark!" said Mrs. Beckford, with a little sigh. "That's right, Edith—draw the curtains; now we're comfortable!"

Comfortable indeed, they were, with the shaded lamp glowing softly on the table and the bright fire on the hearth, while Mrs. Beckford's spectacle glasses shone like twin orbs of flame and her knitting-needles glittered responsively.

Edith was sitting opposite to her, fashioning narrow white ribbon into bows for the old lady's new winter cape. She looked wonderfully pretty in a dress of sober blue merino, with a blue ribbon tangled somewhere in the braids of her burnished hair, while the delicate color on her cheeks was like the inside of a pink shell.

"What's that you were saying a while ago about going back to London, my dear?" said the old lady, suddenly turning round to Edith. "I just want you to understand that you can't go. I can't spare you."

She put one arm around Edith's neck and drew the round cheek down on her lap.

"Do you really love me, Mrs. Beckford?" asked the girl, earnestly.

"Love you, darling? I could no more get on without you than I could without the sunshine. It seems as though you belong to me. I don't know what you've done to steal my old heart away, I'm sure," went on Mrs. Beckford, musingly; "but you remind me somehow of the little daughter I once lost. You won't leave me, Edith, dear?"

There was something almost pathetic in her pleading voice as she touched her withered lips to the pure forehead of the beautiful girl.

"You'll stay and be a daughter to me in my old age, Edith? What should I do without the little feet that trip so lightly about the house and the hands that are forever busy in my behalf? Tell me you will stay, Edith."

"Dearest Mrs. Beckford," whispered Edith, with the happy crimson dyeing her cheek, "I'll never leave you; I will stay with you always. Oh, I am so glad you have learned to love me—more glad than I can tell you. But, Mrs. Beckford——"

"Well, dear?"

"There's something I want to tell you—something I have kept back from you," faltered Edith, with her fingers nervously twining themselves around the old lady's slender wrinkled hand. "Mrs. Beckford, I am——"

But Mrs. Beckford had started to her feet with a low, half-suppressed cry.

"Hush! did I not hear his footsteps? It was something more than the wind among the evergreens—it was my boy's foot upon the threshold! He has come back to me!"

She rushed to the door and threw it wide open.

"Ernest! My boy!"

And the tall stalwart figure caught her in his arms, as if she had been a little child."

"Mother, are you glad to see your wanderer back once more?"

Nor is it any aspersion on his manly dignity to state that a slight moisture was sparkling on his long eyelashes as he bent to kiss his mother's cheek! Men are but mortal, even though they be six feet high and framed accordingly.

As she drew him in he caught a momentary glimpse of the figure in the apartment beyond.

"You are not alone, mother?"

"No; Edith is with me."

"And who may Edith be?"

"Didn't you get my letters? I wrote all about her."

"I haven't seen a letter for three months."

Edith was standing where the full brilliance of the lamp shone upon her blushing cheeks and radiant hair, as mother and son entered the room together. Ernest stopped short, gazing at her in bewilderment.

"Mabel!"

"Ernest, what do you mean?" exclaimed Mrs. Beckford, doubtful whether or not her son had taken leave of his senses. "This is Edith Moore."

"She is Mabel Moore, my own affianced wife!" said Ernest, springing forward and sealing his words on lip and brow and cheek with half a dozen kisses, while the young lady, much to Mrs. Beckford's horror, made not the slightest resistance.

The next moment, however, she withdrew from his encircling arms and glided to the astonished matron's side.

"Dearest Mrs. Beckford," she said, softly, "I may tell you now what was just trembling on my lips when Ernest's footsteps interrupted me. My name is Edith, but it is Mabel too. Will you forgive me for stealing into your heart by stratagem? I knew you were prejudiced against one whom you regarded as a mere butterfly of fashion and I had told Ernest that I would never marry him without your consent. Half an hour ago I promised never to leave you. Mother, you will not send me away from you now?"

And Mrs. Beckford melted straightway before the pleading sunshine of the blue eyes.

"I always wanted a daughter," she said, "but I couldn't bear the idea of Mabel Moore, the Bayswater heiress."

"But you will love little Edith, who came to be your companion?"

"I suppose I ought to scold you for deceiving me," said the old lady; "but I—I couldn't help loving you if I were to try ever so hard—and that's the truth of the matter. There, Ernest, take her and I will ring and tell Thomas he may serve up dinner."

Ha! As though Ernest cared for anything less ethereal than Mabel just then!

"You have conquered, dearest," he said, tenderly. "My brave-hearted darling, will the devotion of my whole life compensate you for all this faithful love?"

Mabel thought it would and Mabel was right.

TRUTH, OR FICTION?

Orenburg is a town of European Russia, situated in the Ural Mountains, near the Asiatic border. About a year ago Abraham Chorkov, a wealthy Jewish inhabitant of that town, was lying dangerously sick with typhoid fever. On the 22d day of September, at midnight, a crisis set in which seemed to take a fatal course; the man suffered and struggled, and his physicians called it the agonies of death. A number of Jews were called in, prayers were offered, wax candles were lighted, and behold! the patient, who was supposed to be in the last stages, commenced to breathe freely, opened his eyes, and looked with astonishment at the surrounding scene. But the sequel has no precedent. The man soon after fell into a sleep which the physician declared to be a healthy one. In the morning he awoke, saw wife and children around him, who partly in anguish and partly in joy were waiting for his awakening. His wife, overwhelmed with joy, wanted to throw herself upon his neck, but by signs he repelled her, and demanded something in a language which none of them understood.

It should be mentioned here that Abraham Chorkov is a man of sallow appearance, tall and lean, looking like a genuine Russian Jew, with long black whiskers and beard, black eyes, and a long Oriental nose, and that before his sickness he understood no other language than Hebrew and a little Russian, being one of those illiterate Jews found in such large numbers in that part of the world. Now the man began to speak in a language unintelligible to every one around him. The physician who was summoned did not understand him. With contempt he pushed away his wife and children whenever they attempted to come near him, and the doctor gave it as his opinion that in consequence of the typhus the fellow had become insane. The despair of the family lasted for many days. His wife had, in the meantime, sent to Tamboy for his parents; but on their arrival Abraham would not recognize them, did not understand their language, and appeared to be angry that no one understood him. After a week he rose from the bed, and his wife gave him his clothes as worn by him before his sickness, the usual habits of the Russian Jews. He examined them closely and laughed heartily. He wanted to run out, but the people quickly shut the doors, fearing he would take cold. He remained in the room, pacing it with meditation. Passing a looking glass, he beheld his figure in it. He stopped before the mirror amazed, touched his curls, his big nose, his long beard, and burst out laughing, but then, all of a sudden, became quiet and earnest and in deep meditation.

His wife and parents, who had witnessed this strange behavior, looked at each other with astonishment, and it now appeared to them that the man before them was not their Abraham Chorkov, but a stranger. But Abraham's forehead bore still the black line with which he was born, so that even the physicians who had attended on the patient for nearly two months had to laugh at the idea.

Abraham Chorkov looked often out of the window, and seemed surprised at the country about him, and one day he made strong efforts to run away. The family now decided to call in the Government physician and other doctors, who, after a careful examination, pronounced him thoroughly sane. Although they understood not the tongue in which he spoke, they recognized it as a regular language, well articulated. Thinking he could make himself understood in writing, Abraham wrote a few lines on a piece of paper, which the physician read, but without comprehending their meaning. The writing is in a plain, good hand, in Latin letters, but the language was unintelligible to all, and no one could make out how Abraham Chorkov came to use Latin characters.

So things went on until it was agreed to take Abraham to St. Petersburg to the medical university to hear the opinion of the prominent scholars. As soon as Prof. Orlow heard the language of Abraham he recognized it forthwith as English. Abraham expressed immense pleasure at being enabled to make himself understood, and, after some conversation, Prof. Orlow pronounced Abraham to be a very intelligent Englishman.

"But, for God's sake!" cried his wife, "how does my husband come to be English, and how did he forget his Hebrew language?"

Prof. Orlow listened with astonishment to the story of Abraham's life, and would not believe that he had been a common, illiterate Russian Jew. He asked Abraham in English who he was and whence he came, and Abraham replied in the same language, "I am from British Columbia, in North America; my native town is New Westminster. I have there a wife and one child living, and God only knows how I came here, or to this woman."

It is easy to imagine the great amazement on all parts. The Professor declared the parties to be frauds, or that a man abduction had taken place. He called upon the Government to have the matter investigated, and the family physician of Abraham, his neighbors and others were officially examined, the examination lasting for weeks. But nothing came of the examination, the matter re-

mained as deep a mystery as ever, and the physicians contented themselves with declaring it to be a psychological puzzle, a revelation of the human soul which could not be explained. Abraham told the Professor that although his name is Abraham, it is not Abraham Chorkov, but Abraham Durham, and that he had no other desire than to go back to his family.

One morning, when his wife arose, she found his place empty—he had disappeared. The marvelous story soon reached the ears of the Russian Emperor, who forthwith ordered diligent search to be made after the lost one; but all of no avail, the man could not be found; and at last it was generally believed that he had been insane, and in his insanity had sought his death in the river Neva.

In the spring of the year 1875 Prof. Orlow of St. Petersburgh visited Philadelphia, at the request of his Government, to arrange the preliminaries of the Russian department of the Centennial Exhibition. One day, reading a newspaper, the following arrested his attention:

"In New Westminster an occurrence recently took place which caused a great sensation throughout the whole territory of British Columbia. On the 22d day of September, 1874, a fur dealer of said city was in a dying condition, suffering from typhoid fever, and no one, not even his physicians, seemed to entertain any hope as to the possibility of his recovery. Nevertheless the patient rallied and fully recovered. But, wonderful to relate the patient, who was an intelligent Englishman, had forgotten his mother tongue, and speaks a language which is understood by no one around him, but which at last is recognized by an inhabitant of the city to be a jargon of bad Jewish-German. The patient, before his sickness, a short, stout fellow and a blonde, is now thin and lean like a stick, refuses to recognize his wife and child, but insists he has a wife and several children somewhere else. The man is believed to be insane. All at once a European traveler arrives, marked with a genuine Hebrew face, and claims to be the husband of the wife of the fur dealer. He speaks to the woman in the same language her husband was wont to speak to her; he gives her, and even his parents who reside in said city, but who, of course, do not recognize him as their son, the most detailed and minutest description of bygone events, and insists upon being the woman's husband and the parents' son. The poor woman is almost in peril of her reason by the effect of the trying ordeal. She incessantly asks, 'Who is this fellow? How does he come to claim to be my husband?' When she hears him speak and does not look at his figure, she is ready to think that he is her husband; but as soon as she looks at him the spell is broken, for, surely, this stranger with the Jewish face cannot be her husband whom she had just nursed in his sickness. But the man continues to press his claim, and tells her the most secret and delicate facts, evidently known only to husband and wife."

Prof. Orlow recollected now all about the occurrence last fall, and to solve this "psychological phenomenon" he decided upon going to New Westminster. To his great surprise he really found there the same black Abraham whom half a year ago he had seen at St. Petersberg. He asked the blonde fur dealer in the Russian language whence he came, and was answered, from Orenburg; and when asked for the name of his wife, he gave the name of a Jewish woman who had called upon him with her husband, now before him, in St. Petersburg. When asked what his name was, he answered, "They call me here Abraham Durham, but my right name is Abraham Chorkov.

Prof. Orlow was struck with a strange idea. He reasoned this way: A man abduction could not have taken place; the bodies have not been changed; one is short, stout and blonde, the other thin, long and dark; and then New Westminster is 2,000 German miles away from Orenburg. Metempsychosis must have taken place.

It must be remembered that on the 22d day of September, at the midnight hour both were lying between life and death, the soul of each one must have flown into the body of the other, and thus a complete metempsychosis has taken place; that at the midnight hour of the 22d September begins the shortening of the days; that the inhabitants of the two cities are antecians, that is, if a spike were driven through the center of the globe, entering at Orenburg, it would come out at New Westminster, and that when at Orenburg it is 12 o'clock at midnight the time in New Westminster is just 12 o'clock noon.

Prominent men of science are now occupied with this most marvellous occurrence. Prof. Orlow has taken the blonde fur dealer with him to St. Petersburg, whither the woman Chorkov of Orenburg will also be brought, and further developments are now expected.

A TERRIBLE SCALP RAISER.

It was up in a saloon on West Van Buren street. He was a gaunt young man, whose face hadn't been washed for two months and who wore his hair long behind. He was attired in a slouch hat, buckskin breeches, a red flannel shirt open at the neck and a rough coat. He had four revolvers and a big knife in his belt. When four dry goods clerks came in in a group and ordered some beer, the first dry goods clerk said to the barkeeper:

"Say, John, who's that cuss over yonder?"

"That," said the saloon keeper, dropping his voice to an awe-struck whisper, "that is Buffler Ben, the Wild Trapper of the great plains. Ask him to drink. Perhaps he will."

The first dry goods clerk did so and the Wild Trapper replied:

"Wall, stranger, seein' as it's you, I will just take some fire water. As I heerd Old Red Tail say to Spotted Cloud, 'It's a mighty long time between drinks.' Here's to us," and he engulfed a dose of whisky.

"You are," said the first dry goods clerk, "connected with the trapper business?"

"In the scalp and grizzly line," said the second dry goods clerk.

"Your reminiscences of a personal character, I doubt not, would be exciting and interesting," said the third dry goods clerk.

"Truth is stranger than fiction. Take something?" said the fourth dry goods clerk.

"Wall, no," said the trapper; "I never drink when I'm off the war-trail. It kinder makes me ugly, yer see, and I'm apt to dror my cutlery. I killed seven men up to St. Jo, Mezzouri, onst—seven men that I was talking to as friendly as I mout be to you, but I sorter got riled—wall, gimme some more whisky."

"Your hand," said one of the dry goods clerks, "has often been stained with human blood?"

"Stranger, she bev. The fust time you come up and see me at my wicklup in Montana—second lodge on the right beyond the Yellowstone river—and be sure you turn to the left up by the big boulders 300 miles this side—ask any Injin and tell him yer want to see Buffler Ben and ef he don't scalp yer he'll show yer the road plum straight. I'll show yer Old Bull's Eye, my rifle. She's old Kaintuck stock (likewise the barrel) and is sixteen feet long, and whenever I wipe out a white man I make a notch on the barrel, and there's notches all the way up one side and nine feet down the other. I went up to see your graveyards at Cavalry and Greeceland. They're a good deal like my private graveyards, more posies and statutes and so on, though they ain't as spacious. Now, jist about three months ago I turned loose in a barroom down to Lafayette, Arkansaw, and the coroner was kept busy for three days after attending to seven inquests. And this was just because a durn skunk stood up at the bar and improved his mind with my conversation and never asked me if I would take——"

Here one of the dry goods clerks caught Buffler Ben's eye and he stammered out an invitation to fill her up again. Mr. Buffler Ben irrigated himself and in reply to a question concerning his solution of the Indian question, said:

"Injins! Wall, no; I never keep count of the reds I wipe out. I used to when I was young and sort of vain, but I grew out'n it. It looked too much like vanity. I suppose I've not taken the trouble to lift the har of the last 150 or 200 Indians I've killed. Before that I was kinder particular that way and took so many scalps that I bust the 'Frisco chignon market and seventeen dealers in false hair went into bankruptcy. Injins is poor trash. Gimme a whole tribe of 'em and I'll wipe 'em out as fast as I can load my revolver and put it to my shoulder."

Here he paused again and was promptly refreshed. Then he continued:

"I tell yon, boys, if you want to see the choicest country on the footstool, jest you go to them ar Black Hills. The only thing agin the country is the buffaloes. They hatch there; and when they take to flight it's awful to see them in clouds so thick you can't see the sun, and when they light they chaw up garden sass and sour apple trees and corn and railroad ties and potatoes and telegraph poles. But ther's gold in the Black Hills. I've seen it myself. When you get down to the bed-rock you strike $50 and $20 pieces and you wash out eagles and dollars in the streams and up in the roots of the grass you find small scrip and nickels. No nuggets as I know on, though I did hear at Shyan of one worth $165,000."

Thus, with anecdote and information, Buffler Ben whiled away the time. When the four dry goods clerks had settled for the drinks—their bill amounting to $6.85—he bade them an affectionate farewell and made them promise to call at his tepee if ever they were up in Montana. When they had gone out the barkeeper paid him his 20 per cent. commission on the drinks sold through his instrumentality and told him to recollect next time that it was grasshoppers that flew, not buffaloes.—*Chicago Tribune.*

A CONSCIENTIOUS DOG.

I had had this dog for several years, and had never—even in his puppyhood—known him to steal. On the contrary, he used to make an excellent guard to protect property from other animals, servants, etc., even though these were his best friends. [Mr. Romanes here adds a note, "I have seen this dog escort a donkey which had baskets on its back filled with apples. Although the dog did not know that he was being observed by anybody, he did his duty with the utmost faithfulness; for every time the donkey turned back its head to take an apple out of the baskets, the dog snapped at its nose; and such was his watchfulness that, although his companion was keenly desirous of tasting some of the fruit, he never allowed him to get a single apple during the half hour they were left together. I have also seen this terrier protecting meat from other terriers (his sons) which lived in the same house with him, and with which he was on the very best of terms. More curious still, I have seen him seize my wristbands while they were being worn by a friend to whom I had temporarily lent them."] Nevertheless, on one occasion he was very hungry, and in the room where I was reading and he was sitting, there was within easy reach a savory mutton chop. I was greatly surprised to see him stealthily remove this chop and take it under a sofa. However, I pretended not to observe what had occurred, and waited to see what would happen next. For fully a quarter of an hour this terrier remained under the sofa without making a sound but doubtless enduring an agony of contending feelings. Eventually, however, conscience came off victorious, for, emerging from his place of concealment, and carrying in his mouth the stolen chop, he came across the room and laid the tempting morsel at my feet. The moment he dropped the stolen property he bolted again under the sofa, and from this retreat no coaxing could charm him for several hours afterward. Moreover, when during that time he was spoken to or patted, he always turned away his head in a ludicrously conscience-stricken manner. Altogether I do not think it would be possible to imagine a more satisfactory exhibition of conscience by an animal than this, for it must be remembered, as already stated, that the particular animal in question was never beaten in its life.—*Quarterly Journal of Science.*

A STRANGE STORY.

A strange story comes from Spain. A detachment of soldiers some time ago discovered in a secluded part of a mountain chain a cavern which was inhabited by robbers, who had taken advantage of the civil war to ply their criminal avocation. An alcove was attached to this subterranean dwelling, the door of which the soldiers broke open. They were astonished to find the apartment decently furnished and provided with books, flowers, and even a piano. In an easy chair sat a venerable old man. The soldiers interrogated him, but obtained only incoherent replies. It has been ascertained from one of the robbers that the old man was the cashier of a banking firm at Burgos; that they had broken into the bank and stolen the safe, taking the cashier away with them in hopes that he would assist them to open it. During their retreat from the scene of this exploit, which was marked by many adventures, the intrepid old man for a short time succeeded in evading the vigilance of his guardians and secreted the safe in a place where, should he regain his liberty, he would be able to recover it. When the booty was missed by the robbers and they failed to ascertain its whereabouts, with fiendish malignity they revived the proceedings of the famous chauffeurs, namely, roasting the feet of their unfortunate prisoner in order to extort a confession. But, unhappily, the torture had a different effect. The brave old man became insane, and with the object of restoring him to reason, in the hope that when he recovered he would reveal to them the place where the safe was concealed, the robbers bestowed upon him the utmost kindness and attention.

VIOLIN PLAYING.

The difficulty of thoroughly mastering the violin—the difficulty, that is, of combining perfect execution with brilliancy of tone and perfect expression is so vast, that nothing short of indomitable patience and perseverance, united with those indispensable faculties which all good players must possess, will succeed in overcoming them. "Twelve years' practice," says a musical critic, "on the violin, will produce about as much proficiency as one year's practice on the piano." If that is so, we may well imagine that a man who, by dint of perseverance, has at length qualified himself to take his place in an orchestra, may content himself by merely maintaining his acquired skill without attempting to rival the great heads of the profession. The time which some students will devote to fiddling is almost incredible. We have known a clever man to practice every waking hour in the day, rising early and sitting up late and sparing hardly one hour in the twenty-four for meals for two years together, in the hope of qualifying himself for the leadership in a provincial orchestra which, after all, he had failed in doing. We have known men who fiddled in bed when they could not sleep rather than waste the time; and others who have carried a dumb fingerboard in their pockets in order to practice the fingering of difficult passages while walking abroad or traveling by coach.—*Leisure Hour.*

HOW TO GET ALONG.

Don't stop to tell stories in business hours.

If you have a place of business, be found there when wanted.

No man can get rich by sitting around stores and saloons.

Never "fool" in business matters.

Have order, system, regularity and also promptness.

Do not meddle with business you know nothing of.

Do not kick every one in your path.

More miles can be made in a day by going steadily than by stopping.

Pay as you go.

A man of honor respects his word as he does his bond.

Help others when you can, but never give what you cannot afford to, simply because it is fashionable.

Learn to say, No. No necessity of snapping it out dog-fashion, but say it firmly and respectfully.

Use your own brains rather than those of others.

Learn to think and act for yourself.

Keep ahead rather than behind the times.

Young man, cut this out, and if there be any fallacy in the argument let us know.

What a fine looking thing war is! Yet, dress it as we may, dress and feather it, daub it with gold, huzza it and sing swaggering songs about it—what is it, nine times out of ten, but murder in uniform?—*Douglas Jerrold.*

I never judge from manners, for I once had my pocket picked by one of the civilest gentlemen I ever met with, and one of the mildest personso ever saw was Ali Pacha.—*Byron.*

Sabbath Reading.

PRAYER.

(IMITATED FROM THE PERSIAN.)

Lord, who art merciful as well as just,
Incline thine ear to me, a child of dust!
Not what I would, O Lord, I offer thee,
Alas! but what I can.
Father Almighty, who hast made me man,
And bade me look to heaven, for thou art there,
Accept my sacrifice and humble prayer.
Four things which are not in thy treasury,
I lay before thee, Lord, with this petition:
My nothingness, my wants,
My sins and my contrition.

[*Robert Southey.*

PRECEPTS.

I have been reading this morning from the seventh chapter of Ecclesiastes. In the first chapter of the same book "the Preacher" says:—"I gave my heart to know wisdom, and to know sadness and folly; I perceived that this also is vexation of spirit." After all his wisdom and fame he does not seem to be satisfied with that alone, but says in the seventh chapter, "A good name is better than precious ointment; and the day of death than the day of one's birth." Evidently he felt that it was not "all of life to live, nor all of death to die." And again, "Sorrow is better than laughter; for by the sadness of the countenance the heart is made better."

Here is a lesson for us who are given to levity, and a reason why we should have sorrow. "The heart is made better." It is drawn nearer to the great, throbbing heart of Christ. There is a sympathetic cord connecting our sorrows with those of the "Man of God." And "the Preacher" adds, "The heart of the wise is in the house of mourning; but the heart of fools is in the house of mirth." "Better is the end of a thing than the beginning thereof; and the patient in spirit is better than the proud in spirit." In the tenth verse he gives a word of advice to those under adversity, "Say not thou, What is the cause that the former days were better than these? for thou dost not inquire wisely concerning this." He furthermore adds, "Consider the work of God; for who can make that straight, which he hath made crooked?" "In the day of prosperity be joyful, but in the day of adversity consider." "God also hath set the one over against the other, to the end that man should find nothing after him." Again, "the Preacher" had need to apply his heart "to know and to search and to seek out wisdom and the reason of things." And he closes the chapter with these words, "Lo, this only have I found that God hath made man upright; but they have sought out many inventions."

Methinks we have need of "applying our hearts unto wisdom," that we may know and learn of Christ in these days. What with our Presidential election and the anniversary of our nation's birth, are we not in great danger of losing sight of God? Is there not need in our hearts, individually and collectively, for a greater amount of Divine love, that we may come out of this commotion purified and better prepared to do His work?

Juda, Wis. Ray Hulburt.

MORAL CULTURE.

I think that more harm is frequently done by over than by under culture in the moral training of youth. Judicious *letting alone* is a precious element in real education, and there are certain chords which, often touched and made to vibrate too early, are apt to lose instead of gaining power; to grow first weakly and morbidly sensitive, and then hard and dull: and finally, when the full harmony of the character depends upon their truth and depth of tone, to have lost some measure of both under repeated premature handling.

I sometimes think that instead of beginning, as we do, with a whole heaven and earth embracing theory of duty to God and man, it might be better to adopt with our children the method of dealing only with each particular instance of moral obligation empirically as it occurs; with each particular incident of life, detached, as it were, from the notion of a formal system, code, or theory of religious belief, until the recurrence of the same rules of morality under the same governing principle, invoked only in immediate application to some instance of conduct or incident of personal experience, built up by degrees a body of precedent which would have the force and efficacy of law before it was theoretically inculcated as such. Whoever said that principles were moral habits spoke, it seems to me, a valuable truth, not generally sufficiently recognized or acted upon in the task of education.—*Mrs. Kemble, in Atlantic.*

THE PERFECTNESS OF GOD'S WORKS.

Upon examining the edge of the sharpest razor with a microscope, it will appear fully as broad as the back of a knife—rough, uneven and full of notches and furrows. An exceedingly small needle resembles an iron bar. But the sting of a bee seen through the same instrument exhibits everywhere the most beautiful polish, without a flaw, blemish or inequality, and it ends in a point too fine to be discerned. The threads of a fine lawn are coarser than the yarn with which ropes are made for anchors. But a silk-worm's web appears smooth and shining, and everywhere equal. The smallest dot that is made with a pen appears irregular and uneven. But the little specks on the wings or bodies of insects are found to be an accurate circle. How magnificent are the works of God!

Ladies' Portfolio.

DOOMED.

BY EBEN E. REXFORD.

I saw them coming down the walk;
  His arm was round her, and I heard
The hum of low and tender talk,
  So low I caught not any word.
He plucked a flower beside the path,
  And put it in her shining hair.
My brain whirled in a sudden wrath:
  What right had he to put it there?

What right had he,—a smooth-faced boy—
  To rob my life of all most dear?
My heart leaped in a sudden joy
  When something whispered in my ear:
Oh fool! to let him win away
  The love you prize, nor lift your hand!
One blow will thrust him from your way—
  Revenge is something sweet and grand!

How strange that scene! How weird and wild!
  His boyish face, her shining eyes!
The moonlight mocked at me and smiled;
  I heard the owl's forboding cries.
He bent and kissed her rose-sweet lips.
  What happened then? My brain was wild!
A flash of steel—a cry! He fell,
  And falling, spoke her name, and smiled!

What will the end be? Oh I know,
  I see a scaffold, grim and bare—
And faces, eager, white, below,—
  I hear the solemn sound of prayer!
And then,—ah then! I dare not think!
  I shudder in a strange affright!
My God! I hear the hammer's clink!
  They build a scaffold in the night!

FRIENDSHIP OR LOVE.

"Love is like a hunter, who cares not for the game once caught, which he may have pursued with the most intense and breathless eagerness. Love is the strongest in pursuit—friendship in possession."—*Emerson.*

This for the text and for the argument this: Either Emerson did not know what love was or he did not write the word with the full significance of its meaning. Probably the latter. For many of the most bitter discussions arise from a different understanding of the same word. Thus in horticulture, "hybrid and cross" are used by some as synonymous and hence arise misunderstandings and debates; so in Theology with the words "belief and faith;" and so love is often written when the meaning would be better expressed by feeling, desire or passion.

It is no more sad than true that this misconception goes further than mere words and that people often believe themselves possessed by one of these when, in fact, it is another that has control of them; and we often find those united in marriage who learn too late that they have been mistaken in regard to their own feelings. Many believe their emotions and actions engendered by far different causes than is really the case.

Nature has implanted in the sexes a desire to mate and all that nature does is to urge on the mating without regard to propriety or fitness. Nature's end and aim in all life, whether vegetable or animal, is Reproduction; and reason, judgment and the whole intellect which should be brought to bear on the question of the choice of a partner for life, is often overborne by this natural desire. When this is done, the result can but be evil; for on a proper direction and control of this desire depends more than the future happiness of those mating. It behooves them then, to understand, if possible, what love is—"Love that annihilates all time and space, all doctrines and creeds, all forms and prejudices"—love that is full and complete—and they will come to know that it is not strongest in pursuit.

It is often and truly said that the first year of married life is the most trying. It is in this year that the parties first become really acquainted with each other's faults and foibles and, if they truly love, to look leniently upon them; for marriage does not always bring out the bright side of character. Lecky says,—"The beautiful affections which had before been latent are evoked in some particular forms of union, while others are particularly fitted to deaden the affections and preserve the character.

One seldom finds a wedded mate the same as imagination has pictured. The desire to mate blinds one to defects of character obvious to others, while regard, esteem and affection magnify virtues to such an extent that the chosen one appears as near perfection as possible. When this glamour is removed by the knowledge gained from the experience of everyday life and the parties appear to each other in their true colors, it is sometimes the case that the steps taken are regretted and it is found that desire and not love has fostered the union.

That an object for the possession of which we have striven earnestly often proves valueless, is true. We grasp at an apparent reality and find only a shadow; and when we awaken to a knowledge of the truth and find that what we have is not that which was sought, love can find there no resting place. It is an utter impossibility. But the possession of that which is worthy of love increases its intensity until, at last, it comes to reach that completeness that can be attained only in the marriage relation.

A true and abiding friendship is worthy of our highest encomiums. Wherever it exists it should, if possible, be cherished and retained. But it is less than love which overshadows and embraces it. There can be no love without friendship, but friends are not necessarily lovers. With friendship abideth faith and hope; but a greater than these is Love, which "beareth all things, believeth all things, hopeth all things, endureth all things."

DESTITUTE CHILDREN.

Will you permit the publication of a few facts? Should they elicit from any of your readers a donation or subscription, I shall thank God and them for it. I ask for no help, for if this be God's work I am sure it will prosper and need no appeal from feeble lips like mine.

Last year God put it into my heart to snatch from poverty, from haunts of crime and drunkenness, a few poor little girls. After many hindrances I established my "Home for Destitute Little Children" three-quarters of a mile from here, in a large farm-house; my new family consists of a matron, three servants and sixteen children, all but two being fatherless and all save one totally destitute.

Order, cleanliness and a love of God are impressed on their young minds by my practical and affectionate matron. The children receive a plain education and are being brought up as servants in various capacities.

I only intended to have eight girls when I began but I could not steel my heart to refuse some in a fearful condition; and I now find I have gone beyond my original estimate of expenses.

Other cases quite as sad have lately been brought before me but which, unless I can get help, I cannot take in. The cost of maintaining a child yearly will be about £18.

Any one is welcome to visit the "Children's Home." We are 19 miles from London and three miles from the station at Weybridge.

Lady Pigot writes the above to the London Times. We copy it, thinking that some of our benevolent and wealthy ladies may "get an idea" that, should they act upon it, might serve to fill up those long hours during which they are so afflicted with *ennui*.

THE PHILOSOPHY OF AFTER MARRIAGE.

"You love me no longer," said a bride of a few months to her better half in his gown and slippers. "Why do you say that, Puss?" he asked, quietly removing a cigar from his lips. "You do not caress me nor call me pet names; you no longer seek so anxiously for my company," was the tearful answer.

"My dear," continued the aggravating wretch, "did you ever notice a man running after a car? How he does run! over stones, through mud, regardless of everything till he reaches the car and he siezes hold and swings on. Then he quietly seats himself and reads his paper."

"And what does this mean?"

"An illustration, my dear. The car is as important to the man after he gets in as when he is chasing it, but the manifestation is no longer called for. I would have shot any one who put himself in my way when in pursuit of you, as I would now shoot any one who would come between us; but as a proof of my love you insist on my running after the car."

FOR AND ABOUT WOMEN.

Miss Kavanagh of Damariscotta, Me., has given $50,000 toward completing the Roman Catholic convent in Portland.

Mrs. Booth has offered her personal property, consisting of furniture and live stock, for sale to help pay the debts of her husband.

A silly Chicago woman wants a divorce from her husband because he kept secret from her before marriage the fact that he had lost by an accident all the toes of one of his feet.

So much delight was felt by the ladies of Nevada City over the completion of the railroad from that town to Colfax, that they clubbed together and furnished the passenger car with an elegant carpet, mats, curtains and spittoons.

Accustom yourself to overcome and master things of difficulty; for if you observe, the left hand for want of practice is insignificant and not adapted to general business, yet it holds the bridle better than the right, from constant use.—*Pliny.*

A wife's love is the golden chain which unites her to her husband. It has a thousand links forged by sympathy, self-respect and mutual confidence; sever but one of them and the chain is as completely broken as though a hundred were destroyed.

Woman's pluck receives a notable illustration in the case of a Holyoke (Mass.) widow. Her husband had been sick two years and had died, leaving her with two children and a debt of $400. She went to work in a mill and never lost a day. Besides doing her week's work, she took in washing for two families. Her children she placed in school and has paid their expenses, asking no help from any one. By honest hard work she paid off the debt of $400 and, besides supporting and educating two children, has put by $400 against a time of need.

In a book published in 1660 called "Courtship, Love and Marriage," there is this clause concerning leap year:—"Albeit it is nowe become a part of the common law in regard to the social relations of life that as every bisextile year doth return, the ladyes have the sole privilege during the time it continueth of making love unto the men, which they doe, either by words or lookes, as to them it seemeth proper; and, moreover, no man will be entitled to the benefit of clergy who doth in any wise treat her proposal with slight or contumely."

Reading for the Young.

TO A LITTLE INVALID.

If I knew
Where the shyest, sweetest spring flower hides its face,
Clinging to the mother earth with childish grace,
  It should be for you.

If I knew
How to charm away the blithest little bird
From the deep wood, where his happy notes are heard,
  He should sing for you.

If I knew
How to catch and hold this fresh and sporting gale,
Sweeping lightly o'er the banks of wild flowers pale,
  It should breathe on you.

If I knew
How, by some benign ministry, to bring
To your heart the heavenly secret of the spring,
  It should stay with you.

[*Mary Townley.*

A QUESTION.

We have a question to ask the little boys and girls of the Rural Brigade, not over twelve years of age. To him or to her who shall make, in a few words, the brightest answer, we engage to forward by mail a little present.

The other day, while the writer was enjoying a listless "nooning" in the shade of a tree, he noticed a wasp entangle itself in the web of a spider. The wasp endeavored with might and main to be free, and would have succeeded more than once but for the spider, which at such moments attacked it vigorously and reinvolved the wasp in its web. The struggle lasted for fifteen minutes or more, when it became evident that the wasp was helpless and conquered.

Now for the question: Ought we to have rescued the wasp from the unrelenting spider? If so, or if not so, why?

UNCLE TRUE RISES TO EXPLAIN.

My Dear Nieces and Nephews:—Did it ever occur to you to ask why the Red Sea was so called? When I was your age the question gave me no little trouble, and it was a long time before my curiosity was satisfied, as in those far-off days Science was a mere child like myself. My teacher told me it was red because it was——red! With this I had to be content. What will you say when I tell you the color is due to the presence of infinite numbers of a small plant—so small that in a square inch there are over 20,000,000?

That's a tough one isn't it? and I don't wonder you ask, How could you see or count them? Well, it's a simple matter to see them collectively, and it's their great number spreading over and beneath the surface that gives the sea its red tint. But how count so small a thing? That I will tell you in confidence was the great difficulty. We are not prone to count what we cannot see. However, a sturdy Dutchman named Leuwenhoek (some say) invented a little instrument that gave him an artificial eye of immense magnifying vision. This was the microscope; and they have gone on improving it until now, in our day, they make them of such a power that they enlarge the natural surface something like 50,000,000 times its ordinary size! Here, then, was a start, and a great victory over our eye. It was one thing, however, to see a wee mite of weed; quite another to *measure* it. To do this we invented the microscope, an instrument made of glass, on which are engraved some 1,500 lines so fine and close that the naked eye cannot see them. Of course no mere man could perform this difficult work, but Brain and Will (that wonderful firm) concluded that machinery could do it. They made an instrument so delicate that it works only in the dead of night, when the world's noise is hushed. Even the attendant dare not enter the work-room, but starts the machinery by an ingenious system of clock-work. At length the task is finished, and we are shown a bit of glass that contains in the space of *one inch* 30,000 lines! Thus equipped, the man of science goes to sea, investigates and comes home with facts that so far outdo Aladdin's wildest fancies that we may well say, of what use is imagination, since Nature so far outstrips it.

It may be wonderful to contemplate plants so small, but what do you say to animals yet more minute? The *Infusoria* of which the sea is full; those mites that sometimes convert the track of the mariner into a line of fire, and the good ship seems to be forging ahead through a mass of diamonds; these fellows are so minute that a drop of water contains millions. They would not make good aldermen, as their diameter is but 1-250,000,-000th of an inch! You don't see how they live? Why they enjoy themselves immensely; are epicures in their way, with a stunning advantage over us in that they have 200 *stomachs!* It don't seem possible, does it? but what a proof of the omnipotence of our Lord!

A curious experimenter placed a drop of water containing Infusoria under his microscope, and then another drop of water colored with carmine close by. They were brought together with the point of a needle; the little beasts seized their food with tentacles, and as they were transparent its course could be observed on its way to a stomach. And what think you they gorged themselves on; why animals even *smaller* than themselves! It is mentally impossible for us to conceive such miniature life. I should be afraid to tell you that even these creatures are attacked by parasites who burrow and re-create in the vitals of the Infusoria. But the amusing part is that if you think you destroy a monad by *dissolving* him into various parts, you will be quite chagrined to discover that instead of killing one you give birth to a colony, as each separate part is at once imbued with life; starts off on its own infusorial hook, and is to all intents and purposes quite as much an Oliver Twist as his late other self, and whose motto is: More!

At some subsequent time I will tell you more interesting particulars concerning their big brothers, the Polyps. Uncle True.

HOW TO TELL YOUR AGE.

There is a good deal of amusement in the following magical table of figures. It will enable you to tell how old the young ladies are. Just hand this table to a young lady and request her to tell you in which column or columns her age is contained; add together the figures at the top of the columns in which her age is found and you have the great secret. Thus, suppose her age to be seventeen, you will find that number in the first and fifth columns; add the first figure of these two columns. Here is the magic table:

1	2	4	8	16	32
3	3	5	9	17	33
5	6	6	10	18	34
7	7	7	11	19	35
9	10	12	12	20	36
11	11	13	13	21	37
13	14	14	14	22	38
15	15	15	15	23	39
17	18	20	24	24	40
19	19	21	25	25	41
21	22	22	26	26	42
23	23	23	27	27	43
25	26	28	28	28	44
27	27	29	29	29	45
29	30	30	30	30	46
31	31	31	31	31	47
33	34	36	40	48	48
35	35	37	41	49	49
37	38	38	42	50	50
39	39	39	43	51	51
41	42	44	44	52	52
43	43	45	45	53	53
45	46	46	46	54	54
47	47	47	47	55	55
49	50	52	56	56	56
51	51	53	57	57	57
53	54	54	58	58	58
55	55	55	59	59	59
57	58	60	60	60	60
59	59	61	61	61	61
61	62	62	62	62	62
63	63	63	63	63	63

The Puzzler.

SCRIPTURAL ENIGMA.—No. 1.

I am composed of 74 letters:

My 21, 46, 61, 14, 40, 11, 5, 31, 10, 52, 48, 45, 20, 10, 3, 38, 31 is one of the Commandments.

My 18, 73, 56, 53, 42, 15 one of the seven churches of Asia.

My 13, 23, 15, 24, 64 father of David.

My 4, 17, 31, 31, 51, 67, 8, 68, 9, 26, 49, 57 guided the Israelites through the desert at night.

My 1, 22, 44, 31, 55, 15, 39, 24, 63, 69, 12, 65 is one of the Parables.

My 6, 2, 50, 66, 19, 43, 71, 11, 32, 20, 9, 58, 31, 31, 61, 68, 62, 7, 3, 33, 48, 55, 72, 43, 44, 20, 15, 8, 9, 35, 41, 57, 31, 61, 49, 72 was the text of our last Thanksgiving sermon.

My 73, 27, 36, 28, 42, 70, 37 a city in Syria.

My 51, 47, 69, 60, 34, 74, 15, 71 a precious stone mentioned in Revelations.

My 72, 23, 58, 35, 12, 49, 48, 29, 48, 54, 74 a book of the Old Testament.

My 2, 5, 30, 51, 56 was Ishmael's mother.

My whole is a selection from Proverbs.

☞ Answer in two weeks. Eudora.

CROSS-WORD ENIGMA.—No. 14.

My first is in silver but not in gold,
My second is in young but not in old;
My third is in part but not in all,
My fourth is in high but not in tall;
My fifth is in reap but not in mow,
My sixth is in catch but not in throw;
My seventh is in right but not in wrong,
My eighth is in dance but not in song;
My ninth is in sign but not in name,
My whole was a river of ancient fame.

Answer in two weeks. Isola.

CENTRAL PUZZLE.—No. 1.

1. Knowledge. 2. Malice. 3. A mischief. 4. A lady's name. 5. A man's name. 6. Very unpleasant. 7. An anæsthetic. 8. A garden tool. 9. Blooming with health. 10. A false friend. Centrals form a poisonous flower, and the words are of five letters.

☞ Answer in two weeks. Little One.

MISCELLANEOUS ENIGMA.—No. 5.

I am composed of 14 letters:

My 11, 8, 13, 10, 6, 9 is a beautiful flower.
My 7, 5, 3, 2 is a valuable fruit.
My 4, 12, 1, 14 was a true patriot.

My whole is a lady's name.

☞ Answer in two weeks. B.

PUZZLER ANSWERS.—June 3.

Biblical Enigma No. 6.—The Lord is my Shepherd; I shall not want.

Geographical Enigma No. 2.—Let all your things be done with charity.

Charade No. 2.—Misunderstand.

Cross-word Enigma No. 12.—Sarah.

PUBLISHER'S SPECIAL NOTICES.

The Rural is a very good present to send to a friend, and it pleasantly reminds the recipient of the donor fifty-two times a year—this year fifty-three times. Any *subscriber* can send it to a relative or friend as a present, at our lowest club rate—only $2.15, including postage.

Back Numbers of this Year (from Jan. 1) can be furnished to all new subscribers, but we shall not send them hereafter unless specially requested. Those who desire can begin with any number, however.

Officers of Agricultural Societies and Clubs, Granges, &c., can, if they will, materially aid in augmenting the circulation of the RURAL. Scores of such are already forming clubs; how many others will kindly do likewise?

Select Your Premiums.—All persons entitled to Premiums will please designate what they prefer and notify us how and where to forward—whether by Freight or Express—if articles are not mailable.

The Best Paper, and the Best Premiums to Agents, is our motto. We ignore Chromos and all other cheap colored pictures, preferring to put our money *in the paper*, and in Premiums to Agents.

Act as Agent!—Reader, if there is no agent for the RURAL in your locality please become one by forming a club. *It will pay.*

At Our Risk.—You can remit by Draft, P. O. Money Order or Registered Letter *at our risk.*

News of the Week.

HOME NEWS PARAGRAPHS.

HEAVY frosts prevailed in the vicinity of Council Bluffs, but no damage has been done. The continued drouth is seriously injuring the crops.

The ravages of the Colorado potato bug in Concord, N. H., and in adjoining towns, causes much apprehension among farmers.

The threatened strike in the Harmony Mills has been settled, the employes accepting the reduction of 10 per cent, and all returning to work.

Grasshoppers have commenced to appear in great numbers in Northern Alabama, and are occasioning great uneasiness.

The Atlanta (Ga.) Constitution says that one would not imagine that the times are very hard, judging from the amount of building going on in Atlanta at present. There is more now than at any time since the war, and some branches of business are more prosperous than ever.

There is more tobacco now in Hopkinsville, Ky., than was ever before known at one time. Some warehouses not having storage room sufficient have erected temporary sheds.

In the U. S. Court in Philadelphia, Chas. Worms was found guilty of forging the signature of Sec'y Chandler to a contract with the Interior Department for furnishing Indian supplies. Sentence deferred.

Farmers in Princeton, Ky., are gloomy about the wheat prospects in that vicinity. They do not think that more than three-fourths of a crop will be made.

The corn crop is a little backward in Woodford Co., Ky., but has come up well and will make a good yield. The wheat crop looks well, but is rather thin, and will probably not be above an average. Barley promises a very large yield. Hemp does not look so well. The cut-worm is doing very great damage to hemp on clover land.

The Nashville (N. C.) Citizen says that mica is being found abundantly in the vicinity of Mitchell, that State. Two parties there have recently sold a quantity of mica in the lump for $37,000. From one spot 20 by 40 feet, over $10,000 worth has been taken.

Wheat does not look well in Tennessee.

Good horses are selling at auction in San Suba County, Texas, at from $18 to $20. More horses than money is the reason.

The San Antonio (Texas) Express says that in Atascosa County, the dryest-looking section of Western Texas, where no rain has fallen for months, the crops are ahead of those in all other counties reported.

Henry Hulling of North Carolina, who was sent to the Penitentiary in Albany last winter for robbing the mails, has been pardoned by President Grant.

Marshall S. Smith, a clerk in the Pennsylvania State Treasury Department, and John A. Wagoner, formerly in the Auditor-General's office, were arrested for conspiracy to defraud the State of $5,000.

Winter Garden, the establishment of the Messrs. Hovey in Cambridge, Mass., is now a-bloom with hardy azaleas, which will be in flower from four to six weeks.

The Metropolitan Bank of Montreal is in difficulty. It is proposed to reduce the stock and amalgamate the concern with some other bank. Serious charges are made against the Directors by Mr. Rhodes of Quebec, who claims $10,000 damages, owing to his being deceived into buying the stock of the bank through highly-colored documents issued by the Board of Directors. He also charges the Directors with using money belonging to the bank for their own private ends.

The cut-off at Vicksburg has greatly alarmed the citizens The Vicksburg Herald admits that the river is gone, and that the only hope for a current past the city is in changing the channel of the Yazoo River, so as to bring it through Chickasaw Bayou, and thence by canal in front of the city to the Mississippi. The Herald thinks this can be accomplished at a cost of about $200,000 and adds: "The main volume of the Yazoo could be diverted through the bayou, thence into Fish Lake, and finally into the Mississippi River at the National Cemetery, by means of a breakwater at Yazoo, by cleaning and deeping the bayou, and by the cutting of a canal from the southern end of the lake to the Mississippi. The effect of the plan proposed will be to keep open a channel in the Mississippi from the National Cemetery along the river border of the whole city; and should this be practicable, the dangerous influence of the cut-off will not only be avoided, but we should be brought into closer and more direct communication with the rich and populous Yazoo basin, upon which Vicksburg mainly relies for her support."

Two hundred passenger trains went from New York to Philadelphia, on one day, on the Central road—one every seven minutes night and day.

A vessel sailed from New Haven, Ct., loaded with more than $700,000 worth of arms and ammunition for the Turkish government.

The New York and Boston division of the New York, Boston and Montreal Railroad, being the section between the Harlem River and Brewsters, in Putnam county, was sold at White Plains to satisfy the first mortgage bonds, amounting with interest to $3,230,835. It was bought by the Farmers' Loan and Trust Company for the bondholders for that amount. It is understood that a new company will be organized. The tracks of 32 miles of the road, which is 55 miles in length, are already laid. It is expected that the road can be furnished and fully equipped within three months, with an expenditure of about $800,000.

Tennessee has forty cotton mills, employing 56,350 spindles, and consuming 13,443 bales of cotton.

The whole of the ground not occupied by bones, in the catacombs, under the city of Paris, is occupied in growing mushrooms of peculiarly fine quality for the table.

Berdan, the well-known American armorer, has just sold to the Servian Government 60,000 rifles.

The sponges of France yield $240,000 a year.

In a suit for libel against the Buffalo Express by a lawyer named Reed, for $5,000 damages, the jury has awarded damages for $15.

The Morgan Line steamship Austin, from Havanna, struck a snag in the river twenty-two miles below New Orleans, sinking at once. Her cargo was valued at $80,000; she had on board 700 hogsheads of sugar. The vessel was valued at $125,000, and is a total loss; no insurance.

In the event of Turkey drifting into a European war, our trade with her need not occasion uneasiness. In the fiscal year, 1874-5, our exports to her markets amounted to only $4,244,784. Our imports from Turkey were still less, being only $579,917. Many a one of our wholesale stores does a larger business than these figures represent.

The potato crop throughout Warren, Washington and Saratoga Counties, N. Y., bids fair to become the victim of the Colorado potato bug—the latter having made its appearance in large numbers.

Every year the material condition of the South grows better and better. From every State comes most cheering accounts of the crops. In many States such promising crops have not been seen in years, and, all in all, the prospect is better than in any year since the war. The last cotton crop, being marketed, has already reached to 3,813,000 bales and will probably reach 4,500,000. There has been an increase of 440,000 bales over the preceding year.

At the annual meeting of the New England Associated Press, in Boston June 7, all the officers were re-elected.

Twelve hundred lodges of the Northern Sioux are reported as moving to meet Gen. Crook.

Ex-Senator Boyce of Wisconsin addressed the General Assembly of Connecticut in advocacy of the abolition of capital punishment.

A dispatch from Carson, Nevada, says:—"The anti-Coolie men continue demonstrations, and demand the discharge of Chinese laborers, but as yet have committed no violence.

John Jay Bradely, a graduate of Dartmouth College, was drowned in Lovewell Pond, Maine.

Dom Pedro has been quietly visiting the points of interest in Boston without the slightest exhibition of ceremony.

The summer meeting of the Harvard Athletic Association was held in Jarvis' Field, Boston. The one-mile run was won by D. J. James, Class of '79, in 5 min. 35⅖ sec. The 100 yards dash was won by A. H. Latham, Class of '77, in 10¾ sec. The running high jump was won by E. C. Hall, Class of '76, who made a jump of 4 ft. 10 in. The half-mile run was won by J. Swift, Class '79, in 2:24¾. The running long jump was won by J. I. Linzel, Class of '77, clearing 18 ft. 4 in. The hurdle race was won by A. H. Latham, and the quarter-mile run by H. C. Dunham, Class of '77, in 56 seconds.

The stores of T. C. Phinney and Hutchinson & Smith, in Montpelier, Vt., were robbed, June 8, of over $1,000 worth of goods.

Syracuse, N. Y., was visited by a tremendous rain storm, June 9. It is estimated that between 4:30 and 8 o'clock 8 inches of water fell.

During a violent thunder storm at Hemlock Hollow, Wayne Co., Pa., William Huff, while peeling park, was instantly killed by lightning.

Adam Bear, a leading business man at West Camp, Ulster Co., committed suicide by jumping into the Hudson. Aberration of mind is said to have been the cause.

Samuel M. King, formerly Deputy U. S. Marshal for Middle Tennessee, was indicted at Nashville, Tenn., for obtaining money under false pretenses.

Captain A. C. Stiner, engineer on the Monitor in the famous fight with the Merrimac in the early part of the civil war, died at his home on Staten Island, after a brief illness, on Saturday.

Cincinnati claims to have in her midst 4,693 manufactories of all sorts, devoted to 231 separate and distinct industries, and turning out $150,000,000 worth of products annually.

Some idea of the immense extent to which the bridge-building interest has attained in this country may be had from the fact that some $150,000,000 have been invested in bridges since the late war.

Mr. Moody has preached in his new tabernacle in Chicago. He stated that the building and lot cost $89,207, and that $19,897,77 remained unprovided for. A collection was taken up and $12,356,73 realized.

More than six years since a New Brunswick farmer, living on the upper St. John, took it into his head to build a vessel in which to take his family to Australia. He went to St. John and there visited a ship yard for the first time in his life, and examined the build of a schooner. Returning home with a few tools and a book on navigation, he worked all the time he could get days, and studied, with the aid of his wife, his "navigation book" evenings. At the end of six years his vessel was completed. During the spring freshets he floated his craft down to St. John. At that time he had expended every dollar he could raise, including the proceeds of the sale of his farm. The craft is said not only to be a great curiosity in point of construction, but has numerous inventions never before seen on a vessel of any kind, which Mr. Draper, the backwoods builder, had studied out himself. Draper has chartered his vessel for three months, in order to get the means of taking his family on a trip to Australia. The vessel is of about fifty tons burthen.

J. P. Usher, ex-Secretary of the Interior, attorney for the Kansas Pacific Railway, has gone to Washington to testify in the Blaine investigation.

The printers of the Hamilton Manufacturing Company at Lowell have given notice to the Company that they will not accede to the present reduction of wages.

A better feeling has prevailed in the freight market in Quebec during the past week. Grain freights from Montreal have taken a start upward, which has tended to strengthen rates here.

The steamer Oriental, ashore on Harding's Ledge, Massachusetts., has been condemned as not being worth the cost of getting her afloat. She will be sold at auction. About all the cargo has been discharged.

The marriage of R. S. McCormick and Miss Katharine V. Medill was solemnized in Chicago, at the residence of Joseph Medill, editor of the Chicago Tribune. Elegance of dress and decorations characterized the occasion.

The report of the Chicago, Rock Island and Pacific Railroad shows the gross earnings for the year ending April 1 to be $7,665,162; operating expenses, taxes, &c. $3,687,029, a decrease in gross earnings since last year of $46,545, and an increase of net earnings of $154,723.

The following dispatch was received at Omaha from the commanding officer at Fort Laramie: "Spotted Tail, the chief of the Brules, arrived here to-day on a visit, and reports that his people are at home and will not go out on the warpath. Large numbers have gone from the Red Cloud and other agencies on the Missouri River, and are concentrating on Powder River for a fight." He reports over 1,700 lodges collected.

At the meeting of the American Medical Association in Philadelphia the following resolutions were adopted:

Resolved, That members of the medical profession who in any way aid or abet the graduation of medical students in irregular or exclusive systems of medicine, are deemed thereby to violate the spirit of the ethics of the American Medical Association.

Resolved, That there be appointed a committee of three persons, members of this Association, in each of those States where there has been no action taken for the establishment of Boards of Health to urge upon those States the necessity of the establishment of such boards.

Henry J. Bowditch of Massachusetts was elected President for the ensuing year. After the election of other officers, the Association adjourned to meet at Chicago on the first Tuesday in January, 1877.

The commencement exercises of the Boston University School of Theology were held in Tremont Temple. Seventeen graduates received diplomas, one of them being a lady.

Steam is being tried on the street railways of Baltimore.

Secretary Chandler has entered suit against Jacob Thompson, ex-Secretary of the Interior, in the sum of $1,000,000. The warrant has been served. Jere. S. Black, it is understood, will defend Thompson.

The exhibition of the Horticultural Society at Gilmore's Garden, New York, bids fair to be the finest ever given in this city. Arrangements have been made to gather the finest specimens of flowers from private collections all over the country. The exhibition will continue afternoon and evening from June 12th to 15th. Gilmore's Band will discourse sweet music during the afternoons.

The sentence of Crozier, the Penn Yan murderer, has been commuted to imprisonment for life.

George Branebridge's portable picture saloon in Ware, Mass., fell on him crushing him so badly that he will die.

Nineteen Japanese connected with the Japanese Commission at Philadelphia visited Trenton yesterday and inspected the potteries.

The Delaware and Hudson Canal excursionists made a distance of fifty miles in one day, passing through fifty locks in 12½ hours, an extraordinary feat.

Dom Pedro has presented his check for $100 to the Fire Department of the District of Columbia.

The General Assembly of the Presbyterian Church of Canada, has met in the Knox Church, Toronto. Rev. Dr. Cook, Moderator, preached the opening sermon.

FOREIGN NOTES.

THE French workmen are to leave for the Exhibition at Philadelphia on the 17th inst.

Halim Pacha has been ordered by the Sultan to go into Egypt.

The Grosvernor Mission has arrived safely at Rangoon. It is now certain that Mr. Margaray was murdered by Chinese Imperial troops.

The Public Works Department at Ottawa purposes inviting tenders for the building of the Canadian Pacific Railroad. The contracts will be awarded early next year.

Advices from Rome say that the prospect of an understanding between Spain and the Vatican is good.

A dispatch to The Post from Berlin says that Prince Hassan, son of the Khedive of Egypt, has resigned his commission in the Prussian army. He goes to Egypt, where he will be made Minister of War.

During the passage of the Serapis home to England from India, one of the Prince of Wales's tigers bit off a midshipman's hand.

In consequence of the judgment of a Bremen court, Prince Bismarck, as Chancellor, has issued a notification prohibiting for two years the circulation in Germany of the *Nordamerica*, the weekly edition of the Philadelphia *Volksblatt*.

The Spanish Premier holds that the Government must for its own safety retain the right to override the law and establish military discipline. It is evident, from this that a sense of insecurity prevails at Madrid, despite the overthrow of the Carlists.

A dispatch from Alexandria says a quarrel has arisen between the Khedive and the new Turkish Government, in consequence of which the Khedive has been ordered to proceed to Constantinople. He will arrive there shortly with his family.

Some interesting discoveries have recently been made at Rome in excavations on the Esquiline and the Monte della Giustizia. They consist of vases of baked earth, and arms and implements of a period anterior to the foundation of the city, among the former being a vessel wrought by hand from the earth of the Esquiline, and at the bottom of which are three letters of extremely ancient form. In all probability it is the oldest inscribed object that has yet been discovered in Latinum.

An ornithologist observes that in the northern countries of Europe, when the storks, soon after the breeding season, prepare to migrate southward, they make flights to test the capabilities of the young birds to accomplish the journey. When any one is found not to possess the requisite strength, it is deliberately put to death by the others. Storks feed principally on frogs, and the mother knows that the weak ones would die of hunger if left behind.

Although the statement that the Prince of Montenegro had notified Baron Rodich of the conclusion of an alliance between Montenegro, Servia, Roumania and Greece proves totally unfounded, it becomes more and more evident that Servia is drifting into war. The Turkish forces facing Servia have been reduced 27,000 men in consequence of detachments being sent to quell the Bulgarian insurrection. The Servians now under arms according to the lowest estimate number 75,000.

The *Estafette* reports that the Russian army is marching to the frontier. When it arrives at Pruth, the Servians will commence hostilities.

The Grand Vizier has issued a letter declaring: "The Porte accords full amnesty to all insurgents who will offer their submission. To give them time to do this the Sultan grants a six weeks' armistice subject to movements necessary to maintain the concentration of troops and the revictualing of Nicsic."

The Sheik-ul-Islam has forbidden the Softas to carry arms or to congregate in the public thoroughfares.

Austria, Germany and Russia have each recognized Sultan Murad in the same terms.

It is probable Winslow will be liberated June 15th, as, from the correspondence submitted to Parliament, it is doubtful that a supplementary treaty covering his case will be agreed upon by that body.

The Lower House of the Danish Rigsdag have unanimously decided in favor of the Government's demand for 2,000,000 crowns ($555,555) for the purchase of sixteen Krupp field batteries.

The funeral of M. Moulin, the French Consul who was brutally murdered at Salonica, took place in Paris, France, on June 7. The remains were buried with great ceremony and military honors, the expense being borne by the State. The Duc Decazes and deputations from both Chambers attended the funeral.

Among the twenty-four new Italian Senators created are two Jews—Isaac Artom and Julio Massarandi—the first who have ever been raised to that honor in Italy, notwithstanding that Jews have sat in nearly all the Italian Parliaments and eleven were returned at the last election.

The Queen, the Lady's Newspaper and Court Chronicle, has an interesting account of "definition bees," to which, it appears, "spelling bees" are now giving way in England.

Ricardo Menocal, Collector of Taxes in Havana, has absconded to the United States with about $400,000 in gold.

The Cuban authorities are making contracts with parties in Florida for cattle, paying $1 in gold per pound, delivered in Nuevitas.

The vote for the Duke of Connaught's establishment on his marriage with Princess Frederica, daughter of the ex-King of Hanover, will be submitted to Parliament at this session.

A dispatch to *La Republique Francaise* from Lyons reports a violent thunder-storm at Valonne.

Three soldiers of a regiment encamped there were killed by lightning, 11 paralyzed, and one blinded.

Sir Francis Hincks made a speech in reply to Sir Alexander Galt on the depression of trade in Canada. He did not agree with Sir Alexander that the depression of trade was caused by overtrading or extravagance, but rather from the reaction that had taken place after an extraordinary amount of money had been spent upon public works which created a necessity for the importation of articles required by new consumers.

The Count of Paris has gone to England to bring to France the remains of Louis Philippe, Queen Amelia, the Duchess of Orleans, the Duchess of Aumale, and the Prince de Conde. The remains will be taken to Dreaux, where they will be reinterred in the chapel built by Louis Philippe for the burial of his family. The transfer of the bodies and their reinterment will be strictly private.

Intelligence received at Ragusa on June 7 from Slavonic sources states that Prince Karageorgevic's legion defeated the Turks in the vicinity of Carkovico, Bosnia, June 3, killing 160 men. On the following day 2,300 Turks capitulated. Many insurgents have petitioned Austria to grant them an asylum, alleging that if they are refused they are in danger of starvation.

Lord Northbrook, late Governor-General of India, has been created an Earl.

The King of Greece, who was sick at Copenhagen with a severe attack or gastric fever, has recovered.

THE MARKETS.

PRODUCE AND PROVISIONS.

NEW YORK, Saturday, June 10, 1876.

RECEIPTS.—The receipts of Produce for the week were as follows:

Flour, bbls	79,420	Molasses	—
Whisky	2,700	Rice, bbls	406
Corn meal, bbls	4,300	Cut meats, pkgs	9,200
Corn meal, bags	1,178	Lard, pkgs	9,000
Wheat, bush	1,307,200	Tobacco, hhds	3,747
Corn, bush	384,000	do. cases	3,228
Oats, bush	270,400	Butter, pkgs	28,023
Rye, bush	83,900	Cheese, bxs	48,120
Malt, bush	42,700	Cotton, bales	9,224
Barley, bush		Rosin	7,500
Beans, bbls	3,600	Sats. furn., bbls	2,800
Grass seed, bush	50	Dried Fruits, pkgs	175
Beef, pkgs	1,336	Eggs, bbls	14,150
Wool, bales	2,070	Peanuts, bags	1,227
Hops, bales	135	Leather, sides	114,377
Pork, bbls	670	Sugar, hhds	—
Tallow	1,663	Oil cake	13,723

HINTS TO SHIPPERS.—Pack produce as firmly as its nature allows; otherwise many items suffer in appearance, if not in quality, through the jostling incident to transportation. Do not mark packages with any material that will smudge. A good paint for marking purposes can be made of bichromate of potash and extract of logwood. Nailed cards are very lowcut. For long lines of goods a marking plate or brand is preferable to ordinary lettering. At the time of shipment put a complete list of the lot into one of the packages if it can be done; but be sure to mail to consignee a full list, naming date, style of packages and contents. Aim to have each parcel of uniform quality as far as possible; mixing always injures sale. Roll butter should be wrapped in clean white muslin. Dressed poultry should be packed in well shaken dry straw. When poultry sweats in boxes straw-dust gives a mean look. Break off nail points from the inside of old barrels when they are used in order to prevent property from tearing. Short cut dry straw is better for packing eggs than anything else. Try and avoid the arrival of summer lots here on Saturday.

BEANS AND PEAS.—Exports of beans past week, 1,277 bbls.; since Jan. 1st, 39,007 do.; same time last year, 15,000 do. Exports of peas past week, 1,751; since Jan. 1st, 326,008 bush.; same time last year, 211,325 do.

Medium beans are in a drooping condition and we note a further decline, very good marks selling at $1.00. Mediums are also easier, but the low prices lead to some business, which is a redeeming feature compared with other varieties of beans. Pea beans are quiet; while kidneys not moving, nice showy red kidneys are in fair demand part for Cuban use. Green peas lower; Canadian not quotably changed.

Beans—Prime pea, $1.20@1.25; fair to good, $1.00@$1.15; prime mediums, $1.00@1.05; fair to good, 75@90c.; poor, 40@60c.; prime marrows, $1.55@1.57; fair to good, $1.30@1.45; prime white kid., $1.30@1.35; other, $1.15@1.30; prime red kidneys, $1.35@1.40; other, $1@1.15; Limas (Cal.), $5.00. Peas—Canadian, bbls., free, $1.15@1.20; do. to bulk and bond, 95@95c.; green, $1.10@1.20; Southern B. E., 2-bush. bag, $2.65@2.70; split, $ bbl., $6.

BEESWAX.—There is a fair trade from bleachers, but better supplies weaken prices. Sales at 33½c. for Western and 35@36c. for Southern.

BROOM CORN.—Trade is very light, with prices unsettled.

We quote Brush, short green, 8½@10c.; hurl, green, 8½@10c.; green, medium, 5@6½c.; red and red-tipped, 3@4c.

BUTTER.—It is difficult to give a full and comprehensive view of prices this week. The market has been only active in spots and when that is the case it is hard to find steady quotations. At one period of the week it looked as if State butter was about to assume a stiff position, owing to light receipts and the knowledge of the fact that N. Y. dairymen have begun to pack. The hidden appearance of hot summer weather, however diminished the number of buyers and reduced the wants of regular purchasers of the high-priced grades. Fancy pails have some of their warm weather firmness but only selected parcels can be put at 25@28c., the latter for fine creameries. Western butter is still largely ahead of the wants of trade, and likely to be for a time; a large quantity has been started this way. The eastern trade is buying again but only since prices reacted. The export trade for England is using up some Western, quality being in buyers' favor at 16@17½c.

Western firkins quoted at 13@15c. for poor to fine yellow. State firkins 16@21c. for poor to fair, 25@26c. for prime. Sweet cream pails range at 22@25c.

Pails, State selected, 25@—c.; do., other 21@23c.; creamery, 25@26c.; half firkin tubs, prime, 24@—c.; fair to good, 20@22c.; Welsh tubs selected, 22@23c.; Welsh tubs, prime, 20@22c.; fair to good, 19@21c.; Pails, Western creamery, prime, 23@24c.; fair to good, 20@22c.; Western tubs, dairy, good to prime, 18@20c.; fair to good, 13@16c.

Western factory choice, 16@17c.; do. fair to good, 14@15c.; poor, 12@13c. Grease, pure, 7@10c.

CHEESE.—With a decline in the interior markets, the market fell off here about ½c. at the reduced figures, exporters have been operating moderately, only arrivals are liberal and freely offered. Exports past week 48,946 boxes.

New at 11c. for fine factory; 10½@10¾c. for good; 9@9½c. for fair; do., half skimmed, 7½@8½c.; do., skimmed, 4@6c. State farm dairy, fair to good, at 9½@10½c.; poor lots, 7@8c.; Western factory, good to prime, 9¼@10¼c.; fair lots, 8½@9c.

COTTON.—Exporters are buying more freely at modified prices. Closing sales are:—For June, 11 13-16@11 27-32c.; July, 11 29-32@11 15-16c.; August, 12@12 1-32c.; September, 11 31-32c.; October, 11 25-32@11 13-16c.; November, 11 23-32@11¾c.; December, 11¾c.; January, 11 27-32@11¾c.; February, 11 31-32@12c.; March, 12⅛@12 3-26c.; April, 12 9-32@12 11-32c.; May, 12 15-32@12½c.

Quotations for spot cotton, based on American standard of classification:

	Uplands.	*Ala.*	*Orleans.*	*Texas*

Stained.

Good ordinary	8¾	Low middling	10¼
Strict ordinary	9⅜	Middling	11¼

DOMESTIC DRIED FRUITS.—Apples are freely offered, unsettled and favoring the buyer. Peeled peaches are dull and weak. Blackberries are lower and dull. Small fruits generally inactive.

Apples—State, sliced, 10@10¼c.; do., quarters, 9¼c.; Western quarters, 9c.; Southern sliced, 10@10½c. for prime; fair lots, 9½@10c.; Tennessee quarters, 8¼c. Blackberries, 10½@11c. Peeled peaches, good and prime Georgia, 13@14c.; do. fancy, 16c. Unpeeled peaches, new, 12@12½c. for halves, and 10@11c. for quarters. Plums, 16c. Raspberries, 26@27c. Cherries, 19@21c.

same time last week, 2,191 do.

Exports of dried apples since Jan. 1st, 1,578 bbls.;

EGGS.—The supply continues heavy notwithstanding the extremely low prices. It is about 14 years since eggs were down to 12c. The comparative dates have this lamentable difference—then eggs sold, now they don't. Cheap berries and garden stuff seem to have more influence than usual in dividing up trade. Few near points arrive.

Near points, ₱ bbl., 13@17c.; State and Penn., 13@16c.; Western, prime, 11½@12c.; do. fair marks, 11c.; Southern and Southwestern, 10½@11c.; Canadian, 12@12½c.; duck, 11@15c.; goose, 19@21c.

ESSENTIAL OILS.—Oil Peppermint, in glass, $3.75 ₱ lb.; in tin, $3.25. Spearmint, in glass, $3.50; in tin, $3. Wintergreen, $3. Sassafras, 55c.

FEATHERS.—Sales only in a small way. We quote prime live Western geese, 52@55c.; mixed, do., 35@45c.

FLOUR.—An active export trade has been reported at higher prices. The demand largely from Great Britain $4@4.50 for poor to very choice superfine State; $5@5.10 for very common to fair extra do.; $5.15@5.25 for good extra do.; $5.30@5.50 for fancy do., and $5.75@7 for very choice extra; $4@4.30 for superfine Michigan, Indiana, Iowa, etc.; $5@5.25 for shipping extra do., the inside price for inferior, and $5.30@5.65 for choice to very fancy extra do.; good to choice white wheat extras at $5.70@7; fancy do., $7.15@7.75; winter wheat, good to choice family city mill extras, $7.50@9; round-hoop, Ohio, at $5@5.15, and trade brands of do. at $5.20@7; St. Louis, $5.10@5.25 for common to fair extra, and $6.30@9 for good to very choice; Minnesota "straight" at $5.25@7, and patent at $6.20@9.50; unsound stock at from $3.75@4.75. Southern at $5@5.25 for common to good extra, $5.30@5.15 for good to choice, $6.20@8.50 for family extra. Rye flour at $4.75@5.20.

FRESH FRUITS.—Strawberries have arrived faster than they could be used locally, while the hot weather has rendered a good many parcels unsuitable for shipment—especially the case in the stock coming from Southern points. As the shipping sales form a supporting feature in the strawberry trade, the lack of it during the past week has kept prices low. The best are now coming from New Jersey. Large fancy berries begin to show, but "fancy" buyers are scarce. Gooseberries dull. Cherries also; few fine table sorts of the latter have appeared. Russet apples nominal.

We quote apples, $1.50@2.50 for poor to fair; $3.50@3.75 for choice. Delaware and Maryland strawberries, qt., 5@8c.; New Jersey, pints, 3@5c.; hulled, basket, 2½@3c. Cherries, 4@8c.; a few from New Jersey. Hot-house grapes, ₱ lb., 75c.@$1.25.; do. peaches, ₱ doz., $2.50@4.

PEANUTS—Virginia, ₱ bush., $1.58@1.67; Wilmington, $1.80@2.00; do. Tennessee, 95c.@$1.15.

GINSENG.—Southern, $1.50@1.60; Northern, $1.15@1.20; Somona root, 75@80c.

GRAIN.—For wheat there has been an unusually brisk demand for Great Britain and the Continent, and higher prices prevail. It is the general impression that Germany, France and England are short of supplies and that the business is for legitimate wants, with the war exports from abroad exerting but little influence; latest sales of No. 2 Chicago spring at $1.18@1.19; do. Milwaukee do., $1.21½@1.21¾; No. 3 Chicago do. $1.07@1.08; do. Milwaukee do., $1.13¾@1.14; ungraded do., $1.05@1.28; No. 1 Milwaukee spring, $1.30@1.31; No. 2 do. choice '71 crop, $1.28, a fancy price; 85@87c. for unmerchantable do. Rye at 86@87c. for Western; State, 96@97c.; Canada in bond, 96@97c. Corn has been active; latest sales to date were at 45@53c. for unsound mixed Western; 53@54c. for New York no grade; 57@57½c. for New York steamer; 60c. for graded mixed; 50@60c. for ungraded do., 61@62c. for steamer yellow, and 64c. for Southern do. Oats have been in good demand, partly from shipping, with prices higher, sales at 46@48c. for mixed Western and State; 44@48c. for white do.

HAY AND STRAW.—There is a very full supply, and trade moderate giving an easy range of prices.

Bale hay is quoted:—Shipping, 75c.; retail qualities, 85@90c.; clover, 60@70c.; salt, 60@65c. Straw is quoted at $1.15 for long rye; 80@85c. for short rye; 60@65c. for oat.

Exports past week, 1,489 bales. Since Jan. 1st, 27,420; same time last year, 18,187.

HIGHWINES—Selling at $1.09¼.

HOPS.—The exports for the week are only 50 bales. Trade continues very light, with prices generally steady. A custom house broker visited all the hop concerns in this city last week to get at the stock, and reports it 6,537 bales; this is under the amount that had been generally counted upon. The reports from the growing districts are rather less favorable, some little mite of fogs injuring the vines.

N. Y. state, 11@15c.; Eastern, 8@15c.; Wisconsins, 8@15c.; Peachings, 8@10c.; Olds, all growths, 4@6c.; California (nominal), 15@18c. ₱ lb.

LEATHER.—Hemlock sole at 20@21c. for light; middle, 21@23c.; heavy, 21@23½c.; good damaged, 19@21c.

MAPLE SUGAR.—There has been rather more demand induced by the low prices that holders are willing to accept. We hear of lots sold at 8½c. for good Western.

OIL CAKE.—Western brings $40 (currency) per ton.

POULTRY AND GAME.—But little dressed arrives, and even that is lower. We quote fowls 13@16c.; spring chickens, 21@26c.; Turkeys, 13@16c.

Live poultry has arrived more liberally than it could be handled, mostly Western coops. Prices quite low. We quote:

Fowls, N. J., ₱ lb., 12c.; do. Western, 11c.; Roosters, 6@8c.; Turkeys, N. J., 12@13c.; do. Western, 10@12c.; Ducks, N. J., pair, $1@1.25; do. Western, 65@80c.; Geese, N. J., $1.75@2.50; do. Western, $1@1.37.

Wild pigeons exhibit very careless packing. Some lots have turned out so poorly as not to pay freight. A prominent receiver says: "Pack fewer birds in more ice." We quote:

Wild pigeons dressed ₱ doz., 50@75c.; do. unpicked, 40@60c.; small fed, $1.12@1.25; Wild squab, 60@75c.; Tame do., $2.00@2.50, dressed

PROVISIONS.—Prices, after ruling comparatively very low, have reacted sharply and closed strong with a fair export business. Mess pork at $19.50@19.62½. July delivery at $19.60; August, $13.75. Bacon at 10½c. for Western long clear; 10¾@10¾c. for city do. Western steam lard at $11.10 for spot lots; 11.05 for June; $11.70 for July; $11.80@11.85 for August; 11.95 for September. Steamrun at 13c. for prime Western. Tallow at 8¾@8 11-16c. for prime. Beef hams at $22@21. Barreled lots quoted: $10@11 for plain mess; $12 for extra mess, and $14 for packet. Tierced quoted at $20 for prime mess, and $21 for India mess. City extra India mess at $23.

SEED.—Grass is dull; clover is quoted at 15@16c.; timothy, $2.75.

TOBACCO.—Export trade has fallen off, and otherwise but little doing.

KENTUCKY LEAF—NEW CROP.

VEGETABLES.—Old potatoes are quotable for the best only. Southern are in large supply; some steamers bring 5,000 bbls. a trip. Green stuff variable and likely to rule low from this time forward. Southern green peas not wanted; L. I. and N. J. take their place. We quote:

Potatoes—Old Peachblows, bulk, 1.25@1.50 ₱ bbl.; Early Rose, $1@1.25; common, 50@87c.; Norfolk, new, $2@3.50; Charleston, do., $2.50@4. Bermuda, $5.25@5.50. Asparagus—N. J., 75@1.25 ₱ doz.; Oyster Bay, $1.25@2. Rhubarb, ₱ 100 bunches, $2@3. Southern cabbage, $1@1.25. Norfolk cauliflowers, ₱ bbl., $2@2.50. N. J. green peas, ₱ bbl., $3@3.50.; L. I. do., ₱ bag, $1.50@2.; Norfolk marrowfats, ₱ bbl., $1@1.25; Maryland, small, ₱ bbl., $2.50@3. Charleston tomatoes, ₱ crate, $2@2.50. Florida do., $2@3.; Bermuda do., ₱ 5-qt. box, 60@80c. Bermuda onions, ₱ crate, $1.25. Norfolk string beans, ₱ bbl., $1@1.50; Charleston do., ₱ crate, 75c.@1. Cucumbers, ₱ crate, 75c.@1.50.

WOOL.—The advices from the interior are of small sales of the new clip at 33@35c., and accordingly higher. Trade here is very moderate, and prices weak. XX Ohio fleeces, 40c.; No. 2 to No. 1 do. 33@36c.; XX State and Western, 40c.; pulled at 35@37c. for superfine and extra; 21@27c. for No. 1.

ROCHESTER, June 10.—Flour market dull; spring, $6.75; amber winter, $7.00; white winter, $7.25; double extra, $7.50. Rye flour quiet at $5.00. Wheat lower; Milwaukee club, $1.25@1.30; amber winter, $1.20@1.25; white winter, $1.25@1.35. Oats, nominal at 35@40c. Corn quiet at 70@75c. Corn meal, $1.50@1.75. Butter, 20@22c. Cheese, 12@14c. Eggs, 13@14c. Lard, 14½@15c. Apples, bu., $1@1.75. Potatoes, bu., 25@30c. Beans, ₱ bu., 60c.@$1.10. Mess pork, $23.50. Wool, 25@40c. Hay, $10@13. Straw, $5@10. Timothy seed, $2.75@3.; clover, $9.50@9.75. Mill feed dull at $16 for shorts, $18 for shipstuffs, and $20 for middlings. Railroad Freights—Flour to Boston, 40c. ₱ bbl.; to New York, 30c.; to Albany, 20c. Wood, hard, ₱ cord, $8@9. Coal, $6.50@6.30 for stove.

COUNTRY CHEESE MARKET.

LITTLE FALLS, N. Y., June 10, 1876.

THE market this week has been dull and depressed. Cheese has declined in price from ½ to ¾c. from last week's rates. The decline came earlier than was expected, many dairymen coming to market in the full belief that sales could be made at last week's prices. The delivery of farm dairies was not far from 300 boxes, and as some of the lots were skimmed or of inferior quality, they went as low as 8 to 8c. The better grades reached from 9 to 10c., and one or two lots were sold at 10½c.

Factories were well represented, the offerings amounting to upward of 5,000 boxes. The sales commenced at 9c. and ran up to 10½c., at which the bulk changed hands. A few lots of fancy full creams sold at 10¾c., which was the highest figure reached. Quite a number of lots were sent forward on commission, and several factorymen who were not satisfied with the ruling rates refused to sell, preferring to hold over another week.

The delivery of butter was mostly grass make, and prices ranged from 20 to 21c., a few tubs of fancy creamery changing hands at 22c.

The weather has been favorable for grass, and cows are yielding good returns.

We have advices from abroad for the third week in May. Our London correspondent says the stocks of fine cheese are nearly exhausted, but secondary and inferior grades of all sorts are slow of sale at a reduction of from 2 to 4s. sterling ₱ cwt. Some American has been sold as low as 72s. ₱ cwt.

The prices are for extra American, 62@72s.; fine, 58@62s.; good, 52@58s.; secondary and common, 22@48s. English cheddar brings 81@90s.; Wiltshire double, 68@78s.; Cheshire medium, 50@58s.; fine, 70@80s.; Scotch, 68@68s. Dutch cheese—Edams, 58@72s.; Gondas, 50@62s.; Derby shape, 50@64s.

The supplies of butter are in excess of demand and pressed at a reduction of 1@2s. on the previous week's rates. Dorsets brings 100s.; Jersey, 120s.; Danish and Swedish, 120@110s.; Normandy, 136s. No American or Canadian butter in market. Oleomargarine sells at 60@110s. ₱ cwt.

LIVE STOCK MARKETS.

" last week	9,207	59	4,216	21,265	21,503

BEEVES.—Trade opened very slow on last Monday. The herds to hand were from coarse and fat to good, quality grades and sold at 9@11¾c. ₱ lb.; weights, 5¾@9¾ cwt. The market closed weak, with a few car loads unsold. Wednesday trade extremely slow at 8¾@11c.; weights, 6@9¾ cwt. The markets closed weak with a few head unsold. Thursday, trade small and still slow at 8¾@10c.; weights, 5¾@8¾ cwt. Friday, the markets closed weak; sales at 8¾@10¾c.; weights, 5¾@8 cwt. From 55@57 lbs. net have been allowed on the cwt.; only a few top steers obtained 57 lbs. to the cwt. net, and two carloads of selected beeves were allowed 58 lbs. net. Native steers sold at 8¾@10c.; grass, do. at 10¾@11¾c.; the cattle sold at 12c. were too poor to influence business. Bulls on live weight, 3¾@4c.; oxen, 9@11¾c.; mixed herds at 8¾@9¾c. The quality of these herds as above quoted was from common to good, being in general coarse but fat.

Fair	11 @11¾	11 @11¾
Poor	10 @10¾	10 @10¾
Poorest	8½@ 9¾	8½@ 9¾
Gen. selling rates	9¾@10¾	9¾@10¾

MILCH COWS.—Trade slow on a light run of generally inferior quality fresh cows; 9 cows sold at $10@80 ₱ head; 7 at $45@55; 3 at $60@65; 3 at $35@75—calves always included.

VEALS AND CALVES.—As yet no smooth quality veals have been received. Buttermilk-fed calves sold at 4@5c; also at $5.75@5.87½c.; ordinary quality, 5@7½c. State calves sold at 8¾@7½c. ₱ lb.; Jersey, 6¾@7¾c.; Pennsylvania, 7@7½c.; 10 head of selected calves, 8c.; 9 head poor quality, 3½c.

SHEEP AND LAMBS.—Trade unusually slow at reduced rates; the quality of the flocks to hand has not been so good as heretofore. Only one carload of woolly sheep has been received; some sold at 7½c. On Monday sheep sold at 5@6¾c.; lambs, 6¾@8c. Wednesday, sheep, 5¾@6¾.; lambs, 6¾@8¾c. Thursday, sheep at 4¾@6¾c.; lambs, 6¾@8c. Friday, the markets closed weak; sheep, 4@6¾c.; lambs, 7@8c. Colorado sheep 4¾@5c.; State, 4¾@6¾c.; Kentucky, 6@6¾c.; Ohio, 5¾@6¼c.; Michigan, 5@5½c.; Missouri, 5@5¾c.; Delaware lambs, 8@8½c.; Kentucky, 6¾@7c.; State, 6¾@8c.; Jersey, 7@8c.; Ohio, 8c.; Virginia, 7@7¾c.

HOGS.—Wednesday no live on sale. Thursday, trade in city dressed inactive at 7½@8¼c. General sales, 7¾c.

HORSE MARKET.—City trade slow, with a larger number of sales effected; 15 head of poor quality light harness horses sold at $22@72.50 ₱ head; 25 ordinary do., $115@200 ₱ head; 12 mustangs broken in part to the saddle, $75@125 ₱ head; 19 head coarse quality heavy draft horses sold at $125@235 ₱ head; 15 roadsters, with fair trotting action, $150@300 ₱ head. High-priced horses held on sale. Seventy-seven horses arrived per Erie Railway, via Oak Cliff Station.

PERSONAL ITEMS."

WHITTIER is now Clay. A plaster bust has been taken.

RUSKIN said that women, as a rule, have no eye for color.

P. BUG and G. HOPPER are on their way to Horticultural Hall.

PROF. HUXLEY says the horse is an evolved form of the orchipus.

IT IS said that Mr. Grau will cancel his engagement with Rossi.

THE victim of Circumstance has referred the matter to the Courts.

BRYANT has been editor of the New York Evening Post forty-eight years.

ANY one may feel that he is in the Quak-er City when that big horn blows.

WHEN stationers fail there must be a great amount of protested paper.

THE Citizens' Relief Committee of Indianapolis say they breathe freer now.

CALIFORNIA proposes to enact a law against pigtails. John or hog—which?

AH GONG made quite a noise when he was arrested for stealing in 'Frisco.

VANDERBILT should get *better*, of course, he owns a church, and runs a university.

THE Prince Imperial, it is said, will shortly make a tour through this country.

THE Duke of Edinburgh will be promoted to the rank of Rear Admiral in a short time.

A WOMAN is living serenely under the same roof with two husbands near Geneva, Ga.

MOULTON being in the salt business, may account for the profusion of brine in that late trial.

HON. JOHN M. FRANCIS of the Troy Times has arrived home from his trip around the globe.

Mr. HUTCHINS of the St. Louis Times is engaged in tanning the Hyde of the St. Louis Republican.

WHERE did the new Sultan get his degree, and a fellow of what Society is he? He registers himself, Murad F. N. D.

SEVENTEEN priests have been ordained in St. Louis, and yet the whisky thieves prefer that place to Jefferson City.

THE Poles in Switzerland are going to keep the Fourth of July, and thus increase our Alpine "stock" of patriotism.

WHAT could be more appropriate than an illuminated address to Adelina Patti by the London Throat and Ear Hospital?

A PAPER called the Jail Bird is issued from the Colorado penitentiary. It is not highflown but talon-ted, though o-pinionated.

AT this season your ideas about the weather are modified by the position of the thermometer. We find the refrigerator the best place.

MRS. MAXWELL, the Colorado huntress, who is now in Philadelphia, has killed 200 bears. She will now turn her attention to bores.

RUTABAGA says he always looks for financial news under the head of "Deaths"—to see who has paid his debt to Nature, you know.

"THE horn of the hunter is heard on the hills" surrounding the Exposition. It is the fog horn. They use it to hunt visitors off the grounds.

THERE are 30 circus companies browsing about the country, and yet Philadelphians wonder why the attendance at the Centennial is not greater.

GEN. JOE HOOKER, who went to the Hot Springs of Arkansas some weeks since for the benefit of his health has received no benefit from his treatment.

RUTABAGA says:—"This is not the time of year to pick quarrels, but it would be seasonable to 'harrow up' the feelings or 'cultivate' the affections."

KATE FIELD is said to have refused a millionaire. She is evidently wedded to her art. We trust that in due season the attachment will be mutual.

IT takes nineteen doctors' affidavits to prove that Abdul Aziz died of the scissors. And yet Europe shrugs its shoulders and hints it's sheer guessing.

"Is the Devil dead?" inquires the Religio-Philosophical Journal.

Don't think so. We heard him asking for "copy" a moment since.

THE story of Ole Bull's separation from his wife is pronounced by Mr. Blanton Duncan, in a letter to The Cincinnati Enquirer, to be without foundation. Of course!—Fiddle-sticks!

A COUNTRY newspaper in Connecticut says: "F. H. Williams, who usually sets ten acres of tobacco plants, will this year put out cabbages instead." The segars will smoke just as well.

ALBERT SMITH'S literary signature, "A. S.," was once shown to Douglass Jerrold, at which the wit remarked, "Ah, that's a fellow who never tells more than two-thirds of the truth."

A VEGETARIAN who was dodging an infuriated bull behind a tree, exclaimed: "You ungrateful beast! you toss a vegetarian, who never ate beef in his life! Is that the return you make?"

MR. SCHELL, Assistant Doorkeeper of the House of Representatives, pounded a grocer who presented a bill to him. If that's his method of paying debts, it's time to announce Schell out. He must have been a green grocer.

THE report that Dr. J. C. Ayer has been taken to an insane asylum is incorrect. He has been suffering from a flow of blood to the head, brought on by sleeplessness and application to business; but the physician hopes that in a short time he will be able to sail for Europe.

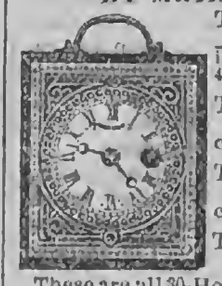
Time Pieces.

Thirty Hour Clocks.
BY MAIL, POSTAGE PAID.



The **"St. Nicholas," $2**
(Box board case, double; imitation morocco; 4½ in. high, 4 in. wide.)

The **"Cabinet," 2.50**
(Solid black walnut or maple case; 6 in. high, 4½ in. wide.)

The **"Oreide," 3.00**
(Round metal imitation Gold case; 5 in. diameter.)

The **"Boudoir," 3.50**
(5 in. octagon morocco case.)

These are all 30-Hour Detached Lever Escapement Clocks, of careful construction and are guaranteed as accurate and reliable time-keepers. They will run in any position, and are suitable for any place where correct time is desired.

Henry T. Williams, editor of the LADIES' FLORAL CABINET, New York, says of them: "The little wonder has come. It has proved as accurate as the best $200 watches, obeys the regulator immediately, and is fully as reliable as any clock of ten or twenty times its worth. We think it well worth the money."

The AMERICAN AGRICULTURIST of New York says of it editorially: "It is a very neat affair. We have had one running for about two months, in competition with a larger and more expensive clock, and though we can't say that the little one has beaten, we are quite sure it has KEPT EVEN with the other."

Such notices as these would not be given to anything but a first-class article, so that all who purchase are certain of getting the money's worth. Sent by mail, post-paid, on receipt of price. Established 1856. S. B. JEROME & CO., NEW HAVEN, CONN.

ALLEN'S
AMERICAN CATTLE.

THEIR HISTORY, BREEDING AND MANAGEMENT.

EVERY breeder or owner of Cattle should have this work by Hon. LEWIS F. ALLEN, Ex-Prest. N. Y. State Ag. Society, Editor of "American Short-Horn Herd Book," &c., &c. It is a handsomely illustrated and well printed and bound volume of 523 duodecimo pages. Mailed, post-paid, to any address in United States or Canada on receipt of reduced price, $2.

Address
RURAL PUBLISHING CO.,
78 Duane St., New York.

ANSWERS TO CORRESPONDENTS.

N. H. W.—A "Cold Vinery" isn't a structure in which vines are grown during the summer months, and laid down and kept in a dormant state in winter. It is, in other words, a structure which enables the cultivator to control the temperature sufficient to perfect fruits in our climate which do not generally succeed in the open air. While artificial heat is usually dispensed with in cold graperies, still some means of raising the temperature and dispelling moisture during long, cold rains should always be provided, even if nothing more than a common box stove set inside of the house. In planting grape vine cuttings it will make very little difference whether set "erect or slanting," although the latter plan is frequently adopted if the cuttings are of some length, in order to prevent the lower end reaching the cold, unfertile soil. If the first roots which spring from the exposed wood strike out into a good, rich soil, a better growth of vine will of course be secured.

L. E. B.—Your questions require answers too long for this column.

1. Your dog had but a fit, to which pups—especially those reared in cities, that are given little exercise and much food—are peculiarly subject.

2. Dogs never "froth" at the mouth during hydrophobia. They never fall over, never struggle as if to regain their feet. Such manifestations are positive evidence that it is *not* hydrophobia. This disease always gives a long notice. The dog is sick, stupid, restless; he cannot keep the same position a moment; he gazes fitfully at fancied objects—lies down carefully—gets up at once—rests upon his haunches, etc.

3. They have no "horror" of water during the early stages of this disease—nor, indeed, later. But the jaws ultimately become so fixed that, though they strenuously endeavor to drink, they cannot.

4. People are so ready to cry "hydrophobia" that harmless dogs in fits are driven wildly about the city, and finally killed and reported as mad.

5. To treat a young dog for fits, we would recommend you to give a light purgative and then change his food to the simplest—such as crackers, rice and milk, boiled Indian-meal, bread, etc.—and to give him regular but gentle exercise in the cool of the morning and evening.

John C. W.—If you have a desire to know how to "preserve and stuff bird skins," purchase a good work on Taxidermy and study it thoroughly before making the first attempt in that direction. In addition to what you may learn from books, it would be money and time well spent to visit some practical Taxidermist, and take a few lessons in setting up specimens. There are some very fair Taxidermists who can skin and stuff a bird neatly, but when it comes to setting up they fail to get a natural poise, either through ignorance of the bird's habits or lack of an artistic eye.

A Subscriber.—The small green lice, or Aphis, as they are generally called, which infest your rose bushes, may be destroyed by sprinkling the plants with strong tobacco water or dusting with snuff. If the plants are growing in pots, the better way would be to fumigate them with tobacco. Set the plants in a tight box or room, and throw some damp tobacco upon live coals placed in an old kettle or tin pail. Leave the plants in the smoke for two or three hours, then remove and sprinkle them well with pure water.

Bessie M.—Your mother is certainly mistaken in supposing that the small flies which first appear in spring grow to large flies when they become older, or later in the season. All kinds of flies, including the mosquito, as well as beetles and butterflies, are as large when born as they ever will be. It is the grubs and caterpillars which are afterwards transformed into the perfect insect, that grow after leaving the egg. There are four different stages in the life of an insect—first, the egg, from which comes the grub, or, as entomologists call it, the larva, the beetle growing and feeding until maturity, then changes to a pupa, in which state it neither feeds nor possesses any considerable power of movement or locomotion. From the pupa the perfect insect hatches, or comes forth, full grown. Therefore, little house or other flies never grow to be large ones.

Alexander.—The cherry stocks which you neglected to graft last spring may be budded this summer, say in July or August. It must be done before growth entirely ceases, because, after that period the bark will not peel up and permit of inserting the bud under it. The usual time for performing this operation is so soon as good, plump buds can be obtained from the tree it is desirable to multiply. The proper time for budding in one locality may not be the best in another.

James B.—Your success in seeding down a lawn at this season will depend somewhat on the weather. If it should prove dry for the next few weeks, the seed would be very likely to fail and the land produce nothing but coarse weeds. We would say, wait until cooler weather in fall, say about the first of September, then harrow and rake the surface of the ground thoroughly, sow on the seed and roll smooth. Blue grass is a good species for a lawn in your locality and soil.

WILLARD'S PRACTICAL Butter Book

ONLY COSTS $1,

And should be in the hands of every Farmer's wife in this country. It is full of practical and scientific information upon every branch of butter making, from the care of cows to butter in the market, and should be kept for constant reference in every house where that article is made.

☞ *This book is fully and handsomely Illustrated.*

Every one can understand it, and improve the quality and quantity of their butter by reference to its pages. Written by one who has not only made a life study of the subject, but who is himself a

Practical Dairyman,

it cannot but be thorough and useful. No book contains more solid information upon the subject in so few words. A complete index enables the reader to refer to any branch of butter making, and take in the whole subject in a very short time.

Lay it beside your churn, and apply its useful lessons each day, and your one dollar book will have yielded you fifty dollars before the end of the year.

Sent, post-paid, upon receipt of $1.

WILLARD'S
Practical Dairy Husbandry.

A Complete Treatise on Dairy Farms and Farming,
Dairy Stock and Stock Feeding,
Milk, its Management and Manufacture into Butter and Cheese,
History and Mode of Organization of Butter and Cheese Factories,
Dairy Utensils, Etc., Etc.

BY X. A. WILLARD, A. M.,
Dairy Husbandry Editor of Moore's Rural New-Yorker, Lecturer in Cornell University, Maine Agricultural College, Etc., Etc.

THIS is the most full, practical and reliable work on Dairy Husbandry extant; indeed the only one which describes the recent great improvements in the Dairy Business. It is highly commended by leading Agricultural and other influential journals, and must speedily become (in fact is already) the *Standard and Only Authority.* It will pay every one engaged in any branch of dairy business, or who keeps a single cow, to obtain and study this work.

RURAL PUBLISHING CO.,
78 Duane St., New York.

MOORE'S RURAL NEW-YORKER became a household word and power in the land long before we quit "going to school," and, perhaps, needs no comment from us; still "its memory is ever fresh and green," and is renewed by its appearance every week, brimful of *good things* as ever. We are glad to announce that our predictions in the January number are being more than fulfilled. We have sent it more than *five hundred* names, and we learn that subscriptions have been pouring in in like proportions from all parts of the country, despite the hard times. Long may it continue to be what it is—a power for good in the land.—*Agent's Friend.*

Traveler's Guide.

JOHN CRUMP, - - Proprietor,
Chestnut St., cor. 15th,
PHILADELPHIA.

CALIFORNIA.

Have you any thought of going to California?
Are you going West, North or Northwest?
You want to know the best routes to take?

The shortest, safest, quickest and most comfortable routes are those owned by the Chicago and North-Western Railway Company. It owns over two thousand miles of the best road there is in the country. Ask any ticket agent to show you its maps and time cards. All ticket agents can sell you through tickets by this route. Buy your tickets via the CHICAGO & NORTHWESTERN RAILWAY for San Francisco, Sacramento, Ogden, Salt Lake City, Cheyenne, Denver, Omaha, Lincoln, Council Bluffs, Yankton, Sioux City, Dubuque, Winona, St. Paul, Duluth, Marquette, Green Bay, Oskosh, Madison, Milwaukee, and all points west or northwest of Chicago. If you wish the best traveling accommodations, you will buy your tickets by this route, and will take no other.

This popular route is unsurpassed for Speed, Comfort and Safety. The Smooth, Well-Ballasted and Perfect Track of Steel Rails, Westinghouse Air Brakes, Miller's Safety Platform and Couplers, the celebrated Pullman Palace Sleeping Cars, the Perfect Telegraph System of Moving Trains, the regularity with which they run, the admirable arrangement for running Through Cars from Chicago to all points West, North and Northwest, secures to passengers all the COMFORTS IN MODERN RAILWAY TRAVELING. *Pullman Palace Cars* are run on all trains of this road.

This is the ONLY LINE running these cars between Chicago and St. Paul or Chicago and Milwaukee. At Omaha our sleepers connect with the Overland Sleepers on the Union Pacific Railroad for all points west of the Missouri River.

For rates or information not attainable from your home ticket agents, apply to
MARVIN HUGHITT, Gen'l Superintendent. W. H. STENNETT, Gen'l Passen'r Agt.

78 Duane St., New York.

Wit and Humor.

SPARKS AND SPLINTERS.

A YOUNG Lothario, much given to moonlight strolls expresses the opinion that "to flirt" may be parsed as a "fine-night verb."

A WITTY prelate was asked if he did not think that such an one followed his conscience. "Yes," said His Grace, "I think he follows it as a man does a horse in a gig—he drives it first."

THE lightning struck a Patchogue darkey on the head Saturday morning last, but he refused to budge an inch, and muttered doggedly: "Dat makes free times I'se been hit, and now I shouldn't wonder of it buff me alone."

A CELEBRATED dandy was one evening in company with a young lady, and observing her kiss her favorite poodle, he advanced and begged the like favor, remarking that she ought to have as much charity for him as she had shown the dog. "Sir," said the belle, "I never kissed my dog when he was a puppy." The fellow took the hint and was off instantly.

CANDOR.

Old Gent—"Do you know what a lie is, young man?"
Impudent Boy—"Oh, don't I! You bet I tells lots of 'em."

TRY THE CORTLAND PLATFORM SPRING WAGON.

"THE VIBRATOR."
1,000 SOLD LAST SEASON
WITHOUT ONE FAILURE OR REJECTION.

This is the famous Threshing machine that has "swept the field" and created such a revolution in the trade, by its MATCHLESS GRAIN-SAVING AND TIME-SAVING principles.

THE ENORMOUS WASTAGE of grain, *so inevitable with other styles* of Threshers, can be SAVED by this Improved Machine, *sufficient, on every job, to more than pay all expenses* of Threshing.

FLAX, TIMOTHY, MILLET, HUNGARIAN and like seeds, are threshed, separated, cleaned and saved, as easily and perfectly as Wheat, Oats, Rye or Barley.

AN EXTRA PRICE is usually paid for grain and seeds cleaned by this machine, for extra cleanliness.

IN THE WET GRAIN of 1875 these were substantially the ONLY MACHINES that could run with profit or economy, doing fast, thorough and perfect work, *when others utterly failed.*

All GRAIN, TIME and MONEY wasting complications, such as "Endless Aprons," "Raddles," "Beaters," "Pickers," etc., are *entirely dispensed with;* less than one-half the usual Gears, Belts, Boxes and Journals; easier managed; more durable; light running; no costly repairs; no dust; no "litterings" to clean up; not troubled by adverse winds, rain or storms.

FARMERS and GRAIN RAISERS who are *posted* in the large saving made by it, will not employ inferior and wasteful machines, but will *insist* on this improved Thresher doing their work.

FOUR SIZES made for 6, 8, 10 and 12 Horse Powers. Also a specialty of SEPARATORS designed and made EXPRESSLY FOR STEAM POWER.

TWO STYLES OF HORSE POWERS, viz.: our Improved "Triple Gear," and our "Spur Speed," (Woodbury Style), both "Mounted" on *four* wheels.

IF INTERESTED in Threshing or Grain Raising, apply to our nearest Dealer, or write to us for Illustrated Circular (sent free) giving full particulars of Sizes, Styles, Prices, Terms, etc.

NEW VARIETIES OF STRAWBERRIES.

There is comparatively little doing in the way of new varieties of strawberries, and perhaps for the very good reason that there is little to encourage the experimenter in attempting to produce anything better than those we already possess. It will certainly be difficult to produce a variety larger than either the Triomphe de Gand, Agriculturist, or Seth Boyden, and at the same time retain in the new production the merits of these old and none-too-good sorts. It has been tried in many a thousand seedlings, and still the old favorites hold their own with remarkable tenacity amid their numerous competing rivals.

Among those which are classed as second in size the Wilson's Albany still holds its own as one of the most productive sorts, while the Charles Downing, which is fully equal to it in size, ranks among the first in brightness, firmness and flavor. Of course we would not wish to slight or overlook the Champion, which is of very large size when grown in a congenial soil, nor the Green Prolific, Downer's Prolific, Kentucky, Col. Cheney, and other well-known sorts for there are localities and soils where some one of these may succeed better than others; hence their local value and corresponding popularity. But the "perfect strawberry" for general cultivation throughout the whole country still belongs to the future, if we are to believe all that is said of the numerous varieties already introduced and widely disseminated. Perhaps this statement might be modified by saying that every new variety when first introduced possessed all the properties of a "perfect strawberry," but lost a number of them soon after being disseminated. At least this appears to be the case, if we are to believe what is said of them before and after distribution.

At the Exhibition of the New York Horticultural Society held in this city at Gilmore's Garden, June 14—13–15, we expected to see some excellent strawberries, and while the few sorts shown were first-rate, the number was anything but creditable to our fruit growers in the vicinity of this great metropolis. Only one new variety was presented for the consideration of the judges, and as they awarded it the premium offered for the "best new seedling never before exhibited," we give the accompanying illustration of a cluster and leaf of this new prize berry. It resembles the Wilson in size and form, but is of a bright scarlet color, instead of crimson. The flesh is moderately firm, colored throughout, sub-acid not of a rich, but agreeable flavor. Seed slightly sunken in a shallow but rather wide cavity. The fruit-stalks are strong and long enough to keep the berries well up from the ground. Leaves very large, of good substance, and of a deep, rich, glossy, green color. This new sort may become the rival of the Wilson. It was raised by Wm. H. Burgess, the well-known florist, of Long Island.

Since writing the above, we have been informed that on the second day of the Exhibition a large number of new varieties of merit were shown, but too late for competition.

SEEDLING CURRANTS AND GOOSEBERRIES.

There is a much better chance of producing new varieties of these fruits than of strawberries, inasmuch as less attention has been paid to the production of new sorts and there are fewer in cultivation. There is really no more difficulty in raising seedlings of this berry than of our most common vegetable or grain, if one knows just how to do it and pays proper attention to the preservation and sowing of the seed.

First, the seed should not be permitted to become thoroughly dried after being separated from the pulp, although a few days or weeks of drying will not materially injure it if committed to the ground before cold weather sets in. The best method of preserving is to crush the ripened berries and then mix the seeds and pulp with sand, just enough to absorb the juice of the fruit and to permit of a separation of the seed will be sufficient.

Now, this mixture of sand and seed may be sown in the fall if the soil of which the seed bed is made is of a light, porous nature, the surface of which will not become so hard and compact during the winter and under the pressure of spring rains that the young seedlings cannot break through. A light top-dressing of sand or leaf-mold will prevent this, however, if one takes the trouble to apply it. But it is right here that we may mention a second cause for frequent failure in attempts to raise seedling currants and gooseberries.

The seeds of these fruits germinate at a very low temperature, a few degrees above zero being sufficient to excite the germs into active growth, consequently a thaw in winter of enough duration to warm the surface of the seed bed to the depth at which the seeds are placed will start the seeds. The next cold snap, however, will kill the young sprouts, and in spring neither seeds nor plants can be found. To avoid failure through the latter cause with seed sown in fall, it is always best to cover the seed bed with evergreen boughs, or some other material which will effectually shade it and prevent thawing until warm, growing weather in spring. But the safer way is to put the seed and sand after mixing in a box, and then bury it on the north side of some building or other shady place, leaving it there until spring; then take out and sow as early as the ground will permit. If sown early and covered very lightly, say not over half an inch, the plants will soon appear and make a vigorous growth before warm weather sets in. The ensuing fall the seedlings may be lifted, heeled in during winter, then planted out in spring, giving each sufficient room to reach a fruiting size and age without crowding.

Those who have these fruits in cultivation should make selections of the largest specimens this season, save the seeds therefrom, and endeavor to raise new and superior sorts, for it is only by such experiments that we can expect to make any considerable progress in horticulture.

OTHER SMALL FRUITS.

The seeds of raspberries, blackberries, huckleberries and other small fruits may be treated in the same manner as the above, and as it is very little trouble to raise seedlings, and there is always a chance of producing something new and valuable in this way, we think such experiments are worth all they cost. If every one possessing the facilities for raising new seedlings used them, our progress would be far more rapid and pronounced than it is under the present almost general neglect to make experiments in this direction.

NEW SEEDLING STRAWBERRY—NATURAL SIZE.

SEEDLING CHERRIES.

I have some 4,000 new cherries mostly in fruit this year, but a great many of them not for the first time.

Many years ago, when I became acquainted with the cultivated cherries, I was astonished at the meager list that had proved hardy in the Northwest and the inferior quality of the few that were hardy, and I determined to at least try to remedy this, or do for the hardy classes of cherries what Prof. Kirtland had done for the sweet, or tender varieties. I commenced saving and planting seeds of those varieties which had withstood our rigorous climate. Out of many thousands of seedlings grown, I selected each year a few of those that in my judgment had the appearance of giving good fruit—and an expert can judge to a great extent whether or not a certain seedling will produce *poor* fruit or not. These selections were planted in orchard; they were good, *hardy stocks* at least; so as to make a *paying* orchard, a bud or graft of each was inserted in some of our most valuable market cherries and so trained as to leave one or two branches of the seedling to fruit.

Since the planting of this orchard in 1868 I have made selections from many thousands of other seedlings, and buded or grafted them in the tops of bearing trees. Now what are the results? I made the Early Richmond (Kentish of Downing) my standard for comparison, marking nothing for propogation, unless the tree was the equal of that variety in all essential qualities, I also, in marking, made three classes, to wit, good, very good and best. I would like to stop right here, and give the Editor of the RURAL a chance to say, or guess, with his mature judgement and expertness and knowledge of fruits, how many of each class I have, and others of our pomologists as well. I think they would all go very wide of the number, and when set aright be as astonished as I was at the meagerness of the result. What acrid, miserable trash the 800 were before you came to the one of value! After tasting a few hundred of the terribly sour things it took some courage to taste the next. Out of this great mass of at least 4,000 distinct varieties, I have selected as worthy of preservation only 16—7 good, 6 very good and 3 best; and I may yet drop all but the three best, as they cover the season in ripening of the whole 16. The one variety which shows promise of great and extraordinary value, I have named Early Kentish. This is its fourth season of continued fruiting—and two of these seasons have been the worst we have ever had. It ripens its fruit in from 10 to 15 days before the Kentish (Early Richmond); in color it is dark red, almost black, heart-shaped, full medium in size, in flavor almost exactly like Early Purple Guigne, only a little more tender and melting. (If this is not good enough for a cherry of the sour class I will experiment further.) The tree is a little slender in growth, with a conical head, and it is of course absolutely hardy, having withstood 30 degs. below zero and borne fruit the next spring. The original tree stands on a very poor, hard, dry, clay soil, so it may be better every way than I have classed it. The others I will try and send you notes of as they ripen.

D. B. WEIR.

Lacon, Ill.

HOW TO GROW PREMIUM FRUIT.

THE veteran pomologist of Ohio, M. B. BATEHAM, in writing to the American Farm Journal about raising fine large fruit, says:

There is likely to be a good crop of most kinds of fruit this year, and many people will desire to grow extra specimens of some choice kinds for sending to the Centennial or their State or County Fair. This is right and commendable, and all who expect to do anything in this line should aim to do the best they can. It is no particular credit to a man if his trees or vines chance to be in good condition and produce for one season better specimens of fruit than his neighbor's, when no particular skill or care has been used on his part. And it may be that the season will prove so favorable that good specimens of fruit will be quite general, so that no praise will be due except for samples that are remarkably fine. At any rate it is the duty of each one to do his best.

The common fault with us all is greediness, in allowing trees to bear more fruit than it is possible for them to bring to the highest development of size and quality. Take the case of a thrifty young apple tree, which can bear without injury say a barrel of fruit, but it blossomed well, and enough is set to produce two barrels, unless thinned off by hand or by insects. Now the tree will carry an excessive burden through the season of heat and drouth and will fail to give full size or quality to the crop. It may yield two barrels of fruit, but the value of the crop will not be as great as that of one barrel of fine, large specimens, and besides, the tree will be exhausted so that no fruit will be borne next year.

Most farmers and fruit growers think it is too much labor to thin the fruit of a number of trees, or a whole orchard; but I have no doubt it will pay as well as any ordinary labor. However this may be, there can be no question about the advantage of thinning a few best trees when fruits are desired for exhibition purposes.

Mulching the soil—covering the surface as wide as the roots or the tops extend, with coarse manure, old corn stalks, chip dirt, or like materials, is the next important duty. Of course it is presumed that the trees are not growing in grass sward—then the mulching put on the surface in spring or early summer will be of great benefit in protecting the roots from injury by drouth. If the soil is of a mellow order, and occasionally stirred with a harrow or cultivator during summer, the mulching is not necessary where trees are standing in grass. I would not plow up the sod after the leaves have put forth in spring, as that would injure many of the rootlets; but I would mulch so heavily as to smother the growth of the grass; or if this could not be done, mow the grass early and often and leave it on the surface where cut, under the trees, so as to lessen in some degree the amount of evaporation from the soil during the heat of summer.

In garden culture of fruit trees the same hints will apply. Thin the fruit freely and early, and stir or mulch the surface of the ground during summer.

For grapes, the thinning is especially essential if large and perfect clusters are desired. Mulching the ground is not generally considered of advantage to grape vines; but it is important that the surface be occasionally stirred, and kept clear of weeds: also that the superabundant shoots be removed from the vines and the tieing up be done often.

PRUNING SHEARS AND FRUIT GATHERER.

THE accompanying illustration of a pruning shears and fruit gatherer combined, is taken from the "Memoirs of the Philadelphia Society for Promoting Agriculture, Vol. 2." It repre-

sents what was then called Jocelin's Patent Pruning Shears. Accompanying the illustration is a receipt for a cash sale of one of these implements as follows:

NEW HAVEN, March 27, 1810.

Honorable Richard Peters, Esq. Bought of S. Jocelin one of Jocelin's nine-inch patent pruning shears, price 4 dollars 50 cents.

Rec. Payment. SIMEON JOCELIN.

This old patent fruit gatherer and pruning shears resembles very much some supposed-to-be later inventions and we think it is fully as good. Will our Pomologists just take a look at the picture and tell us if they know of a better implement, of late introduction, that is in any respect better than the old Jocelin pruner.

Farm Economy.

CUTTING HAY.

OFTEN as the subject of cutting and curing hay has been discussed in the agricultural press it seems to have had very little effect upon the minds of our farmers. A few perhaps heed the advice given by those who have paid the most attention to the subject, but the masses still adhere to their old ideas and prejudices, cutting hay just when they get ready without regard to the condition of the grasses or other kinds of plants cultivated for forage. It may be that some of our readers will think this a rather sweeping assertion but they have only to look around among the farmers in their own neighborhood or into our larger haymarkets to see that it is the truth nevertheless.

Our best farmers as well as chemists long since decided, but not until careful investigation, that hay made from grasses or other forage plants, cut before the seed began to mature was far more nutritious and better liked by stock generally than that which is gathered later; still good early-made hay is the exception instead of the rule.

It is rare that a ton or more of sweet bright looking hay can be found in New York city markets, and we presume that it is about the same in all of our larger cities, which shows that there is something radically wrong in the time of cutting and curing hay throughout the country. The great fault, however, we believe to be found in the almost general neglect to delay commencing the hay harvest until it is impossible to make a good article out of the grasses or other plants to be secured for this purpose.

Now the amount of nutritive matter lost during the drying of herbage of all kinds is considerable even under the most favorable conditions, but the amount is greatly increased by permitting the plants to mature naturally. Grasses, clovers, and similar plants when severed from their roots in a green and succulent state contain a comparatively larger proportion of starch, sugar and gum, than when cut in a ripening condition, for in the latter much of these valuable properties are converted into wood fiber which is neither nutritious nor digestible. Meadows of mixed grasses require more attention in regard to cutting early than those composed mainly of one species.

We have noticed during the past few days meadows composed of red clover, timothy and June grass, and the condition of these three were so widely different that it would be impossible to cut the hay at a time to secure either in a proper condition. The June grass was over-ripe and the seed falling, the clover just in bloom and ready for the scythe, but the timothy had scarcely shown a sign of heading out. Now the same variation in the period of maturity of the kinds named may not be as great in all soil as in the one to which we have referred, but we doubt if they should ever be grown together for the purpose of making hay. But whatever mixture is used, or any single species, it is always best to cut early, or just when the plants are in bloom in order to make a first-rate quality of hay.

THE INEVITABLE CUT WORM.

IN the spring of 1862 or 3, I was called on by a man offering to sell trees. During our talk he told me that the cut worms crawled up his young pear trees and ate out the tips of the buds. I manifested some incredulity, for I thought I knew enough evil of the "varmint" without charging him with that. He assured me it was true, and said that he had tied around the trunks inverted paper funnels, and found the worms under them by lamplight trying to get up. I had then to believe it, but did so under protests.

A few days after I saw a neighbor looking sorrowfully at a young pear tree in his garden, and as I came opposite he asked me if I could tell what was the matter with his tree? I asked him to loosen the dirt around the trunk and see what was there. The result was three or four cut worms. I was convinced then, and during the next three or four years I had ample demonstration of the climbing propensities of the insect, having trees by the hundred nearly denuded, or rather the foliage prevented till July the year they were put out, and almost as bad the next year. At one sitting I took over fifty of these worms out of the earth under one small raspberry bush. I could see plain enough that all the progress I should make in horticulture would be crab fashion (backwards) unless I could learn or invent some method of protection from this pest. I consulted FITCH's report of 1855, the best entomological authority I then had, and found that although he claimed to treat specially of "such insects as are injurious to fruit trees" he said nothing of cut worms. But in June, of 1866, Mr. WALSH of Illinois, in the Practical Entomologist, quotes from HARRIS a mention of a climbing species of cutworm, also Mr. RILEY of Missouri as giving "an excellent account" of three varieties of these climbers, and describing them as distinct from the common corn cut worm. This was the first mention I could find in any work or essay of the then peculiar habit of this (as Prof. TRACY has since called it) "meanest thing in the heavens above or the earth beneath."

A scientific description of this insect in any of its forms, or of its different species, is not in my line, but it and myself have had a speaking acquaintance for the past twelve years, during which time I have learned much of its habits and have been somewhat successful in my warfare against it, and if I can give any information of value to my brother horticulturists and at the same time avoid the charge of egotism, I shall consider myself amply paid for this effort. I can see no difference in the worms I take from under a fallen tomato or cabbage plant, or under a mutilated grape vine or young tree, but they differ in color in both cases from pearly white to almost black (the latter with diamond stripes,) and miscegenes of all shades between, and at this time (June 1) of all sizes from very small and darkish color to very large and fat, the largest being the lightest color.

The safest protection for trees and grape vines is the inverted funnel made of roofing or other stout paper and fastened with a pin. A very good substitute, and costing less in the time of application, is the outside rim of the quart berry boxes, which are furnished for 20 cents per hundred. These are folded around the trunk or stem and pushed slightly into the earth. They are not, however, an absolute protection like the paper funnel, when put on just right, but they diminish the damage very materially, and are better adapted to small plants and vines, as they can be taken off by unfolding them, and can be straightened out and tied in bundles for another year. Scrolls of tin have been used in the same way under the impression that the worm could climb only live matter. An excellent protection for tomatoes is a bottomless box eight inches square inside, made of two pieces of six inch fencing eight inches long, and two pieces of siding ten inches long, nailed together with eight shingle nails. These will sometimes save the plants from early frost, and if left on, have some effect to keep the fruit off the ground.

Hens are an indispensible article to market gardening here in this light, warm sandy soil, the very paradise of such insects as burrow in the ground. They soon learn to run from tree to tree and from plant to plant, and are the best insect hunters in the world and these and other burrowing insects are their best food. Thus far I have spoken of this insect only in its larva state, but a very successful warfare can be made against the moth. In the latter part of June put sweetened water in small vessels (glass jars are the best) fill them up occasionally and you will be astonished at the quantity of these cutworm moths you will catch, as well as many other moths and flies. The fencing against these larvæ is an individual matter, while the destruction of them and especially the moths is a national benefit. My neighbor B. MOULTIN, scatters turnip seed over his ten acres of grape vines at the time of his latest cultivation; these turnips remain during the winter and leaf out in the spring, affording plenty of food for these poor starving cut worms before the grape vines are edible. To feed one's enemy is a good Christian principle, but in this case it is not very patriotic. As you unearth one of these sluggish worms from under a cabbage plant which he cut down the night before, you very naturally think him too lazy to move much, but view him by lamplight up four feet high on a grape vine or tree, and you will see that he can be quite nimble when hungry and under cover of darkness.

From my own observations, I conclude that there are several varieties of these cut worms, and that they all take their food at the surface of the ground if they can find it, but if not they will climb till they find buds or leaves on any tree, shrub or vine that is alive. I conclude also that the normal place chosen by the parent moth to deposit her eggs is at the foot of, and within three to six inches of something then alive, and that in early spring the young larva seeks and eats the nearest food he can find, and if neccessity compels he will go several rods for it. I have within the last ten days, found them of all the colors and sizes I have mentioned, in all such positions as I have described, at the foot of all varieties of garden vegetables, and every variety of cultivated tree, even the Lombardy poplar, whose leaves they had multilated.

I ought here to mention lest I should lead some one into error, that these wooden protections, if put around trees and shrubs in the spring, that were not protected the latter part of the summer or fall previous, will operate rather as a protection to the worm than the plant. In April of 1875, I put out thirty grape vines; they remained without protection and were badly mutilated. Early this spring I put around them the berry-box flats; on the first day of this month I found every one of the vines injured. I examined some put out and thus protected this spring, and some put out in 1874 and protected ever since and found them generally safe. After reflection I concluded that the moths deposited the eggs at the foot of the thirty vines, and the boxes shut the larvæ in, that my chickens would otherwise have raked out and devoured.

Now, I have never heard of climbing cut worms in the State of New York, though I used to see corn, cabbages and beans cut off there as now here, and by a similar worm as near as I can remember. Did they climb there and we not notice them? or have they learned the trick there, as here, of late years? We are certainly ahead of New York in some things. We had the potato bug here long before they became fashionable there.

S. B. PECK.

Muskegon, Mich., June 5, 1876.

LIQUID EXCREMENT.

How strangely we overlook the value of the liquid excrement of our animals! A cow, under ordinary feeding, furnishes in a year twenty thousand pounds of solid excrement, and about eight thousand pounds of liquid. The comparative money value of the two is but slightly in favor of the solid. This statement has been verified as truth, over and over again. The urine of herbivorous animals holds nearly all the secretions of the body which are capable of producing the rich nitrogenous compounds so essential as forcing or leaf-forming agents in the growth of plants. The solid holds the phosphoric acid, the lime, and magnesia, which go to the seeds principally but the liquid, holding nitrogen, potash and soda, is needed in forming the stalk and leaves. The two forms of plant nutriment should never be separated or allowed to be wasted by neglect. The farmer who saves all the urine of his animals doubles his manurial resources every year. Good seasoned peat is of an immense service to farmers, when used as an absorbent, and the stalls for animals should be so constructed as to admit of a wide passage in the rear, with generous passage room for peat, to be used daily with the excrement.—*Journal of Chemistry.*

Dairy Husbandry.

DAIRYING IN CALIFORNIA.

On the 20th of May last leading dairymen of the Pacific Coast assembled at the Produce Exchange in San Francisco and organized an association under the name of the "California State Dairymen's Association." This is a step in the right direction, and, judging from the numbers present and the interest taken in the preliminary meeting, a great impetus will be given to the progress of dairying in California, under the auspices of this Society.

The chief objects sought by the Association were stated to be:

1. To make a uniform and superior article of butter and cheese which will command the highest market price and force inferior grades of dairy produce down to a level with common firkin butter, thereby rendering the making of an inferior article by California farmers unprofitable.

2. To institute and provide for a series of lectures and discussions before each meeting of the Society, where each member may profit by the experience of the rest, and to invite experiments in all branches of dairying.

3. To ascertain how and by what process the most can be made out of a given quantity of milk, what breed or breeds are best and most profitable, the best mode of feeding, and what grasses produce the greatest quantity and richest quality of milk.

4. To prevent an overstock of the market by regulating the amount of butter made by the demand; converting the milk into cheese when there is a surplus of butter, which can only be done by an organization of this kind acting intelligently and in perfect harmony.

5. To ascertain the demands of other markets, as well as of our own, as to what kinds of cheese are called for. It very frequently happens that dairymen consult their own tastes rather than the desires of those who are to consume their products.

Up to the present time there has been but very little cheese made in California, the dairy sections along the coast being mostly employed for butter dairying. In 1870 we spent several days in going over the extensive butter ranch of Mr. Chas. Webb Howard and the Shafter Bros. This estate, at Point Reyes, covers some 75,000 acres, and at the time of our visit there were about 3,000 cows in milk, which were divided up into 20 dairies, averaging about 150 cows each. The different farms, or ranches, were substantially fenced in with red-wood pickets, six feet long, driven into the ground about six or eight inches apart, with a rail placed horizontally two feet from the top, to which each picket is nailed. As there is no frost here, fences built in this way, Mr. Howard informed us, would stand, without needing repair, for twenty years. About 100 miles of fence had been built upon this estate, and good roads were made over the lands so that the different dairies could be easily reached.

One great advantage which the coast lands possess for dairying is a low, even temperature, averaging about 60° Fahrenheit during summer and winter, and subject to no extremes of heat and cold like those prevailing in the Middle and North Atlantic States. The winters there are so mild that cattle do not require to be housed, and during most of the time they can procure sufficient sustenance in the field; indeed, cattle there are often wintered without a particle of food other than that which they pick for themselves over the ranches, though it is not considered good economy to allow herds to thus shift for themselves during the first part of the rainy season, as the rain washes out the nutritive elements of the old grasses, while the new vegetation springing up is flashy, or too immature to afford requisite nourishment for the thrift and well-being of the animal. Hence, in November and December it is considered good economy to eke out the pastures by giving the herds a daily allowance of fodder.

In comparing California as a dairy region, with grazing lands on the Atlantic Slope, the winter and spring months correspond with our best grazing season. From the first of January to June the grasses grow in great luxuriance, July, August and September correspond with our fall and early winter, while November and December, when stock require a little feed, may be set against our six months of cold and snowy weather. It is evident, so far as climate is concerned, so far as the storing of cattle food and the necessary breadth of land for growing such food, the advantages are all in favor of the dairy lands of the Pacific. But, on the other hand, our nearness to the markets of the world, the permanency of our grasses, our established system and skill in manufacture, must, in a measure, compensate for the rigors of the climate and other disadvantages which do not obtain in more favored sections.

In 1870 the forage depended upon, over the Point Reys estate, was the wild oats and the "bunch grass." This last is exceedingly nutritious and stock thrive upon it at all seasons, except, perhaps, at the beginning of the rainy season, when for a few weeks its nutritiousness is impaired from the causes which have been previously named.

The quality of the butter made on the Point Reys estate was very fine, which shows that the forage natural to the lands of the coast is not objectionable for making good milk.

The discussions, essays and addresses which will now be had at the meetings of the California Dairymen's Association will give us more knowledge concerning the dairy resources of the State, while the introduction of the factory system and the new processes of butter and cheese making will be of the utmost advantage in developing this interest in the Golden State.

We are glad to see that Prof. E. J. Wickson, late of the Utica Herald, but now of the Pacific Rural Press, has been chosen Secretary of the Association. His experience in the East in the management of dairy conventions will be useful in putting the California meetings on a successful footing, and we congratulate our friends on the coast that they have inaugurated a movement which will be of great value in developing an important industry for California.

SMALL CHEESES.

A correspondent writes us as follows:

"Is there a market for cheeses weighing, say from 20 to 30 pounds, and can more be realized in making small cheeses than those of the usual size made at the factories?"

Yes, there is a market for small cheeses both at home and abroad. There has always been a demand, and a large demand, for a cheese weighing from 10 to 30 pounds. There are many people who dislike to purchase cheese by the piece, because there is waste from breaking and drying; and there is so much bother in keeping up a supply for the table, on account of the necessity of making frequent purchases, that during a large share of the time there will be no cheese in the house.

Many persons do not feel willing or able to buy a large cheese, though excessively fond of this kind of food, but they would gladly take a small cheese, and would be willing to pay more for it per pound than to be constantly buying small and uncouth pieces.

Again, an original package or a whole cheese, of whatever size, can be sold by the dealer at cheaper rates than to cut and peddle it out in small parcels; and hence the large cheese, though costing the cutter less per pound than the small cheese, is rendered more expensive by cutting, on account of waste, risk and time employed in selling. Something also must be allowed for down-weight, and a 50-pound cheese, if sold out in pound lumps, will not hold out, and so the dealer must charge enough extra to make up for this deficiency.

If the market could be well supplied with small cheeses, the consumption of cheese would be greatly promoted; and if dairymen desire to see a larger home consumption, they must pay some attention to the tastes and needs of consumers and furnish such goods as they want. Much has been said, first and last, in regard to the nutritive value of cheese and its cheapness, compared with other articles of food, and it has been strongly urged as an economical and healthful article of food. All this is true enough. But dairymen seem to forget that consumers have tastes and prejudices to be gratified, and when they say, "We want a style of cheese that suits us," and dairymen pay no attention to the demand, it is not strange that many people do not get into the habit of eating cheese freely. Dairymen have yet an important lesson to learn, and that is, that they cannot ignore the home wants with impunity. They cannot send their best goods abroad and force our own people to purchase and eat inferior stuff cut up in wedge-shaped lumps.

Among the great cheese-eating nations we find a large variety of styles in which the article is placed before consumers. The great bulk of the cheese made in Holland is put up in small weights. Thus we have the Edams—a ball-shaped cheese of five or six pounds; the Gondas—a small, flat cheese, and other varieties. In England there are the Stilton and the Cheddar loaf, each weighing ten pounds or less, and then there are the Gloucester, the Wiltshire and the Derby, all cheeses of about 30 pounds weight.

What we need in America is a cheese weighing from 10 to 20 pounds, to put upon the table, from which pieces may be cut as needed for immediate consumption. This is the English fashion, and it is a good fashion, being both convenient and economical, and it insures a more palatable morsel than when cut in slices and laid on a plate. The only small cheese that has been much used in this way among us is the Pine-apple, but its manufacture is decreasing, although the price per pound which it commands in market is often double that of large cheese. Much more money can be realized for small cheeses of good flavor and quality than for the same number of pounds made up in the usual factory style.

It costs more to manufacture small cheeses and more time is required in their care than large ones, but they are more readily sold, and the extra price which they will bring more than pays for the trouble named. We know of some factories which have made a 30-pound cheese for years, and it always is in eager demand, commanding an advanced price above all factories making larger cheese.

We say, then, to our correspondent that he will have no trouble in marketing small cheeses if they are of good quality, and that more money can be realized from them than when made in the usual way; and in addition to this, such manufacture would be a help to the dairy interest by promoting home consumption.

CITY CHEESE AND BUTTER FACTORY.

We learn from the Canadian papers that an enterprise is now being agitated to build a cheese and butter factory on a gigantic scale at London, Ontario. The plans are to make an arrangement with the six railroads that center at this place to bring the milk on from all stations along the lines, and to make butter and cheese at the factory on the most approved scientific principles. The argument used for the success of such an undertaking is that in so large a factory the best talent and skill can be employed, while it opens to dairymen along the lines of the roads who are not conveniently located near factories the facility of disposing of their milk at little expense and trouble.

City factories have from time to time been suggested for the purpose of working up the surplus milk received by city milkmen. When large quantities of milk are received and a portion of it cannot be disposed of, it would doubtless be better to work it up at such a factory than to return it to farmers, since in the latter case the milk is spoiled for any purpose, except, perhaps, as food for swine.

We do not learn whether it is proposed to purchase the milk at the London factory, or whether it is to be made up for the farmers on the joint-stock plan at a certain price per pound.

There are some objections that occur to us in the running of such a factory; still it may prove a success, and we shall await the development of the Canadian enterprise and look for its operations with interest.

The Poultry Yard.

THE MARKET VALUE OF POULTRY AND EGGS.

The value of poultry and eggs raised in this country is certainly enormous, but we were scarcely ready to place as high an estimate as the Fanciers' Journal from which we take the following:

The market value and amount of poultry and eggs annually raised and consumed in the United States is immensely greater than most of us have any idea of. To say nothing of the thousands of prime "fancy" fowls and pigeons every year disposed of to amateurs, small breeders, and public exhibitors in America, the quantities of farm-poultry and eggs—including the products of the turkeys, geese, ducks, fowls and pigeons produced on this side of the Atlantic—are enormous.

There is no doubt of the truth of the statement recently made by an agricultural lecturer, that "the aggregate weight of dead poultry sold yearly in this country exceeds by many tons the weight of dead beef consumed in our markets!"

The product of poultry is continually on the increase, also. There never has been, and probably never will be any glut in the market of these desirable edibles—good chickens and fresh eggs. The price has kept steadily up to paying figures, too; and whether the times be hard or easy the change in the current value of *this* product is not noticeable.

If we were to set down here some of the figures lately given of the estimated millions of dozens of eggs sold in a single large city market, in 1875, or note the millions of pounds of chickens and other poultry there disposed of in the same year, the facts would be almost startling, and seem incredible. Yet it is true that *no* class of live stock in the country foots up in solid money value, annually, the sum that is realized by farmers, poulterers and egg dealers in the United States, at the present time, for these always desirable and readily salable commodities.

Of course the business of poultry and egg-production is disseminated over a wide field, and great numbers of persons are engaged in producing this aggregate, which is brought about in individual small quantities, monthly. But when we know that in a single county of Ohio, last year, according to official statistics there were over $430,000 worth of eggs and chickens marketed, we can fancy what the grand total value of all counties in all the States *may* be?

It is by no means a trivial business, indeed. There be those, as we hinted lately in these columns, disposed to ridicule this occupation, and the parties who follow it. But if those who incline to jest at the chicken fanciers and fowl breeders of this country would reflect upon the solid importance and large value of this interest in America, such ridicule would be turned to wonder at the real *facts* in the case.

YARDS FOR POULTRY.

One of our most experienced poultry breeders, speaking of poultry in small yards, says:

A dozen fowls would do very well in a yard 50 feet square, with a little grass plot in one corner, as fowls must have grass. This space is as small as can be used for that number, and if one cannot give that space to them, he had better buy his eggs and chickens, as fowls cannot be kept profitably without a certain area of yard room. A few fowls may be put into a smaller yard and they will lay well for a few weeks, but after a while, with the grass all destroyed, the hens will begin to lay fewer eggs and will be unprofitable. Of course, a large range is always best, but in a village one cannot do as he could on a farm. Don't forget to supply your fowls with gravel, old mortar, or ground or pounded oyster shells, as aids in the formation of eggs.

MEASURING EGGS IN FRANCE.

In France eggs are not sold as they are here, so much for a dozen, whether big or little, those of the large Brahma or Creve Coeur counting the same as the little Bretons or Bantams. The eggs brought to market are verified by agents appointed by the administration, who are called "mireurs comptours," and the eggs are submitted to three operations—first, counting to verify the number of eggs in the panniers; passing them through rings to test their size and value, and final inspection to separate the clean and fresh eggs from those stale or addled. Small eggs in the markets of Paris are those which will pass through a ring of four centimetres. Hence, French egg merchants have rings of different sizes to try the eggs.

HOW TO CATCH HAWKS.

As the season is approaching when hawks are most destructive to young poultry a method of catching and killing these marauders will be in order. It is a well-known fact that a hawk will always light on some conspicuous place close to the poultry yard from which to swoop down on his victims. Taking advantage of this erect a pole with flat surface at the top just large enough to hold a strong steel trap. Fasten this trap by a chain to a staple in the pole and await results. No bait will be needed for the hawk will be quite certain to light on the trap and be caught. A gentleman who has tried this method has succeeded in killing all the hawks in his neighborhood and can now raise poultry without loss except by accident.

POULTRY NOTES.

Guelders or Guelder Fowls.—Thos Ludford: There is a breed of fowls known by the above names also called Guelderlanes from a province of Holland lying south of the Zuyder Zee. Tegetmeir in giving what is known of the history of this breed says:—"There is no doubt whatever that the Guelders were originally a sport from the feather-crested Polish family."

We do not known the address of any one having this breed of fowls for sale.

Raising Pekin Ducks.—Mrs. L. J. P. of Salem, Oregon, writes that she desires some one of the Rural to tell her how to raise Pekin Ducks. Last year was her first attempt which proved almost a total failure, only two ducklings were raised out of eighteen. She also adds that a few years since information was asked in regard to raising turkeys and the reply received through our columns enabled her to make a perfect success of what before was almost a total failure.

Will some one having had experience with Pekin Ducks respond to the above request.

Another Cure for Gapes.—Ed. Rural New-Yorker.—I will tell you how we doctor chickens for gapes. We catch and put them in a barrel the barrel sitting on the end, then take some air slaked lime in a coarse bag, and shake on them, till there is a dust, then cover up for five minutes to breathe in the dust. Then let them go; if this does not cure try again in two or three days. When we find they have the gapes we do not put any more there, but change to another piece of ground, and we do not have any trouble for a year, and some times two years. We think the ground has much to do in giving chickens the gapes.—C. A. Davis.

The Centennial.

CENTENNIAL CORRESPONDENCE.

ATLAS HOTEL,
PHILADELPHIA, June 15, 1876.

FIELD TRIALS.

To see the grand competitive field trials of agricultural implements was the object of my coming here, but disappointment alone was my reward. I have, however, the consolation of knowing that I am not alone in this, for many people who have spent considerable time, labor and money in preparing for the trial, now find themselves in the same condition. The great Centennial International Field Trials will *not* take place. I presumed the readers of the RURAL would like to know why and therefore did my level best to discover the cause; but found it no easy matter. Hoping to get bottom facts I at once interviewed Mr. Burnet Landreth, Chief of Bureau of Agriculture. While I found him a very pleasant gentleman, I failed to get many facts from him as he did not desire to say or do anything which should look like disrespect to his superiors and evidently seemed to think that a full statement of facts would place the Centennial Executive Committee in no very favorable light before the public as to this one subject at least. Left to my own resources I was obliged to get them from Mr. Geddes, Superintendent of Field Trials and the exhibitors themselves who are interested in the subject.

It seems that as early as August 20, 1875, these trials became a fixed fact as will be seen by the following extract from a circular of that date.

FIELD TRIALS.—Manufacturers designing to compete in the field will be at liberty to use the machine or machines placed by them on exhibition in the Agricultural Building, or may use a less costly one, provided it is identical in construction and working parts.

August 20th 1875.

In addition to this Mr. Landreth, by authority of the Commission, hired and caused to be planted with grasses and grain, ninety-four acres of land, just outside of the city, for the purpose of these trials. For rent, labor, fertilization and incidental expenses, these lands have cost up to date the sum of $2,875.

As soon as the competition became a fixed fact, the work, pressure, influence and pipe laying with the Commission began. Quite a number of the large manufacturers who had already received many valuable awards began to do all in their power to prevent their occurrence, covertly at first and subsequently in an open and undisguised manner. These men had everything to lose and nothing to gain. Should a new implement or one comparatively unknown carry off an award, it would depreciate the value of those which *they* had already obtained. With these powerful incentives the obstructors worked like beavers. They caused the Centennial Commission to be officially and personally flooded with letters containing reasons why Field Trials should not take place. They set influential men to talk to the Executive Committee for the same purpose and did everything which men of their ability and brains (and the implement men of this country are about the brightest we have) could devise as a preventive. They seem, however, to have failed in receiving any decided expression of opinion from any of the Executive Committee and began to think that the Trials were a certainty. Nearly all this work of obstruction was done covertly and without the knowledge of Mr. Landreth who was, in the meantime, going ahead with his preparations in accordance with the original intentions of the Commission.

Finding themselves doubtful of success, a convention was called ostensibly for the purpose of devising and proposing a plan of operations by which a fair trial could be had and just awards could be made, but in point of fact entering another obstructing wedge to any trials being had. What was accomplished can now be seen, though at the time of the convention it was only partially disclosed. Still the careful preparations under the immediate supervision of Mr. Landreth, who seems to do all his work carefully and conscientiously and to perform an immense amount of it too, were steadily progressing and the following circular was issued to exhibitors:

CIRCULAR LETTER TO EXHIBITORS.

GENTLEMEN:—The Centennial Commission have provided for a field trial of rakes and tedders, and in a few days will mail you forms of entry. The rules of the Department of Agriculture will admit to the full competition only machines similar in construction to those on exhibition in the building. If you have any machines under process of construction which are not represented in the building, you may yet enter them, as I still have some room to spare in the section appropriated to hay-making machinery. I mail you an entry blank form, which you can use if you desire.

I will be pleased to receive from you suggestions of points applicable in judging rakes and tedders.

A scale of 1000 has been adopted in relation to mowers and reapers, but none yet decided upon in connection with rakes and tedders.

I also request a schedule of parts of machinery comprised in the construction of rakes and tedders, each to be tabulated and sent to the manufacturers, requesting them to affix the measurements and weights of a list to be given to the judges, to be used by them in making up the awards. Respectfully,

BURNET LANDRETH, Chief of Bureau.
Per C. HENRY RONEY.

Among the bits of information developed by my investigations, the following speaks for itself:

PROPOSED AGREEMENT BETWEEN HARVESTER MANUFACTURERS AS TO COMPETITIVE TRIAL AT THE CENTENNIAL EXHIBITION.

The undersigned, manufacturers of reapers, mowers and harvesters, believe that a competitive trial of machines at the approaching Centennial Exhibition in Philadelphia would be attended with much expense and consumption of time on their part, and require their attention at a season when it is urgently needed in carrying on their regular business. They are also of the opinion that no substantial benefit can arise, either to their business as manufacturers or to the community at large, from such a trial.

The circumstances under which the trial must necessarily take place will not afford a full and fair test of the relative merits of the machines, inasmuch as the distinguishing merit of one machine over another at this day is only perceptible under exigencies of rough ground, soft ground, heavy, beaten-down grain and grass, or other extraordinary conditions. Whatever superiority one machine might exhibit over others at such trial would probably be due to unusual accuracy of construction of the detailed parts of a machine made with a special view to this trial. Such accuracy of workmanship in detail would never be exhibited in the ordinary construction of said machine.

Upon these and other grounds which will readily occur to manufacturers in this department, we express ourselves as earnestly opposed to such trial, and do hereby agree not to enter into such trial.

(Signed) D. M. OSBORN & CO.
C. AULTMAN & CO.
AULTMAN, MILLER & CO.
ADRIANCE, PLATT & CO.
RUSSELL & CO.
WALTER A. WOOD
Mower and Reaping Machine Co.

About the first of June the preparations were well nigh completed and Mr. Geddes, Superintendant of Field Trials, was sent for and ordered to go ahead with his estimate of expenses and to receive his entries. Judges were selected and their names submitted to the Executive Committee and an approbation of $10,000 asked for with the understanding that only a part of it would be used and a large part of that which was used would be returned in entry fees. It was estimated by Mr. Geddes, that about $5,000 would cover the expense and that he could safely count upon $4,000 entry fees. This would make the net expense to the Centennial Commission, but $1,000. Implements were sent to the grounds to be ready when the day arrived and a large amount of expenses was incurred in such preparations by those who had entered and intended to enter for the competition. Up to this time, as nearly as I can learn, Mr. Landreth and Mr. Geddes were totally ignorant of any intention (if indeed any such existed) on the part of the Commission to throw a straw in the way of the trials. What was their astonishment when at the eleventh hour of the last day they were informed that no appropriation would be made and no trial could take place. Then for the first time was made manifest the power behind the throne. The $2,875 already spent upon the grounds is wasted and the large sums spent by competitors are gone for naught.

In some quarters of Agricultural Hall the feeling is very bitter against the Commission for this action. Every one seems to acquit Mr. Landreth entirely in the matter. They say, however, that it is simply a fraud upon them to permit expensive preparations up to the very last minute and then render them absolutely nugatory by one arbitrary sweep—that it is evident to anyone that the financial question has not produced this result; but it is some stronger interest somewhere. Of course it places Mr. Landreth and Mr. Geddes in a position of conspicuous awkwardness without any fault of their own and the only thing left for them to do, it would seem, is to roundly abuse the Commission which neither of them will do so long as they hold appointments under it. This action I learn is only one of the snubs which the Agricultural Department has received at the hands of the Commission.

From the beginning of the preparation of the ground to the present time the high authorities seemed to have looked with contempt at anything to which was attached the word agriculture. While various side shows and feeding shops have received everything they asked with a little more thrown in for good measure, this Agricultural Department has been obliged to go through a process like pulling teeth to get even passable recognition. In the first place, their building site was placed in the extreme back part of the grounds and is about the most miserable structure of the Exhibition. It is about half the size it should be and almost literally pasted together.

An interest of as much importance as this, representing, as it does largely, that which is good in citizenship, moral in character, and productive of the wealth and solidity of the nation, should not be looked upon as entitled to less consideration than the Barnum-show part of this great International Exhibition. Yet the show part is made more prominent and receives vastly more attention from the Commission than the producing interest. They seem to think that each man who wears the badge of Agricultural Hall has "hay seed in his hair" and that they are bound to give him the go-by. The visitors, however, think very differently. One has only to watch the intelligent and solid appearance of those who are generally found in this Department to appreciate the class and kind of people who are interested in it. These people come to learn and not to be amused. The various eating houses and beer shops have for them no meaning, except as a possible convenience when constant motion has made them hungry or thirsty.

But somebody must be dissatisfied, and I suppose the Commission calculate that those people who stay at home and mind their own business, as the agricultural class do, are the safest people to snub and perhaps they will never discover their mistake. There is, however, a slight muttering of distant thunder, which may, in time, develop into a storm of dissatisfaction about the Commission. The last *camel* may break the *straw's* back, then—stand from under!

DAIRY.

The building for the Dairy display is now nearly completed and some exhibits have already arrived. In conversation with several of the Executive Committee of the American Dairymens' Association, who are in command there, they claimed that the RURAL NEW-YORKER had greatly retarded them in their work by its series of articles on the "Centennial Dairy Ring"—that it had produced a sort of distrust in the minds of many who otherwise would be exhibitors and resulted in a lack of interest in this Department. In spite of all this, however, they are working hard and intend to make the display a success. The Jewett pans are being put up and the Iron Clad people are making preparations to erect a set. The arrangement of the building seems to be a good one and Mr. Pope, the Superintendent, says he can take as good care of the perishable goods as any Butter Or Cheese man could do at home. Mr. Blanding, the Architect, is conspicuous for his activity and seems to have worked out an excellent plan with much judgment. Mr. Harris Lewis was on hand with his eyes open, as usual, and if he didn't quote Scripture so much I think he would make a fair Dairyman some of these days. When Mr. Pope sets his teeth and says he is going to have a good show in spite of all the opposition, it looks as if he meant business. Of course I cannot be expected to have much knowledge of your action in the matter of the "Dairy Ring" of which these gentlemen all complain so bitterly; but I can see that the Dairymen of the United States will never have another such opportunity to display their goods as this one is and I should advise them to send forward their exhibits and each one contribute his mite towards the success of this Department. If we are, at no distant future, to supply the world with Dairy products, as some fully believe, now is certainly the time to push that industry forward and the Centennial is undoubtedly the place to do it. Let us have something at Philadelphia which is commensurate with this rapidly-growing interest.

SCHENK'S STATION, PA., June 16th, 1876.

TRIAL FIELDS.

WITH Mr. Geddes and his old time companion, Mr. Willoston, I visited the grounds which were prepared for the Field Trials at this place. There are about fifty acres of wheat, largely Clausen, which bids fair to be a heavy crop. The ground was carefully fertilized and Gallup of the Bickford and Hoffman Grain Drill put it down. It is being staked out into plots, as the intention now is to have an Exhibition of Agricultural Implements, even if the competition has been given up. Probably the jury of that Department will attend in order that they may see the machines at work and thus form a more perfect idea of their relative merits.

The grass consists of about forty-seven acres and is now in good condition for work. The exhibition will begin, under the direction of Mr. Geddes, on the 26th day of June and continue probably for ten days. The dissatisfaction caused by the prohibition of competition in the field has not abated in the least and it does seem a very unjust thing that new implements should be shut out of all chance for possible awards. I cannot see why such men do not club together and make the exhibition competitive, leaving out such as are opposed to it altogether. Of course the grounds will be free to all: but this would not interfere with that freedom in the least.

Why Mr. Geddes did not resign as soon as the Commission showed the cloven foot on this matter would be a mystery to me did I not know that the Implement men were anxious to show their machines at work and were equally anxious that a man of his experience, judgment and fairness should manage such exhibition. To a man like him, these are powerful reasons. In conclusion, permit me to say that every machine should enter, as it is highly probable that the Jury intend to be present. SHORTHORN.

Insurance Department.

INSURANCE NOTES AND NEWS.

Chicago Insurance Companies.—Chicago appears to be an insalubrious locality for insurance enterprises. Four out of five—perhaps a greater proportion of the life companies started there—have come to grief rather suddenly and unexpectedly, and for causes suspiciously inexplicable, while the great fire left but very few of its fire insurance companies in existence, and not one, it is believed, of those that did a purely local business. The American comes in neither category, and is a notable exception to a too general rule. Quite recently, if the reports of the Insurance Department of Illinois are trustworthy, two more life companies—the Mutual Life and the Safe Deposit (?)—have been numbered among those that have fallen under the official ban. The former "has been weighed and found wanting" fully $120,000, it is said, to make its books balance comfortably, and the latter, perhaps, two-thirds as much. There are no tears to be shed, for these were always callow enterprises, and there are too many companies for their own and the public welfare.

Farmers' Companies.—Owing to an unexpected increase of losses during two years past, several of the companies doing a farm business have lost heavily, and, as a measure of safety and expediency, have been compelled to ask an increase of premium rates. One company that was at one time regarded as prosperous and promising suffered so severely from this cause that it has, it is said, taken the initial steps toward abandoning the business entirely. It is not yet decided what disposition will be made of the risks now outstanding, but they will, probably, be assumed by some good company. The lesson of this failure is twofold: That farmers cannot be too careful in ascertaining the actual condition of the companies asking their patronage, for there are others not much better entitled to their confidence than the unfortunate alluded to; and that since reliable protection costs money and cannot be had without money, they should be willing to pay a fair premium.

Exchanging Life Policies.—Whenever a life company quits business now under the most favorable conditions, the holders of policies are asked to exchange them for new ones issued by the reinsuring company. This is very general, but it is seldom, if ever, necessary, and never either safe or profitable to the insured, who, if they do not sacrifice the accumulations of their old policies in part or wholly, encounter other and unsuspected dangers. An instructive case was recently decided by the courts that throws some light upon the perils of this sort of business. A man insured his life for $10,000 with the Empire Mutual Life Insurance Co., stating, among other things, that he had no serious illness during several years preceding—a statement which was *then* strictly true. After two or three years, during which he had a severe illness, and of which he nearly died, the Empire reinsured all its risks with the Continental, and required an exchange of policies. The policy tendered and accepted by him was insured (as it is stipulated by express terms) upon the faith of the representations of the first (and only) application. He died, and the Company contested his claim because the statement in regard to his having had no severe illness, though admitted to be true when it was made, *was not literally true when the last policy was issued.* The worst part of the transaction—if there can be anything worse than picking technical flaws to avoid paying a widow's claim—is that the Continental would have had no such defence if the original policy had been in existence and in force, and the widow's claim was voided by the act, or in consequence of the act, of exchange. The best way to avoid such trouble is to hold on to the original document and obstinately refuse to part with it upon any terms whatever. There may be one case in a hundred where the policy holder is better suited with the second policy; but the rule is otherwise. The Company would not consent to a change, and would certainly propose none, unless with a prospect of gain, and if one party gains the other must lose.

Floricultural.

EXHIBITION OF THE N. Y. HORTICULTURAL SOCIETY.

We regret that our crowded columns prevents us from publishing a report of this creditable exhibition of flowers and plants at all commensurate with its merits.

The many residents of New York who have long felt the need of just such a society have reason to feel grateful that, though comparatively of recent origin, the Exhibition just closed at Gilmore's Garden is one that would not have disgraced the Centennial. Indeed, several of the gentlemen to whom the Centennial is most indebted are those who made the finest display here. Prominent among them were S. B. Parsons and R. B. Parsons of Flushing, N. Y.—and Geo. Such of South Amboy, N. Y.

Among the most interesting plants to the general observer of Mr. Such's collection were splendid specimens of *Nepenthes*. The pitchers of *N. Rafflesiana* were the largest and most highly colored—mottled with deep purple upon a greenish white ground, and large enough to hold half a pint. Here was also a fine *Sarracenia flava*, a *Pteris scaberula—Adianthum Peruvianum*, a robust, distinct Fern of pendant habit,—an *Ixora Javanaca flava*, resembling a Hydrangea in its flowers of deep orange.

Mr. S. B. Parsons' collection consisted of a pretty assortment of Ferns and small but rare specimens of evergreen and deciduous trees. Among the latter was a Horsechestnut with leaves as finely cut as those of a Fern,—Oaks with leaves of strange outlines, Oaks with golden leaves, Oaks with leaves of pure white and green.

Mr. John Henderson's group of *Lygodium scandens*, a comparatively new Japanese climbing Fern, attracted much attention. It consists of upward of 100 plants in pots placed close together upon a square platform, with a fountain in the center. The Ferns, about five feet high, were trained to perpendicular strings, and reminded one of a little, cool grove of green spray.

Mr. Charles Zeller of Flatbush, N. Y.—a gentleman noted for his seedling Pinks—exhibites a number of *Agaves*, *Cacti* and *Echeverias*.

John S. Bush displayed several of the highly colored *Caladiums* and a vigorous specimen of *Clerodendron Balfouri*.

Peter Hanson of Brooklyn, N. Y., presented a small *Lilium Washingtonianum* in bloom and several seedling Lilies of the *umbellatum* varieties.

In Mr. Wm. C. Wilson's exhibit we observed a small specimen of the rare *Todea superba*, a New Zealand Fern, the fronds of which, of a velvety texture and a lively green color, arch gracefully and are feathered to the base.

Among a few cut flowers exhibited by Messrs. Beach, Son & Co. of this city were several of the pretty Iris. *I. Persica* is a bronze, with blotches of bright yellow upon each of the three outer perianth segments. It was common enough "once upon a time," but is now quite rare. This, with others of lavender and white, formed a delicately pretty grouping.

Mr. I. Buchanan, whose beaming, benevolent old face was as pleasing as his plants, exhibited specimens of Orchids, among which were several of the *Calleya mossiæ*, *elegans* and *superba*. The flowers are very large, of a soft, light rose, shaded with deeper rose,—and *Vanda tricolor*, whose flowers may be said to resemble birds, beetles, fishes, reptiles, according to the fancy of the beholder.

While noting the above, we would not slight dozens of other exhibits in no way inferior; but our space is filled. We dare to hope that the N. Y. H. S. has a future that may be to Floriculture what the American Pomological Society has been and is to Pomology—and we can wish its enterprising directors no greater boon.

ANNUALS AND BEDDING PLANTS AT THE CENTENNIAL.

Later in the season the effect of many summer plants at the Centennial Exposition, now arranged in ample plots with great care and taste, will be apparent, though at present little besides this care and taste is noticeable. The earth has been dry, the specimens have made little or no growth, so that, except the ever-present Pelargonium, there is a meager display of colors—while the half-withered foliage impresses one that half of them are as likely to die as to live.

The effect of hundreds of Pelargoniums of the same color massed together is well shown in two plots, one of them filled with the rose-colored Christines, and the other with scarlet varieties. There are not less than 500 plants in each plot, each bearing full trusses of flowers. It is a glare of rose and a glare of crimson, unrelieved even by the leaves, which are curled and brown. Unusual forms and arrangements always rivet the eye, though it be for a moment only. There is nothing in this massing of a single color to commend it to general and permanent adoption. At a little distance, one sheet or blanket of rose and another of crimson would look just as well.

Another large bed is devoted to Roses of all colors, with foliage green and lively, and with flowers in every stage of development and of every color known to this queen of the floral world. They seem to have been placed with a nice regard to harmony of colors, and they show to a striking advantage the beauty which many Roses reflect upon one another, as compared with that of a single subject. The Pelargonium beds and this bed of Roses are the work of Messrs. Miller & Hayes of Philadelphia.

Mr. Thos. J. Mackenzie has constructed a large circular plot that, if we mistake not, will prove an attractive object during late summer and early fall. It is surrounded by the usual arched-iron border, first within which is a circle of Gnaphalium; next, a circle of Iresine; next, two circles of Pelargoniums—the outer pink, the inner crimson; next, a circle of Coleus; next, Abutilon Thomsoni; next, Cannas; and finally, in the center, a fine Cycad. It will be seen that whether we regard size, habit, vigor or color, this is a skillful arrangement. As the circles diminish, the plants are larger and, in the same time, will make a taller and statelier growth. The outermost circle is a silvery-gray; the next, deep reddish-purple; then green, with pink flowers; next, green, with crimson flowers; then the subdued foliage of the Coleus, the stately bronzed Canna, and finally the majestic Cycas.

Other plots are devoted to Gladioli—others to mixed bedding-plants without definite arrangement, in one of which we noticed many specimens of Amaranthus salicifolius, which, however graceful when under the extremely squeamish care it demands, will, if we may judge from our own experience, prove a conspicuous failure as it is here placed.

As if it were by a preconcerted plan, a number of the most successful Rhododendron growers of the world have united their best efforts to render this display the most extensive that has ever taken place. S. B. Parsons—R. B. Parsons of Flushing, N. Y.—H. A. Dreer of Philadelphia—Anthony Waterer and James Veitch & Sons of England are the most notable exhibitors. Those of Mr. S. B. Parsons are all perfectly hardy in Flushing—a fact that invests them with extra interest to those who desire to make selections for out-door culture from our choicest hardy varieties. Those of the Veitches, together with many other rare evergreens—hardy and semi-hardy, to which we shall again have occasion to refer—are, with the well-known liberality of this enterprising establishment, presented to the Commission.

Mr. Waterer's Rhododendron exhibit, occupies a space that would itself suffice for a country fair, is protected by an awning and comprises perhaps 1,500 specimens. As one wonderingly looks upon these plants in full bloom and without a trace of injury sustained by their journey to this country, it is difficult to say which feeling triumphs—delight over so grand a spectacle, or perplexity as to how so varied and numerous a collection of shrubs, from one to four feet in hight, could be transported so great a distance and yet tell no tale but what they had been cultivated in the very places where they stand.

We heartily wish that every one of our readers might see these plants. Every corymb consists of upward of 20 flowers, each flower is as large as a small Gladiolus, and plants two feet high bear a dozen corymbs. The central flowers are so elevated above the lateral ones as to form a perfect bouquet, each subtended by and resting upon a whorl of large, deep-green leaves. When, therefore, 1,500 Rhododendrons, averaging three feet in hight, with a range of vividly delicate colorings rarely equaled by any other class of plants, are collected together and artistically arranged, the effect is one that must be seen to be appreciated. Every Rose has its thorn, however, and the Rhododendron is not perfect. Its floral beauty is short-lived. Ere these lines can reach our readers, the Rhododendron display will be of the past.

FLORICULTURAL NOTES.

It is easier to get rid of weeds to-day than it will be to-morrow.

Camphor.—It has been going the rounds that camphor hastens the germination of seeds. In some instances perhaps it may—in others it does not. We planted Fig seeds side by side, half soaked in camphor, half not. There was no difference in the time of germination.

Vaccinium stamineum.—We call attention to the Deerberry that is now (June 1st) in profuse bloom. It may now be determined by its irregular branching habit, swollen joints; by its many solitary, axilary, nodding, whitish flowers of a spreading bell-shape. Later it may be known by its large greenish, bitter berries.

The Woods.—The woods at this season are grand—and we know of several old-fogy fellows that say they can more enjoy an afternoon among the trees, shrubs, ferns, flowers, grasses and shady brooks of the woods than in the Horticultural Grounds of the great Centennial. Philosophers, after a world of study, tell us there is no accounting for tastes. Perhaps if it were not for the ballast power exerted by the old fogies—Young America might find himself "up in a balloon" on a squally day.

Soloman's Seal (*Polygonatum biflorum*), now in bloom is as pretty in the garden as it is in the woods. A simple slender curving stem two feet high, with large durable leaves arranged distichously and from every axil a hair-like peduncle that, forking, bears from one to four (generally two) vase-like, greenish-white, pendulous flowers. This plant though so different in every way, somehow reminds one of the pretty Smilax in its tidy, graceful habit. It looks well among beds of our hardy Ferns that, by the way, may with care be removed from the woods as well now as at any other time.

Edging.—A few days ago we saw a willow edging about 18 inches high surrounding a little vegetable garden. It had been made in this way. In early fall small branches half-an-inch in diameter were cut two feet long, sharpened at both ends which, being stuck in the ground, formed semicircles. Each semicircle began in the middle of the preceding one so that both together formed a net-work with a scalloped top something like the wicker-work of garden trellises. Every end seemed to have rooted during the fall and the buds had pushed so vigorously as already to have formed a thick growth that required clipping. We do not know that we have ever seen a cheaper, more easily formed or more suitable edging for such plots.

Watering.—We believe that the sprinkling of bedding plants during dry weather not only does no good but is injurious. When from using the watering pot, it seems as if the earth were wet, we shall find that it has penetrated scarcely half an inch. This can have little effect upon the roots, while evaporation carries it away at once upon receiving the first rays of the sun. The surface earth is made by artificial sprinkling hard and close thus excluding the air—forming a readier conductor of heat and offering a barrier to the ready absorption of moisture and rain when showers come—as they sometimes do—to mitigate the killing effects of drouths long continued. If we would preserve the freshness of our flower beds, and are willing to take the time and pains, they should be watered after sundown until the water is about to run off. Then wait for this to soak in and water again and again. Finally spread freshly-cut grass over the entire surface an inch thick. This does not mar, as one would suppose, the appearance of the bed after a few hours, as the color of dried grass is nearly that of dry earth and consisting of short and fine blades as it will be if cut with the lawn-mower, it very soon resembles the earth itself. A covering like this suppresses weeds and the drouth must be severe indeed to seriously affect plants thus treated. We recommend the same for fruit and ornamental trees transplanted this spring.

Industrial Topics.

BEET SUGAR INDUSTRY.

Comparatively little has yet been done towards the manufacture of beet sugar in this country; still the few experiments made show that both climate and soil are adapted to the production of beets on an unlimited scale. All we need is a few successes to make the thing popular and then the product is sure to equal the demand. A correspondent of the Wilmington Commercial in speaking of the industry says:

The effects produced upon agriculture in France by the cultivation of beets for sugar have been astounding. Notwithstanding the high protective policy to which it owes its existence, there is no question that sugars have been cheaper throughout the world, during the last fifteen years, in consequence of the great success of this industry. The cane sugar manufacturers of the Tropics have adopted the improved processes of the beet-sugar manufacturers of Europe because so much superior to theirs, but with it all, the latter will soon outstrip them. In the cane sugar districts no other crop is to be seen, while the cattle and sheep are few; the beet-sugar districts of Europe, on the contrary, are covered with the diversity of crops; beets, wheat, rye, barly, &c., and all the cultivated grasses, every field cultivated, and the stables filled with cattle, sheep and horses. No farmer need be told which system is the most enduring. In the best cultivated districts of the Continent, the basis of it is the beet. It not only furnishes to man the article of all others that most delights the palate, but the pulp left after the juice is extracted is excellent food for cattle, the number of which is largely increased and they furnish an increased amount of manure, which, applied to the deeply plowed lands, multiplies their productiveness. On a great public occasion, a visit of the Emperor and Empress to Valenciennes, the following inscription was placed on a triumphal arch: "Before the manufacture of beet-sugar, the arrondissement of Valenciennes produced 695,750 bushels of wheat and fattened 700 oxen." "Since the manufacture of beet sugar was introduced, the arrondissement of Valenciennes produces 1,157,750 bushels of wheat and fattens 11,500 oxen." All farmers who obtain first prizes at the agricultural exhibitions are either sugar manufacturers or cultivators of the beet; it is so uniformly the case that they would be surprised if they did not secure them. A farm of eight hundred and thirty two acres, the sales of produce from which under the former treatment amounted to $8,000 per annum, with six years treatment of sugar beet culture produced $41,200 per annum. Another instance: a farm of two hundred and ninety-five acres, produced 5,225 bushels of wheat, 2,500 tons of beets, and fattened 150 head of cattle per annum. But the model farm of France is one of five hundred and fifty-two acres, which with eleven years of sugar beet cultivation produces an average of 70 bushels of oats on thirty acres. 36½ bushels of wheat on one hundred and fifty-six acres, 20 tons of beets per acre, and 3 tons of hay per acre fatten 200 cattle and 8,000 sheep per annum. In 1865 the yield of beets was 30.35 and as much as 30 tons to the acre. These farmers attribute their success as cultivators entirely to the immense amount of manure the beet pulp enables them to make, to the improved condition, and also to the increased amount of profitable service of the land consequent upon beet culture, no fallows being required. On this model farm the beet crops only were manured which were plowed in deep the previous fall, and the ground was again lightly plowed in the spring. For the succeeding grain crops a single light plowing sufficed.

Before the introduction of the sugar industry into France, farm hands, by reason of a lack of employment in winter were so continually emigrating to the city, that Government instituted inquiries to ascertain the cause, and also the best method of preventing it. Now the tendency of workmen to seek the capital is not noticed in the sugar districts, that industry giving ample and well paid employment in the summer months. Wherever the beet is cultivated in France land advances in value, and wages take the same direction. No one believes now that it exhausts and impoverishes the soil or hurts other crops; these are the prejudices of bygone years, which science and experience have banished. The quality of the wheat is better, the heads are larger and heavier, the straw stronger, and not so liable to lodge, the grain is larger, brighter, and heavier, weighing from two to three pounds above the standard. The departments in which the beet is cultivated are not grazing districts in which cattle are raised, but are pre-eminently distinguished for supporting and fattening cattle, and producing grains. To fairly estimate the full value of this root culture, allowance must be made for the undoubted facts that its culture as a rotation crop so prepares the soil that it needs not be left fallow, and so improves the wheat, that from one third to one half more is produced than before the beet preceded it; and that cattle are fattened on the leaves and pulp, are exceedingly prolific, the cows produce more abundant and better flavored milk, so that the production of sugar from the beet adds to the supply of bread and meat, and those three leading necessities of man's existence stimulate and aid each other.

HOW TIMES CHANGE.

When a boy we resided in Western New York, Orleans Co., and then a sale for cash of any kind of fruit was a rare occurance. The best of Rhode Island Greenings, Spitzenbergs and Pippins, were sold for twelve cents per bushel in trade, and we well remember trying to sell a wagon load of excellent plums, in Albion, offering them at 25 cts. per bushel, but only managed to sell one peck at that rate. A quarter of a century has, however, worked a change in that region, and from late reports of Horticultural Societies, of Western New York, we gather the following items in regard to sales of fruit from Orleans and adjacent counties.

Erie county, apples and pears, valued at				$300,000
Genese county, all fruits shipped,	do.			153,000
Niagara county,	do.	do.	do.	1,147,000
Orleans county,	do.	do.	do.	784,000

The pear crop in Genese county sold for $11,000; in Niagara county, $35,000; in Orleans county, $12,700. Apples in Genese county, $141,000; in Niagara, about $1,000,000; Orleans, $632,000. The quince crop in Genese was only $1,000 against $6,000 last year; in Orleans, $3,860. Peaches in Niagara sold for $52,000, plums $10,000. The crop of apples in Wayne county was 185,000 barrels.

Onion Coloring.—A good authority says that a decoction of the peel of onions produces a fine, rich, orange-yellow upon glove leather, which fixes itself with great permanency.

The Garden.

TOO LATE NOW, TO PLANT.

Many a family has gone without choice fruits, flowers and vegetables for years, all in consequence of the above potent but rather lame excuse. The husband and father promises that next year he will plant a strawberry bed, some raspberries, grapes, gooseberries and other small fruits for his family, but it is neglected until the buds begin to swell and the blossoms appear, then comes the ever ready excuse—"its too late now," and another year goes by and the coveted luxuries or necessities are not forthcoming. We don't mean you, of course, but your neighbor over the way who has been promising to plant an asparagus bed these ten years but has not done it, and probably never will, for the very good reason that procrastination is the thief which steals all his spare time.

It is certainly better to plant early than late in the season, but "better late than never," is an adage, which should be forcibly impressed upon every owner of a garden or farm. The asparagus, rhubarb, and other similar plants may have started and grown a foot or more, still it is not too late for planting them if all the leaves and stems are cut away at the time.

The same is true in regard to many kinds of ornamental and useful trees and plants. A little more care may be required when moving plants late in the season than when it is done early, still it can be done and a year saved by the operation.

We would prefer to plant out strawberries before they commence growth in spring, but it can be safely done in wet weather even after the fruit is fully grown or even ripe, and the plants will become well established and bear a good crop the following season.

Early beets, carrots, cabbages, lettuce, and other vegetables are usually prized more highly than late ones, still they seldom come amiss in a family at any season, especially in one which is never sure of having a supply at any time.

It's now too late for planting early peas, beans, and sweet corn, but it is not for a late crop, therefore we say drop in the seed and keep it up as long as there is a chance of the crop reaching a useful condition. The farmer and gardener should look ahead and anticipate the wants of those depending upon them for food and the comforts of life.

SEED SOWING IN WET SEASONS.

We are not generally much troubled with too much rain in this country, still there is an occasional wet season when it would be well to guard against committing errors in the management of soils, especially those which are of a compact nature. The following article on the treatment of soil in wet seasons, which we find in the London Garden, is as applicable to this country as England, and withal very good advice:

It is never advisable to go upon ground when it is wet and sodden; but when seed-time, properly so called, is about ended for the season, and the ground is still wet, such considerations have to be put on one side, and one has to adapt his practice to the exceptional state of things. To tread onion ground when the soil is the least wet is the hight of indiscretion, for it causes it to bind like clay, and when dry weather sets in it becomes a network of deep fissures, and it is altogether in a most unsuitable condition for the plants, which never come away or grow as they should. The most miserable crop of onions I ever saw were sown under these conditions. This season I simply turned the ground over with forks, and afterwards scuffled the surface over with wooden rakes to level it, drew hills, sowed the seed, and covered it over by hand with dry soil from the sheds, leaving the finishing touches with rake to be done in dry weather. Raking the surface of a seed-bed when the soil is wet is worse than digging it in that condition, for it rolls it into nodules, which the first shower of rain runs together into so impervious a crust that the seed cannot push its way through. The vegetable that suffers more than any other, however, when sown in a cloggy soil and covered in with the same material, is the Turnip. The young plants come away sluggishly, and are almost sure to fall a prey to the fly. Under such circumstances the sowing should be done as the ground is dug, no raking should be attempted, and the seed should be covered by hand, like the Onion, with dry light soil of any kind. Treated in this way they do well enough, and the ground can be stirred deeply between the rows on the first favorable opportunity. All small seeds, such as those of Lettuce, should be treated in the same manner. Peas and Beans should just have the soil drawn over them as sown, without any raking or patting. French Beans, if the soil be heavy, do much better if covered like Turnips; so also does Beet, and indeed any large seeds that do not need to be covered deeply. After the crops are fairly above ground, the adverse conditions of seed-time may be greatly compensated for by surface-stirring, doing it deeply with the hack or Dutch hoe, and when practicable by mulching. I have had to deal with soils so heavy and tenacious that they never "fell" kindly during the whole summer, if the ground were dug when wet; the sun simply baked the clods into lumps like pieces of brick. Planting any of the Cabbage tribe in such a soil was a difficult operation, and they made little progress for weeks afterwards, unless mulched with some loose material such as short grass, which is always plentiful, when they did not appear to suffer much. There is less to be feared, however, with the seed-bed in wet seasons than with those crops which require transplanting. The roots of seedlings find their way into the soil when once they get a start; but transplanted subjects take most unkindly to the ground when the soil is lumpy and wet. Cauliflowers are almost sure to "button," Lettuces to "bolt," and few things do well. Moving with good balls in all cases, and planting without squeezing the soil about the roots, and surface-stirring with the hoe afterwards, is the only plan. I am, of course, not speaking of soils which after a period of drouth have just been soaked with a good fall of rain, for then the soil is in the best condition for planting, but of soils, and particularly heavy ones, which are in a state of saturation.

"THE CHIEF END."

"The chief object of plant life is to produce seed for the continuation of its species." In one form or other, how often do we hear and read this! Spare us for a while, good writers, from a further consideration of this learned statement.

Is it the chief object of a plant to produce seed? Is it the chief object of animals to reproduce themselves? In our egotism, we believe that all things are produced for man's benefit—all things are in some way subservient to his wants. Man and the lower animals dispose of thousands of fruits of all kinds where one is preserved for seed. The leaves of all vegetable life, and the branches to a certain extent, perform a vital object in separating from the air and appropriating the poisonous emanations from the expirations of animals, and our botanies teach that in the course of time the atmosphere would become so impregnated with carbonic acid gas as no longer to support combustion.

Is not this a chief object? That the formation of seed is an important end, nobody need dispute; but it is only one of many no less important. Plant and animal life is reciprocally dependent, neither one could exist without the other. It is no more essential that the species should be continued than that animals should have food—clothing—fire—shelter. If we are told that not one of these could exist without seed, we grant it and add, that death too, is the chief end of all life since without death there could be no life. But in truth all things in nature are constituted upon the plan of utter mutual dependency, and to say that this or that is the "chief end" is only one of the many evidences of man's conceit—in which surely—as in most other things probably—he is the brightest star of contemporaneous existences.

RENEWING OLD STRAWBERRY BEDS.

In one of our exchanges we find the following paragraph, said to be taken from the advanced sheets of a new work on the strawbery by E. W Durand, Esq.: "Now, my advice is, if you can find no other place than an old strawberry bed to set out a new one upon, set out none at all, for, do as you will, you are likely to fail under the most favorable circumstances."

It's a pity that the author of the above cannot see the absurdity of such statements, in face of the fact that strawberries grew in a wild state for hundreds and thousands of years upon the same ground, neither failing or running out. Of course, in selecting a place for a strawberry bed, we would prefer new land to old, but should not hesitate to use an old bed, and without the least fear of failing to produce a good crop. Apply the proper fertilizers and there will be little danger of a failure.

This idea of the wearing out of land—degeneration of varieties and excrementitious poisoning of soils by the plants growing therein—harmonizes very well with the restlessness of our American farmers, who are continually seeking new lands and new homes, instead of improving the old, but it at variance with common sense and science.

STRAWBERRIES AS A BORDER.

The Valley Farmer says that it affords a happy combination of beauty, utility and convenience to border the garden walks with strawberries. A single row of plants, set one foot from the edge of the walk, will, if properly cared for, give a close border two feet wide the second year. Draw a line on each side after the runners begin to root, cut the edges straight and keep them so. You thus not only economize space which might not otherwize be used, and make the garden attractive, but get your fruit where it can be picked from the walks, which if properly made, of coal ashes or gravel will always be dry, and very convenient to use a stool in. Two walks thus bordered through the center of even a small garden, each way, will give a family a good supply of this most delicious of fruits.

GARDEN NOTES.

The Sterling Strawberry.—This new sort of which we have heard much is now offered to the public at a price which shows that the owner of the stock of plants believes he has a gold mine or something near it in the "Sterling."

Another New Raspberry.—The Thawack raspberry is a new sort, highly extolled by a correspondent of the Gardeners' Monthly. It originated in Missouri and is said to be a cross between the Herstine and Brandywine. Who will tell us when and how the crossing was done? More light is wanted.

Currants.—Dr. Long said at the horticultural meeting at Alton, that those who eat freely of currants will never need the doctor. He has picked forty bushels of the fruit from a fourth of an acre. They want good culture, although often grown in fence corners without care.

[The too free use of currants will destroy the functions of the stomach and produce the worst kind of dyspesia.—Ed. Rural.]

Working Gardeners.—I see people continue to advertise for working gardeners. If there is such a being as a gardener who does not work, I should like to see him and have him exhibited. Gardeners worthy of the name, whether they get their living from the profession or merely follow it for healthy excitement and recreation, cannot help working any more than a hen can help laying eggs.—*Wm. Taylor in J. of H.*

Sheep Husbandry.

AUSTRALIA AND THE CENTENNIAL.

Philadelphia, Pa,, June 10, 1876.

None of England's colonies make a more creditable show, or, in some respects, as good, as Australia. Here is a colony that is a continent of itself, and forty years ago it was, in two senses at least, a howling wilderness. Now fifty thousand men support thrice that number of women and children. The Australian colonists grow annually 12,000,000 bushels of wheat, have a commerce amounting to £9,000,000, and raise a revenue of £1,000,000. Their flock of sheep numbers over 50,000,000, and it is to this branch of industry that I gave special attention.

Queensland is on the Eastern Coast and contains 35,000 inhabitants; climate is semi-tropical on coast, with a gradual rise to an elevation of 4,000 feet above the sea's level. The rainfal averages about 30 inches.

A part of New South Wales resembles Queensland geographically, and it is from these two districts that most of the wool is exported.

There is a fine display of merino fleeces. The average weight of a fleece is seven pounds, but they decrease about one-half in washing. Sheep are worth, on an average, $3 per head, fine bucks selling as high as $50, however.

Sheep "runs" are leased at so much the mile, the price being inconsiderable. They range from 10 to 200 square miles. Good farming land is sold for $3.50 per acre. Sheep are owned in a wholesale way, some having flocks of 200,000, which are divided into smaller flocks of about 2,500, which are put in charge of a man and dogs. A shepherd's wages are about $1.75 per day, food and a cottage being part of the bargain Sheep increase per annum 80 per cent. There are a number of good photographs included in the exhibit showing different breeds of sheep, which afford an excellent means of comparison, especially as the investigator can turn to the cases and inspect the veritable fleece as represented in the photograph.

The cattle is nearly as large as the sheep interest. Short-Horns are the favorite grade.

In this connection it is interesting to note that it is a practice of breeders to slaughter vast numbers of low grade, in order that the pure blood may be preserved. The attendant told me that Australians think they have the best horses in the world, and the same system, *i. e.*, discouraging all common stock raising has been pursued in this branch with flattering results. The number of sheep in Queensland is 7,500,000, and it was given as the judgment of the attendant that the whole number in all the colonies is not less than 50,000,000, which, if true, is greatly in excess of the United States.

It would well repay the agriculturist to give the exhibit of this colony a careful visit, as in addition to their live stock, they have various woods, herbs, minerals and vegetables that are extremely interesting. It will not be many years before Australia will come into direct competition with home markets, in which case it is well to have a definite idea of the strength of our competitor. Young Rural.

WHITE SKIN OR LUNG WORMS IN SHEEP.

At a recent meeting of the Ohio Sheep Breeders' Convention, Dr. Townshend of the Agricultural College spoke of lung worms in sheep. He described these worms, which infest the lungs of sheep in large numbers, as follows:

The females are white and about as thick as No. 8 sewing cotton, four inches in length and full of ova. The males are fewer in number, of a yellow color, and only about four inches long. This was a description of these worms as found in a sheep sent to the College some two years ago, that had died with them. He said he had not had an opportunity to observe these worms at other seasons, and could not fully state their natural history. So far as his examination went, there were no young strongyli in the sheep, but all were matured. What might have been if the examination had been made at other seasons, he could not tell. It is probable that the eggs or young worms are coughed out of the air passages in the spring, and live for a time on grass or in the water to which sheep have access. In ponds and streams in early summer we may find immense numbers of little nematoid worms, evidently in an early stage, for they are sexually imperfect. We find what appears to be the same worms in the larva of several aquatic insects, such as Libellula, Agrion, Ephemera and Phryganæ. We find the worm in fish and birds, and particularly in meadow larks. Still, how they get out of the sheep and how in again, and where and how the balance of their life is spent, he could not tell, and said that so far as he was concerned this is a missing link. That trouble from them in sheep was always at one season of the year. As a remedy he recommended, first, fumigating in a close room by burning sulphur, which caused violent coughing, and then give turpentine in teaspoonful doses once a day for several days.

NEW SPECIES OF SHEEP.

From the Peruvian Andes some specimens of sheep have been received in England, being representatives of two rare and distinct breeds. The Agricultural Gazette (Eng.) furnishes the following particulars respecting them:

The first are two fine white-wooled sheep, each having four long, massive horns, two of which have a forward curve over the head, while the other two curve downward, under the eyes, giving the head a singular but handsome appearance. These are brought from Peru by Mr. J. I. Watts of Whistley, near Devizes, who discovered them, during his recent travels in the Andes Mountains, at an elevation of some 8,000 or 9,000 feet above the level of the sea, and they are reported to be very hardy. The second lot much resembles the alpaca. There are three—one male and two females—and they are thickly covered with long, dark-brown, but exceedingly fine hair or wool, which is highly prized by the native Indians for the manufacture of their more delicate fabrics. The male stands about three feet high at the shoulders. Their peculiarly formed heads, long necks, large, shaggy legs and general character will insure them a large share of attention. These also are from the Peruvian Andes, and inhabit the highest and more exposed situations, and were imported by Mr. Anthony Gibbs of London.

A FEW BIG SHEEP.

Although we make no great blow of imported stock, etc., in this vicinity, still I believe that some of my neighbors have as good sheep as anybody in the United States, and if any of the subscribers of the Rural can beat them, I would be glad to hear from them through the Rural. Mr. A. J. Brown of Jeddo, N. Y., has a Cotswold buck, weighing 309 lbs., that sheared 17 lbs., and Mr. A. E. Sweet of the same place has three yearling ewes that sheared as follows:—No. 1, weight 148 lbs., sheared 16½ lbs.; No. 2, weight 141 lbs., sheared 16 lbs.; No. 3, weight 134 lbs., sheared 14 lbs. Who can beat them?

Ridgeway, N. Y. A Subscriber.

SHEEP FOR CLEARING LAND.

It is not a bad idea, which somebody has suggested, that of introducing sheep upon newly-cleared land to keep down the sprouts and wild weeds until they die out and a better class of forage plants is introduced. There is scarcely a doubt that sheep may be employed for this purpose with profit, provided a farmer has facilities for keeping a flock at other seasons when the new pasture does not furnish the requisite amount of food.

Domestic Economy.

PICKLING CUCUMBERS.

SOME of our readers may want to know how to pickle cucumbers, and the following from the Grocer, may be of use to them at this season:

For pickling purposes the cucumber in all stages of its growth is used, from the large vegetable which is cut into slices and sold to the cheap grocery stores, to the smallest size or gherkin, which is preserved entire. In buying, selling and estimating quantities, cucumbers, whether large or small, are counted, not measured. The farmers sort the cucumbers into three sizes, small, medium and large; the factories have five sizes, viz: very small, small, medium, large, and very large. Of these different sizes 5,000 of the very small would fill an ordinary whisky barrel; 3,000 of the small; 2,000 of the medium; 1,100 of the large; and 800 of the very large. The cucumbers on being picked at their place of growth, are taken by the farmers to the salting-houses, whence they are removed to the pickle factories. Most of the salting-houses are within a few miles of where the plant is grown, as the fresh crop will not bear long transportation. Although some farmers do their own salting, in most cases the latter is a separate business, conducted on a large scale, the manufacturers buying of the salters. The pickles, on being taken from the brine, are "freshened up," that is, they are put into large wooden vats containing fresh water, to extract the salt. This water is changed three times during the freshening process, after which the cucumbers are packed in casks or bottles for sale. The best vinegar in use for pickling in this country is that made from the Western high-wines. In a vinegar made from wood the pickles soon become soft, and even cider vinegar, though the best and most wholesome for table purposes, will not preserve pickles more than a month. All the artificial vinegars made from acids fail in this respect, and from vitriol especially. Cucumbers pickled in high-wine vinegar will keep for an almost indefinite time, and will come out as good as at the first, after an interval of several years. Large quantities of very fine cucumbers and cauliflowers are imported from Holland, which country likewise supplies the London market. The pickles which are thus imported extensively into this country have the advantage of low prices, due to the cheapness of labor abroad, and, in addition to the best possible sample, with the least amount of trouble at the factory. With the requisite amount of care and attention, we can, in this country, make as good a pickle as can be made in London.

DRYING SWEET CORN.

J. M. HAYES of Lebanon, Ohio, finds a sweet corn crop more profitable than a distillery. He raises over 500 acres of this crop annually. The drying-house employs fifty persons. The fresh ears are steamed five minutes to "set the milk"—the grain is then cut off rapidly with cutters having concave faces. It is then spread on perforated zinc tables, and heat applied four or five hours from long furnaces, stirring constantly. It is then packed in barrels of three bushels each for shipment. Great care is required to have the corn just at the right age, and have it dried just enough to keep well. Four bushels of fresh corn on the cob make one bushel dried—the wholesale price of which is $20 to $22 per barrel. At fifty bushels of corn per acre, 500 acres would yield 25,000 bushels, and give over 2,000 barrels of dried corn, which, at $20 per barrel, would be $40,000.

WASHING FLANNELS AND LINENS.

To whiten flannel, made yellow by age, dissolve 1½ lbs. of white soap in 50 lbs., soft water, and also 2-3 oz. spirits of ammonia. Immerse the flannel, stir well around for a short time, and wash in pure water. When black or navy blue linens are washed, soap should not be used. Take instead two potatoes grated into tepid soft water (after having them washed and peeled), into which a teaspoonful of ammonia has been put. Wash the linens with this, and rinse them in cold blue water. They will need no starch, and should be dried and ironed on the wrong side. An infusion of hay will keep the natural color in buff linens, and an infusion of bran will do the same for brown linens and prints.

SAVE YOUR SOAPSUDS.

WHO would throw away a barrel full of soft soap or a box of hard soap? Were it not otherwise useful, it would be of great value as a fertilizer, if spread, in its raw state, about our fruit trees or berry bushes. But, after being dissolved in water and passing through the wash tub, gleaning the imperceptible elements of the best manure from soiled linen, its fertilizing power is vastly increased. Indeed we may almost say that the average soapsuds from the kitchen and laundry is worth more than the soap which produces it. Do not, then, allow your soapsuds to run away wasted while you have trees which it might benefit.

ORANGE JELLY.

ONE box of Cox's Gelatine, soak it one hour with three lemons sliced (remove the seeds) in a quart of cold water, then add one quart of boiling water, four small teacups full of granulated sugar, put it over a slow fire for twenty minutes stir often to prevent burning, then add one teaspoonful of essence of cinnamon. Take five small oranges, sour ones are the best, peel and divide them in small pieces, cover the molds with them, sprinkle plenty of sugar over the oranges, strain the jelly through a flannel bag into the molds, set in a cool place. Make the day before it is wanted for use. MRS. RUSTIC.

SELECTED RECIPES.

Macaroni and Cheese.—One-half pound macaroni broken into inch pieces; wash, put on the stove to soak till soft, then drain; grate one-half pound old cheese: put layers of macaroni and cheese, with bits of butter, pepper and salt, and three tablespoonfuls of milk; let the last layer be cheese. Bake for three-quarters of an hour.

Scalloped Veal.—Chop cold cooked veal fine; put a layer in a baking dish, alternating with a layer of powdered crackers, salt, pepper and butter, until you fill the dish. Beat up two eggs; add a pint of milk; pour it over the veal and crackers. Cover with a plate and bake half an hour. Remove the plate and let the top brown.

Hygienic Information.

DR. R. GREENE ON EXERCISE.

ONE of the great conditions of life and health is exercise, and without it health is impaired, the system becomes enfeebled and life itself shortened. Food is the life-giving principle, but it requires a certain amount of exercise to enable the economy to convert it into suitable material for use, which can be assimilated by the system.

By proper exercise the chest is expanded, the tone of the muscles improved, the current of blood quickened, and the whole system invigorated and refreshed. But exercise, to be effective, must not be excessive; must never be carried so far that the body feels fatigued, or the muscular powers exhausted, in which case more harm than benefit is the result.

It is of the most service, also, when taken at regular intervals, not by fits and starts, too much one day and the next too little but in moderate amount each day. As we gain most from that which is pleasurable, that which agreeably occupies the mind, the cultivation of a garden, or any light work, with a distinct end in view, is always preferable and more conducive to health than long solitary walks, which, because they are aimless, are often uninteresting and tiresome, and the body lacks the refreshing energy which the exercise should bring. It is absolutely necessary to keep harmony between mind and body, in order that exercise should be beneficial; and without this harmony it is not only without benefit, but in many cases is exceedingly injurious. The peculiar relations of the body and mind render it difficult to affect the body favorably in the cure of disease without a corresponding impression upon the mind. And to this fact may be attributed much of the ill-success of physicians, they treat the body and neglect the mind. Many affections are dependent alone on a diseased state of the mind. Remove this morbid condition, and the bodily affliction disappears as if by magic. So exercise, to have its health-growing effect, must have the cooperation of the mind. Every exercise for invalids in which the mind does not co-operate with the body is worse than useless, as it tends to exhaustion rather than building up.

In all such cases our first endeavor should be to get the body and mind in harmonious action, and then, when physical exercise is required, the patient should be instructed to have some purpose in his walks, such as calling upon some friend, or viewing some object of interest, so that his mind shall be taken from his walk, and he will return refreshed and invigorated.

Not only the body, but the brain, requires exercise. The brain, the great center of life, requires the stimulus of vigorous thought. The same laws which govern other parts of the system are applicable here; use strengthens, while without it the brain and, indeed the whole mental and moral character, becomes weakened; and with that weakening, the integrity of the whole physical constitution is impaired. It is a prevailing mistake that active study impairs health and shortens life, for it is only by close application, and a vigorous exercise of the powers of the mind, that a bright manhood or womanhood can be attained. Instead of debilitating, it strengthens; instead of shortening life, it prolongs it, and opens the pathway to broader culture and a higher sphere of life.

RHEUMATISM RECIPES.

THE Journal of Health has recently patiently collected all the recipes for rheumatism floating through the papers, and spreads them before its readers thus:

"Rochelle salts. Guaiacum. Rub with chloroform liniment. Sleep with your head toward the north. Nux vomica. Wear a chest protector. Nitrate of potash. Nitrate sodium. Fowler's solution of arsenic. Sleep with a big dog and give it to him. Kill a big dog, and, after taking out his intestines, put your feet where they came from. Magnetism. Galvanism. Bromide of ammonium. Iodide of ammonium. Mustard plasters. Spanish fly plasters. Bromide of potassium. Iodide of potassium. Lemon juice. Sage tea. Wear sulphur in your shoes. Hard rubbing. Oleate of mercury. Common soda. Capsicum. Radway's Ready Relief. Wear silk. Wear flannel. Wear buckskin. Gin and hemlock. Reynold's Specific. Make a necklace of the knots produced by the sting of an insect on Golden Rod, and wear it next the skin. Citrate of lithia. Exercise and keep it off. Keep as quite as possible. Colchicum. Morphine. Water cures. Angel's rheumatic gum. Pray fervently. Soft soap bandaged with flannel. Do not eat meat. Do not eat eggs or potatoes. Eat anything you please. Opium. Do not smoke at all. Smoke all you like. Take camphor. Drink nothing but beer. Do not drink anything but whisky. Do not leave the house. Take a ride out whenever you can. Carry a piece of alum in your pocket. Take Turkish baths. The Turkish bath is one of the worst things for rheumatism. De Soto spring water. Acetate of potash. Burdock seed. Bathe in hot water with pearlash in it. Bathe in cold water frequently. Do not bathe at all until you are nearly well. Catnip tea. Wrap fresh lamb's entrails around your neck. Drink brandy. Brandy is very bad for rheumatism. Sleep next to flannel. Go to Arkansas Hot Springs. Go to Doolittle Springs—to Saratoga, to Florida, to Bermuda, to the Sandwich Islands, to California, to the South of France, to Mexico, to the Azores, to South America. Wear a horse-chestnut in your left hand breeches pocket. Wear a potato in the other. Take Constitution Water. Take carbolic acid. Wrap joints with cotton, and cover with oiled silk. Glen Flora water. Get out on the prairies. High land is best for rheumatism. Balm of life. Magnetic salve. Rub with kerosene. Mustang liniment. Read Job. Put on hop poultice. Apply hop mashes. Do not swear. Put mustard poultice over the heart. Drink Friedrichshall bitter water. Seidlitz powders. Take a quart of alcohol with a dozen lemons in it. Take spirits of turpentine. Slippery elm poultice. Electric oil.

THE APPLE CURE.

A CORRESPONDENT of Laws of Life speaks highly of the use of apples as a cure for dyspepsia and while we in part agree with him that fruit is healthy and for some kinds of dyspepsia may be beneficial, in others it is about the worst food a person can take. Each one every individual must decide for themselves in such cases, but we give the opinion of the correspondents for what it is worth:

Persons suffering from dyspepsia, constipation, congestion of brain and other ills which attend on general debility, are accustomed to apply to the doctors for bitters for the stomach, cathartics for the bowels and iron for the blood. But it is generally found that the relief to the stomach and bowels induced by medicine is temporary, and when reaction takes place after stimulation, the vital organs are weaker and the patient is worse off in every respect than when he commenced the use of medicine.

I have a remedy to suggest which, although it may not be of universal application, has in my own case and that of many others who at my suggestion have tried it, brought relief after all drug remedies had failed. Apples are a natural stimulant to the stomach, bowels and kidneys, and unlike medicine, keep up when habitually eaten, a continued healthy action of these organs. Apples are not only stimulative, they are also nutritive.

The case of an invalid was cited some years ago in the New York Tribune, who lived a year on no other food than apples, and during the time gained in flesh and strength. In my own case I had been very much troubled with the "heart-burn." I tried two meals a day, to which I still adhere, graham bread and water treatment, but with only partial success. Thanks to raw apples I have no more heart-burn. I finish each meal with two or three, and the cooling effect on my stomach and indirectly on my brain, is most grateful. Formerly I was troubled with wakefulness, would lie awake thinking, unable to sleep, until late in the night. I am wakeful no more. When I commenced to eat apples as a remedy I weighed 130 lbs.; in less than two months my weight was over 160 lbs., my strength increasing as my weight. My food is now well digested and assimilated, the hue of health is restored to my cheek, in other words, I am cured.

I think if people would eat more fruit, using it wisely, and throw medicine to the dogs, it would be a great benefit to them, though it would not benefit the quacks correspondingly.

CARE OF THE FEET.

CONCERNING this subject the Scientific American very truly says: Many are careless in the keeping of the feet. If they wash them once a week they think they are doing well. They do not consider that the largest pores are located in the bottom of the foot, and that the most offensive matter is discharged through the pores. They wear stockings from the beginning to the end of the week without change, which become perfectly saturated with offensive matter. Ill health is generated by such treatment of the feet. The pores are not only repellants but absorbents, and fetid matter, to a greater or less extent, is taken back into the system. The feet should be washed every day with pure water only, as well as the armpits, from which an offensive odor is also emitted, unless daily ablution is practiced. Stockings should not be worn more than a day or two at a time. They may be worn one day, and then aired and sunned and worn another day if necessary.

Entomological.

THE AILANTHUS SILK WORM NATURALIZED.

OUR cousins over in Australia appear to have had better luck in keeping the Ailanthus Silk Worm than our own sericulturists. A late number of Town and Country, published at Sydney, says:

Some few years ago the Ailanthus Silk Worm was introduced to New South Wales and other Australian colonies. The culture of this silk worm had recently been established, with promising success, in France, and it was thought that it might prove also in Australia a profitable husbandry. Mr. Brady (of sericultural renown) for some time experimented and reported results upon the culture, but, as usual, our very apathetic people went to sleep about the matter, though for a time there seemed to be an enthusiastic desire to enter upon the new industry. Nothing has been heard of the worm, so far as the public is aware, for three or four years past. To all appearance, the notion of establishing the industry had gone to sleep forever. But the insect seems to have had more sense, for, without giving any publicity to its intended course, it has quietly and successfully naturalized itself, and thereby taught us a lesson that in many ways ought to profit us. This silk worm has found for itself a common wild plant which answers its requirements in all respects, perhaps better than the plant from which it derives its name. The other day a gentleman called at our office and left specimens of the plant and the silk worm encased ready for the harvest. The plant is the *malanthus populifolius* of Jussieu, so very common on the rocky shores and cliffs along our seaboard, and particularly in the vicinity of Port Jackson. Without man's assistance, it appears that the insect, when in the butterfly stage of its life, has selected a plant suited to its wants, and has become what may be called a natural production. In a few years it is more than probable that numbers of people may be able to support themselves by collecting the cocoons from our waste and otherwise unproductive coast and mountain lands. Our informant cannot say to what extent the worm has established itself on this tree, because he has not yet had an opportunity of visiting the most likely locality. He states, however, that on the one tree which came under his observation the cocoons were numerous, and that there was no doubt whatever that they found their way to it spontaneously. Our readers who live near the coast or on the mountains will perhaps look for the worm, and report to us the result of their search. The tree is a very common one in such localities as are already mentioned; and those who may not be able to identify it without can see the specimen, with the cocoons upon it, by calling at the office of this journal. The tree itself is of considerable interest in a botanical point of view. It may be found in a mature and fully developed condition as a tree thirty feet high and as a tree half an inch—a miniature and a giant in one. It may be often seen as a perfect tree in all respects, but less than an inch in hight, being dwarfed by limited root room. It will often be found growing in a hollowed rock, with no more room than could be found in a child's thimble. There is no doubt that the Ailanthus Silk Worm is now thoroughly naturalized in New South Wales.

WHERE IS THE GREAT WEST?

It is but a few years since what was known as "the West," comprised Ohio, Indiana, Illinois and Michigan. These are now the Eastern Central States of the Union. The star of Empire kept its westward way—the Mississippi was soon crossed and Kansas and Colorado were settled. When the Mormons, driven from Illinois, found a resting place in Utah, they supposed they had gone so far beyond the farthest outpost of civilization, that Gentiles would give them no further trouble. Up to that time there had been no emigration except from East to West, for so long as reliable history bore testimony. But now began a different state of affairs. From the Pacific coast came a few pioneers across the Rocky Mountains. What had before been *West* to almost the whole world, had become *East* to thousands. Draw a line direct from the most densely populated part of Europe west to China and it passes near Portland, Chicago and San Francisco. From each end of this line multitudes are wending their way to our vast uninhabited country, where there is room and to spare.

It is estimated that all Europe has 80 inhabitants to a square mile; England has 440 and Germany about 200. One of the Provinces of China has over 800; the average of the empire is over 100. Japan has more than 200 inhabitants to a square mile. The United States and Territories (exclusive of Alaska) have over 3,000,000 square miles, with an average population of less than 13 to a square mile. Of the more densely settled States, Massachusetts has 190, Connecticut 111, and Rhode Island 167. With the same density of population Illinois would have more than England.

The "Great American Desert," so much talked of in the past, does not exist; and although considerable territory west of the Mississippi is occupied by mountains and alkaline plains, there is, comparatively, but a small portion of our vast domain that can not be compelled by proper means to contribute to the support of man. But should the great West—or the great East, whichever it may be to immigrants—ever be filled and our seaboard States, both Atlantic and Pacific, become uncomfortably crowded, Mexico on the one side and the British Possessions on the other will gladly open their doors to all comers who will apply for admission in the proper spirit.

What will be the final result of the mixture of the races and particularly of those so widely separated as are the Caucasian and the Mongolian, if they ever do mix—time alone can determine. Enough for us to welcome all whose condition will be improved by their coming among us. We know nothing of what the great future has in store for our country, but should remember that men's years are only God's moments and as He has made of one blood all nations of the earth, they should strive to live together in the peace and unity calculated to promote His glory and their welfare.

AGRICULTURE AT THE CENTENNIAL.

From our Philadelphia correspondence (on another page) we learn that the Competitive Field Trials of Agricultural Implements have been entirely abandoned and, as a poor substitute for them, there are to be Exhibition Trials at which there will be no official competition and for which there will be no judges appointed. While it seems probable that the jury appointed by the Centennial Commission to judge of that particular class of exhibits will be present, they will simply attend unofficially to see the machines in operation.

It is evident that there is something going on in the Commission of which the public are not informed. There seems to have been an exercise of influence somewhere which has brought this part of the Exhibition up with a round turn and which, if the juries are not men of stanch qualities, may result in sending the highest awards to those who have used the greatest amount of silver plating and inlaid wood upon their exhibits. We hope however, and confidently look for a better result than this. The value of a machine consists in what it can accomplish with the least expenditure of brains, time, power and money and just how this can be determined by an examination in Agricultural Hall we cannot see. Yet the jury appointed to determine this point really have no right to base their judgment upon anything which may occur in the field, where many of the machines entered for exhibition may not be taken at all or, if taken, may not be put to work, there being no obligation upon an exhibitor to take his machine to the field.

The general complaint that the Agricultural Department is and has been slighted is a matter which we confidently expected. We have heard this same sort of thing for years. Wherever these industries come in competition with others they receive the toss of the head and the elevation of the nose. The epithet "Hay seed in your hair," as applied to everything agricultural, comes so naturally from the measurers of flag stones and the denizens of brown stone fronts that we seldom look for anything else, though it *does* always remind us of the Chinese calling Americans barbarians. We are sorry, however, to see any such ideas gaining ground in the Centennial Commission, which should be both too pure and too liberal minded to permit them to gain a lodgment in their deliberations or to influence their action in the least.

As to the Dairy Exhibition we must say that it is not a matter of congratulation to us that we have, by our exposures of the "Centennial Dairy Ring," retarded the progress of the Dairy Exhibition, for such was not our intention. We *did* mean to place the gentlemen who were capturing all the offices and the whole control in such a position that they should look carefully before they used that control for their individual benefit and we believe we have accomplished it. We cannot say what they would have done if the Rural had not set the people to watching them; but if their first few meetings can be taken as a criterion, the Centennial "machine" would have been run by and for about a-half dozen men. They seem now however to be doing well and acting fairly and no one is more rejoiced than ourselves. We want this part of the Exhibition to be a success and hope every Dairyman will now put his shoulder to the wheel to help it along. While doing this they can safely depend upon one thing—that if this "Ring" business is attempted again they will hear of it through the Rural without much delay.

HOLIDAYS.

Our Puritan Fathers were taught and in turn transmitted to their children that "the chief end of man" was "to glorify God and keep his commandments;" but, in the third and fourth generation, this seems to have been entirely lost sight of. The chief end of man (and woman too) seems now to be the acquisition of the Almighty Dollar. Don't understand us to depreciate a reasonable competence and pecuniary independence, for that is one of the solid foundations of national success and progress. As a secondary object in life it should be thought of and cared for. But we arraign at the bar of public morality, that feverish, restless, insatiable desire for money which seems to take a *first* place in the minds, habits and wishes of so many. Men cannot leave their business on a holiday for fear of losing the possible gain of a few dollars. Women cannot leave their household cares on a holiday because their husbands or fathers will expect the usual attentions which they are in the habit of receiving after their day's work. Now suppose the head of the family *should* take his wife and children somewhere for a day's pleasure and *should* thereby reduce his income a few dollars by his absence from business and a few dollars more by their expenses? He would probably save the full amount in the doctor's bill before the year is out. The pleasure obtained by the pure enjoyment of an occasional holiday does not die with the day; but it is a lasting benefit and will be green in the minds of the whole family for months. If this does not seem clear to you, ask your family physician. Our word for it, if he is a fair-minded man, he will tell you as we do—By all means take a holiday occasionally and devote it wholly to pleasure and recreation.

RURAL NOTES AND QUERIES.

New York Horticultural Society.—The first exhibition of the recently organized New York Horticultural Society was held at Gilmore's Garden, June 13-15. The display of choice plants, fruits and flowers was one which did credit to the exhibitors as well as managers and they may well feel proud of their success. This first attempt of the new Society brought out hundreds of novelties and rare specimens of plants which few persons had the least idea could be found in or near the great city; and this exhibit may, we hope, fairly indicate what may be confidently expected at future shows under the auspices of the same organization. The members will doubtless do all in their power towards providing for future exhibitions of the kind; and to make them a success the residents of this great city must show their appreciation of the enterprise by a liberal patronage. Whether they will do this remains to be seen in the accounts of the Treasurer of said Society.

Don't Ask Us to Decide.—It is a mistaken but very prevalent idea, that an editor of a newspaper ought to, if he does not, know everything worth knowing in this world and likely to be found in the next. Among the many questions he is called upon to answer are those relating to the best breeds of all kinds of farm stock as well as the best fruits, flowers and grain. Now the difficulties met in an endeavor to decide in such cases are frequently quite formidable and the most prominent of them all is the fact that circumstances alter cases to such an extent that the very best in one might be the most worthless in another. Now don't ask us to decide such questions until you have narrowed them down to the smallest practical limits and then state for what purpose a thing inquired about is wanted and why.

Unity and Co-operation.—A writer in the Farmer (Eng.) thinks it will be quite difficult to get the agriculturists of England to unite or co-operate as they have done to some extent in this country through the Grange. He says:—"We ought first to get our farmers into the belief that they are units of one great whole—members of one mighty family; individuals in one most important class." This is just what is lacking in this country and even with the aid of the Grange there is not sufficient concert of action among our farmers to produce the desired advancement in intelligence or financial prosperity. However, the leaven is working and the time must come when all this will be changed for the better, but not until every farmer shall be intelligent and liberal enough to subscribe for at least one paper especially devoted to rural affairs.

The Book Department of the Rural New-Yorker, from which our subscribers have been wont to select their practical reading, has been transferred to Messrs. Geo. E. Woodward & Co., as our successors in that particular line. Mr. Woodward, long and favorably known to the book trade as a publisher of Architectural and Agricultural works having returned from Europe has taken unto himself a partner in business and intends to put upon the market for the benefit of the Rural population many good practical books of interest to our subscribers. Those who have been supplied from our office can safely deal with Messrs. Geo. E. Woodward & Co. whose place of business is 31 Broad St., New York City. This transfer is not the matter of a day's consideration; but has been contemplated for weeks and is done largely as a matter of gratitude for the noble response which has been made by old and new subscribers to the efforts of the new proprietors of this paper to make it in every way worthy of their patronage. The absence of this branch of the business leaves so much more time, brains and muscle for the paper itself. Time an Editor always needs. Brains he always proposes to have. Muscle—well, just try us, that's all.

RURAL BREVITIES.

The Great Competitive Field Trials of Agricultural implements have ended in smoke.

Cass County, Dakota Ter., boasts of a wheat field containing 10,860 acres. This will do pretty well for a starting in a new and almost unexplored country.

There is to be a meeting of horticulturists at Detroit on the 27, 28 and 29th of this month. Everybody is invited to come and bring as much fruit as convenient.

An ounce of carbolic acid, diluted with a pint of water and then sprinkled upon a few lumps of freshly-burned lime, is said to form an insecticide which is death to melon bugs or beetles.

It is said that two ounces of paraffin oil to six gallons of water sprinkled over onions will effectually destroy what is known as the Onion Maggot. This insecticide is worth trying by those whose onions are attacked.

The Editor of "Our Dumb Animals" says: "We are glad to notice that the Montreal Society is prosecuting poulterers for plucking fowls alive. One was fined $10, the other day." We should have been twice glad had it been $20.—Ed Rural.

Two correspondents of the Gardeners' Chronicle are quarreling over the botany of the Garden of Eden. When they get things settled on the Eden affair, it is to be hoped we shall be informed as to the system of grape culture practiced by Noah.

A late writer begins an essay on grape culture by asserting that "the grape is the noblest fruit that the temperate zone produces." Our peach, plum and pear culturists must feel sad to see their special pets counted out in this rather autocratic manner.

It is estimated that South Carolina, Florida, Alabama and Georgia purchase annually $54,000,000 worth of grain raised in the Northwestern States. Of this sum the producer gets but $16,000,000, the remaining $38,000,000 going to commission men and transportation companies.

British dairymen are trying to organize a Dairymen's Association after the plan of those in this country, but from late reports their efforts are lacking the proper support. The time will soon come, however, when British dairymen will see the advantages of supporting associations of this kind.

The Gardeners' Chronicle, in acknowledging the receipt of a copy of the report of the American Pomological Society, says, "The perusal of this report gives us a vivid idea of the magnitude of the Society's operations. We know nothing to approach it in Europe." This is a handsome acknowledgment of the meritorious labors of our pomologists.

Mr. Robinson, Editor of the London Garden, gives our American apple growers, or packers of this fruit, a little wholesome advice when he tells them not to put all the bad, knotty specimens in the center of the barrel, when shipping to England. We have become used to this trick and don't mind it, but our English cousins are more particular in such matters, and do not seem to enjoy the joke of being swindled.

BUSINESS NOTICES.

ASK your merchant to furnish you the "Phœnix Pure White Lead," if you would have the best, and take no other.

THE RAIN DROPS.

A FARMER had a field of corn of rather large extent,
In tending which, with anxious care, much time and toil he spent;
But after working long and hard, he saw with grief and pain,
His corn began to droop and fade because it wanted rain.

So sad and restless was his mind, at home he could not stop,
But to his fields repaired each day to view his withering crop,
One day when he looked up despairing, at the sky,
Two little rain drops in the clouds his sad face chanced to spy.

"I feel so grieved and vexed," said one, "to see him look so sad,
I wish I could do him some good; indeed I should be glad.
Just see the trouble he has had, and if it should not rain,
Why, all his toil, and time, and care, he will have spent in vain."

"What use are you!" cried number two, "to water so much ground?
You are nothing but a rain drop, and could not wet one mound."
"What you have said," his friend replied, "I know is very true,
But I'm resolved to do my best, and more I cannot do.

"I'll try to cheer his heart a bit, so now I'm off; here goes!"
And down the little rain drop fell upon the farmer's nose.
"Whatever's that?" the farmer cried; "was it a drop of rain?
I do believe it's come at last; I have not watched in vain!"

Now, when the second rain drop saw his willing friend depart,
Said he, "I'll go as well and try and cheer the farmer's heart."
But many rain drops by this time had been attracted out
To see and hear what their two friends were talking so about.

"We'll go as well," a number cried; "as our two friends are gone,
We shall not only cheer his heart, but water, too, his corn.
We're off, we're off!" they shout with glee, and down they fell so fast,
"Oh! thank the Lord!" the farmer cried, "the rain has come at last."

The Story-Teller.

THE HARVEST BRIDE.

IT had been a hot day, but the heat was past. A pleasant warmth lingered and a refreshing breeze was rustling through the thick leafy masses of the trees. All the leaves in the woods were tinted with the mellow richness of autumn and under a gleaming sky waved acres of ripe yellow corn.

Farmer Dinsdale and his son Robin were returning home after work. They had had rather a long spell of it and the perspiration stood in great drops upon their brows. They were very glad to enter the last field and to come in view of their destination, but as it was neared they walked much slower. The way was a narrow footpath. The farmer walked first and Robin followed. The path inclined over an elevation towards a stile and the elder man sat upon the stile for a rest as soon as he reached it. Robin leant his elbows on the topmost rail and looked westward. His gaze followed the wings of a windmill and his thoughts entered a little cottage hidden in a profusion of foliage fanned by the air agitated by the white wings. The farmer's position on the stile commanded a splendid landscape. The sun was sinking upon the water and the whole earth, as far as the horizon, was bright with the reflection of his glory. The brightest spot in the landscape was the farmer's great field of ripe corn. This engrossed all his attention. It was well grown and the ears were large and full. The field represented many pieces of gold and ought to be cut; but for three days no laborer was to be had and Farmer Dinsdale was sore vexed and troubled about the matter. He sat on the stile swinging his thick stick between his knees. He stared sorrowfully at his great field of beautiful corn and wondered what he should do.

"Son," said he presently, "if so be I could get yonder meadow cut, I think I would give my consent to thy marriage with penniless Bessie."

"What!" cried the son, starting from a reverie lit with Bessie's blue eyes.

The farmer smiled grimly. "I was speaking of an impossibility, of course," said he, "but it came into my mind and I must needs say it. I am so vexed to have this good corn stand three days more when it is full ripe, that I said I think I would give my consent to your marriage with penniless Bessie if you could manage to get it cut."

"You promise me thy consent, father," said Robin "and the meadow shall be cut."

"Son Robin," replied the old man, "you talk nonsense. If I cannot get hands, I wist you will not."

"Trust me," said the son, "I will use my own hands; Bessie will not take me without thy consent; so I will cut down the corn in the meadow and thy consent to our bridal shall be my wage."

The old man laughed.

"Can you cut it down in three days?" said he.

"God helping me, I will," answered Robin.

"Then, verily, thou shalt marry Bessie. But mind, she lends no hand to thy help."

"So be it," replied Robin. Then he shook hands with his father to seal the compact and they parted, the old man going away with a smile of incredulity.

Robin thought Bessie Hall, the shepherd's daughter, was the sweetest maid he knew. She was neat and comely and fair withal. She had a simple grace in every movement of her little figure and two charming dimples when she smiled. She had been well spoken of at the Sunday School and her mother called her a devoted daughter. She had innocently engaged the affections of the farmer's son; but the farmer had set his face against the match. He liked Bessie; but

BESSIE CAME BACK IN THE MORNING AND FOUND HER LOVER STILL BENT TO HIS WORK.

she was not the wife, he said, for Robin. Robin must look higher. It was true the shepherd's family was as good as his; but riches made all the difference. A good marriage might better Robin's condition in life. He was a handsome young man and the chance was not unlikely to fall in his way. Bessie was a good, affectionate lassie; but the farmer was very ambitious. He could not consent to receive her as a daughter.

He thought there was no possibility of his consent being won in the manner he had suggested on the spur of the moment and he went home laughing in his sleeve at his sons folly in indulging in such an idea.

Evening had fallen. Robin's sickle flashed to and fro and the corn fell ear upon ear at his feet. One of the farm boys followed him, gathering them into sheaves; and pretty buxom Bessie stood by looking on, finding it difficult to restrain herself from lending a hand. Robin was silent and swift over his work. He had not time to look up, when the moon came out of the clouds, accompanied by a single star and Bessie said, "It is night." When she went away he did not gaze after her. He sharpened his sickle and fell to work with a stronger will. His heart was throbbing with love. It sent new life and new strength through all his limbs as he thought of Bessie.

Bessie, blithe and bright, came tripping back in the morning. She found her lover still bent to his work. He had not failed or flagged all through the night. The farm boy slept a brief sleep on the stubble, but Robin worked on as if he had but just begun and a great heap of mown corn lay about him. He smiled as Bessie came into the field and made a short pause to eat the breakfast she had brought. Then he woke the farm boy and went on as steadily and rapidly as before.

The sun advanced to the meridian. It slanted perpendicular rays through the

"Silver beech and maple yellow-leaved,"

until the scarlet berries, the wild roses and the night-shade dropped upon the hedgerows. It gleamed upon the haymakers and the pedestrians until they called out with thirst. It was many degrees of heat in the shade, but the lovers stood out in the open field and heeded it not.

All but the bees had left off work. Once more Bessie said "Good night," and the dew gathered upon the herb. Once more the nightingale trilled forth her lay in the hay-scented air and the harvest moon rode high in the heavens. Once more the farm boy fell asleep and all the land was quiet; but love had not tired; still—still from eve till morn, from mourn till eve, Robin went on with his work, sustained by love and hope.

On the third day the farmer passed by and paused with amazement to see his corn all laid by his son's single arm. Robin was very pale. He had fallen upon the stubble and Bessie knelt by his side. She held a cup to his lips. Her eyes were full of joyful tears and a prayer of thanksgiving was upon her tongue. Farmer Dinsdale approached the group slowly. He was agitated by conflicting emotions. For a moment he was silent; then he said,

"I could not have believed in this; but since it is so, every laborer is worthy of his hire."

Then he took Bessie's hand and placed it in Robin's; so when the corn was garnered in Robin took the wife home he had chosen and she was a good wife to him all her days. Many a time did he sit by his fireside and tell his children how he had won her in the blessed harvest time and in the harvest thanksgiving she was remembered by him as a gift from the Lord with the golden corn.

The year is about to take up its bright inheritance of golden fruits. The Lord of the harvest gives us signs of great abundance. He hath visited the earth with His goodness. He hath watered the ridges. He hath settled the furrows thereof. He has made them soft with showers, and blessed the springing thereof; and songs of thanksgiving are ready to burst forth for the promise which He makes. Blessed be the name of the Lord!

E. HUNT.

MRS. VANDERDUYNCK.

LETTERS FROM ROGER FLOYD TO HOPE STANHOPE.

BY MISS E. W. OLNEY.

I.

Riverbend, June 10, 187-.

You complain, dear Holt, that in taking up our correspondence afresh since your return, I treat you with that "accursed pride of mine which has always stood in my own light." But then, don't you see, you are no longer the Holt Stanhope of old days; and how was I to guess that the confidence I gave you until you went abroad might not bore you now that you are so big a man? Besides, it is success which renders men buoyant and expansive, and I have begun to consider myself unlucky, and to shrink meanly from those who are more fortunate in making the world give them what they ask for. Not that I envy successful men—you, for instance—so don't think it. I am out of spirits, out of sorts.

The fact is, my constitution has not yet recovered from the drain made upon it during my two fatiguing years in South America. What I required was a year's utter repose. I did not get it, but set to working at my book by night and day. I was correcting the first proof-sheets while I was finishing the last chapters. When I saw it in print I fell ill, and for four months was sick almost unto death. Could I have been delirious, Holt, that might have been a comfort; but I did not lose consciousness even in my scanty feverish sleep. Every torture with which pagan and Christian alike have endowed the Inferno was expended upon me. Heaven, and perhaps my doctor, only know why I recovered; for my disease was sufficiently deep-seated and virulent to have destroyed any one; but I at length emerged into convalescence, and sat up, feebly regarding the world through the vista of a dirty fourth-story window.

You have known me all your life, and you have known me for a worker. I have hoped little, dreamed little, have studied when not actively employed; but after my sickness I felt utterly cut off from the interests of my old life. I could have drifted out of life without a regret. Relatives I have none for whom I care a dolt; my literary friends regard me with as superficial an interest as I feel for them. Study has so fully made my life, that I have neglected those interests which make existence a pleasure and death a serious calamity. But nevertheless, without wishing to do so, I grew better, and about six months after my first seizure I was on the fair way to complete health once more. I need not tell you I had no money. A poor man cannot thriftily be sick for half a year. I had lacked the sense to order myself sent to a hospital, but had paid a fabulous price for the wretched room I lived in; so that all my expenses taken together were, considering my means, enormous.

So, Holt, imagine me, like the hero of a novel, pale, gaunt, emaciated, in a garret, without money in my purse, my mind dully disinclined to exert itself, not one of my mental powers fully answering my will, and yet absolute necessity for effort staring me in the face. I thought I was equal to copying, so looked into the morning paper for a possible advertisement. I came across this:

Wanted: A resident tutor for two boys aged respectively nine and eleven. The applicant must be a gentleman by birth and education, and of unexceptionable manners, besides answering educational requirements which will be fully set forth by letter upon application to E. H., Brevoort House.

I scarcely know how I came to answer the advertisement, but I did so, half laughing at myself for my coming down in the world. The response from E. H. was curt and business-like, and the "educational requirements" were admirably set forth. I referred my correspondent to the colleges that know me, and when a personal interview was appointed, I crawled one afternoon to the Brevoort. Curiously, until I had sent up my card, the full meaning of the advertisement had failed to impress me. I am, I suppose, a gentleman by birth; that is, for three or four generations—for all I know, since the flood—the Floyds have lived respectably, have dressed well, dined well and owned family portraits. By education I am, I suppose, a gentleman, although not according to the social code which makes the education of a gentleman a smattering of the acquirements of a *roue*, a jockey, a bartender and a billiard-marker. My manners I had never considered at all; they have never known but one rule—thorough self-command and a careful observation of the wishes and requirements of those about me.

I expected one of my own sex to answer my call, but it was a lady who entered the private parlor. She introduced herself as Mrs. Hunt and her sons, my present pupils, were with her. Apparently I reached her standard. She engaged my services, offering testimonials of her husband's position and character.

"Allow me to ask," she inquired politely, "how you do me the honor of accepting this charge? Each one of the gentlemen to whom you referred me remarked that you could have a good appointment in any college in the country."

"Madam," I returned, "I am poor—my health is still delicate. My eye fell on your advertisement, and knowing myself to be at present unequal to routine, it occurred to me that I might try teaching, since besides having occupation, I should, in being a tutor, gain the comforts of a home."

"You have no home then?"

"Oh, no," I replied. "I was orphaned from my birth. I have never had a home."

That comprised my personal explanations and two weeks later I met her here and took up the charge of the boys, both lads of energy, though a pair of cubs sadly needing licking into shape before their society can be a boon.

You know, perhaps, the geography of this place. The Susquehanna is here one of the most picturesque of rivers and Mr. Hunt's grounds, extending over some twenty acres, have the stream for their boundary on three sides, thus making a charming little peninsula of the estate, which they call "Riverbend." The house is stately, although the architecture combines the faults of every style; but money has been lavished to make it an agreeable residence and nothing in the way of comfort or elegance is lacking. My employers are, in fact, monied people. Mrs. Hunt's private income is twenty thousand dollars, while her husband's wealth is something too vast for any surmise of mine. He is the great Hunt, the broker, banker, railroad man—what not?—a man noted and notorious, as astute and shrewd as he is seemingly reckless, vulgar in mind, but at his will gifted with tact and knowledge of men beyond any one it was ever my fortune to meet before. In public life he is full of *bonhomie*; in private no words can express his insolent dogmatism. I suspect his habits are the reverse of domestic, for during my six months here he has spent but two weeks with his family. Furthermore, I suspect his wife prefers that he should be with her as little as social *convenances* permit. She is anxious to make her sons gentlemen; hence her exigence in demanding breeding in their tutor. They are smart boys, born for business men and possessing few scholarly instincts, yet they study well and I have

succeeded in adding a systematic energy to their native vigor and hope much from their affectionate docility toward me. I do not, as you fancied, abhor teaching; although I confess it is an employment which makes the punishment of Sisyphus no fable. Now, dear Holt, you cannot complain of the reticence of

Yours truly,

ROGER FLOYD.

II.

June 22.

. . . . You are importunate, dear Holt, when you tell me I have not yet been confidential with you. I have not described Mrs. Hunt, forsooth! About thirty-five, I should say—a large, handsome woman, with considerable enterprise in her look and manner, a good voice and agreeable ways. I like her extremely and respect her even beyond my liking. Why, born as she was a Vanderduynck, with not only family prestige, but enormous wealth, she should have married so unsuitably, might puzzle some people. She is a woman of remarkable abilities; in fact, she quite disturbs my traditions of the sex; for she is critically truthful, never exaggerates and has an earnest mind, which can not only receive great thoughts, but can balance, weigh and adjust them for use. Until within a week I have seen her constantly; but the middle of June brought such a rush of visitors that I at once withdrew the boys to our own private quarters, out of the way of the gay people who throng halls, piazzas and parlors. Among others Mrs. Hunt's stepmother, Mrs. Vanderduynck, is visiting her. Albert and John talked constantly before her advent of "grandmamma," and I drove them in the pony carriage to meet her, expecting a venerable lady. It was a most absurd experience. At the station the boys rushed into the arms of a girlish-looking creature of certainly not more than twenty-two years and then dragged me up to introduce me to "grandmamma."

Mr. Vanderduynck, great man though he was called to the end of his life, probably lost his mind before. At the age of sixty-eight, he married this little girl, whom he left a widow a year after, with one child. She is one of those women, Holt, who make us men thank God we are neither women or married to one of them. She would be called deliciously pretty, I suppose and possesses those eyes and that smile that stir the slumbering devil in us easily; a pleading voice and manner and a running fire of impertinent nonsense always on her tongue. The pony carriage was for her and the dog-cart had followed for her luggage; but she ordered her maid and the nurse, who was holding her little girl asleep in her arms, into the phaeton and insisted upon going back in the dog-cart with us. I mounted her there, then bowed and walked home across lots. It was a four-mile walk on a hot afternoon, but I felt it to be a cheap alternative to sitting beside this brilliant young woman for a half hour. She was on the piazza when I came up and at sight of me started and ran toward me bareheaded like a little girl.

"Mr. Floyd!" she cried, as I was striking off toward the side entrance. I went up to her, hat in hand. I fear my obeisance was a trifle satirical, for she colored crimson. "I am so sorry you had that long, hot walk," she went on in a low voice and as if frightened.

"It was my choice, madam," I replied.

"But why your choice?" she asked, looking up with the open-eyed wonder of a child. "Did you dislike being in the wagon with me?" Then, meeting my involuntary smile, she flushed again. "Oh," said she, with a very grand air, "I have a bad habit of asking questions. Allow me to express my regrets that I made you lose your drive;" and with a little bow she swept back to the house.

Her coming was the signal for gayeties to begin in the neighborhood. All her suitors followed her and now fill the hotel by the river and the owners of the villas for miles about vie with each other in proffering entertainments. Mrs. Hunt entertains constantly and nothing can exceed her courtesy to her sons' tutor. I am regularly invited to all her parties, like her distinguished friend and I decline with the same high ceremony she extends to me. I rather enjoy the tumults from a distance. A band plays frequently for the enjoyment of the guests. I fancy that Mrs. Vanderduynck sings. If she does, it is quite an unnecessary accomplishment, for the rich widow is too frivolous—too adulated, of course, to really care for the great soul of music and her numerous followers would worship her just the same without any gifts of nature, so wonderfully has fortune endowed her. Think of it! she has uncontrolled possession of eighty thousand a year until her daughter marries, or is twenty-one and afterward she has the half during her life-time, with power to will two-thirds of it to suit herself at her death. Not an unpleasant investment for a marrying man and I scarcely wonder at the throng of beaux who pursue her. She either affects or really feels an interest in Albert and John and would like to draw them into her circle frequently, but I emphatically forbid it. They will, only too soon, learn social lessons from a foolish woman, but I shall allow nothing of the sort as yet. Did I tell you Mrs. Vanderduynck has a little girl? Only this morning, about six o'clock, I was setting out toward the river for my ten-mile, before-breakfast row, when I met the child in the garden. She was playing with the dogs; and as I like children when they are free from mothers and nurses, I at once ran up to her. "You love the dogs," said I. "Which one do you like best?"

The little maid glanced at me with grave brown eyes. "I love Ponto," she returned, "but I love my own little Dio best."

"Tell me about Dio," I exclaimed, sitting down upon the bench, "and afterward I will tell you about two little monkeys I had in South America."

"Tell me about the monkeys," she cried imperiously and approached and stood at my knee while I recounted various traits of our undeveloped relations who still chatter and clamber and swing by their tails in the recesses of pathless forests. She was amused and enthusiastically clambered upon my lap, quite assured of a generous welcome and sent away her nurse with a frown when she came up after her. But finally my watch showed me that it lacked but twenty minutes to lesson hour and I summoned the attendant.

"I shall tell my mamma of you," said little Cora. "When will you talk to me a great deal more?"

"Ask your mamma," I replied, "if you may go upon the river with me to-morrow morning at six o'clock, for I want to tell you about my parrot."

"Oh, I will go. Mamma will say I may go," she cried ecstatically, "for I love you so much—so much!" And, my boy, she put her little arms around me warmly and her lips to mine. I held her close a minute, then put her gently down. Am I not to weak too tell you this? But caresses have been rare with me. I cannot remember my mother and my uncle was a cold man. This child's clinging arms and tender lips made me think a little about the exquisite side of life—the experience I have never known. I even had a spasm of sentiment as I walked toward the house—I positively was imbecile enough to say to myself, "Some day, please God, I will be married and will have just such a little daughter of my own."—[To be continued.

The Literary World.

RECENT LITERATURE.

Working People and their Employers.—By WASHINGTON GLADDEN. [Cloth.—pp. 241.] Boston: Lockwood, Brooks & Co.; New York: James Miller.

This volume contains a series of sermons to working people; but they are very unlike the orthodox sermon. As his apology or explanation of their character, the author says:

It is not unlikely that some readers may pronounce discussions such as these quite too secular for Sunday and the Church; but the lawfulness of doing good on the Lord's day is not an open question: and the Christian who does not feel the need of trying to do good in this way, who does not see the importance of bringing the truth of the New Testament to bear directly upon the matters now in dispute between labor and capital, is one with whom I do not care to argue.

The sound practical advice and good sense of these talks will commend them to every one who is not an idler or a shirk. The different relations of those who get their living by labor of mind or body are fully discussed, and the whole work is interspersed with solid chunks like the following:

The young man makes up his mind that a wife is a luxury too expensive for him to afford; and the young woman resolves that she will not marry unless there is money enough in the proffered hand to support her in good style. Thus the young woman grows mercenary and frivolous, and the young man dissolute and rakish. Every year that passes makes it less probable that they will ever enter into the family relations, and still less probable that, if they do, this relation will be a happy one. This state of things, which we witness everywhere in the middle classes, is greatly to be deplored. It is the source of a large part of the vice and wretchedness with which these classes are infested.

The American Herd Book.—Containing Pedigrees of Short-Horn Cattle, with Introductory Notes. By LEWIS F. ALLEN, assisted by WILLIAM T. BAILEY. [Vol. XV.—pp. 955.] Buffalo, N. Y.

WE are again indebted to the editor, L. F. ALLEN, Esq., for a copy of a work to which and the preceding volumes he has devoted the greater part of his life. The present volume registers bulls from No. 21,860 to 25,480, and about 5,000 cows. This of itself is sufficient to indicate the extent of this great work, of which the editor, as well as every breeder of any kind of farm stock, has good reason to be proud. The author's preface, as usual, gives a review of the condition and progress made in breeding this strain of the bovine race. The plan adopted in this (15th) volume of giving the names of the breeder, as well as the different transfers of the animals down to the latest date, in addition to the full pedigree, must commend itself to all who may desire to fully recognize and trace the life-history of any particular animal. This valuable work, which should be considered indispensable to every breeder of Short-Horn cattle, can be had of the editor, by addressing as above.

The Centennial History of the United States. By JAMES D. MCCABE. [8vo.—pp. 925.] Philadelphia, Chicago, St. Louis and Columbus: National Publishing Co. Sold by subscription only.

This is the season and the year when a history like this should be and will be extensively read. Our newspapers, in commenting upon various national events are constantly making allusions to those of one hundred years ago. He who is ignorant of the history of this country is wholly unfitted to comprehend the meaning of many of the gatherings and celebrations which are now of almost daily occurrence. If one has not time to make a study of this history, is it but due to himself as an intelligent citizen that he should have by him some book of reference by which he can inform himself upon any matter to which allusion may be made in current news. For this purpose, if for no other, we can safely recommend this epitome of the History of the Republic. There is hardly any event of importance during the last century which is not illustrated and this will not astonish anyone who is informed that the work contains 442 engravings on steel and wood. The work is brought down to date and contains many cuts of places and institutions as they now exist. The National Publishing Co. will give full information upon application to one of the above addresses.

Wych Hazel.—By SUSAN and ANNA WARNER. New York: G. P. Putnam's Sons.

A NUMBER of years ago, when the "Wide, Wide World" was first published, the American public felicitated itself upon the development of a new novelist, who would add much to the literary reputation of this Republic. Upon what particular theory this opinion gained ground is still a mystery to some; but the fact is indubitable that the book was extensively read and favorably noticed almost everywhere. Now we have Wych Hazel, which, though superior to previous works in some respects, is in many ways faulty. The authors have made an impossible young woman, endowed her with wondrous beauty, untold wealth and two guardians, one of whom she marries at the end. She says the most remarkable things in the most unusually laconic manner—so much so one is reminded of numerous effusions of ALEX. DUMAS for which he was paid by the line, and many lines contained but one word each. Taken as a whole the book is interesting, and certainly points a moral.

The Pacific Tourist.—By HENRY T. WILLIAMS, Editor, with Special Contributions by various celebrated Travelers and Explorers of that Country. [8vo.—pp. 293.] New York: Henry T. Williams.

This enterprising editor and publisher has added another large item to the credit side of his account with the public by issuing this complete travelers' guide across the continent by rail. The illustrations are so numerous and excellent that one can almost see the whole journey without the trouble of going over the ground. In addition to this, the minute directions and explanations as to everything that is worth seeing are made doubly valuable by coming from the pen of so old and so excellent a traveler. Next to crossing the continent with Mr. WILLIAMS himself, commend us to his book as a guide. No one should go to the extreme West without a copy. It is a necessary part of a traveling outfit.

The Prime Minister.—By ANTHONY TROLLOPE. International Series. [Cloth.—pp. 690.] Philadelphia: Porter & Coates. Price $1.50.

THE last addition to the International Series, The Prime Minister, is a novel in Mr. TROLLOPE'S best vein. English life and manners, especially political life is portrayed with microscopic detail. FERDINAND LOPEZ, the hero, is an individual who thinks money the aim and end of existence, and the various shifts he resorts to in gaining it are horribly realistic. Those who have read previous novels by this author will, in these pages, meet many old acquaintances, among others Her Grace of Omnium, Phineas Finn and "Dear F." The printing is so clear and neat, that it is a comfort to hand the books of this series.

Broom Corn and Brooms.—A Treatise on Raising Broom Corn and Making Brooms on a Small or Large Scale. Written and Compiled by the Editors of the American Agriculturist. Illustrated. [Paper.—pp. 57. New York: Orange Judd Co.

This will doubtless prove a valuable hand-book for those engaged in broom corn culture or the manufacture of brooms. The directions for planting and culture, as well as description of varieties, are given in plain and readily-understood language, while the numerous illustrations cannot fail to be of great assistance to those who may desire to make their own brooms. An excellent treatise on a subject which is of late attracting considerable attention in the Western States, as it has longer done in the Eastern.

The Complete Poetical Works of JNO. GREENLEAF WHITTIER. Centennial Edition. Illustrated. [Paper,—pp. 293.] Boston: Jas. R. Osgood & Co. Price $1.

THE publishers have in the present volume issued the complete works of this favorite poet, with a well-arranged index and copious notes. So much has been written in praise of this poet, the BURNS of America as he might properly be called, that the reviewer can do little but express his personal preferances. The illustrations in the present volume are very creditable, and the price, $1, is certainly a strong incentive to every family of culture, but small means, to make an addition of real value to its library.

Old Acquaintance.—Barry Cornwall, &c. By JAS. T. FIELDS. [Cloth.—pp. 121.] Boston: Jas. R. Osgood & Co. Price 50 cents.

This little volume is a reprint from Harper's Magazine. Mr. FIELDS has been attacked by the mania for personal reminisence which is abroad, and has given in the brief gossips about PROCTOR and his friends many hints that should stimulate a desire to know more of these fine spirits. The style is pleasant, a trifle too gushing perhaps, but his memories are of that sentimental character inspired by personal contact. We wish we could see more books of this kind in the hands of the general reading public.

Quarterly Elocutionist.—By Mrs. ANNA RANDALL-DIEHL, Union Square, New York. [$1 a year; single Nos., 30 cts.]

ALL those boys and girls who want "pieces to speak" should thank the originator of the Quarterly Elocutionist for her efforts in their behalf. Each number has seventy-two pages of the choicest selections of prose and poetry, "from grave to gay—from lively to severe," embracing pieces suitable for readings, recitations, declamations and dialogues, and adapted for the school, parlor or platform. The four numbers each year will make a handsome volume of nearly 300 pages, containing about 100 literary gems. A valuable book for any library.

The Shepherd's Manual.—A Practical Treatise on Sheep. By HENRY STEWART. [Illustrated.—pp. 252.] Price $1.50. New York: Orange Judd Co.

THIS is a work upon which the shepherd can rely as a safe guide in all that pertains to the care of his flocks. The author is well known as one of our most careful and pains-taking agricultural writers; adding to this his long practical experience with farm stock, we could expect nothing less from his pen than what he has given us, viz., a work of standard value. With such a book as this in his hands, the novice in sheep husbandry need not go astray if he carefully consults its pages.

The Vendetta and Other Poems.—By T. B. PEACOCK. 2d Edition. [Cloth.—pp. 161.] Topeka: Published by the Author.

WE quote from the author's letter to us,—"I have given time as well as money to make this, my second edition, worthy of public acceptation, hoping it will have enough sales to recover the investment,"—to show that this material age affects even the divine afflatus of the poet. The Vendetta is a collection of verse, of which the title poem is the most ambitious. After reading this book our emotions—natural and acquired—quite overcome our power of expression.

The Coal Trade.—By FREDERICK E. SAWARD Editor of the Coal Trade Journal, New York.

This is a compendium of valuable information relative to coal production, transportation, etc., at home and abroad, of very little interest to the general reader but invaluable to those interested in coal or any of the industries in which the same is used. Mr. SAWARD'S familiarity with the trade generally is a guarantee of its correctness and the completeness of its statistics, which comprise a large part of the volume before us.

Poetry for Home or School.—Selected and Arranged by ANNA C. BRACKETT and IDA M. ELIOT. [Cloth.—pp. 320.] New York: G. P. Putnam's Sons.

This little volume, almost pocket size, certainly contains none but the best of poems and is distinguishable chiefly for the suitableness of the selections for home and school. If one desires the sentimental or pathetic, it is there; or if the fancy is for heroics, they also can be found. Poems for children of six or sixty can both be found in abundance.

NEW MUSIC FROM F. W. HELMICK, Cincinnati, O.:

Centennial March. By J. Wymond. Simple, and not difficult; pretty little march for beginners.

Mineral Springs Polka. By G. Dolfuss. Light and airy.

WM. A. POND & Co., New York:

Columbia's Standard. Words by George Cooper; music by S. Schoenbrun. A patriotic song, with chorus for four voices; good harmony and not difficult.

Rest, my Darling; Slumber Noir. Words by G. L. Stoul; music by David Braham. A sweet little melody, harmonious and smooth.

False Souvenirs. Lester Wallack. Notable for a conspicuous absence of melody, harmony or beauty.

"N. G." Song and chorus. Words by C. W. Denike; music by Murizio G. Giannetti. As a comic song it is a success, for it is both funny in words and in music.

Rothesay Bay. Words by Miss Muloch; music by T. S. Lloyd. A little Scotch song.

The Soldier's Return. By Henry Kleber. March time; much more stilted and dignified than musical.

O, Jubilate Deo. Adapted by Wm. H. Squires from Emmerig's Magnificat. For four voices and piano accompaniment. A good arrangement of fine music.

Music of the Pines. An Idyl. By Ed. B. Phelps. A simple melody, with a sweet grace note accompaniment woven around it like a net.

First Kiss. By George Lamothe. A graceful waltz movement.

Blow Wild and Free. Words by A. M. Smith; music by Franz Abt. The name of the composer is a guaranty for the sweetness of the song.

Evening Service. By Henry Wilson. Composed for the choir of "Holy Cross" of Troy; with organ accompaniment. Solid harmony and very appropriate.

O Hush Thee, my Baby. By C. A. Macirone. Composed for the words of Sir Walter Scott. A soft, soothing little song, of which nothing or anything can be made at the wish of the performer.

Sway the Oil Gently. Song and chorus. By David Braham. The quintessence of stupidity.

Flower Song. By Gustave Lange. A sort of capricious melody with variations; light and graceful.

BENJ. W. HITCHCOCK, New York:

The Shoemaker. Words by Hannah F. Gould; music by Henrico. A comic quartette which, like most comic songs, is most ridiculous where it is worst.

Hail Columbia. Arranged by G. J. Webb, with easy piano accompaniment. Everybody knows this National Hymn.

Marriage Bells Polka. By Emma L. Butler. Emma would have benefited the world by omitting to compose this.

March of the Minute Men. By H. Maylath. A very appropriate march for this Centennial season.

Dom Pedro March. By Fr. Meyer. Poor Dom Pedro! He is to be pitied.

The Dutchman's Visit to the Centenaial. By F. Meyer. A comic song and chorus.

America—My Country 'tis of Thee. Arranged by H. Millard. Even the children in this country are familiar with this National Hymn. This is a quartette with easy piano accompaniment.

Ladies' Portfolio.

NEEDS.

PEARL, gray and opal are the upper skies:
They need the azure of thy tender eyes.

Down western clouds the sun in splendor dips:
They need the added color of thy lips.

Waves, fresh and foaming, roll upon the sands:
They need the whiteness of thy perfect hands.

Far snow-drifts glisten, free from spot or speck;
They need the rare tints of thy lovely neck.

Over the valley ravens cleave the air:
They need the darkness of thy flowing hair.

Roses and lilies droop to fragrant death:
They need the heavenly perfume of thy breath.

Gone mad from longing, cries my soul to thee:
"I need thee darling! Grant thyself to me!"

HUMAN VAMPIRES.

The Ghastly Effects Following the Drinking of Blood as a Remedy for Disease.

BLOOD drinking has become quite popular of late years, and many invalids daily visit the abattoirs of New York for the purpose of drinking the warm life-blood of the ox. It is a fact—not so generally known, however,—that this appetite for blood increases upon those who indulge in it. Women, who at first quaff with repugnance and some horror a wine glass of the warm crimson gore, gradually acquire a craving for it, and take down a tumberful with evident relish. Parties under this blood spell almost invariably manifest a desire to try the effects of human blood. Two cases of this kind have been reported in New York. A young lady belonging to a respectable family suffered in health while devoting herself to her academical studies. Her medical attendant, who vouches for the truth of the story, suggested blood-drinking. Permission and the necessary privacy were secured at the abattoir. Salutary effects were not long in following. The pallor left her cheek, her frame became more robust, and in ten months she gained fifteen pounds in weight. From having been a pale and uninteresting-looking girl she developed radiant beauty, and she married the young assistant of the medical adviser who had saved her life. Well acquainted with the means by which she had been restored, her husband encouraged her natural curiosity respecting the effects of various kinds of blood; and probably quite as much for the purpose of his own professional information as for the gratification of her own wish, he opened a small artery in his leg and permitted her to suck the vital tide. An inordinate mania for her husband's blood forthwith supervened. He gratified the craving again and again until disgust for her became the predominent feeling of his mind; and after he had done himself a great amount of physical injury, he bade her a final adieu and sailed for Peru. The wretched young wife now lies on a sick bed, and almost entirely subsists on blood brought her from an abattoir She is a monomaniac on this subject, and had she opportunity would undoubtedly become a vampire, and banquet perpetually on human blood. The other case was that of a woman of twenty-five threatened with a decline. By the advice of a physician she took, four times a day, a tablespoonful of cod liver oil mixed in a wineglassful of blood. The woman was restored to health, but while she left off taking the oil she continued the dose of blood. At this time her husband met with an accident on the staircase of their house, by which he lacerated the back of his hand and wrist with broken glass. She rushed to him in alarm to stem the flow of blood; but instead of stemming it she sucked it until he swooned away, and lay ghastly, exhausted, and motionless as one dead. The timely arrival of the landlord prevented a fatal catastrophe. The wretched wife was alternately sucking her husband's wrist and bewailing his misfortune in heart-rending tones. Her face was smirched with blood. Her mouth literally dropped gore. The landlady at first imagined that she saw before her a terrible accident to the husband that had culminated in the suicide of the wife.

A LADY ON SLEEPING CARS.

A LADY traveler writing about sleeping cars and her experience on the same says:

A woman's toilet, to be satisfactorily performed, demands some other position than prone upon the face. Likewise, it is somewhat more agreeable to perform portions of the toilet unobserved by the multitude. Men either are not burdened with modesty, or they have minds that soar so high above the feminine that they give no thought to the embarrassment attendant upon the method and manner of disrobing one's self in those quarters. A woman carefully extinguishes herself behind the curtains, slyly unloosens the lace, envelopes herself decorously in a large water proof, not daring to lay aside her chignon for fear of a surprise, and proceeds to bestow herself away uncomfortable and depressed. The stranger in the bunk above leisurely divests himself of his outer garments, pulls off boots, loosens suspenders, and bounds into bed with graceful ease, rather enjoying the situation. I think if there could be a ladies' car for sleeping and toilet exclusive of gentlemen, it would be a great advancement in wayfaring civilization. I thought so this morning, especially when I awoke from uneasy slumbers to find the foot board fallen, and a group of serene-browed men gazing smilingly upon my sleeping beauty. Let us have separate cars, good people, and we can ask nothing more of you in the way of luxury and restful ease.

MARRIAGE AMONG THE ROMANS.

THE Romans not only rewarded those who married, but decreed penalties against men who remained in a state of celibacy. Fines were first levied upon unmarried men about the year of Rome 350; and when pecuniary forfeitures failed to insure their obedience to these connubial edicts, their contumacious neglect of the fair sex was punished by degradations from their tribe. Celibacy continued, however to gain ground in Rome; and, to counteract its effects, we find that, in the year 513 from the foundation of the city, the censors had resource to the extraordinary measure of obliging all the young unmarried men to pledge themselves on oath to marry within a certain time. In Babylon an auction of unmarried ladies used to take place annually. The virgins of marriageable ages, in every district, were assembled on a certain day of every year. The most beautiful was first put up, and the man who bid the largest sum of money gained possession of her. The second in personal appearance followed; and the purchasers gratified themselves with handsome wives according to the depth of their purses. When all the beautiful virgins were sold, the crier ordered the most deformed to stand up; and after he had openly demanded who would marry her with a small sum, she was at length adjudged to the man who would be satisfied with the least; and in this manner, the money arising from the sale of the handsome women served as a portion to those who were either of disagreeable looks, or that had any other fault or imperfection.

A TERRIBLE TRAGEDY.

CHAPTER I.

WITH fierce energy she strode to the window, dashed back the rattling blind and peered into the inky darkness. But her burning glances failed to pierce the pall-like blackness that enshrouded the deserted streets. Tearing up the hall register and detaching the pedal from a sewing machine, she laid them on a hassock and resumed her weary watch. The storm without raged with wild fury, driving the sleet across Charles River with a force and velocity that was appalling. The night waned and she sat wan and haggard.

CHAPTER II.

An abandoned-looking man, with a crimson nose, tattered Ulster and fearful fissures in his trousers, was waltzing with uncertain strides through one of the grand avenues of the Lower Port. Ever and anon the graceless man would mutter to himself: "I—hic—wonderifthatoldwoman'sup?" Bracing himself, he reached home, and was trying to pick the door-lock with an empty flask when the door was opened from within. Then there came a wild cry for mercy, heard high above the horrid, raging elements, waking up two policemen, and—then all was quiet.—*Boston Courier.*

WE ask advice, but we mean approbation.—*Colton.*

THE devil is poor; he has no God.—*Russian Proverb.*

I HAVE known men disagreeably forward from their shyness.—*Arnold.*

I DO not wonder that egotists find the world so ugly; they only see themselves in it.—*Anon.*

CHARACTER doesn't depend on diet. The ass eats thistles and nettles, the sharpest of food, and is the dullest of animals.

POETRY is not made out of the understanding. The question of common sense is always: "What is it good for?" a question which would abolish the rose and be triumphantly answered by the cabbage.—*Lowell.*

THE girl who can put a square patch on a pair of pantaloons may not be so accomplished as one who can embroider and work green worsted dogs on blue ground, but she will be more useful at the head of a large family.

WORKING-WOMEN in France on an average earn but little more than half the wages earned by men. M. de Foville writes that to place women on a footing of equality with men they ought to earn at least two-thirds as much.

A LADY writer in the Philadelphia Item perpetrates the following: "Women never truly command until they have given their promise to obey; and they are never in more danger of being made slaves than when the men are at their feet."

THAT the nasal twang is not wholly confined to New England is proved by Spurgeon's recent advice to some young clergymen. "Moreover, brethern, avoid the use of the nose as an organ of speech, for the best authorities are agreed that it is intended to smell with."

A GENTLEMAN gave his servant-maid the following character the other day: "The bearer has been in my employ a year minus eleven months. During that time she has shown herself diligent—at the house door; frugal—in work; mindful—of herself; prompt—in excuses; friendly—toward men; faithful—to her lovers; and honest—when everything had vanished.

THE importance of the most innocent speeches and acts increases with our years, and I strive continually to direct the attention of those whom I see often about me, to the difference there is between sincerity, confidence and indiscretion; nay, that in reality there is no difference, but rather a subtle transition—which ought to be noticed, or, better still, felt—from what is most harmless to the most mischievous.—*Goethe.*

Reading for the Young.

KISS ME—GOOD-NIGHT.

DEAR mother, when my prayer is said,
Before you take the light,
Oh! lean your head so closely down,
And always kiss "good-night;"
For I am happier in my dreams,
And sleep is sweeter rest,
If I have laid my lips to thine,
And thine to mine are press'd.

One kiss, dear mother, for the love
My heart keeps warm for thee;
And one for all the tenderness
Thy sweet eyes look to me.
Kiss me forgiveness for my wrongs:
Kiss me with hope and prayer
That I shall be a better child,
And more reward thy care.

Kiss me for some poor orphan child,
To whom no kiss is given;
And next for all the happy ones,
And then for one in heaven.
Kiss me for everything I love,
The beautiful and bright;
Sweet mother, kiss me for thyself
Once more, and now "good-night."

THE PITCHER PLANT, AGAIN.

DEAR RURAL YOUNG FOLKS:—Uncle MARK, in his Centennial letter, told you of the "American Pitcher Plant," or ADAM'S Drinking Cup, as it is sometimes called (see RURAL, June 17, page 393, for illustration), but he forgot to tell you some of the most wonderful things about it.

Here, in Western New York, about Chautauqua Lake, it is sometimes found in its native haunts, and most of the green-houses keep a supply of them. Perhaps some of you remember having read of different kinds of plants which are called *carnivorous* or flesh-eating. I think there were illustrations of some of them in the RURAL not long ago. Well, the Pitcher Plant belongs to this species. If you ever have an opportunity of examining one, look carefully down its throat, and near the bottom of the cup, which contracts and becomes quite small as it nears the ground, you will find flies, bugs and sometimes small worms, in all stages of decomposition, undergoing the process of absorption into the plant,—for these plants eat and live on the insects which they entrap. You will find the inner surface of the cup lined with innumerable hooks, so arranged that they allow the unwary victim to crawl down the sides, but never to return! Over the top of the cup there is a beautiful cover, which opens and stands nearly erect during a shower, but when the rain ceases, and the sun shines, the lid closes; and the cup is always found with more or less water in it. It is probably the hope of obtaining a *drink* which lures the poor victim to his death, with no less certainty than human beings who frequent the dram shop are deluded to ruin and death. The plant has a very curious blossom, and altogether it is one of the greatest wonders of the vegetable world.

Some thirty or forty years ago the Botanical Society of the State of New York offered a prize of $50 for the most interesting and curious plant to be found in the State, together with a description of it, and a young medical student of Jamestown, who is now an old physician of that place, forwarded a specimen of the Pitcher Plant, and carried off the prize. MRS. W. C. G.

Jamestown, N. Y.

LETTERS FROM BOYS AND GIRLS.

From a Little Agent-Friend.

DEAR RURAL COUSINS:—As I have read with so much pleasure the letters of the many Cousins, I thought if they would accept me I would like to become one of their number. I agree with YOUNG ARTIST about piecing quilts. I am piecing one which I would like to get done before I am fourteen, but have my doubts about doing it. Why does not YOUNG BACH answer the many letters that are written against him? Is he afraid the girls will glory over the conquest of such a boasting youth? He need have no fears, for no one would glory over such a small conquest. I wish some of the Cousins would tell me how to make a pretty bracket. I have a bird cage I made of pasteboard and straw. I got up two clubs for the RURAL, and received as my Premiums the Silver Plated Napkin Rings and the Gold Pencil Case, which I liked very much.—FARMER'S DAUGHTER.

P. S.—My papa thinks that POTATO DIGGER had horses to help him.—F. D.

From the Far West.

DEAR UNCLE MARK:—I am a little boy twelve years old. I live in Kansas. Am a farmer's son, so of course have to work pretty hard sometimes. I for one say, thank you, Uncle MARK, for offering to tell us of the Centennial. Please go and tell us what you think will interest us most of all you see. I have just read your nice letter. You tell us Uncle TRUE displeased you by not honoring the girls. I, too, have a little fault to find with him, and was just going to write and ask him to please be so kind as to offer his next premium in such a way as to give us poor Cousins on the frontier a chance—for you see long before the RURAL gets to us the city Cousins have time to read and answer his letters. However, both your letters were good, and we young folks ought to be proud of our new Uncles,—only we are sad to think dear old Uncle MARK uses tobacco in any shape. When I am a man, I don't intend to touch, taste or handle the unclean stuff; I mean to be a teatotaler. I would like to say something to the Cousins, but will only beg the girl Cousins to have a little mercy on poor YOUNG TOM. My heart aches for him.—FRANK W. G.

From the Sunny South.

DEAR RURAL COUSINS:—I live in Western Texas, in a land of beautiful prairies and clear, rippling brooks, noted for their huge rock cliffs and the dark, mysterious recesses of the grotto caves. It is delightful enjoyment to me to roam through rocks and climb from cliff to cliff, viewing as I go the beauties of nature. I agree with YOUNG ARTIST about piecing quilts, as well as other things of which she wrote. I think it is wasting time to cut up cloth and sew it together again. I think horseback riding among the chief enjoyments of a country life. I would like to see another letter from YOUNG NATURALIST. I am almost one myself. I have quite a collection of rocks I gathered from the caves in this vicinity. Also many curious bugs and flies; but my friends tease me about them so much I sometimes feel inclined to destroy them. I am afraid some of the girls have been too severe on YOUNG TOM; I do not want him to quit our social columns entirely. Hoping Uncle TRUE and Uncle MARK will look with favor upon my first effort, I will close.—MARY A. Y., *Rainey's Creek, Texas.*

Uncle Mark, Please Notice.

DEAR RURAL:—I have been away visiting for the past three weeks; had a very nice time. One thing interested me very much, which I will tell you. It was the day the Centennial opened. The fire bells rang 1-7-7-6, then 100 strokes, and then 1-8-7-6. I am very fond of reading. I usually read the Story Teller first, then the Girls' and Boys' Letters. Will Uncle MARK please write again?—JENNIE L. A., *Danbury, May 31.*

New York State, Again.

DEAR EDITOR:—My father has taken the RURAL a long while, and we like it very much. We have a large farm and keep thirty-five cows, which makes us much work. I like to milk, plow and drag, and do any kind of farm work. Where has YOUNG TOM gone? Have the "fair sex" beaten him down? I quite agree with CRITIC on those "tobacco distillers," and think no decent young man will use the weed.—YOUNG FARMER, *Springville, Erie Co., N. Y.*

The Puzzler.

ILLUSTRATED REBUS.—No. 10.

☞ Answer in two weeks.

BIBLICAL ENIGMA.—No. 7.

I AM composed of 24 letters:

My 2, 11, 16, 21, 19, 14 is a domestic animal.
My 8, 19, 14, 20, 3, 9 is an animal of the weasel family.
My 10, 5, 14, 20, 13, 6 is an agricultural implement.
My 15, 7, 20, 23, 5, 17 was miraculously restored to life.
My 17, 2, 16, 4, 7, 10 was a city of Ephraim.
My 18, 16, 12, 5, 24, 11 was a governor of Judea.
My 22, 17, 1, 2, 3, 14 was a queen of Persia.
My whole is part of a verse of the Bible.
Answer in two weeks. ISOLA.

DOUBLE CROSS-WORD ENIGMA.—No. 3.

My first is in sail but not in row,
My second is in arrow but not in bow;
My third is in knave but not in thief,
My fourth is in pain but not in grief;
My fifth is in wind but not in gale,
My sixth is in snow but not in hail;
My seventh is in harrow but not in plow,
My eighth is in horse but not in cow.
My whole form two rivers of the United States.
☞ Answer in two weeks. BERBIX.

PUZZLER ANSWERS.—June 10.

CROSS-WORD ENIGMA No. 13.—Milan.

MISCELLANEOUS ENIGMA No. 4.—Love is precisely to the moral nature what the sun is to the earth.

TRANSPOSED FLOWER GARDEN No. 1.—1, Hyacinth; 2, Candytuft; 3, Mignonette; 4, Amethyst; 5, Marigold; 6, Columbine; 7, Ice Plant; 8, Sweet Pea; 9, Forget-me-not; 10, Cypress vine.

PUZZLE No. 2.—Yam.

TRANSPOSITION No. 5.—These two lines are inserted only to see if anybody can read them.

PUBLISHER'S SPECIAL NOTICES.

The Rural is a very good present to send to a friend, and it pleasantly reminds the recipient of the donor fifty-two times a year—this year fifty-three times. Any *subscriber* can send it to a relative or friend as a present, at our lowest club rate—only $2.15, including postage.

Back Numbers of this Year (from Jan. 1) can be furnished to all new subscribers, but we shall not send them hereafter unless specially requested. Those who desire can begin with any number, however.

Officers of Agricultural Societies and Clubs, Granges, &c., can, if they will, materially aid in augmenting the circulation of the RURAL. Scores of such are already forming clubs; how many others will kindly do likewise?

Select Your Premiums.—All persons entitled to Premiums will please designate what they prefer and notify us how and where to forward—whether by Freight or Express—if articles are not mailable.

The Best Paper, and the Best Premiums to Agents, is our motto. We ignore Chromos and all other cheap colored pictures, preferring to put our money *in the paper*, and in Premiums to Agents.

Act as Agent!—Reader, if there is no agent for the RURAL in your locality please become one by forming a club. *It will pay.*

At Our Risk.—You can remit by Draft, P. O. Money Order or Registered Letter *at our risk.*

News of the Week.

HOME NEWS PARAGRAPHS.

AFTER a very exciting session at Cincinnati, the Republican Nominating Convention has adopted a platform and named as its candidate for President, Rutherford B. Hayes of Ohio, and for Vice-President, Mr. W. A. Wheeler of New York.

One hundred and fifty men went to the Santa Rosa (Cal.) jail, and took out Thomas W. Henley, who was confined there for killing James Rowell, a prominent citizen, and hanged him.

The Cincinnati Enquirer calculates that, letting 1,000 represent a woman's chances of marriage in the whole course of her life, 136 of those chances are lost when she is seventeen years old, 588 when she is twenty-one, 915 when she is twenty-seven, 992 when she is thirty-three, and the entire thousand when she is forty-five.

The gold ore found at Saccarrappa, Me., yields $15 a ton.

The unusual amount of grain being shipped from Chicago to Baltimore by the Baltimore and Ohio Railroad, shows that there was cause for being alarmed at the decrease of shipments to New York. In order to stop shipments at present, and get rid of a large amount of accumulated freight, the company has decided to advance freight rates to Baltimore for a short time to 20 cts. per 100 lbs.

The steamer City of Peking which arrived at San Francisco from China via Japan, brought 150 coolies. This is the first vessel to leave since the Chinese six companies here telegraphed to have further emigration stopped. The Peking brings 20,775 packages of tea, 9,200 being for New York.

The long railroad bridge at Fort Edward, N. Y. burned on the 7th inst. has been replaced.

Ex-Mayor Eastman of Poughkeepsie, has presented 500 hats to the street boys of that city.

The Archdiocesan Union of the Catholic Total Abstinence Societies at Philadelphia, adopted a resolution postponing the dedication ceremonies at the fountain in the Centennial grounds projected for the Fourth of July. The action of the union postponing the dedication ceremonies is in consequence of the refusal of the Board of Finance to let the societies march to the site of the fountain within the Exhibition grounds in a solid column.

During the excitement attendant on the parade of a circus company at Fall River, four men entered the City Treasurer's office and stole $4,317.

The wheat crop of Pickens Co., Ala., has been greatly cut by the rust. Many planters are reported as having plowed up their wheat and planted the land in corn.

The farmers have commenced haying in California. The crops will be unusually large.

The second crop of oranges is now beginning to whet the appetites of the population in Florida. There will be a large quantity for shipment between now and the first of July.

It is estimated that rice culture in Louisiana employs 80,000 people on 1,200 plantations, producing a crop worth $3,000,000, and developing business to the extent of $10,000,000. Sugar culture employs three or four times as much capital and a larger proportion of labor, producing a crop worth twelve to fifteen millions.

The chinch-bug is after Wisconsin wheat.

Marshall, Iowa, has a chicken with two heads, four beaks, and four eyes.

A horse in Talbot county, Georgia, ate six bushels of oats at one feeding.

The Liverpool Courier says the number of magnificent steamships lying idle in Liverpool and Birkenhead docks is unparalleled.

Thus far the catch and pack of salmon in Oregon is far in excess of that for a corresponding period last season.

They must have careful kitchen girls in China. That country sends to the Centennial some plates and dishes over a thousand years old.

The "General Grant" is the latest variety of cucumber.

What must they think of us in France? M. Gavardie's assertion in the French Senate that there is nothing else but politics for the workingmen's delegation to learn in the United States don't strike us as being a high compliment, to say the least.

A new rule on the Central Vermont Railroad requires every employee to take the total abstinence pledge, and dismissal is to follow a violation of it.

The Pacific Mail steamer City of Sydney, from Panama, brings news of the foundering of the Guatemallan gunboat Gen. Barreos off San Jose de Guatemala during a gale the week previous to the time the City of Sidney touched at that port—the 31st ult. The crew of the gunboat were saved, but 16 soldiers went down with her.

An effort is being made to save the Old South Church, Boston, from destruction, and a public meeting will be held in the building to prevent it.

Dom Pedro passed June 12th in Boston, visiting the schools and the Institution for the Blind. In the evening he listened to a lecture by Prof. William J. Marshall on the Yellowstone National Park.

Men representing themselves as agents for Eastern florists and horticulturists are deceiving farmers in the Territories.

Texas has a new law requiring of jurors the ability to read and write.

Miss Martin of Cincinnati had her bustle shattered by three bullets shot from a revolver by her lover.

Seventeen residences in Waterford, N. Y., are connected by telegraph wires, and the occupants gossip handily.

The Mexican Revolutionists are badly defeated.

The statue of American Girl, who fell dead on the track of the Elmira Driving Park while trotting a race on the 2d of October last, has been unveiled. The statue is a life-like and life-size bronze image of the horse. It stands on the northwest corner of the park. A granite base supports the statue bearing two inscriptions on polished panels. One reads: "American Girl; record 2:16¼; winner of 150 heats in 2:30 or under. *Monumentum aere perennius.*" The other reads: "American Girl, owned by Wm. Lovell of York, foaled in 1862, dropped dead in the free-for-all race on this track, October 2, 1875.

The Western fruit crop now promises to be the largest ever produced, and wheat never before made so good a show.

In Iowa the crops are feeling the influence of summer heat and showers, and are springing forward rapidly.

The new artesian well at Sheboygan, Wis., forces water through an inch and a-half nozzle a distance of ninety-six feet perpendicularly.

The primary school apportionment of the State of Michigan is fifty cents per scholar annually, amounting to $223,935.50, to be paid by the State Treasury during the month of June.

The Treasury now holds $343,756,050 in U. S. bonds to secure national bank circulation and $18,825,850 to secure the public deposits. U. S. bonds deposited for circulation for the week ending June 10, $18,200. U. S. bonds held for circulation, withdrawn for week ending June 10, $200,000; national bank circulation outstanding, $332,680,006; gold and bank circulation outstanding, $2,099,190.

At a meeting in St. Louis of the Mississippi Valley and Brazil Steamship Company such action was taken and subscriptions made to the capital stock as insures the success of the undertaking. Subscriptions to the stock now amount to $800,000. Steamers adapted to the trade between New Orleans and Brazil are available at short notice.

The Centennial Exhibition (Woman's Pavilion) contains the following contributions from the royal family of England:—Twenty-six etchings by the Queen, also two table napkins spun by the royal hands; a banner screen embroidered by Princess Beatrice; a table cloth embroidered by the Princess Louise of Hesse and the Princess Christian, and four drawings of flowers by the Marchioness of Lorne.

The special attraction of the Exhibition of the Massachusetts Horticultural Society was the Rhododendrons. The first prize was awarded to E. S. Rand, Jr., and the third to Joseph Clark. Besides the Rhododendrons, there was a good show of other plants and flowers, the most striking of which was a very large and finely grown plant of *Azalea Decora*, covered with thousands of crimson blooms. It was brought by C. M. Atkinson, gardener to John L. Gardner. Mr. Joseph H. Woodford made a beautiful display of hardy clematis, the varieties being Miss Bateman, Sophia, Lord Londesborough, Albert Victor, John Gould Veitch, and others. James Conley showed *Hibiscus cruentus*, a fine seedling, tuberous-rooted Begonia, and a great variety of choice cut flowers.

It is said that ninety-four plans have been sent in for competition for the building of the French Universal Exhibition in 1878. Eighty of these are by architects living in Paris. They are now on exhibition at the School of Fine Arts.

Three masked men broke into the house of Samuel Abrahams, a wealthy farmer residing three miles from Nashville, Pa., placed a halter around his neck and threatened to hang him if he did not deliver his money. After cruelly torturing Mr. Abrahams and his wife by burning their feet, the miscreants fled, taking with them $65 in money and a valuable horse and buggy.

The final competition for places in the American Rifle Team was ended on Creedmore range June 14th. The team and reserve, with their total scores, are: Farwell, 864; Hyde, 860; Weber, 843; Dakin, 835; Yale, 827; Bruce, 811; Schaffer, 808; Fulton, 806; Orebaugh, 802; Anderson, 797; Jewell, 793; Washburne, 764.

Geo. D. Lord of canal notoriety has had a stay of proceedings granted until July 10.

Jacob Nunnemacher and Christian Guenther, who were convicted of conspiracy to defraud the revenue, were sentenced by Judge Dyer in Milwaukee, the former to five months imprisonment and a fine of $10,000, and the latter to three months and a fine of $1,000. They are to be imprisoned in the county jail. Nunnemacher is a very old and wealthy citizen.

The Hamilton Print Works at Lowell has suspended operations, seven of the calico printers having refused the reduction of wages.

The trustee of the A. & W. Sprague Manufacturing company of Providence, has given orders to shut down all their many mills and print works as soon as the stock can be run out on account of the depressed condition of the market.

The corner-stone of a monument to be erected in honor of Bishop Allen, the founder of the African Methodist Church, was laid on the Centennial grounds by a delegation of colored ministers. An address was made by Bishop Jabez P. Campbell of Philadelphia. The monument is a gothic structure of marble, made in Italy, and will contain a life-size marble bust of Allen by Alfred White of Cincinnati. The cost was $7,000, and the money has been raised by contributions from the colored people throughout the country.

Eduard Field, the Protestant Episcopal Bishop of Newfoundland, died on the 8th inst. in Bermuda. His age was 76.

E. P. Hingston, the English essayist and author of a life of Artemus Ward, died on the 16th in London.

Mr. B. H. Bristow has resigned his office of Secretary of the Treasuy, to take effect in June. Private affairs claim his undivided attention.

According to recent statistics, the production of silver in the whole world in 1800 was $35,000,000, which rose in 1850 to $42,500,000, in 1854 to $47,500,000 and in 1865 to about $62,500,000. The production of this precious metal during the year 1873 is subdivided as follows: England and its colonies, $10,000,000; Norway, Sweden and Denmark, $250,000; Russia, $500,000; Austria, $1,620,000; Germany, $3,000,000; France, $2,000,000; Spain, $2,000,000; Sardinia, $500,000; Mexico, $20,000,000; Central and South America, $8,000,000; Canada, $900,000; The United States, $36,500,000, which gives a total of $85,250,000. Including the year 1873, it is estimated that the total production of silver, since the discovery of the New world by Christopher Columbus, has been $715,000,000, the largest source of accession, during late years, being due to the Nevada mines.

A daughter of Gen. D. H. Hill has been married in Charlotte, N. C., to a nephew of Stonewall Jackson.

The Bessemer steamship, which was to perform such wonders on the Channel trip between Dover and Calais, and which cost the enterprising speculators exactly $1,000,000, has just been sold for $100,000, and will hereafter be employed in some more ignoble trade.

An English journal says that rolled iron sheets, .0015 of an inch thick, have lately been made at Warrington so flexible that they bend almost as easily as paper, and yet so tough as to be torn with difficulty.

The Atlantic and Great Western Railway Company announce a further reduction for the round trip to New York, $25; tickets good for 60 days.

The Queens Co. (N. Y.) Agricultural Society have met at Mineola, L. I., and decided to open a Horticultural Exhibition at the above place June 21-22. The affair will be a novelty in this line, as in addition to the presence of the "Shinnecook" and Montauk Indians, there will be a Centennial Exhibition of revolutionary relics.

Pushing further toward the Yellowstone River, the expedition against the hostile Sioux finds no traces of them. These Summer campaigns are not apt to be of great service if the Indians choose to keep out of the way, since there is plenty of grass now to feed their ponies.

A new pest, the nature of which has not yet been learned has lately been injuring the orange and lemon trees in Southern California, attacking the roots near the surface, and causing the decay of the trees. Whether the pest is an insect or a disease is not known.

The Grand Jury have returned indictments against Richard Harrington and Arthur B. Williams, each for bribery. The first named is charged with having on the 12th of October, 1873, while Assistant United States Attorney, received the sum of $15,000 to have his decision and action in a proceeding pending before him influenced in the matter of a motion for a new trial, filed by one Hope H. Slatter, and that he did ask and receive such sum therefor. The second charges that A. B. Williams did give the sum of $15,000 to Harrington as a bribe to influence his action in the case referred to above. Hope H. Slatter is indorsed as a witness. Mr. Williams appeared before Judge MacArthur and gave bail in the sum of $5,000.

FOREIGN NOTES.

THE Catholics and Protestants in Belgium have joined issue and the recent election of delegates to the Chamber of Deputies was attended with riot and bloodshed.

The French oyster plantations have proved wonderfully successful. Those at Morbihan, which in 1872 yielded only 8,928,000 oysters, last year gave 21,286,000, and have produced this season 27,214,000.

The rivers in the south of France, especially the Adour and Garoune, are rising with alarming rapidity. The damage done in the eastern cantons of Switzerland by the inundations is immense. The bridge at Frauenfield has been carried away, and twelve railway lines are interrupted.

Winslow, the Boston forger, who was released by the British authorities June 15th, has been interviewed. He looks careworn but his general health is good. He says the Governor and officers of the prison were extremely kind to him during his confinement. He arose, at seven o'clock every morning, fixed his hammock, and cleaned out his cell by eight o'clock. The remainder of the day he spent in reading and in taking exercise in the yard, the jailor attending. Some time each day was spent in receiving visits. He retired regularly at 10 P. M. His meals were supplied from an outside restaurant. He intends remaining in England. Having no funds he is entirely at the benevolence of others.

He declares that the bonds were stolen from his wife and sister by the Dutch police and were sent to Boston. He will make an effort to recover their value. He declares his innocence and considers his treatment a disgrace to America. The newspapers there published persecuting articles, and he thinks himself hunted to death to please the caprice and vanity of enemies. He had no fear of the consequences of returning to Boston. Officers Dearborn and Wood have left London When Winslow left the prison he bade an affecting farewell to Brent and Gray.

There has been a riot at Gibraltar, but no details have been received. Spanish dispatches say the trouble was begun by a German sailor of the iron-clad fleet insulting ladies on the wharf. All the German sailors were confined to their ships until the fleet sailed.

The Grand Vizier has notified the Imperial Commissioners in Bosnia and Herzegovina that the reforms already granted will be maintained in their integrity.

Advices received here from Tabreez, a large walled city in the Province of Azerbaijan, North Persia, announce that the black plague has broken out in Persian Koordistan.

The cable steamer Dacia left the Thames yesterday for South America, to lay a cable between Valparaiso, La Serena and Caldera, thus completing the submarine telegraph system of the west coast of South America.

Anthoine de Gorgorza's Darien Canal project continues to gain popularity in Bogota. He is aided by a syndicate of which the Hungarian Gen. Turr, who opened the canal between the Oder and the Danube, is the head.

Hassan, the Turkish assassin, has been hanged.

The Roumanian Government has arrested several Servians.

M. Buffet's election as Senator is regarded with disfavor by the French Ministry.

In Canada, the town of St. Johns, Quebec, was nearly destroyed by fire.

In Peru, Henry Meiggs offers to complete the Oroya Railway and make a branch to the Cerro de Pasco at his own cost, provided the governments give him all the mines he may discover. The guano contract with the Societe Generale of Paris of March 30 has been suspended, and Gen. Mariano Prado is personally treating with the bondholders in Europe. Considerable property was destroyed by fire at Cuzco on the 29th of April.

Safvet Pasha has telegraphed to the Turkish Minister at Washington that he has been appointed Minister of Foreign Affairs by his Imperial Majesty, the Sultan.

Minister Waddington continues his progressive labors by promising France free schools. This boon was needed, since 30 per cent. of the people above the age of six were in 1872 unable to read or write.

THE MARKETS.

PRODUCE AND PROVISIONS.

NEW YORK, Saturday, June 17, 1876.

RECEIPTS.—The receipts of Produce for the week were as follows:

Flour, bbls	87,375	Molasses	—
Whisky	2,227	Rice, bbls	668
Corn meal, bbls	2,243	Cut meats, pkgs	6,831
Corn meal, bags	562	Lard, pkgs	4,730
Wheat, bush	329,300	Tobacco, hhds	4,653
Corn, bush	342,040	do. cases	3,806
Oats, bush	253,700	Butter, pkgs	23,420
Rye, bush	30,000	Cheese, bxs	64,287
Malt, bush	41,310	Cotton, bales	9,313
Barley, bush		Rosin	10,497
Beans, bbls	7,168	Spts. turp., bbls	2,478
Grass seed, bush	503	Dried Fruits, pkgs	60
Beef, pkgs	2,950	Eggs, bbls	10,355
Wool, bales	2,400	Peanuts, bags	336
Hops, bales	236	Leather, sides	72,649
Pork, bbls	615	Sugar, hhds	—
Tallow	2,182	Oil cake	10,584

HINTS TO SHIPPERS.—Pack produce as firmly as its nature allows; otherwise many items suffer in appearance, if not in quality, through the jostling incident to transportation. Do not mark packages with any material that will smudge. A good paint for marking purposes can be made of bichromate of potash and extract of logwood. Nailed cards are very insecure. For long lines of goods a marking plate or brand is preferable to ordinary lettering. At the time of shipment put a complete list of the lot into one of the packages if it can be done; but be sure to mail to consignee a full list, naming date, style of packages and contents. Aim to have each parcel of uniform quality as far as possible: mixing always injures sale. Roll butter should be wrapped in clean white muslin. Dressed poultry should be packed in well shaken dry straw. When poultry sweats in boxes straw-dust gives a mean look. Break off-nail points from the inside of old barrels when they are used in order to prevent property from tearing. Short cut dry straw is better for packing eggs than anything else. Try and avoid the arrival of summer items here on Saturday.

BEANS AND PEAS.—Exports of beans past week 1,329 bbls.; since Jan. 1st, 32,015 do.; same time last year, 12,800 do. Exports of peas past week, 21,240; since Jan. 1st, 414,250 bush.; same time last year, 213,900 do.

Receipts of beans exceed all expectation and with the summer weather upon us dealers have to again report weak prices for the heavy supply of mediums and marrows. For the former $1 is not regarded extreme. Marrows have a fair demand considering the recent free exports. They also are quoted extreme. Pea Beans are dull with little attractive stock. White kidneys quiet. Some further animation in choice red has put up quotations. A many common beans suitable only for feeding purposes. Canadian peas are unchanged for bulk, no free barrels here. Green peas are a drug. California Lima Beans lower. We quote:

Beans—Prime pea, $1.15@1.20; fair to good, $1.00@1.10; prime mediums, $1.00; fair to good, 75@80c.; poor, 60@50c.; prime marrows, $1.50@1.55; fair to good, $1.25@1.40; prime white kid., $1.30@1.35; other, $1.0@1 20; prime red kidney, $1.10@1.45; other, $1 15@1.25; Limn Cal.), $2.50. Black beans, $3.50. Peas--Can. $1 15@1.20; do. in bulk and hond, 95@98c.; green, $1.00@1.20; Southern B. E., 2-bush. bag, $2.65@2,70; split, ₱ bbl., $6.

BEESWAX is coming in more freely and prices lower. Sales at 38@35c. for Western and Southern.
Exports past week none; since Jan. 1st, 38,341 lbs.; same time last year, 34,950 do.

BROOM CORN is still neglected and nominal.
We quote Brush, short green, 8½@10c.; hurl, green, 8½@10c.; green, medium, 5@6½c., red and red-tipped, 3@4c.

BUTTER.—State butter is in light supply and the near point producers have to some extent dictated the market in the matter of pails. For strictly fancy selections 30c. has been quotable several days. Half tubs and firkins are regarded high, and the new figures send many good buyers in search of fine Western. This movement has helped Western considerably this week. While a free export demand has to some degree diminished the rather large stock. A large portion of Western butter has arrived Leaked and frequently 14@15c. has been accepted for it. The following table shows the improved reversion but the market is not over strong. Quite a number of pails that were held back when the market was low are selling at easy figures.

Pails, State selected,	27@28c.; do., other 22@26c.;
creamery,	25@30c.; half firkin tubs, prime, 26@27c.;
fair to good,	22@24c.; Welsh tubs selected, 21@25c.;
Welsh tubs, prime,	21@23c.; fair to good, 20@—c.;
Pails, Western creamery, prime,	25@27c.; fair to good, 23@25c.; Western tubs, dairy, good to prime,
	19@20c.; fair to good, 13@16c.

Western factory choice, 17@18c.; do. fair to good, 14@15c.; poor, 12@13c. Grease, pure, 7@10c.
Western firkins quoted at 13@18c. for poor to fine yellow. State firkins 13@25c. for poor to fair, 24@27c. for prime. Sweet cream pails range at 23@28c.

CHEESE.—There has been a liberal supply this week of other than choice stock; the latter are scarce; the warm weather gives us a number of lots out of condition. Exporters are taking choice stock promptly at from 10¾@11c.; other grades are irregular in price. Cheese is generally showing the severity of the hot weather upon them. Exports past week, 50,952 boxes. We quote;
New at 10¾@11c. for fine factory; 10¾@10½c. for good; 9¾@9¾c. for fair; do., half skimmed, 7@8c.; do., skimmed, 3@5c. State farm dairy, fair to good, at 9½@10c.; poor lots, 7@9c.; Western factory, good to prime, 9½@10c.; fair lots, 8@8c.
Western cheese principally Ohio, and not first-class.

COTTON.—Export movement is fair but prices fluctuate sharply, closing weak. Closing sales are:—For June, 11 15-16@11 31-32c.; July, 11 31-32c.; August, 12 1-16c.; September, 12@12 1-32c.; October, 11½c.; November, 11¾@11 25-32c.; December, 11¾@11 25-32c.; January, 11¾@11 29-32c.; February, 12 1-32@12 1-16c.; March, 12 3-16@12 7-32cc.; April, 12 11-32@12¾c.; May, 12 15-32@12¾c.
Quotations for spot cotton, based on American standard of classification

Strict ordinary	9⅜	Middling	11⅛

DOMESTIC DRIED FRUITS.—Exports past week 65 bbls. apples; since Jan. 1st, 1,637 bbls.; same time last year, 9,500 do.
Apples—State, sliced, 10@10½c.; do., quarters, 9½c.; Western quarters, 9c.; Southern sliced, 10@10½c. for prime; fair lots, 9½@10.; Tennessee quarters, 8¼c. Blackberries, 10½@11c. Peeled peaches, good and prime Georgia, 13@14c.; do. fancy, 16c. Unpeeled peaches, new, 12@12½c. for halves, and 10@11c. for quarters. Plums, 16c. Raspberries, 26@27c. Cherries, new pitted, 19c.

EGGS.—The feeling in eggs has improved decidedly. Prices showing a steady advance throughout the week. Now that receipts favor steady prices, it is to be hoped that sellers will not advance rates so rapidly as to decrease use. Canadian begin to arrive more liberally. Southern are no longer quotable. New Jersey and near point eggs are scarce, being mostly used at the boarding houses.
Near points, ₱ bbl., 17½@18c.; State and Penn., 16½@11c.; Western, prime, 15c.; do. fair marks, 15½c.; Canadian, 15@16½c.; duck, 14@15c.; goose, 20@21c.

ESSENTIAL OILS.—Oil Peppermint, in glass, $3.75 ₱ lb.; in tin, $4.25. Spearmint, in glass, $3.50; in tin, $3. Wintergreen, $3. Sassafras, 55c.

FEATHERS.—The supply is light, but the demand does not call for much stock. Common poultry feathers not wanted. We quote prime live Western geese, 52@55c.; mixed, do., 35@45c.

FLOUR.—Export movement has been quite liberal, but at the close a weak feeling prevails on less satisfactory advices from abroad: quoted at $4@4.40 for poor to very choice superfine State; $5@5.10 for very common to fair extra do.; $5.15@5.25 for good extra do.; $5.30@5.50 for fancy do., and $5.55@7 for very choice extra; $4@4.40 for superfine Michigan, Indiana, Iowa, &c.; $5@5 25 for shipping extra do., the inside price for inferior, and $5.30@5.45 for choice to very fancy extra do.; good to choice white wheat extras at $5.50@7; fancy do., $7.10@7.75; winter wheat good to choice family city mill extras, $7.50@8; round-hoop Ohio at $5@5.15, and trade brands of do. at $5,20@7; St. Louis, $5.10@6.25 for common to fair extra, and $6,30@8 for good to very choice; Minnesota "straight" at $5.25@7, and patent at $6.25@9.50; unsound stock at from $3.75@5.75; No. 2 at $2.50@3.30 Southern at $5@5.25 for common to good extra, $5.30@6.15 for good to choice, $6.20@8.50 for family extra. Rye flour at $4.75@5.20. Corn meal selling at $2.75@3.15 for Western, Penn, & Jersey.

FRESH FRUITS.—The supply of strawberries has been large and of fine quality. Up-river "monarchs" have made an excellent display. Staten Island also sends some choice fruit. New Jersey mainly supplies the market for table purposes. Southern berries are in poor order and go to manufacturers. A few red raspberries are in, also some black caps. These are hardly wanted until strawberries run out. Gooseberries dull, with good qualities in market. Georgia peaches have sold at $5, half bush crates. Cherries begin to look well, and better prices are attributable to quality. Apples nominal. Peanuts quiet, but firm.
Apples, choice, $3.50@3.75 per bbl.; other, 1.50@3. Strawberries, N. J., ₱ quart, 5@10c.; Up-river and Staten Island, fancy do., 12@15c.; extra do., 25@30c; Small limited baskets, 2½c. Cherries, best, ₱ lb., 10@12.; common, do., 3@6c.; Gooseberries, ₱ bush., $1.50@2.
Peanuts—Virginia, ₱ bush., $1.40@1.65; Wilmington, $1 80@2.00; do. Tennessee, $1@$1.20.

GINSENG.—Southern, $1.50@1.60; Northern, $1.15@1.20; Seneca root, 75@80c.

GRAIN.—The closing market for wheat is less confident and prices have fallen off 3@4c. from the best point of the week. There is now no probability of war on the other side, and this has tended as much as anything else to limit business. Latest sales of wheat are reported at $1.04@1.08 for No. 3 Chicago spring, $1.08@1.10 for No. 3 Milwaukee spring, $1.05@1.25 for ungraded spring, $1.13 for No. 2 Chicago spring, $1.22 for prime dry No. 2 Milwaukee spring, with soft do. offered at $1.20, $1.18 for No 2 Northwest spring, $1.25@1.28 for soft to good No. 1 Minnesota spring $1.29@1.31 for No. 1 Milwaukee spring, so-called, $1.25 for No. 1 Sheboygan spring, $1.44 for white Western, $1.06@1.10 for No. 3 New York spring, and $1.10 for New York No. 2 spring. Rye at 84@87c. for Western, and 96½@97½c. for State Corn is quoted at 50@53½c. for damaged and heated Western mixed, 54@55c. for New York "no grade;" 58c. for New York steamer, 59c. for low mixed, 60@60½c. for graded mixed, 54@61. for ungraded mixed, 62c. for graded Western yellow, 60c. for ungraded Western yellow on track. Oats at 34@43c. for mixed Western and State, and 37@47c. for white do.

HAY AND STRAW.—The market is liberally supplied and trade is moderate, with prices without change.
Bale hay is quoted:—Shipping, 70@75c.; retail qualities, 80@95c.; clover, 60@70c.; salt, 60@65c. Straw is quoted at $1.15 for long rye; 70@85c. for short rye; 60@65c. for oat.
Exports past week, 125 bales. Since Jan. 1st, 27,515; same time last year, 21,200.

HIGHWINES—Selling at $1.12, with a little better business.

HOPS.—Export this week 573 bales; this is showing a freer business than had been expected from this source; stocks are being reduced steadily and it is anticipated they will be worked down closer this year than for a number of seasons. Prices are without change, but firmly held. The quotations are:
N. Y. State, 11@18c.; Eastern, 8@15c.; Wisconsins; 8@15c.; Yearlings, 8@10c.; Olds, all growths, 4@6c.; Californias (nominal), 15@18c., ₱ lb.

LEATHER.—Hemlock sole at 20@21c. for light; middle, 21@23c.; heavy, 21@23½c.; good damaged, 18@20c.

MILK.—The farmers' prices for May were 2¼@2½c, mainly 2½c. Milk is selling better at the commission platforms.

OIL CAKE.—Western brings $40 (currency) per ton.

POULTRY AND GAME.—Spring chickens are in demand; other dressed poultry has merely a hotel and steamer demand. Such stock is sent in summer by contract for near points, when not supplied by city killers. We quote:
Fowls, ₱ lb., 11@15c.; turkeys, 13@16c.; spring chickens, 26@30c.
Live poultry has ruled low most of the week, owing to heavy early arrivals. At the close prices are steadier.
Fowls, N. J., ₱ lb, 12@13c.; do. Western, 10@11c.; Roosters, 6@7c.; Turkeys, N. J., 12@13c.; do. Western, 10@12c.; Ducks, N. J., pair, $1@1.25; do. Western, 65@80c.; Geese, N. J., $1.75@2 50; do. Western, $1 20@1.37. Spring chickens Western, 31@23c.; do. N. J., 21@26c.
The market is almost bare of game. Pigeons arrive, but they have been coming in such poor order that buyers begin to neglect them. We quote:
Wild pigeons dressed ₱ doz., 80@90c.; do. unplcked, 60@75c.; stall fed, $1.25@1.50.

PROVISIONS.—The export movement in hog products generally is more satisfactory and the closing market is strong. Mess pork at $19.40@19 70 for job lots; $19.60 for August, $19.75 for September. Dressed hogs at 8@8½c. Bacon at 10½c. for Western long clear; Western steam lard at $11.70 for spot lots; $11.67½ for July; $11.80 for August. Stearine at 13½@13¾c. Beef hams at $22@24. Tallow at 8½@8 11-16c. Beef.—Barreled lots quoted: $10@11 for plain mess; $12 for extra mess, and $13 for packet. Tierced quoted at $20 for prime mess, and $21 for India mess. City extra India mess at $21@22.

SALT.—Quoted at $2.50 for Ashton's; Deakin's, Marshall's and Worthington at $1.25@1.40.

SEED.—Grass are not wanted in important lots; small sales at 16c. for clover, and $2.80@2.85 for timothy.

SUGAR.—Refined is quoted at 8½@9½c. for soft yellow, 9¾@10¼c. for soft white, 10¾c. for crushed and powdered, and 10¾c. for granulated.

TOBACCO.—Exporters are holding off on important lots and the business is otherwise small; prices are without change; the appearance of the crop at the West is more satisfactory and tends to quiet trade.

VEGETABLES.—Old potatoes have run out well during the last fortnight and it is not likely there will be further losses on prime stock. New potatoes are in large supply and tending in buyers' favor. Garden stuff is seasonably low. New Jersey peas had a short crop. Long Island in good supply. Asparagus dull.
Potatoes—Old Peachblows, bulk, 1.25@1.50 ₱ bbl.; Early Rose, $1@1 25; common, 50@87c.; Norfolk, new, $1.50@3; Charleston, do., $1.50@3. Bermuda, $4@4.50. Asparagus—Oyster Bay, ₱ doz., $1.50@2; N. J., 75c.@1.25. Rhubarb, ₱ 100 bunches, $1.50@2.25. Southern cabbage, ₱ bbl., $1@1.25. L. I. cauliflower, ₱ bbl., $1.50@2; do green peas, ₱ bag, 50@75c.; Charleston tomatoes, ₱ crate, $2@2 50; Florida do., 50c.@$1.25; Bermuda do., ₱ 5-qt. box, 60@75c. Bermuda onions, ₱ bush., $1@1 25. Norfolk string beans, ₱ bbl., flat, 75c.@$1.25; do. round, $1@2. Long Island beets, 100 bunches, $2.50@3.

WOOL.—The result of the large auction sale of woolen goods this week has been of a more encouraging character, leading to a freer inquiry from manufacturers. Prices are without an advance, but more steadily held. The trade are awaiting with much interest the marketing of the new Western clips. We quote XX Western fleeces at 38@42c.; XXX and picklock do., 46@48c.; X do., 38@42c.

ROCHESTER, June 17.—Flour market dull; spring, $6,75; amber winter, $7.00; white winter, $7.25; double extra, $7.50. Rye flour quiet at $5.00. Wheat lower; Milwaukee club, $1.25@1.30; amber winter, $1.20@1.25; white winter, $1.25@1.35. Oats, nominal at 35@40c. Corn quiet at 55@60c. Corn meal, $1.30@1.35. Butter, 20@22c. Cheese, 12@14c. Eggs, 13@14c. Lard, 14½@15c. Apples, bu., $1@1.75. Potatoes, bu., 25@50c. Beans, ₱ bu., 90c.@$1.10. Mess pork, $23.50. Wool, 25@40c. Hay, $12@12. Straw, $5@8. Timothy seed, $2.75@3.; clover, $9.50@9.75. Mill feed dull at $16 for shorts, $15 for shipstuffs, and $20 for middlings. Railroad Freights—Flour to Boston, 40c. ₱ bbl.; to New York, 30c.; to Albany, 25c. Wood, hard, ₱ cord, $8@9. Coal, $6.50@6.90 for stove.

COUNTRY CHEESE MARKET.

LITTLE FALLS, N. Y., June 17, 1876.

THE market has been rather dull this week and prices have declined. The proportion of full cream cheese has largely increased and by another week we are likely to be well rid of the skims at this market.
The delivery of farm dairies amounted to about 400 boxes and prices ranged at 8@10c., the lower rates being for lots more or less skimmed.
About 120 factories were represented, offering in the aggregate upward of 7,000 boxes, nearly 6,000 of which changed hands. The range of prices were 10@10½c., the bulk of sales going at 10¼c.
The quality of factory cheese offered this week was generally good; even the every day cheese which had been lightly skimmed showed meat and was of clean flavor and in some instances sold at a price equal with full creams. The lots offered were larger than heretofore.
There is nothing but grass butter now coming forward and the delivery this week has been light. Prices are a shade lower than for the previous week, the range being 22@24c. for the bulk, with fine lots fancy at 25c.
We have advices from abroad for the last week in May. Our London correspondent reports that new American cheese here sold at 50@58s. The stock of extra fine was exhausted and secondary sorts were pressed at a reduction.
The prices are for extra American, 62@64s.; fine, 56@58s.; good, 48@52s.; secondary and common, 18@44s English cheddar brings 84@90s.; Wiltshire double 68@78s.; Cheshire medium, 50@58s.; fine, 70@80s.; Scotch, 60@66s. Dutch cheese—Edams, 74@74s.; Gondas, 48@50s.
There is a brisk demand for butter, with an advance on Normandy. Dorsets brings 140s.; Corks, 125s.; Jersey, 108s.; Danish and Swedish, 100@130s. No American or Canadian butter in market. Oleomargarine sells at 70@94s. ₱ cwt.

LIVE STOCK MARKETS.

NEW YORK, June 17, 1876.

RECEIPTS OF LIVE STOCK.

	Beeves.	Cows.	Calves.	Sheep & Lambs.	Hogs.

Totals this week	10,013	77	2,631	25,790	17,536
" last week	9,026	35	4,745	21,745	22,527

BEEVES.—Trade opened very slow on last Monday and the markets closed weak, although nearly all of the herds to hand had been sold off at noon. Prices ranged at 8¾@11c. ₱ lb.; weights, 6¾@10 cwt. The quality of the herds to hand was generally rough and not fat enough to meet the demand; in consequence, prices were off a fraction ₱ lb. on the closing rates of the previous week. Wednesday trade very dull on a moderate run of generally fair quality beeves, at 8¾@10c.; weights, 6@9 cwt. Thursday, trade small at 7¾@10¼c.; weights, 6@7¾ cwt. Friday, the markets closed dull; sales at 8¾@10¼c.; weights, 5¾@8¾ cwt. By far the larger number of the herds as above quoted were sold on 5 lbs. net; one herd run down to 55 lbs. net and a few carloads of selected beeves obtained 57 lbs. to the cwt. net. Native steers sold at 7¾@9¾c.; grade, do. at 10@11c.; the cattle sold above that rate were too poor to influence trade. Oxen, 9¾c. Still-fed steers, 9@9½c.; Spanish steers, 9¾c. Bulls on live weight, 3¾@4½c.

COMPARATIVE RATES.

Quality.	This week. Cents.	Last week. Cents.
Good	12 @	12 @
Fair	11 @11¾	11 @11¾
Poor	10 @10¾	10 @10¾
Poorest	7½@ 9¾	8½@ 9¾
Gen. selling rates	9¾@10¾	9¾@10¾

MILCH COWS.—Trade slow at $10@80 ₱ head; general sales at $50@55 ₱ head—calves always included. Five cows sold at $55@60 ₱ head; 10 at $50@72; 16 at $55@75; 3 at $70@80.

VEALS AND CALVES.—Although the quality of the milk-fed calves received since our last weekly report has been better than that received for several weeks past, still none of the lots could justly be quoted as of smooth quality; those same sold at 6@7¾c., with 10 head at 7@8¾c. Buttermilk-fed calves sold at 3¾@5c.; State, 3¾@c.; Jersey, 6@8¾c.; Pennsylvania, 7@8c.

SHEEP AND LAMBS.—Trade still slow at rather reduced rates; the quality of the flocks to hand has been generally fair, with a few carloads of coarse quality sheep among them. On Monday sheep sold at 5@6¾c.; lambs, 7½@8¾c. Wednesday, sheep, 4½@5¾c.; lambs, 8@11c. Thursday, sheep 3@5¾c.; lambs, 6¾@11c. Friday, the markets closed weak; sheep, 3½@5½c.; lambs, 7@10¾c. Illinois sheep, 4¾@4¾c.; Ohio, 5@5½c.; Kentucky, 4¾@5¾c.; State, 5¾@5¾c.; Kentucky lambs, 8@8¾c.; Jersey, 8¾@11c.; Virginia, 7¾@8c.

HOGS.—On Monday last 140 head of Ohio hogs, average gross weight 207 lbs. ₱ head, sold at 6¾c. Wednesday no live on sale. Since our last weekly report, trade in city dressed has been inactive. Extreme range of prices, 7¾@8¾c. for hogs; light market pigs, 8¼@8¾c.

HORSE MARKET.—City trade slow, with a heavy supply of ordinary quality horses on hand; 19 head of poor quality light harness horses sold at $52@107 ₱ head; 22 ordinary do., $120@210 ₱ head; 17 head course quality heavy draft horses sold at $150@300 ₱ head; 3 pairs stylish carriage horses, $900@1,200 ₱ pair; 7 pairs family do., $300@350 ₱ pair. Forty-five horses arrived per Erie Railway, via Oak Cliff Station.

THE COATES LOCK LEVER HAY RAKE.

E. SEARS

Manufactured of the best wood and iron, and put up in the stanchest manner. Shafts and rake head extra strung; thimble skein axles; wheels high, well built and finished; seats easy and thoroughly braced. The teeth made of **Refined Cast Steel, Tempered in Oil**, and every one tested at the factory. They readily adjust themselves to uneven surfaces. **Every Tooth is warranted.** The springs double coil, made with the body of the tooth, much stronger and better than the small separate wire coils so often used in inferior rakes. The Lock Lever has an ingeniously-contrived patented joint, which holds the rake rigid and firmly to its work, while down, WITHOUT USING THE HANDS OR FEET.

Discharging the Rake is effected by simply giving the slightest upward motion to the handle of the lever, which, unlocking it, causes the **Driver's weight** to lift the Rake and discharge the contents. A child can operate the Rake with ease. *It is easily regulated for any kind of ground.*

Twenty Acres per Day is a fair day's work with the **"Coates,"** and you can save enough grain from twenty-five acres of stubble to PAY FOR THE RAKE. Send for illustrated Circular to the Manufacturers,

PERSONAL ITEMS.

OLE BULL will give concerts in Paris next winter.

HON. GEORGE BANCROFT, ex-Minister to Berlin, is at Newport.

ONE hundred years ago we were fighting for liberty. Now we are fighting for bread and butter.

BESIDES the California pears on exhibition at the Centennial, there are a great many bridal pairs.

AN American girl, Julia Sinclair, has just taken her degree as doctor of medicine at the University of Zurich.

HENRI ROCHEFORT is said to be seriously ill at Geneva from dropsy complicated with hypertrophy of the heart.

AN Indiana man has planted six acres of watermelons. He has also planted a large crop of bulldogs and man-traps.

MR. GEORGE SMITH, the Assyrian excavator, is expected home very shortly from his third expedition to Mesopotamia.

MR. MOTLEY is spending a few weeks in England at the country residence of his son-in-law, Brinsley Sheridan, in Devonshire.

THE price of Circassians is lower now than at any time since the Crimean War. The fall of the Sultan has broken the market.

THE Abdul Aziz of the Western continent is not dead yet. Some may think that reference is made to Brigham Young. If they do, all right.

IF you feel sick and debilitated from office confinement, remember that out in the country they are paying $1.25 an acre for mowing grass.

MR. PIERREPONT, our new Minister to England, sails this week. He will retain Messrs. Hoffman and Cheseborough as the Secretaries of Legation.

THE death is announced of Gustav Ekmann, the well-known Swedish Iron-master, who has done much for the development of the iron industry in Sweden.

LEGISLATING is a game in which one faction tries to kill all of the bills proposed by the other side. The people pay for the game and have no fun in the playing.

EDW'D EVERETT PARKER, a graduate of Harvard, is preparing for the stage at the Boston School of Oratory. His Romeo is said to be a remarkable piece of acting.

THE sketches taken of the Prince of Wale's tour in India for The London Graphic have been sent to the Centennial Exhibition by the proprietors of that journal.

THE State of matrimony has no especial department at the Centennial, but its general display of exhibits is, in some instances, remarkably fresh and interesting.

THE woman who runs the steam engine in the pavilion at the Centennial Exposition says that the work requires far less attention than to take care of a child all day.

THE Khedive of Egypt has devoted the thirteen thousand pounds sterling, contributed to erect a monument to him, to the erection of a great public school in Alexandria, open to all nationalities.

RUTHERFORD B. HAYES is the senior in years of the seven principal presidential candidates, being fifty-four. Bristow is the youngest, forty-four. Blaine is forty-six, Conkling forty-seven, Morton fifty-three.

No man can loaf around a Police Court six months and see what fun it is to fine a man $25 and get $5 of it as fees, without feeling convinced that duty to humanity calls upon him to become a Justice himself.

BROOKLYN ARGUS: The Duke of Edinburgh is off yachting in the Mediterranean, and the Duchess has gone back to her papa at St. Petersburgh. The way these two young hearts beat as one is something that Heaven cannot contemplate without a sigh.

QUEEN VICTORIA'S new title of Empress has been improved upon in Jamaica. A recent proclamation issued there commences thus: "Victoria, by the Grace of God of the United Kingdom of Great Britain and Ireland Queen, Defender of the Faith and of Jamaica Supreme Lady."

JOHN MALCOLM LUDLOW, in an English book, declares that the Declaration of Independence has been a source of infinite mischief, and that the passionate declamatory rhetoric of that document has left a stain to this hour on most of the political oratory and writing of the United States.

MRS. CRAIK, the author of "John Halifax, Gentleman," is erecting a drinking fountain under a railway arch near her residence in Kent, England, and in addition there will be a constant supply of penny loaves and a money box, under the supposition that those who partake of the bread will pay for it.

"MR. MOODY was never known," says an exchange, "to give way for even a moment to anger or impatience." Then it's probable he never had occasion to take a short cut across the fields on a warm morning to catch a railroad train, and find when he got to the further end that the frugal farmer had put up a high board fence and stationed a blear-eyed bull-dog there as sole occupant.

ONE of the Indian Princes who came to Calcutta to meet the Prince of Wales died the other day from hard drink. This was the young Maharajah or Puttiala. When he was ten years old he succeeded to an income of $2,500,000 a year, and he died at the age of twenty-four, worn out by dissipation. His two great passions were buying jewels and getting drunk. His son and successor is a lad five years old.

AN INDUCEMENT!

A Good Way to Secure a Practical and Scientific Library.

WE have made a selection from our Publications of the following Standard Works, which we offer to subscribers in conjunction with the RURAL NEW-YORKER, at the extremely low rates below. These works are by men who have a national reputation in their various specialties, and we feel sure that we are conferring a double service when we offer the best Agricultural and Family Journal, *and* a Valuable Book, at little more than the cost of either alone.

We will send one year (postage prepaid on both) the

Rural N.-Y. and Willard's Dairy Husbandry, for		$5 00
"	Randall's Practical Shepherd...	4 00
"	Allen's American Cattle.....	4 00
"	People's Practical Poultry Book	3 50
"	Quinn's Money in the Garden...	3 50
"	Willard's Practical Butter Book	3 00

MONEY IN THE GARDEN.

A Vegetable Manual, Prepared with a view to Economy and Profit.

THIS Work upon Kitchen and Market Gardening and the Field Culture of Root Crops, is by P. T. QUINN, Practical Horticulturist, (Author of "Pear Culture for Profit,") and should be owned and studied by every one interested in Gardening. It is an able, practical, profusely illustrated work of 268 12mo. pages. Sent, post-paid, for $1,50. Address
RURAL PUBLISHING CO.

ADDRESS
RURAL NEW-YORKER,
78 Duane St., New York City.

MOORE'S RURAL NEW-YORKER became a household word and power in the land long before we quit "going to school," and, perhaps, needs no comment from us; still "its memory is ever fresh and green," and is renewed by its appearance every week, brimful of *good things* as ever. We are glad to announce that our predictions in the January number are being more than fulfilled. We have sent it more than *five hundred* names, and we learn that subscriptions have been pouring in in like proportions from all parts of the country, despite the hard times. Long may it continue to be what it is—a power for good in the land.—*Agent's Friend.*

Paints, &c.

ESTABLISHED 1837.

ECKSTEIN, HILLS & Co., CINCINNATI. PURE TRADE MARK WHITE LEAD.

We offer the above brand of White Lead to the public with the positive assurance that it is

PERFECTLY PURE.

For sale by dealers generally.

RANDALL'S
Practical Shepherd
A COMPLETE TREATISE
ON THE BREEDING, MANAGEMENT AND DISEASES OF SHEEP.

THIS Work, by the Hon. HENRY S. RANDALL, LL. D., (author of "Sheep Husbandry in the South," "Fine Wool Sheep Husbandry," &c.,) is the Standard Authority on the Subject. It is the most complete and reliable Treatise on American Sheep Husbandry ever published, and (as the New England Farmer says) "should be in the hand and head of every person owning sheep."

The PRACTICAL SHEPHERD contains 453 pages, and is illustrated, printed and bound in superior style. Twenty-seventh Edition now ready. Sent by mail post-paid, on receipt of price—$2. Address
RURAL PUBLISHING CO.,
78 Duane St., New York.

ALLEN'S
AMERICAN CATTLE.
THEIR HISTORY, BREEDING AND MANAGEMENT.

78 Duane St., New York.

ANSWERS TO CORRESPONDENTS.

Subscriber.—Of all the methods tried to rid our grounds of moles, a trap to catch them has proved the most effectual. But should you want to know where a good trap can be had, we would be unable to answer the question. A few years since a gentleman in South Jersey invented and manufactured a mole trap which was death to the mole that dared to pass under it; but he received so little encouragement in the way of sale that the manufacture of this useful implement was abandoned. One of these traps, in use for a number of years in our grounds, has been worth to us many times what we paid for it, and it is to be hoped that its manufacture will be revived.

L. R. M.—Your cow is affected with what is termed "Garget," and had you taken the cow in hand when discovered, it would have been easy to effect a cure; but it may now be too late to prevent injury. Bathe the udder in cold water previous to milking, to reduce fever, and then milk clean if possible. A teaspoonful of saltpeter once a week may also be given with benefit....We do not know of any better way of preventing your colt from pushing down fences than to watch him, and every time he is caught in the act punish him severely. Follow up this treatment for a week and it will probably break him of the trick.

J. D.—For pasture grasses in your locality (Ohio) and on hilly land sow several species mixed, in order to have some early and some late; besides, until after a trial, there is no telling which will succeed best. Try a mixture of Kentucky Blue Grass (*Poa pratensis*), Meadow Fescue (*Festuca pratensis*), and Red-Top (*Agrostis vulgaris*). Sow the seed early in September, after plowing and thoroughly pulverizing the surface with a fine-tooth harrow and roller. ....Girdle your black locust trees immediately and let them stand until fall; then cut down, and very few sprouts, if any, will appear from the roots. If the girdling had been done a month earlier, it would have been still better.

Delphos.—It is certainly better to keep the manure from the stables under cover than exposed to the weather, still we do not approve of keeping it under the barn or stable in a cellar, even if this arrangement is more convenient. The manure pit should be outside of the barn and not under it, as the air in stables is none too pure at best for the health of stock, without the addition of the fumes of a deposit of filth beneath....We do not know who has the kind of stock you name for sale, but a short advertisement inserted in the RURAL would probably bring the desired information.

D. R.—We can furnish a recipe for curing gapes in chickens for much less than your price, $100, and have many times done so through the columns of the RURAL NEW-YORKER. If a discovery has really been made, as claimed, you should be both willing and anxious to make it known to help liquidate your indebtedness for the hundreds of other valuable discoveries made by others and which they have given free to the public for the good of all, yourself among the number.

Inquirer—The last census returns show that over six millions of our population are engaged in agricultural pursuits, or we may say that there are six millions of farmers in the United States and Territories.

M. W. F., Bryn Mawr.—"How shall I propagate the *Coleus*, having no greenhouse?" The simplest way is to use large flower-pots. Place a flower-pot saucer of a size large enough to fit the middle of the pot, rim down. Fill with pure sand and insert the cuttings an inch or two deep. Keep the sand moist and somewhat shaded. This is a tidy, an effectual method, but any shallow box may be made to answer as well by boring holes in the bottom and covering them with a crock so as to hold the sand and yet let the water pass off. Leave one leaf to each cutting and insert them two inches apart. They strike very readily.

Rural Reader.—1. Will the *Nelumbium luteum* grow from seed? Yes. 2. How long before they will bloom? Three years. 3. When is the best time to sow seeds? As soon as you can procure them. 4. How deep should the water be in which the seeds are sown? The extremes are one and six feet. 5. Should the plants be in deeper water when older? No. 6. Can the roots be removed with any certainty of growing? Yes. 7. What do the roots look like; are they fine fibrous roots? The roots proper are fibrous, but they proceed from root-stocks or rhizomas. 8. Will the plant bloom more than once from the same root? Yes, from new buds. 9. What season of the year would be best to secure roots for planting? Fall. 10. Where can they be found, or who has them to sell? Near Philadelphia—in various sections of New Jersey—Big Sodus Bay, Lake Ontario—Connecticut River—waters of the Western and Southern States. B. K. BLISS and PETER HENDERSON offer seeds. 11. Some persons tell me it cannot be grown in a latitude north of 40°. Please give your opinion in the RURAL, will you not? Sodus Bay is north of 43°.

Traveler's Guide.

JOHN CRUMP, - - Proprietor,
Chestnut St., cor, 15th,
PHILADELPHIA.

CALIFORNIA.

Have you any thought of going to California?
Are you going West, North or Northwest?
You want to know the best routes to take?

The shortest, safest, quickest and most comfortable routes are those owned by the Chicago and North-Western Railway Company. It owns over two thousand miles of the best road there is in the country. Ask any ticket agent to show you its maps and time cards. All ticket agents can sell you through tickets by this route. Buy your tickets via the CHICAGO & NORTH-WESTERN RAILWAY for San Francisco, Sacramento, Ogden, Salt Lake City, Cheyenne, Denver, Omaha, Lincoln, Council Bluffs, Yankton, Sioux City, Dubuque, Winona, St. Paul, Duluth, Marquette, Green Bay, Oskosh, Madison, Milwaukee, and all points west or northwest of Chicago. If you wish the best traveling accommodations, you will buy your tickets by this route, and will take no other.

This popular route is unsurpassed for Speed, Comfort and Safety. The Smooth, Well-Ballasted and Perfect Track of Steel Rails, Westinghouse Air Brakes, Miller's Safety Platform and Couplers, the celebrated Pullman Palace Sleeping Cars, the Perfect Telegraph System of Moving Trains, the regularity with which they run, the admirable arrangement for running Through Cars from Chicago to all points West, North and Northwest, secures to passengers all the COMFORTS IN MODERN RAILWAY TRAVELING. *Pullman Palace Cars* are run on all trains of this road.

This is the ONLY LINE running these cars between Chicago and St. Paul or Chicago and Milwaukee. At Omaha our sleepers connect with the Overland Sleepers on the Union Pacific Railroad for all points west of the Missouri River.

For rates or information not attainable from your home ticket agents, apply to

MARVIN HUGHITT, Gen'l Superintendent. W. H. STENNETT, Gen'l Passen'r Agt.

WILLARD'S
Practical Dairy Husbandry.

A Complete Treatise on Dairy Farms and Farming, Dairy Stock and Stock Feeding, Milk, its Management and Manufacture into Butter and Cheese, History and Mode of Organization of Butter and Cheese Factories, Dairy Utensils, Etc., Etc.

BY X. A. WILLARD, A. M.,
Dairy Husbandry Editor of Moore's Rural New-Yorker, Lecturer in Cornell University, Maine Agricultural College, Etc., Etc.

THIS is the most full, practical and reliable work on Dairy Husbandry extant; indeed the only one which describes the recent great improvements in the Dairy Business. It is highly commended by leading Agricultural and other influential journals, and must speedily become (in fact is already) the *Standard and Only Authority*. It will pay every one engaged in any branch of dairy business, or who keeps a single cow, to obtain and study this work.

RURAL PUBLISHING CO.,
78 Duane St., New York.

Sewing Machines.

"GENERAL FAVORITE"
No. 2,
Recently perfected and offered to the trade by the
WEED SEWING MACHINE COMPANY,
Possess many advantages, both in construction and capacity, over machines now in use by
MANUFACTURERS.

The Machines made by this Company have always been noted for simplicity, a merit which has been preserved in this new style and combined with great strength, especial care having been taken to provide against the wear and tear of use in Factories running by

STEAM POWER.

Actual WORK is the only test of a sewing machine. The Weed Co., desirous of thorough investigation, are prepared to place these machines on trial, feeling confident that practical work will convince intending purchasers of their merit. Manufacturers will please examine if our claims are not correctly made on the following points:

CONVENIENCE.

The large space under the arm. From needle to foot of arm, 9 inches; from needle to bend of arm, 11 inches; from bed to bottom of arm, 5 inches. Easily oiled, threaded and cleaned.

SIMPLICITY.

No cams or cogs are used, a continuous circular motion, preventing vibration, and rendering a high rate of speed possible, while noise is reduced to the minimum, and for foot power the ease of working is increased to a wonderful degree.

DURABILITY.

The wearing parts are forged and hardened. Lost motion can be taken up with a screw-driver, thus saving cost of new parts, and time consumed in fitting them. The shuttle being carried, instead of driven, wears much longer, and skipping of stitches is avoided. The needle socket is hardened and so constructed that a needle, when broken in the bar, can be readily removed. Address

WEED SEWING MACHINE COMPANY,
HARTFORD, CONN.

Wit and Humor.

SPARKS AND SPLINTERS.

"Will you accept a *cher ami?*" said an infatuated swain to the object of his affection. "A share of you?" replied the young lady, looking downward amid her blushes, "No. I must have you all, or none."

She was a young lady from New York, and he asked her if she would partake of an ice-cream, and she gently answered, "If it's good, square, confectioner's cream, I'm there, but if it's a church-fair or strawberry-festival slush, count me out."

A French gentleman who supposed he had mastered the English language was sadly puzzled one day, when a friend looked at him and said:—"How do you do?" "Do vat?" "I mean, how do you find yourself?" "Saire, I never loses myself." "But how do you feel?" "Smooth, you just feel me."

A lady attended a celebrated New York surgeon who lives near a rink, and has many cases of sprained wrists. The lady's visit was about her sprained wrist. "I suppose a case of rink?" said the surgeon, blandly smiling. The lady did not catch the word or its meaning and indignantly exclaimed, "No, sir, I do not drink!"

Oh! could I stand where Adam stood,
And with the tempter grapple,
Not Satan's wiles nor woman's smiles
Could make me bite that apple.

A recent Transatlantic advertisement contains the following startling information:—"If the gentleman who keeps the shoe store with a red head will return the umbrella of a young lady with whalebone ribs and an ivory handle to the slate-roofed grocer's store, he will hear of something to his advantage, as the same is the gift of a deceased mother now no more with the name engraved upon it."

A gentleman of color, lately arrived in Nevada, who had been scanning with evident curiosty a Digger squaw and her papoose, the latter being a bright little half-breed with unmistakable indications of negro blood, exclaimed, "'Clair to goodness, if dar ain't one of dem! Heard of 'em all my life, but never seed one till dis minute, and it's only a little one—one of dem Improved Red Men? Never knew what dey meant before."

A man came to the late Duke of Wellington with a patented article. "What have you to offer?" "A bullet-proof jacket, your grace." "Put it on." The inventor obeyed. The duke rang a bell. An aide-de-camp presented himself. "Tell the captain of the guard to order one of his men to load with ball cartridge!" The inventor disappeared and was never seen again near the Horse Guards. No money was wasted on that invention.

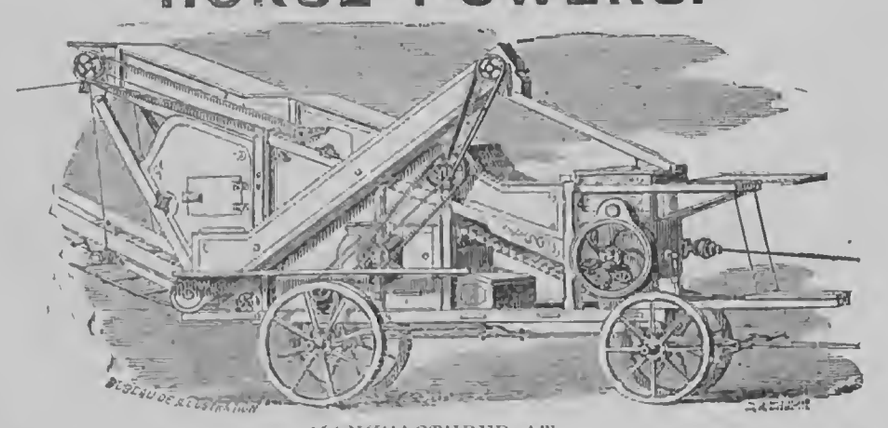
The Buffalo Pitts Threshers
AND
HORSE POWERS.



MANUFACTURED AT
The Pitts Agricultural Works, Buffalo, N. Y.,
Have been known throughout the United States for over thirty years as the
MOST PERFECT AND LIGHTEST-RUNNING THRESHERS
in the world.
FOR THE HARVEST OF 1876
I am offering a large assortment of these Celebrated and Popular Machines, adapted to either Steam, Water or Horse Power.
They combine all the latest improvements which are to be found in other threshers, and some which are found in the Buffalo Pitts alone.
They are built under the direct supervision of Practical Threshermen (who have followed threshing as a business), and all changes made are the suggestions of experience in the field, and are thoroughly tested there before adoption.
Threshers will appreciate the great advantage of this over
Theoretical Threshing Machine Building.
The greatest care is given to using the very *best material* and to having the work done in the *most thorough* manner.
My facilities for purchasing materials at lowest figures and for economical building are surpassed by none and the machines are offered at the lowest prices at which
The Best Material, put up in the Best Manner, can be Afforded.
In comparing prices Threshers will please note differences in material, workmanship and finish and bear in mind that
The Best is the Cheapest in the end, even though the first cost is greater.
Various sizes are made:—24-in., 28-in., 32-in., and 36-in. Cylinder Threshers and 4-horse, 8-horse, 10-horse and 12-Horse Powers.
Repairs are for sale in almost every county in the wheat-growing country, *at my list price.* For Catalogues, Prices, &c., &c., address

Consumers Importing Tea Co.,
No. 8 Church Street.
P. O. Box 5,509. New York City.
This is a combination of capitalists to supply the consumers of Teas throughout the United States on the mutual principle.
We have experienced agents in all the best districts of China and Japan to select Teas especially for our trade.
We expect every consumer of Teas to render us all the assistance they can in carrying out our enterprise, as we make a specialty of SUPPLYING CONSUMERS ONLY (and allow no middlemen to make any profit on our importations), which will enable us to supply them with Teas at prices lower than have ever been known, and of those fine qualities that seldom reach the interior, being sold only to the large cities and among the very wealthy.
Hoping the consumer will take an interest in our enterprise, and send at once for a circular with full explanations of how to proceed to obtain our goods, we remain,
Most respectfully yours,
Consumers Importing Tea Co.,

The Centennial.

CENTENNIAL CORRESPONDENCE.

ATLAS HOTEL,
PHILADELPHIA, June 24, 1876.

SWEDEN AND HER DISPLAY.

THE Scandinavians make a very praiseworthy exhibit at the Centennial. The subject of the present letter—Sweden—in addition to the space occupied in the Main Building, has also considerable space in Machinery Hall, and one of the most attractive features of the grounds is the model Swedish School House. Before criticising her display a few facts concerning the Scandinavian peninsular will help to a better appreciation of the habits and industries of the people.

Norway and Sweden, although separate kingdoms, are governed by one ruler; and as Sweden contains about 52 per cent. of all the territory, it is but natural that a Swedish king should wield the scepter over both people. The government is divided into Lans, which are again subdivided into provinces.

The total population in 1874 was 4,341,559, the major portion of whom are engaged in agricultural pursuits, for which the country is well adapted, notwithstanding its extreme northern boundary projects into the Arctic Zone and its southern extremity is in the latitude of Greenland. The area is stated at 171,749 English miles. Eight per cent. of the land is 2,000 feet above the sea level, with gradations down to 200 feet above the level of the sea, and at this elevation agriculture is flourishing. Owing to the vast system of inland lakes and rivers, the land is splendidly irrigated, which accounts for its great fertility and, in conjunction with the influence of the Gulf Stream, makes the climate mild and salubrious. The streams are not, as a rule, navigable, being interrupted in their progress by a series of water-falls, which the people have turned to account in the manufacturing processes. It is rare to find any manufacturing industry prosecuted by means of steam power. This fact, in conjunction with the low price of labor (artisans receiving but $1.50 per day and unskilled labor about 50 cents), enables them to manufacture at prices that almost defy competition.

The farmer's worst enemy in Sweden is the frost, which in a single clear night, perhaps after a warm summer day, will destroy his brightest prospects; but it is hoped that the increase of tillage, the draining of the bogs, and like causes, will at least mitigate its severity, if not altogether prevent it. Such severe frosts are very rare in the central and southern parts of Sweden.

Mining is one of the most important departments of Swedish industry, and the working of the iron mines in particular is making constant progress by the introduction of new machinery. There were raised, in the year 1873, 19,458,339 cwt. of iron ore from the mines, besides 126,147 cwt. from lake and bog. The pig iron produced amounted to 7,987,646 cwt., the cast goods to 501,350 cwt., the bar iron to 4,125,915 cwt., and the steel to 1,290,907 cwt. There were also raised, in the same year, 1660 lbs. of silver, 26,152 cwt. of copper, and 645,631 cwt. of zinc ore. There are large veins of coal in various parts of Sweden, but no systematic working of them has as yet taken place.

The principal articles of cultivation are, in addition to the various cereals, potatoes, hemp, flax, tobacco and hops, which are generally grown in sufficient quantities for home consumption. The forests are of great extent, covering nearly one-fourth of the whole surface, and, in some spots, rising to an elevation of 3,000 feet above the level of the sea. The birch, fir, pine, and beech are of great importance, not only for the timber, tar and pitch which they yield, but also for supplying charcoal and firewood. The common fruit trees, as cherries, apples and pears, grow as far north as 60°, but the fruit seldom comes to great perfection except in the southern provinces; cranberries and other berries abound in all parts of the country.

In 1870, there were in Sweden, 418,446 horses, 1,965,800 horned cattle, 1,780,000 sheep and goats, and 351,303 swine.

In 1873, there were 2,549 factories, with a production valued at 146,869,000 crowns. Mines and mining establishments are not included in these figures. Shipbuilding forms an extensive branch of industry. The foregoing will give a somewhat accurate idea of the Swedes.

It is not too much to say that what they are and what they may eventually become, is due, in great measure, to the admirable system of education. Public instruction is gratuitous and compulsory and children not attending schools under the supervision of the government, must furnish proofs of having been privately educated. In the year 1871 nearly 97 per cent. of all the children between eight and fifteen years attended the public schools. The scheme of education is amply illustrated in the model school mentioned above, which is situated north of the Main Building and adjoining the Japanese Bazaar. Object teaching, familiarly known as the Kindergarten system, forms the basis of instruction, and such is the thorough and able manner in which it is managed, it would, indeed, be strange if the youth of the country were not perfectly grounded in the principles of education.

I would especially call the attention of the visitor to the way in which geography and the

"THE CLOCK MAKER."

A GROUP IN THE SWEDISH DEPARTMENT, IN MAIN BUILDING, CENTENNIAL.

use of the globes is taught. In the Main building a large space is given to specimens of pupils work in drawing from life, cast, &c. I was assured that these examples were taken hap-hazard with no special reference to the best of its kind. I can well believe this after an examination of the artistic pottery displayed in another part of the transept, which is entirely the work of native artists. In this collection there are vases of a beauty of form and color, so subtile and delicate that they may well have attracted the attention of the Pa. Industrial School and Museum, whose directors have purchased many examples. A couple of vases of china, of a beautiful blue, and delicately ornamented with vines and leaves in white in relief, are the gems of the collection.

While on the subject of ceramics I desire to allude to the fantastic stoves or ovens that are constructed of tiles, with polished brass doors. They stand 8 and 10 feet high, and are ornamented most elaborately in colors. Candellabra of great size, made of china are also to be seen. The finest example being a pair with 8 branches standing about 7 feet high. The bases are supported by griffins and the colors, cream and blue, are most beautifully laid on. These were purchased by Mrs. WM. ASTOR of New York for $420. They were made at the Rorstrand factory which has been in successful operation since 1726.

The geological exhibit is perfect. Large colored maps are suspended from the walls, and directly beneath them are cabinets containing specimens corresponding to the markings on the maps. One can take in at a glance the surface and sub-surface formation of the land, and turning to trophies that flank the display, in the shape of columns composed, each, of 33 blocks, observe the various marbles, granites, conglomerates and porphryry with which the country abounds. Noticeable among these are the various hued marbles and a section of *black* limestone, something unusual, I believe. The finest specimens are from Dalsland. In the alluvial deposits is found lake and bog iron ore, in quantities sufficient to pay, and being exceptionally free from sulphur, it may be seen that a very fine product is the result.

A table made of porphyry, serpentine and marble, with a center of conglomerate, is a beautiful work of art which may be secured by the pickorup of unconsidered trifles for $7,500, not including the duty.

Among the curiosities are a meerschaum pipe, carved and jeweled, which was presented to EMANUEL SWEDENBORG by his English followers; a chair made of oak taken from the sunken warship "Applet," which foundered in 1676. It is 200 years old and almost as heavy as the same bulk of iron. This chair is carved uniquely with signs of the Zodiac and is, or rather was, surmounted by two ravens. A lady admirer of POE happened along and thinking, perhaps, that a Swedish raven would do as well as any other ornithological specimen to illustrate her favorite poet, gracefully detached the unresisting bird from its perch and moved on, omitting as superfluous, any little inquiries customary under such circumstances. Fearing that more admirers of the poet might be in the vicinity, the Commissioners took the precaution to remove the remaining bird to safer quarters.

Much the same fate might befall a set of chessmen were they not secured under glass. These are the first chessmen I have ever seen that embody the idea of a great religious movement. The artist has carved one side, the white men, we will say, to represent the party of which King William and Bismark are the heads, and the subordinate men are the army and others in the protestant interest, and the Pope, cardinals, priests and friars, fight on the ultramontane side. The various expressions depicted on the faces of the latter worthies could have alone been due to a stroke of inspiration. The set is an epitome of the prevailing European sentiment on this much-vexed subject—price, $302.

A feature of no special attractiveness, except perhaps to matchmakers, (male and female) is the great quantity of Incifers. Sweden is a match-making country, and a great point to be considered is that they are safety-matches. Whether the prevalence of this industry has any effect on the moral perceptions of her people, I am, of course, unable to determine, but I am assured that marriages are prosperous, and divorce a rare exception.

The subject of our illustration is one of a group of five which are placed at various salient points in the nave, and are interesting from the fact that they are life-size and realistic representations of the people and manners of the country. Their realism is such that many are at first quite puzzled to decide if they are animate or inanimate. The groups are the work of Mr. SODERMAN, artist, and member of the Stockholm Academy of Arts. The casts are from life, modeled in gypsum, painted and embellished, with an art so consummate that, as above stated, they are the wonder of beholders.

The two figures are husband and wife, natives of the Province of Mora, which is situated in the central part of the kingdom, about 70 miles from Stockholm. Clock making is a leading industry of that section. The figures are dressed in the national costume, the man's coat being composed of sheep-skin, the wool being worn next the body. Shoes are very coarse and the ribbed woolen stockings are fastened just below the knee, with very pictorial garters. The cap and neckerchief of the woman are decorated in colors, and beads of uncouth size are the finishing touch to the daily toilet. On a side aisle is a group from the Province of Dalecarlie. The grandfather, son and wife are mourning the loss of an infant which lies in the stillness of death in a cradle over which the distracted mother is bending. The pose and expression are so true to life that many gazers are visibly affected. The remaining groups are from Leeksand, Skane and Lapland. We have a representation of the old, original Laplander, reindeer, dog, sledge, and any quantity of snow, just as we have fondly imagined the old fellow. Space forbids a further description of the groups; but those visiting the Centennial will miss a most curious and interesting sight who fail to examine the gypsum figures.

As might have been expected, the display of furs is fine and to enumerate the various kinds

would be little less than naming all that are known to commerce. P. N. BERGSTROM, Stockholm, promises to enrich his already varied exhibit by additions that are yet to be taken from the cases. Ladies bent on economy may buy a very nice sable muff for a mere trifle—say $400.

Probably one reason why the furs look so fresh and bright is because the Swedes do not lack paper in which to envelop them and keep out moths. The samples of paper, from the coarsest kinds to artistic wall paper, are entirely too numerous to mention. The book work is done neatly, and the chromo lithography attests their excellence in the making of pictures. A book of fables greatly interested me, especially the illustration of the text, where an alligator was swallowing a bull, and although one would suppose he had his mouth full, he yet is made to remark jocularly, "*Lejonet hade rant in hela sitt hufvud i odjurets svalg*," which possibly refers to the "swallow" when it homeward flies.

I must pass with a mere mention of the domestics, linens and cloths. They are very good of their kind.

Sweden is famed for its iron, which material is amply displayed in various forms. A curiosity is the turning from a soft-steel axle, which extend without break in a continuous line for upwards of a mile. It is wound about a pillar that is decorated with other specimens of iron ware. It must be the Paradise of boys, as jack-knives are sold for six cents each. The arms and accoutrements are under the supervision of Capt. WM. BERGMAN of the Royal Artillery, who was at great pains to explain all of interest in this department.

The Swedish Government has adopted the Remington rifle, and at present have three factories at work turning out firearms. So far as I could see, these samples were in no respect inferior to the work done at Ilion, N. Y.

A cannon on the principle of the Gatling gun, is said to be superior to that famous implement, and the English government has about concluded to adopt the gun of the Swedish inventor in place of the Gatling. I find it will be impracticable to note the jewelry display, carvings, or the machinery in Machinery Hall. Enough has been said, however, to convince anyone that a day in Sweden will not be a day spent in vain, and it is no small advantage to be assisted in your investigations by two gentlemen so courteous and patient under a constant fire of questions as Mr. WM. BERGMAN, Commissioner for the Army Department, and Mr. W. HOFFSTEDT, Mechanical Engineer and a member of the International Jury, to whom I am largely obliged for the above information. YOUNG RURAL.

PHILADELPHIA, June 22.

THE attendance at the Centennial grows daily and it becomes a matter of curious interest to determine to what extent, if any, the fertilizers are mixed up in the phenomenon. We all know that superphosphates have a marked influence on corn, but have they any effect on those who keep the crop covered with leather? Crossing the grounds from the Woman's Pavilion to Agricultural Hall, the visitor involuntarily stops to admire the beautiful display of the Pacific Guano Co. of Boston. The Company has been to considerable expense in erecting a gorgeous kiosk, which is painted fantastically and ornamented with numerous hanging baskets. In the immediate vicinity are a series of plantations containing growing crops, which owe their stimulus to soluble guano.

Seeing this exhibit naturally brings the subject of fertilizers uppermost in one's mind, and as it is but a short distance to Agricultural Hall, it is well worth shaping your course to that part of the building containing the fertilizer display.

Here is our old friend, L. L. CROCKER, proprietor of the Buffalo Fertilizer Works, Buffalo, N. Y., who makes a handsome display. This house has built and maintained its reputation by its scrupulously honest dealings, it being their pride to make an honest fertilizer *only*. Plant food put up in 5-lb. packages and especially adapted to the greenhouse, house plants and flower beds, is a specialty. Mr. LEE explains everything in a way that makes it clear to all.

The Bradley Fertilizer Co., BAUGH BROS., WHALTON, WHANN & Co. and many more, make meritorious exhibits.

If, however, you want to have a scientific talk on guano, and leave the hall with the impression that it is *the* greatest product in existence, just stop and have a chat with Mr. CHAS. V. MAPES, who, when at home, fastens his door-plate at No. 160 Front St., N. Y. In addition to his own fine display, he has charge of the Peruvian Government's exhibit, intrusted to him by HOBSON, HURTADO & Co., their agents in this country. It is important for farmers to know all about the new Rectified Peruvian Guano—that is to say, mixtures of acid and pure guano are made, in which the relative proportions of nitrogen, phosphoric acid and potassa vary, in order to meet the requirements of different crops, and are sold on a new system, the retail price being fixed according to the analysis. Thus, if you want nitrogen or ammonia, or potassa, etc., you pay for your fertilizers according as that quality predominates, the price being governed by market quotations of these substances.

LISTER BROS., Newark, N. J., have a case filled with fine bone phosphates, and it is only necessary to go through the department to be convinced that you feel the influence of guano and are growing visibly——hungry. When a man feels in this way, it is as natural as life to go to the Atlas Hotel and consult Mr. BEILEY'S bill of fare, and on viewing the interminable passage that leads to the office, he will surely believe that guano has had something to do with the growth of this mammoth hotel. Don't go away with the idea, but step to the office and interview Mr. U. S. NEWCOMBER, formerly of the "Bingham," who will put you so perfectly at your ease that, instinctively, you will greet the other gentlemen, Messrs. R. CLARK and THOS. F. CLARK, as old friends; and just here let me say that confidence could not be better placed. A hotel with such clerks is fortunate indeed! Y. R.

FRUITS AT THE CENTENIAL:

REPORT OF THE COMMITTEE OF JUDGES.

PHILADELPHIA, Pa., June 10, 1876.

HON. A. I. GOSHORN, Director-General U. S. Centennial Commission.—Sir: During the week since our last report, the following fruits and vegetables have been submitted for our examination. *Strawberries.*—David L. Peltz, Philadelphia, a seedling strawberry, grown from "Wilson's Albany," with points of excellence, but, on the whole, appears hardly equal to the parent. The same exhibitor had very fair fruits of "Monarch," "Albany," "Chas. Downing" and "Golden Queen," a round berry, rather soft, and not of high flavor.

James S. Jones, Germantown, "Jucunda," these have been generally fine this season. Mr. Jones' were very good; but not quite equal to those which have before come under the Committee's notice.

G. N. Mumma, near Harrisburg, Pa., "Cumberland Triumph," these were much finer fruits than came previously before the Committee, but not quite so high in flavor. It is a promising fruit. Also by the same, "Springdale," another seedling, raised by Amos Miller of Carlisle, darker than the other, a good solid berry, of fine flavor, also a promising new kind.

E. Satterthwaite, Jenkintown, Pa., nine kinds, all of fair average growth, and the "Jucunda" and "Boyden's 30" particularly fine,

"Chas. Dickens", through his gardener, Wm. Smith of Huner's Point, New York, plates of two seedlings. "President Lincoln" was very varied in shape, long, oval, flat and irregular, crimson scarlet, and of fair flavor.

A. M. Smith's seedling, resembling the other, but averaging much flatter, a little brighter in color and of a brisk, good flavor. These both appear to be seedlings of good promise.

H. W. Whitney, 3,620 Baring St., Philadelphia, very good "Jucundas."

Edward S. Handy, Philadelphia, "White Pine Apple," (Lenning White) remarkably good fruit of this slow-bearing but excellent variety. Also "Jucunda," very high colored, and, on the whole, the best of this variety that has been thus far exhibited.

A. H. Felton, Philadelphia, three seedlings, "Reliance," "Continental" and "Beautiful." These seedlings are not as large as some popular kinds exhibited, but are above the average of most that have come before the Committee in flavor, and, on the whole, are promising varieties—the first named perhaps the best.

H. R. Gant, Gloucester, N. J., very good "Monarchs."

S. L. Decon, Morristown, N. J., sends several kinds of good fruits.

H. Jerohmon of the Seth Boyden farm, Irvington, N. J., makes a very handsome display in fine kinds. Of "Boyden's 30" he had three crates, of forty-five quarts each, with extra fine fruit of this popular variety. He had also a box with plants, proving the healthy, free growth of this kind, and also that it will bear a long succession of fruits—a good character in a strawberry.

E. M. Durand of Irvington, N. J., nine new seedlings, called "No. 14," "Great American," "No. 33," "No. 23," "Essex," "No. 12," "Pioneer" and "Giant." They were mostly of very large size and very beautiful in color, making the best collection of seedlings so far exhibited. None of them of the highest flavor. "No. 14" is, in the opinion of the Committee, the best. The raiser regards the "Great American" as the best, taking growth, in all points, into consideration.

Rev. E. P. Roe, Cornwall, N. Y., made a very fine display of eleven kinds. Of these "Keer's Prolific," "Champion" and "Damask Beauty" are on the exhibition tables for the first time, and are equal to the average of the good kinds. The whole collection is creditable.

Peter Henderson, New York, exhibits "Boyden's 30," to show what can be had from plants set out last August. They are not as large as some of this kind that have been set before us, but still superior to many.

E. Burroughs has a dish of superior "Chas. Downings."

Rev. E. P. Roe has a gooseberry, a seedling of the European race, which, so far, has shown no tendency to mildew, which is so common with foreign varieties.

A. S. Felton, Cherries, "Black Tartarian" and "English Morello."

A. A. Outerbridge, Philadelphia, Bermuda Potatoes and remarkably fine Bermuda Tomatoes—equal to the best American production.

Special Committee of Judges. { W. L. SHAFFER. A. W. HARRISON. JOSIAH HOOPES. THOS. MEEHAN.

CENTURY BLOSSOMS.

LANSDOWNE VALLEY is a great center of attraction.

A LARGE mosaic from the ruins of Carthage has just been added to the Tunisian department.

THERE is a fine exhibition of coal from Ohio in the annex to the Main Building, including a block over 12 feet high.

THE Grand Duchy of Luxemburg, one of the smallest countries of Europe, has an exhibit of only three cases, one containing shoes, the other two real kid gloves.

THE American Literary Union exhibits a large collection of autograph letters, including Benjamin Franklin, General Lafayette, Professor Agassiz, and other celebrities.

THE system of teaching the blind is fully exemplified in the Pennsylvania Educational Building, and numerous specimens of handiwork from different institutions are also exhibited.

THERE is still a legal fight kept up in the Court of Common Pleas for an injunction to restrain the Mayor from spending any part of the $50,000 appropriated by the Councils for entertaining the city's guests.

THE remains of Commodore Perry's flagship Lawrence will soon be exhibited at the Centennial. It will be shipped piecemeal from Erie harbor. At the close it will be cut up and sold for chairs, canes, &c.

THE Reading Railroad Company now convey passengers from Broad Street station to the Exhibition in 16 minutes, from Ninth and Green in 22 minutes, and from Richmond in 30 minutes, for the low fare of 10 cents.

The Horseman.

OVER-BRED AND OVER-FED STOCK.

ENGLISH breeders of fine stock are beginning to question the advisability of carrying the high-feeding and close breeding to extremes as may be seen by the following from the Saturday Review:

Doubts begin to be expressed pretty freely in England as to whether high breeding has not already been cultivated to excess. It appears to be admitted on all hands that Short-Horn cattle, for instance, have decreased in size, while it seems also certain that the fecundity of these highly-bred animals is not so great as it was; for it is said that certain tribes have become celebrated for the barrenness of their females, while at the same time a delicacy of constitution has been developed which unfits them for "roughing it," and requires luxurious arrangements to preserve them in health. As in our race-horses we have, according to some authorities, sacrificed stoutness of constitution and capacity of endurance over long courses for the sake of obtaining high speed over a short distance, so in our cattle the desire for fineness of bone and rapid development of meat has brought into fashion animals which have lost many of the valuable properties of their ancestors. Such breeds cannot exist when subjected to the rough weather which prevails on the exposed hillsides and moors which are so valuable as breeding grounds and nurseries for stock; and perhaps it is for this reason that Ireland, which is prolific in cattle reared without shelter, fails to send us anything which can obtain a place in our exhibitions. No doubt Ireland possesses first-class cattle; but these are bred, sheltered and fed under the same conditions as those to be seen at Islington. And the consumers have something to say also in the matter, as there is beef and beef. They prefer, and justly prefer, the meat of the Devon or the Scot, whose young days are spent in cropping the scanty herbage of the moor or mountain, because the meat has more flavor than that of the rapidly-forced stall-fed ox, which has been crammed with corn and linseed cake from its calfhood. So that even if it be true, as the breeders of the delicate animal contend, that their meat can be produced more economically, because more rapidly than those of other races, let them remember that in losing stamina they restrict the area upon which the beast can be reared, and that we want flavor in our meat even if we have to pay a price for it.

BOTS AND HORSES.

AN article in the Farmer, March 11th, Bots and Horses, from Wilkes' Spirit, concludes by saying that "No treatment avails in effecting the removal of bots from a horse's stomach before the natural period of their exit." I venture to affirm (but only from the result of one case reported to me by a gentleman to whom I recommended its trial), that chloroform will remove and probably kill them. In the case referred to the animal discharged a large quantity of dead bots. The horse recovered.

R.—Soft soap—Teacupful; Common salt—Tablespoonful; Dissolve in warm water—one and a half or two pints, add chloroform—tablespoonful and a half or two, shake well, drench immediately.

The soft soap and salt act as purgatives: also to suspend chloroform. The chloroform may be repeated, suspended in any mucilage, as of flax seed, slippery elm, sassafras pith, gum arabic, etc.

The above prescription is unsurpassed in the treatment of colic of horses and mules.—*N. P. Scott, in Maryland Farmer.*

TRAINING A HORSE TO STEP BETWEEN THILLS.

AGRICOLA, writing to the Herald, tells how he learns a horse to step between thills.

I never draw a carriage up to a horse when he is about to be hitched before it. No matter how awkward and blundering he may be, he is always taught to step over one thill to the desired place between the shafts. Before a horse has been trained to step over one shaft the two shafts are placed on a small bench, eight or ten inches high. Then the animal is led along the side of the carriage and taught carefully to step over one shaft with the fore feet, and then to place his hind feet between the shafts. If he is awkward at first exercise patience with his stupidity, and lead him forward again and bring him around until you induce him to understand what is desired of him. A tractable animal (if his driver knows half as much as the horse) can easily be taught to step between the thills and never touch them with his feet.

The Swine-Herd.

MANGE IN PIGS.

THE Live Stock Journal says: "Mange is supposed by many to be merely a roughening of the skin, like chapping of the hands or face in human beings, arising from uncleanliness or some carelessness; but this is a mistake. It is caused by a minute parasitical insect known as *acarus*, under the skin, hence washing will not rid the insect or cure the pig. This same disease attacks our domestic poultry, and is known as the scab leg, or scurvy leg, scales of large size forming on the legs, and then underlaid with a yellowish substance resembling corn meal.

"In combating this disorder, cleanliness is first, for too much heating food, with scanty water and a dirty pen, invite the insects. When an animal is suspected of having the mange, remove it from the rest, and commence by applying to the skin a mixture of flour of sulphur and fresh lard. If the animal be constipated, which often results from feverishness induced by the presence of *acari*, give from a teaspoonful to a tablespoonful of sulphur in a feed of slop. This will gently open the bowels, besides working through the pores of the skin, and as it does, will materially assist in destroying the parasites. A strong solution or decoction of tobacco juice is a very good remedy, but it is not superior to the other. If the disease has been of very long standing, mercurial ointment is sometimes used; but as this is poisonous, we would not recommend its use. Where an animal has become impervious to the influence of sulphur, I think it best to remove him from his suffering, unless he is very valuable; and very valuable ones, rarely, if ever, get it, for they receive such good treatment that they seldom or never contract it. As a preventive, the utmost cleanliness, and a free use of whitewash in the pens and yards, and proper feeding at regular intervals, are recommended.

"Mange is infectious, and very soon spreads through the entire herd if the animal is not removed. Some claim it to be hereditary, but this is not proved.

[Sulphur put into the food, say a tablespoonful to each hog, for two weeks, will cure mange in hogs or other animals, provided cleanliness of stable and pen is attended to at the same time. We have also cured bad cases of mange in dogs and cats by putting sulphur in their food.—ED. RURAL.]

Dairy Husbandry.

MILK FEVER IN HOT WEATHER.

There is not a season but, as hot weather approaches, we hear complaints from dairymen of losing cows that have freshly come in milk. They die of "milk fever," and so sudden is the attack and so rapid the progress of the disease that often the animal is past all means of help before she is discovered to be ill. Cows in high condition and those that are large milkers are more subject to attack. One of the most prominent symptoms of the complaint is loss of power over the motion of the hind limbs, and the animal falls and is unable to rise. During the first attack the animal is restless, pawing with her feet, and she breathes laboriously. The muzzle is dry and hot, the mouth open and the tongue protruded. The countenance is wild, and she wanders about mournfully lowing. The attack occurs sometimes a few hours after calving, but often two or three days may have elapsed. Generally if a week has passed over since calving, the animal may be considered safe from an attack.

Dairymen who are accustomed to have all their cows "come in milk" early, or during cool weather, and before being turned to grass are seldom troubled with this complaint. Indeed we have rarely seen or heard of losses from this disease during March and April when the feed has been hay. But the time for calving cannot always be regulated, and as some excellent cows are kept over that come in milk during hot weather, a word of precaution as to their management will be proper at this time.

We believe that milk fever can, in most cases, be guarded against and prevented if the animal be treated properly as to diet and exposure previous to calving. And in our experience not a single case has ever occurred in the herd when the proper precautions have been observed, but when neglected losses of valuable animals have been the result.

When cows "late in calving" are turned out to grass in Spring they are apt to take on flesh rapidly, and during the "flush of feed" in June they get quite fat. Such a cow—if calving in July and left exposed to the hot sun, and with no attention to diet—will be very likely to be attacked with milk fever, and in such cases the chances are that she will die; for there is not one farmer in ten that will observe the early symtoms of the disease, or resort to remedies until too late.

The precautionary measures are, to put the cow on a rather spare diet commencing two or three weeks before calving. She should be carefully guarded against exposure to the hot sun. Our practice has been to keep the animal in a clean, well-ventilated stable, allowing her room to walk about, but restricting her to a very sparing diet during the day—a little hay or straw to pick at. She should be supplied with water as needed. Then as the sun goes down and it begins to be cool in the evening she may be turned to pasture and allowed to graze during the night. This is the ordinary treatment from day to day for cows in fair flesh and condition. If the animal be very fat, a more sparing diet may be necessary—the object being to reduce her flesh. In this case keep her out of the sun during the day and in the evening she may be turned in the yard with a regulated allowance of grass cut and fed to her on the soiling plan.

After calving she should be kept out of the hot sun for at least five or six days, and not allowed full rations if she be in high flesh.

In case of an attack the usual remedies recommended are to bleed and to open the bowels by giving Epsom salts—one pound being considered a dose. Aromatics—such as ginger or herb teas are also regarded as useful. The disease is an inflammatory one and must be treated as such. Youatt, who is regarded as good authority, says: "The bowels must be opened otherwise the animal will perish; but the fever having been subdued by a judicious bleeding, and the bowels after that being excited to action the recovery is in a manner assured. The medicine should be active and in sufficient quantity; for there is no time for trifling here. A scruple of the farina of the Croton-nut, and a pound of Epsom Salts will constitute a medium dose. For a large beast the quantity of the salts should be increased. Doses of half a pound should afterward be given every six hours until purgation is produced. If twenty-four hours have passed and purging has not commenced even after the administration of such a drug as the Croton-nut there is reason to suspect that the greater part of the medicine has not got beyond the rumen; and on account of the cuticular and comparatively insensible lining of this stomach, strong stimulants must now be added to the purgative medicine, in order to induce it to contract upon and expel its contents. Two drachms each of ginger, gentian and caraway powder, with half a pint of old ale, may, with advantage, be given with each dose of physic.

Warm water, with Epsom Salts dissolved in it, or warm soap and water, will form the best injection, and should be thrown up frequently, and in considerable quantities."

Sponging the body with cold water has been recommended as useful in allaying the fever and inflammation, but of those instances in which we have seen this resorted to the animals died. Possibly they would have been lost under any treatment, but the fact that the water seemed to produce no good effect has weakened our confidence in this remedy. "Milk fever" is a disease to be dreaded by dairymen, and every one who has cows whose time of calving occurs during hot weather should take the proper precaution to reduce their diet and keep from exposure to the hot sun previous to calving. And if the cow be in very high condition and has been kept upon luxuriant pasture a dose of physic in addition to the spare diet may be of advantage.

PASTURE SHADES FOR MILCH COWS.

The question of shade in pastures is being discussed and we regret to see it urged that shade is of no benefit to dairy stock but is, on the contrary, a disadvantage in this—that it fosters a kind of lazy inactivity and thus, by preventing a full consumption of food, lessens the yield of milk.

The advocates of "no shade in pasture," argue that the cow is simply a machine for the manufacture of milk—that to make a large yield requires a large amount of food above that needed for the support of the animal, and that when pastures are well supplied with trees or other shade, cows in hot weather seek shelter and rest and will not feed for a full yield of milk. Take away this inducement for comfort, they say, and cows will rest no longer in the hot sun than is necessary, because they will be compelled in their discomfort to move about—and thus grazing is promoted. We know dairymen of large practical experience who hold to this view of the question, and who have taken pains to remove every shade tree from their pastures. But is it a fact that cows will give more milk under such circumstances? And even though it be shown that a gain of milk can be made by removing all shade in pastures, are dairymen justified in adopting such a system?—and will not the milk of cows so exposed to the sun during intensely hot weather be injured?

So far as we can learn there have been no properly conducted experiments that prove that a larger yield of milk can be obtained from cows when they are not allowed shade in hot weather, than when they are allowed shade. It is true cows will not yield so much milk when they have the run of large tracts of timber, because in woodlands the cows crop the leaves of trees and feed upon various plants that have a tendency to lessen the yield of milk. It is quite different with shade trees scattered here and there over grass lands—they have acquired size and the branches are above the reach of cattle. We do not believe that cows deprived of shade will yield more milk than those which have it under such circumstances. All our experience in the care and management of milch cows teaches us that the more comfort you can give the animal the more milk she will yield, other things being equal; and when cows seek shade during hot weather they do it to escape the burning rays of the sun, and because it affords them relief and comfort in the same way that it does man when similarly exposed. It is a cruel practice to compel cattle to bear the intense rays of the sun during our hot summers. They need protection at such seasons and if man finds shade at times, not only grateful and necessary, there is no reason why the same rule may not apply in some degree to our domestic animals. We have reason to believe that milk is not unfrequently seriously impaired when cows have been exposed for many hours to intense heat under the direct rays of the sun. It has a tendency to make the animals feverish and hence where pastures are stripped of shade trees it is well to erect temporary shades. And these temporary shades can be made useful for enriching knolls and the poorest parts of the field that need manures; for these shades will draw the cattle to such points for rest and there will be an accumulation of droppings which will be of great utility in renovating those spots. Then by changing the shades from place to place as occasion requires these poor spots will be permanently benefitted all over the field.

Those who study to get the largest results from milch cows are careful to keep the animals as quiet and comfortable as possible. All excessive travel or labor in obtaining food, all pain, fear and anxiety are disturbing causes that check the secretion of milk to much larger extent than most people imagine.

SHRINKAGE OF CHEESE IN CURING.

The loss in shrinkage which a cheese will make during a given time while curing depends upon several circumstances, namely, upon size, shape, temperature, dryness of the atmosphere, etc.

Mr. S. Littlefield of Plymouth, Wis., who seems to have had pretty fair success as a cheese maker, has given some statistics in regard to the shrinkage of cheese while curing under favorable circumstances. He has two rooms for curing. The upper room is kept at a temperature of about 70° by a fire below. When the weather occasionally runs that room up to about 80° it is tempered with ice, and when days of that kind get rather frequent the lower room is used. He says the lower room will be at least 10° cooler than the upper. During the summer of the past year it several times reached 73°, but went above that in only two or three instances. Whenever the temperature approached 60° a fire was built, and during a large part of the autumn a constant fire was necessary.

Mr. L. makes a cheese weighing about forty-seven pounds, and he finds it will lose weight in curing in the rooms as above described at the rate of 4½ to 5 pounds on 100 pounds during the first 20 days; after this the loss in weight is ¾ to 1 pound per 100 in every 10 days. He says a careful weighing of cheese kept 30 days in different parts of the room, under a difference of 3 to 6° of temperature, the cheese in the warmer part of the room made a loss of 1 pound more on 300 pounds than the cheese kept at a lower temperature.

The shrinkage of cheese kept for long periods in badly-constructed curing-rooms is very considerable, and often much more than is imagined by those who are not accustomed to test shrinkage by resorting to the scales from time to time.

PREPARING RENNETS.

Whey is better than water for soaking rennets. The whey for this purpose should be purified by raising it to boiling heat, when the albumen and oily matter will rise to the surface and may be skimmed off. The whey is then set aside to cool, when the rennets are added, with salt, and after soaking two or three days they should be well rubbed out to extract their strength, and this should be continued from time to time for several days. Then strain the liquor off through a fine cloth into a clean stone crock, and it is fit for use. Add more whey to the rennets and soak and rub out as before, when their virtues will be nearly or quite exhausted, and the skins may then be taken out and thrown away. Rennets should always be soaked in stone jars, as the ferment penetrates wooden vessels, which soon taint, and when once tainted they spoil the rennet and cause trouble in cheese making.

The rennet jar should be set in a cool place and the liquor well stirred from day to day when dipping out the measure required for coagulating the milk. Great care should be taken to use none but good, sweet rennets, for a bad rennet soaked with a batch of good ones will contaminate the whole, rendering the liquor unfit for use.

The Herdsman.

GARGET.

Zelco writes to the Scientific Farmer. Garget is an inflammation of the milk vessels, and cows coming in high condition are very likely to show a touch of it. At this season, these organs are, so to speak, at a high service pressure. The force of the animal seems all at once to be directed to the production of milk, in expectancy of the coming calf. The organs have an excess of activity—the vessels are extended and pressed with the abundance of the incoming tide—and so long as the milk is accumulating and there is no withdrawal of it, the greater is the pressure upon the tissues; and it is this undue pressure that is in many cases the direct occasion of the ensuing inflammation. Garget may be present in an animal of otherwise perfect health. In such cases, the garget is apt to pass readily off, leaving no marks of its presence. It is but a trifle, and a strong healthy system can swallow up many little ills and make no account of them. My remedy for garget is to maintain most ample health in the animal. Cherish at the critical period all the conditions of health; and see to it that all unfavorable conditions, as drafts of air, bad water, too dry food, hard plants to lie on, a hot sun, etc., are reduced to the minimum. Put six men on one end of a rope, and then they can easily pull one man. With the best of health in the cow, garget is the one man. But let there be a little falling off in the health, let there be a little indisposition—and the cow is peculiarly sensitive at this time—and we are soon in trouble. Now and then garget, so commonly present, instead of passing off in the healthful life current, lingers and augments, until it becomes a serious evil.

When the udder is largely extended, and milk comes to the teat before the calf is come, as is not seldom the case, then it should be our office to act the calf; evidently nature is at fault and needs our interposition. I have had many cases of garget that have been somewhat troublesome; but scarcely a case where I could not look back and see mistaken treatment or more likely an omission to do something that should have been done. Feeding one's own stock, and thinking right along, about each animal, as we care for them, I hold there need seldom occur troublesome garget. It is something that is born of the artificial conditions to which the cow is subject, and preventive measures are commonly at our command. There are, however, cases when the services of a skilled veterinarian will be very desirable. The practical man will sometimes find himself at a loss either to explain the origin of the difficulty, or to prescribe a treatment. But this is an extreme of garget; and it is only such form of garget as is of frequent occurence on every milk farm, that I now refer to.

But it will be asked what shall we do, when garget is anticipated or is already present? Give a dose of epsom-salt morning and night until its action is perceived. Three-quarters of a pound is not an excessive quantity. Dissolve this in a bottle filled with warm water, then pour it down the animal's throat. Don't look her in the face now, for cough she assuredly will. This is the stomach treatment; as to the swollen udder, keep it clean by washing with soap and water.

JERSEY CATTLE.

The London Agricultural Gazette strikes the following hard blows at those who value color as a mark of pure blood.

If the value of Jersey stock is to rest on color, deterioration will surely follow of those useful qualities that are far more noticeable in the good old-fashioned parti-colored cow than that which will be found among the generality of fine, high-bred, whole-colored fawns, grays, or foxey, so-called, Jerseys. I have owned hundreds of acclimated Jersey stock, and have never, as a rule, found the whole-colored such large producers as many parti-colored ones; in fact, by far the most butter-producing cow I ever possessed was not only parti-colored, but the most ugly and ungainly beast of the lot, yet her stock have never failed to show their large butter-making qualities. The true type of a Jersey cow is, in fact, an animal that will not make meat. I do not say that this is not improved upon by acclimatization and a slight introduction of a hardier breed, of which what are termed Chichester Jersey are the best description, neither do I say that Jersey breeders on the island itself have not in some instances a breed that shows a disposition to make some flesh, and very probably may then be following up the requirements of fashion, yet I maintain that a pure Jersey should throw the bulk of her feeding properties into butter, and with little to flesh. The parti-colored good cow may have but a white spot, especially under the belly, but throughout the body the rich yellow skin, under any colored hair, will be found—black, white, or fawn. I have seen the commencement of a whole-colored herd, the property of a noble duke, to obtain which I have seen wealthy and large producing cows sold off to prevent an animal remaining with the slightest stain of other than one color.

Entomological.

THE PERIODICAL CICADA.

It will appear this summer around Alton, Ill., in Indiana and in various Southern States.

Brood X (*Tredecim*), 1862-1875.—In the year 1875, and at intervals of thirteen years thereafter, they will most likely occur in different parts of Texas. According to Dr. Smith they appeared in vast numbers in some parts of Texas in 1849, though he was not able to get any particulars.

Brood XI (*Septendecim*), 1859-1876.—In the year 1876, and at intervals of seventeen years thereafter, they will in all probability appear in parts of North Carolina, Virginia, Maryland, Illinois and Indiana. According to Dr. Smith they appeared from Raleigh, N. C., to near Petersburgh, Va., in 1842 and 1859; in Rowan, Davie, Cabarras and Iredell counties in the same State, in 1825, 1842 and 1859; in the valley of Virginia as far as the Blue Ridge on the east, the Potomac on the north, the Tennessee and North Carolina lines on the south, and for several counties west, in 1808, 1842 and 1859; in the south part of St. Mary's county, Maryland, dividing the county about midway east and west, in 1825, 1842 and 1859; in Illinois about Alton, in 1842 and 1859; and in Sullivan and Knox counties, in Ind., in 1842 and 1850.

The above predictions are taken from Prof. Riley's chronological history of these curious insects, commonly known as seventeen-year old locusts. It would result that, aside from the Southern States mentioned and in which we already get news of their appearance, the cicades will appear around Alton and in Sullivan and Knox counties, Ind. We shall be very glad to have our subscribers in those localities mentioned inform us as to whether the facts this year will verify the correctness of the perdictions.

Industrial Implements.

THE BOOMER & BOSCHERT POWER CIDER PRESS.

THE above cut illustrates one of the several cider and other Presses, found in the exhibit of the Boomer & Boschert Press Co. of Syracuse, N. Y., at the Centennial Exposition in their Agricultural Hall—location, column S & T 12.

The exhibits of this Department, taken as a whole, have, without doubt, never been equaled in point of variety and the most improved adaptations of mechanical methods employed in the various agricultural interests of the world. While many of these exhibits in their principal features have already become well known, yet there are others of more recent origin of such marked character as to entitle them to prominent notice and description of operation. Among these we may safely class the improvements in cider-making, the advancement in which, during the last three or four years, have, as compared with former methods, almost revolutionized the business.

The system which we here illustrate and describe, may be said, substantially, to contain a combination of the most approved methods in present use, in part or entire, by the leading cider makers of the country.

There are three principle and essential features noticeable in these improvements, to wit:—1st. The best mode of reducing the apples to Pomace. 2d. The new and improved method of laying up the cheese. 3d. The continuous application of progressive power for expressing the juice of the apples.

Briefly as regards the grinding, experience has demonstrated that the Grater, properly constructed and run at high speed, is the best known device for breaking the minute cells of the apple and insuring fineness, which condition is essential to insuring both an easy extraction and a full yield of the juice. The Grater in the exhibit referred to is simple in construction, safe in strength, with every detail of adjustment known to the wants of the business.

Both the frame and the cylinder are made of iron. The latter turned and finely balanced, may be run from two thousand to three thousand revolutions per minute, if desired. Eight steel knives, set in planed grooves across the face of the cylinder, are held in place by heavy iron bands at each end, and are arranged to be readily adjusted at any desired projection. Five concaves of flat steel springs are so arranged as to be set at any desired distance from the cylinder. A noticeable improvement is, that each one may be increased to any desired degree of stiffness. These concaves fly back when stone or other hard substances pass through, thereby preventing injury to the knives. The grinding capacity varies from 150 to 400 bushels per hour, according to speed and fineness of work.

The most noticeable feature of the exhibit, however, is the Power Press with double platform and the peculiar manner of laying up the cheese, as illustrated above, which methods are now extensively adopted by leading cider manufacturers in this country.

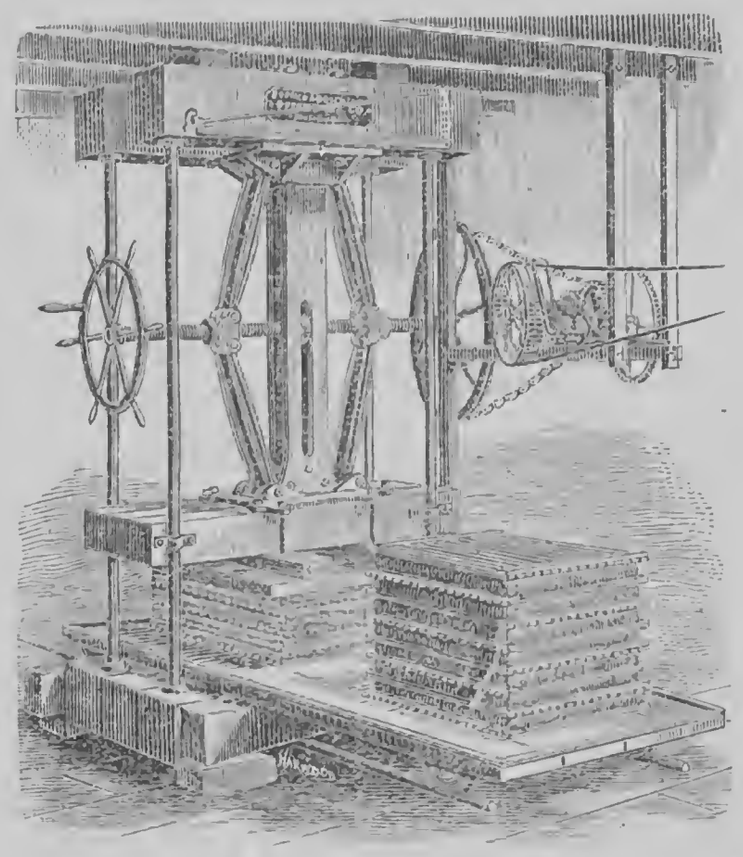
The Press in the illustration is run by power; but presses constructed upon this principle, whether worked by hand or power, are capable of great pressure.

In running down the press, the levers on each side are simultaneously drawn towards each other by revolving the right and left hand screw which passes through the nuts which hinge the levers at their center, thus forcing the platen or follower downward with a continuously decreasing movement, and consequently with a continuously accumulating power which at last becomes almost irresistible.

The double platform is constructed of sufficient length to hold two cheeses, one of which can be laid up at one end while the other is being pressed. The platform is mounted on wheels running upon a track of such length as to admit of endwise movement sufficient to bring either cheese under the follower at will. This arrangement is an important improvement, as it enables the press to be kept in nearly continuous operation—nearly doubling its capacity.

The upper platform, or covering for the top of the cheese, is permanently attached to the follower, thus obviating the continuous placing and removal of the same. The manner of laying up the cheese renders the operation of pressing clean, quick and effective. It consists of successive and regular layers of pomace, each about four inches thick and of a size adapted to the size of the press, each layer completely enfolded in cloth. These are shaped in a simple form or frame, insuring uniformity of size.

Racks made of basswood strips, one-half inch thick by three-quarter inch wide and one-quarter inch apart, are laid between the layers as they are formed. The spaces between the slots operate as channels, giving ready escape for the cider from the center and all parts of the cheese alike. By means of the provisions for free escape, the power of the press may be continuously applied so that each cheese containing ten to fifteen barrels is pressed, on an average, in one hour's time, to which is added ten to fifteen minutes more to allow for proper drainage. Additional important advantages are gained by this system, in that the cider passes from the press strained and perfectly free from dirt and particles of pomace, and also in doing away with the dirt, litter and expense incident to the use of straw.



BOOMER & BOSCHERT POWER CIDER PRESS.

Sixty to eighty barrels of cider in ten hours can be made with one press operated in this manner, with labor which formerly averaged fifteen to twenty barrels only. The machinery described will be put in practical use daily as early as the present growth of apples will permit.

Taken as a whole, this exhibit is a great advancement in cider-making appliances and machinery, and one which, in view of the general promising prospects for a large crop of apples this season, is most timely for those wishing new, or desiring to substitute more improved machinery. B.

ENTRIES TO THE CENTENNIAL FIELD EXHIBITION,

To be held at Schenck's Station, Pa., near Philadelphia, commencing June 26.

AYLESBURY DUCKS.

LAST September I had forty-three Aylesbury ducks, young and old. Two years ago this spring I procured two dozen eggs from a party in Rye, N. Y., I forget his name, from which I got seven ducks. Not the fault of the eggs, however, but one hen got sick under which I had put half of them. The forty-three spoken of above came from that start.

I cannot give any account of the profit and loss but I can state some facts.

They commenced to lay about the 1st September and continued through that month and October and until the 10th November. We obtained fifty-two eggs in September and ninety-six in October but only twenty in November. They commenced again the 2d of February in which month they only laid fifteen eggs. In March I got one hundred and forty-nine and in April two hundred and eighty-six and in May two hundred and ninety-five and so far in June (the 18th) one hundred and thirty-four.

I have however forgotten to say that our spring number is only twenty-two for we have had some very fine eating during the winter from our fall flock. I can assure you that it was very toothsome eating.

Of the twenty-two we have lost two and seven are drakes. These are facts and "we *want* facts young man." Let me recapitulate—In September we got 52 eggs; October, 96; November, 20; February, 15; March, 149; April, 286; May, 295; June 18, 134. Total 1,047.

I don't think this a very bad showing, but as I have said before, I cannot state anything in regard to the profit because my fowls and ducks are all fed in common.

I have no pond of water for them to resort to, but I have some low land through which there is a wide drain to which they resort when permitted, and where we have sometimes to deny them, as our garden is in that neighborhood and they are very fond of "garden sass." I see that Mr. BICKNELL in the June number of the Poultry Bulletin, says that from two to four ducks are allowable to one drake. I think I have had too many drakes this spring and shall hereafter have only one drake for three ducks.

Young ducks are very tender and require peculiar feeding and much care. In the article above alluded to, Mr. BICKNELL says that they should be fed only cooked food, composed of the meal of corn and oats ground together in which by measure add an equal quantity of wheat bran with which mix some finely-chopped cooked meat of a cheap kind. I have not had very excellent luck this spring with my ducklings, but hope to have better now that I have adopted Mr. BICKNELL'S plan of feeding. B. Z.

Ridgewood, N. J.

WHICH IS THE MOST PROFITABLE BREED OF HENS TO KEEP?

THIS seems to be a difficult problem to solve. After ten years experience, with a number of different breeds and an almost endless variety of crosses, I have come to the conclusion that there is more in the proper management than in the breed. For five or six years, the Brahmas were my first choice but I have finally decided that some of the smaller breeds—as for instance the "Leghorns," "Houdans" or "Polands"—will pay best.

A hen weighing three or four pounds can lay one egg in a day, while a hen weighing twelve pounds can do no more. The amount of feed required to grow one chicken to twelve pounds should raise two or three smaller ones. When full grown the difference in food is less, but there is still a difference.

A laying hen will lay her weight in eggs in a very short time and requires food accordingly. A miller cannot run his mill without grain, neither can a hen, a part which some people seem to overlook.

When a person is sufficiently interested in the poultry business to pay extravagant prices for eggs of—to him at least—new breeds, he is very likely to give them extra care and attention—at least while they are a new thing—and the result is a good margin of profit, for hens will pay every time if well taken care of and the profit corresponds with the care taken.

Pleased at the result the next step he will probably send an article to the papers saying that the "Brahmas," "Leghorns," "Houdans" or whatever the variety may be, are, all things considered, the most profitable breed to keep, little thinking that the hens rejected would probably have given as good results under the same improved management.

I have kept the Bolton Grays, Polands, Dorkings, Black Spanish, Light and Dark Brahmas, Buff, and Partridge Cochins, Dominiques and White Leghorn. Each and all have their strong point, also their demerits.

One breed are good layers, but unfit for the table, another takes on flesh rapidly but lay sparingly. One kind will allow you to almost step on them and another are as wild as hawks. One bears confinement well, others not at all. And so it goes. I have not yet found the breed that is perfect in all respects.

It is perfectly proper for any person to have their pet kinds, but overstrained statements, and fixed up figures to sustain their choice should be avoided.

My average number of hens has been about one hundred and I have kept an exact account of all monies received or expended and am not obliged to depend upon what my neighbors say, or to guess at results, for the figures are before me. Feed raised has been put down as feed bought. Eggs and poultry used in the family have been reckoned as sold.

Now it is not my intention to inflict all these figures upon the RURAL readers, suffice it to say that after allowing for all mishaps and losses—that have been considerable—and for all mistakes—which have been many—the net cash profit figures up to something over nine hundred (900) dollars for the ten years. To be sure this is not as good a showing as we often read about, but is very satisfactory to me.

The manure made is also worth considering. Then the service the hens have done by destroying worms, bugs, insects, etc., is beyond estimate, as is also the great pleasure in taking care of them and the satisfaction of testing different breeds. On the whole I am well pleased with poultry keeping. NELSON RITTER.

Syracuse, N. Y.

HOUDANS.

THE English Ag. Gazette while speaking a good word for the Houdan, is quite averse to placing it first in the list:

We are frequently asked what breed of poultry is considered the best—a very puzzling question to answer without a statement of circumstances, by which we mean situation and size of run, whether eggs or chicks are the chief consideration, if beauty of plumage or a quiet easy-going disposition is of consequence. When informed on these points, it is comparatively easy to name two or three varieties of fowls which if properly tended, will satisfy the demand for "profitable poultry." At present there is a strong endeavor to force Houdans to the top of the list and there leave them permanent among fowls. We are of those who dispute their right to that position. We know, and readily allow, that their merits are great, that under trying circumstances they hold their ground and that, if considered on the table as well as producers of eggs, they will hold their own. Hardy, weighing well for their size, consequently compact and plump, quiet and with flesh of a good color, they are in the first-class but not at the top of it. Some people admire them in the yard or pen, others dislike their appearance, though "massed" or seen in large numbers they would please the eye of many who are not partial to a solitary bird. Some good judges consider that no bird looks better alone in the competition pen than a good Houdan. That is a matter of taste and we must leave every one to consult and please his own eye. Our object now is to resist the efforts of Houdan fanciers to place their favorites at the top of the list, while, as we have said, we are quite alive to their just claims upon the favor of poultry keepers.

FOWLS prefer, as well as need, good, pure, cold water, especially in warm, sultry weather.

Farm Economy.

SHEEP PASTURAGE AND WIRE WORMS.

A SINGULAR instance of the effect of pasturing sheep on land infected with wire worms is recorded by a correspondent of the Agricultural Gazette.

In answer to your corespondent, "J. C. C.," I should like to give you a case of my own this year, though I am quite at a loss to account for it. I planted a field of 4½ acres with vetches, half of it in October and half of it in March. I did not manure for them, as the ground had been well manured for the wheat crop, which was very good, without the smallest symptom of wireworm at any time. As soon as the first crop of vetches was ready, my ewes and lambs went up to them, but by the time I wanted them away they had only used up half the field, though the waggoner mowed every other land. The other half of the field I did not dare thresh for seed, as, owing to heavy snows, it was not planted till March; we accordingly mowed it for fodder. We got the whole field plowed during harvest, but being too late for turnips, we left it for wheat. In November, to the envy of my neighbors, I got the field planted well—too fine, if anything, all through. The half of the field the sheep were on looked fit to grow anything. All the wheat came up well, and to the middle of March no one land differed from another. From that time till the last week in April the wheat where the vetches had been mown went on splendidly, while to an inch of the last hurdle the other began to go off till the sight was heart-rending, and my men wanted to plant it again with April wheat. Following the advice given in your columns, I sent for a hundredweight of nitrate of soda, and about the same of salt, having well mixed them, I sowed it myself on every piece attacked by the worm. I could not even then help thinking that the folded land would still come the best if the worm could be stopped, as the blades lay close to the ground, were broad, and of a deep green color. The nitrate and the salt worked wonders, and since the field was harrowed when the seeds were sown, the whole crop has looked well, and I will now back the folded part against the other. I really believe the timely application of the nitrate and salt stopped the worm and saved the crop; but the question that "J. C. C." and I both want answered is, Why should folding sheep engender wireworm? I must admit my sheep had no cake, which is supposed to be very inimical to the worm. I never, in previous years, noticed any worm in land treated the same way. I suppose this piece of land would be called a red marl, but it is of peculiar character.

LIME AND SALT.

PROF. JOHNSON recommends for fertilizing purposes, to mix one bushel salt and two of dry lime under cover; allow mixture to decompose gradually, thus forming chemical union. For this purpose the mixture should be made six weeks before use or still better two or three months, the heap being turned over occasionally. This salt and lime mixture, when applied at the rate of twenty or thirty bushels per acre, forms an excellent top-dressing for many crops. It acts powerfully on the vegetable matter of soils; fifty-six bushels applied to turnips have produced as large a crop as barnyard manure. It is destructive to grubs and insects in the soil. Like salt, it attracks moisture from the air, and is useful against drouth. Its decomposing power is remarkable, and if three or four bushels of it are mixed with a load of muck, the latter will be thus thoroughly powdered.

THE GRASSHOPPERS ROUTED.

THE Boulder (Col.) News, says that, Mr. James Gould called lately, and added something to our stock of grasshopper lore. He says that plowing the land before the eggs hatch in the spring destroys them utterly. This being the case, the farmer has only to guard his grain fields against the incursions of those that hatch outside. This he can effectually do. Mr. Gould has put in 120 acres of grain, and has kept the 'hoppers off, depending mainly on dripping coal oil in the ditches. He has used sixteen gallons and destroyed millions. Almost as soon as they are hatched the myriads outside instinctively move for the fields of young wheat, plunging in to cross the ditch and die at the touch of the kerosene. The ditch is fixed to make eddies, and a scum of the oil floats on the surface. Mr. Gould says that with what the farmers now know about fighting the hoppers, there is no more danger from those that hatch in the spring. About those that come on the wing, late in the season, he says the remedy is to sow early, and then the crops will be out of the way before they come. A year ago it seemed as if the locust scourge might destroy Colorado farming, making a crop so uncertain that none would take the risks. Now it is certainly known how to avert all this danger. It is a most wonderful triumph of the thought of man. He has done what it seemed impossible could ever be done, and henceforth the wheat harvest will be gathered in all the Colorado valleys, year after year, in spite of the locust, thank heaven, and thank human invention, too.

At a recent horse show, we saw men from the various sections of the county, and all told the same story of unwearying diligence and triumph over the 'hopper and represent that the crops never looked more promising at this season. But the best of it is that the victory is decisive for all time as for any destruction from the locust. And the husbandman may lift up his head and rejoice that the day of his redemption draweth nigh.

Arboricultural.

THE NEW JAPAN MAPLES.

A FEW weeks since, we paid a visit to Kissena Nurseries, Flushing, L. I. The venerable Mr. S. B. PARSONS is the proprietor of these nurseries, a gentleman and a scholar too well known to need even this introduction to our readers.

FIGURE 1.

Mr. PARSONS began their propagation in 1862, 14 years ago. Specimens were first sent to him by Dr. HALL and several years after, Mr. THOS. HOGG brought a number over and planted them on the banks of the East River near Hellgate Ferry. They have there stood (those first sent) without protection and without injury for ten years. The question which at once arises in one's mind as he looks at the hundreds of bright plants in Mr. PARSON'S frames, viz.: Are they hardy? seems thus fully answered in the affirmative. But will the bright colors—as bright, indeed, as those of a *Coleus* or variegated *Pelargonium*—stand the sun? "Yes," earnestly replies Mr. TRUMPY, they are brightest in the sun!

The truth of the answer of Mr. PARSON'S well-known propagator may be tested by those visiting the Centennial, where in the plots already referred to in our Centennial floricultural articles, specimens may be seen. Planted in a full exposure to the sun and upon high ground, this may be considered a sufficient test.

Mr. HOGG has of late been sending new varieties which in the nursery are planted with the

FIGURE 2.

We saw many rare and new plants respecting which in the future, as we have done in the past we hope to speak from time to time—but the Japan Maples, the chief object of our visit, must confine our attention now.

There is no tree better known throughout our country than the Maple or one that, in one or the other of its many species and varieties, is more popular as an ornamental tree. Familiar, therefore, as they are to every eye, we were not prepared to see in these Japan Maples leaves as delicately cut and as highly colored and variegated as are many of the plants which for those reasons are cultivated and prized in the conservatory, greenhouse and garden border.

the growth is so weakly that it sooner or later dwindles away. The stock thus far used is *A. Polymorphum*, itself a slow-growing Japanese species.

The accompanying sketches are nearly *facsimiles* drawn from pressed leaves and selected so as best to illustrate types. All are simple palmate leaves, lobed, cleft, parted and divided. Fig. 2 is a divided leaf and the segments are many of them again parted or divided, the lower parts of the divisions having few of either teeth or incisions thus approaching petioles and compound leaves.

Fig. 1. The shape of this leaf, as will be seen, is not unlike many of the common Maples. But the color varies from golden-yellow to greenish-yellow and yellowish-white. One color in the same leaf runs into another and the effect at a distance is that of a light yellow.

Fig. 3, the smallest leaf, is a dark green, variegated, as shown, with rose and white, the lines of variegation being distinctly marked. Fig. 2 is seven times divided and the two lateral lower segments each twice parted. It is in color a solid claret, as dark as a Copper Beech though of a brighter hue.

Whether they will prove all that they now fairly promise remains to be seen. If they do, no prophetic powers are needed to foresee that they will sooner or later find a place in every garden of any pretension. We append a note from Mr. J. R. TRUMPY whose great and successful experience as a propagator will give weight to whatever he says:

1. I judge the Japan Maples you have seen from 5 to 8 years of age, beginning with the stock. I think, however, I could produce finer plants in five years (including age of stock, say 5 to 6 years) and a better proportion between roots

FIGURE 3.

and head than the Japan method, which aims to retard and dwarf, can produce.

2. All the covering they had last winter was a lath shade as you saw; but we have planted out in the border this year, without intention of protection and will report to you next year.

3. Until now I have not found any other stock but the Japan stock that seems to answer for them, but will further report as I am in the dark about some species.

4. Have no knowledge about their size as they may be seen in Japan, but the largest plants are from 5 to 8 feet at Mr. HOGG'S 81th St., East River. They have been unprotected these many years.

Scientific and Useful.

SALICYLIC ACID AS A PRESERVATIVE.

WAGNER recommends, in the *Deutsch Industrie Zeitung*, the practical use of salicylic acid for the preservation of articles of food, especially meat. He employs a concentrated solution of the acid in water, with which he covers the meat and preserves it in well closed vessels. In this way he says he has preserved beef, freed from fat, for a period of fourteen months. He recommends salicylic acid as an addition to lime for meat or butter, and in the preserving of fruit and vegetables, also an addition to wine and beer to prevent souring. Generally speaking, its addition to any substance undergoing acetic fermentation, (souring) retards the formation of the acid.

GLUE CRACKING.

GLUE frequently cracks because of the dryness of the air in rooms warmed by stoves. An Austrian Journal recommends the addition of a little chloride of calcium as such a deliquescent salt that it attracts enough moisture to prevent the glue from cracking. Glue thus prepared will adhere to glass, metal, etc. and can be used for putting on labels without danger of their dropping off.

Floricultural.

CENTENNIAL FLORICULTURE.

One of the happy disappointments of the Centennial is that, going there with the expectation of being crushed and beaten about, one looks about in astonishment to find that there is nowhere a crowd. The houses of exhibition are so immense, so many and so widely separated—the objects of special interest so wisely distributed, that there is no reason for a dense collection of people at any one point. Thus the floral display may be surveyed at leisure and studied without discomfort. The grand collection of plants in Horticultural Hall instead of being viewed by glimpses over other people's shoulders, or by waiting for a crowd to pass on, may be seen from one end to the other in all that collective beauty of arrangement and grouping that so enhances individual effect. In this light, airy structure—in its fragrant air, among the majestic Palms, spreading Cycads, stately Phorminms, fearless Screw-pines and sprightly Ferns—as if every tropical gem had been placed around and about, one walks in freedom and gazes with positive delight. The music seems a superfluous charm and the "savage breast" needs no soothing. As if there were too many delights, the contemplation of one must be abandoned before another can be heeded.

There are few holder looking plants than the Screw-pine, but whether we select a *utilis* or a *Veitchi*, their beauty is of that majestic order that like *Dicksonias*, *Cyatheas*, *Musas*, the finer *Dracaenas*, etc., requires commodious and costly structures and experienced care if we would develop something of their native size and elegance. But there are many of those tropical plants, several of which are mentioned further on, that may be grown in our conservatories and even sitting-rooms that would at least add variety of form, size and leaf, serving to break the monotony of the low-growing, briefly-flowering things with which we are too fond of cramming our flower-structures.

Many specimens of *Pandanus utilis* in the main part of the building, attract much attention. One of the best is ten feet high—makes four revolutions of its magnificent leaves four or five feet long, each one at its base sitting in the lap of that beneath and gradually diverging and ascending the spirally-inclined plane.

The Assaie-palm (*Euterpe edulis*) has a clean stem of fifteen feet though no larger than the wrist, spreading out and drooping gracefully at the top. *Latania Borbonica* or African Fan-palm is a stately object. The plant from which we make these notes bears twenty fans, each being not less than three feet diameter. The leaf divides mid-way, the division being a foot or more long and then again parts mid-way toward the circumference. The petioles, about six feet long, curve from the bottom by the weight of the fans so as to make them spread over a circle not less than forty feet circumference. Small specimens of this palm may be placed in almost any plant-structure and thrive quite well even in sitting-rooms.

A plant of *Euphorbia splendens* is an instance of skilful training. This contrary, prickly thing is made to cover very uniformly a wire globe four feet in diameter. It is healthy in every part, well-foliaged and blooming with its two-petaled rosy little flowers.

Cycas revoluta. A specimen of this, though not superior to several others, is marked "Owned by Robert Morris of Philadelphia during the Revolutionary War." It has a stem eighteen inches diameter and four feet high, presenting the usual appearance of having been blackened by burning. At the top is a fine spread of leaves seven feet in diameter. This Cycad is comparatively hardy and is benefited by exposure to the rains of summer. And the same may be said of the Fan palms *Chamaerops excelsa*, *humilis*, *macrocarpa* and *Palmetto*; of *Dion edule*, *Corypha Australis*, *Phœnix dactylifera*, *reclinata* and *sylvestris*, *Ptychosperma Cunninghami*. They should be kept out of doors until frost, and they may then be placed in sitting rooms for the winter, where they will endure (*C. Palmetto* excepted perhaps) the dust and gas. *Chamaerops Palmetto*, our Southern, and indeed only arborescent species of Palm, is offered in almost every European catalogue. We suppose, however, that the knowledge that we can at any time take a look at it by stepping "down South," deters our florists from giving it a place.

Horticultural Hall is not at its best yet. In one of the side houses Mr. B. S. WILLIAMS is still opening his plants, though enough are displayed to give an idea of the varied and costly characters of the collection when fully arranged. Mr. WILLIAMS is the well-known proprietor of the Victoria and Paradise nurseries of London, and few men living have, by fair dealing, intelligence and enthusiasm, shown a higher appreciation of what is due to horticulture, whether viewed as an art or a science.

The most creditable display at present is that of Mr. GEO. SUCH of South Amboy, N. J., whose plants occupy another of the side houses of Horticultural Hall.

One stage is given chiefly to tender Caladiums. "*Triomphe de l' exposition*" has a green edge, gradually changing to a metallic red in the center of large leaves, and is very showy. "*Brogniarte*" is merely veined red. "*Meyerbeer*" is silvered over the entire leaf; veins of green and rose. "*Cannarti*" is the same as "*Triomphe*," with the addition of white splashes.

One should notice the specimens of *Adiantum Farleyense* and *gracillimum* here exhibited, to know of the full grace of which those delightful Ferns may be possessed when properly cared for.

Croton angustifolium is a perfect fountain of green and golden leaves. The leaves are a *foot* long and scarcely an *inch* wide—some of them pure yellow, others striped with green. The plant is four feet high.

Ficus Parcelli is five feet high, variegated and splashed with white.

You who have heard so much of *Carnivorous* Plants; you who may have read of a newspaper suggestion that they might be utilized to destroy the Colorado potato beetle—be not surprised when, looking down into a glasss case, several specimens of the ferocious *Dionœa muscipula* look up at you with "fly-catchers" scarcely half an inch in diameter. These are *baby Dionœas*—but they inherit from birth all the ferociousness of their parents, and hence are confined in strong glass cases, so as not to endanger the fingers of incautious children or fearless grown folks!

Nowhere—either out-of-doors or indoors—do we see a sign of our distinguished nurserymen ELLWANGER & BARRY of Rochester. And there was so much to hope from them, too.

PLANT EXCHANGES.

WE see the following in the London Garden: "A pamphlet was put into my hands the other day by a botanical friend, entitled, "Rules for the London Botanical Exchange Club," that is to say, a club meant to facilitate the exchange of dried specimens of plants. My friend, however, on showing it to me, said—Why cannot something of this sort be done with living plants? And the idea seemed to me to be so good that I venture to trouble you with a few lines about it. Any one who is trying to form a collection of living plants must know how often he has more of some rare and good plant than perhaps he cares for, while another person would be glad to give in exchange for it what he would prize very highly. Indeed, exchanges among the lovers of rare and beautiful plants are not unfrequent now.

My object, then, in writing this letter is to ask if any system could be introduced like that alluded to above by which exchanges could be made more easy than they now are and those who are pursuing the same end could be brought into contact with each other. Only a small annual subscription would be required, as in the case of the London Botanical Exchange Club. The greatest difficulty would be (as in its case) in finding a secretary; but might not this office be held in turn by different members?

It would not then, I think, be so very burdensome. Lists of desiderata could be made out and there would thus be very great assistance in forming collections. At all events, if you think it worth while, I shall be glad if the idea can be ventilated in your columns. Nurserymen would have nothing to fear from it, for it never could take effect on a large scale, and it would be only among those who already have some rare and beautiful plants which they offer to others. I think it would, from one point of view, even tend to the purchase of rare and expensive plants. One could buy them with a view of exchanges after a little time, when they have been multiplied."

The Editor replies:—"We believe all attempts to establish a system of plant exchanges in this country have hitherto failed."

The floricultural readers of the RURAL NEW-YORKER will remember our announcement a month or so ago offering to publish the names of plants which our subscribers wished to exchange. We received six letters. One was rejected as being an advertisement—the others were published.

We were not aware at the time of making this exchange offer that various systems had been tried and had failed in England as the editor of the London Garden's comments would indicate—and we deemed the plan an excellent one for those who loved plants and who were too poor to purchase them—a belief that was strengthened by private congratulatory letters.

Owing to changes in the RURAL management which were then under way, the announcement was made rather late for exchanges of seeds or plants and this may have caused the partial failure of our plan. In the fall, however, when seeds have been gathered—when bulbs, herbaceous and other plants have been removed to the house and when hardy things may be transported by mail or express in safety, we will again hold ourselves in readiness to publish brief lists from our subscribers. If in this way we can serve them, we shall be glad to do it. If they are not to be served in this way—why we shall not feel the worse for having tried to serve them and failed.

FLORICULTURAL NOTES.

The current shoots of Rhododendrons should be supported against high winds.

Eucalyptus Globulus.—Seedling plants of this flourish finely out of doors. The leaves change in color to a decidly blueish-green, the blue being almost as decided as the green. The leaves grow wider (or less lanceolate) than the sketch we gave a few weeks back—and it is altogether a pretty plant among sub-tropical subjects.

Aesculus Rubicunda, the red-flowering Horse-chestnut. Each raceme is larger than that of a Hyacinth—very much like it in general appearance and quite as pretty. The price of a good Hyacinth bulb is 25 cents. The price of a Horse-chestnut tree is one dollar. By the time the Hyacinth has exhausted itself and becomes worthless (from two to three years if planted in the ground) the Horse-chestnut in its season will be blooming profusely. Not to count its fresh, ample foliage—the shade it offers and the beauty it adds to all about—we have then and ever after, in late May or early June, scores of racemes for the single one of the Hyacinth that blooms itself out of existence in two or three springs. We do not think less of the brilliant Hyacinths—but we venture to hint to those who buy them by the dozens for winter window ornaments and who have not a tree about their homes, that, for *one* season, they get along with four Hyacinths less and invest the dollar in a red-flowering Horse-chestnut.

The Naturalist.

ANIMAL PARASITES.

PROF. VAN BENEDEN, of the University of Louvain, France, has recently written an interesting little work entitled "Animal Parasites and Messmates," in which he has contrived to compress a great deal of curious information regarding a subject much more extended than the reader not versed in modern progress of natural history would suppose. He divides the strange creatures of which he treats into three classes: First, messmates, or those who join others to make a living, or a home, or protection; second, mutualists, or animals which live on each other without being either parasites or messmates; and third, the parasites, whose profession it is to live at the expense of their neighbors, and whose only employment consists in taking advantage of them, but prudently, so as not to endanger their lives.

While it would be impossible here to follow the numerous distinctions which he draws among the members of these different classes, it will perhaps prove interesting to note a few of the most odd and novel peculiarities of the creatures belonging to each. There is a fish, he tells us, called the *holothuria*, which is a living boarding-house for the *fierasfer*, an eel-like animal. The latter is lodged in the digestive tube of his companion, and, without any regard for the hospitality which he receives, seizes, on his portion of all that enters. The angler or *baudroie* of the Mediterranean often harbors, in the bronchial sac, a kind of eel, which is abundantly able to take care of itself, but prefers to live a life of idleness and share its host's spoils. The shark is accompanied by the pilot fish, which does not, as is often reported, exist on the leavings of his larger companion, but on his own industry, and doubtless finds some advantage in piloting his neighbor.

Another remarkable fish, the *remora*, literally moors itself to the body of the shark, thus converting the latter into a vehicle, which carries him about without exertion on his part. When he becomes hungry he lets go, and hunts for prey wherever he may happen to be. This tenacity of the remora in attaching itself is taken advantage of by fishermen of Mozambique Channel in order to capture turtles and large fish. They pass through the tail of the remora a ring to which a cord is attached, and then send it in pursuit of the first passer-by which they consider worthy to be caught. The fish holds on to its prey so firmly that it only remains to haul victim and captor in by the line.

There is a crab, of the family of *maida*, which conceals itself in the substance of a polypidom; it is common in the Viti Islands, in company with a gasteropod mollusc, and both of them assume the exact color of the polypidom. This is a new kind of mimicry. Another crab appropriates a real anemone to form a living cloak to hide it from view, in order that it may spring out from the ambush to attack prey. Remarkable marine creatures are the *birgi*, a kind of crustacean which grow very large, and conceal their abdomens no longer in a shell, but in the crevices of rocks. In the East Indies they remain on land, and even climb trees. They have so much strength in their pincers that it is related that one, while stretched on the branch of a tree, "raised a goat by the ears." A family of isopods are rather dangerous messmates, it would seem, for they eat into the walls of their host's stomach and live like Sybarites on its contents.

The most interesting fixed messmates are the cirrhipedes, which cover the skin of whales, which they never quit after once choosing their abode. Each whale lodges a peculiar species, so that the crustacean messmate is a true flag, which indicates in some respects the nationality. It would not be without interest for voyagers who are naturalists to study these living flags.

Among the mutualists may be mentioned the ticks, one generic species of which has twenty species of which lives on the dog, another on the cat, and another on the ox. Fish parasites multiply so rapidly that they cover their hosts as though they took the place of scales. The cod gives lodging to a species of very beautiful shape, which in its turn affords a resting place for a still smaller organism. In the midst of the eggs of the lobster there lives an animal of extreme agility, which our authors considers the most extraordinary being ever subjected to the eyes of a zoologist. "Let us," he says, "imagine a clown in a circus, with his limbs as far distended as possible, displaying the tricks of strength and agility on a heap of monster cannon balls which he struggles to surmount—placing one foot formed like an air bubble on one ball, the other foot on another, alternately balancing and extending his body, folding his limbs on each other or bending his body upwards like a caterpillar—and then we shall have but an imperfect idea of the attitudes which it assumes and which it varies incessantly."

There is no organ which is sheltered from the invasion of parasites; even in man, *cysticerci* have been found in the interior of the lobes of the brain, in the eyeball, in the heart, and in the substance of the bones, as well as in the spinal marrow. Each kind of worm has also its favorite place; and if it has not the chance of getting there, in order to undergo its changes, it will perish rather than emigrate to a situation which is not suitable to it. One kind of worm inhabits the digestive passages; another occupies the *fosse* of the nose: a third, the liver or the kidneys. Each animal has its proper parasites, which can only live in animals having affinity to their peculiar host. Thus the *ascaris mystax*, the guest of the domestic cat, lives in different species of *felis*, while the fox so nearly resembling in appearance the wolf and the dog, never entertains the *tænia serrata*, so common to the latter animal. The same host does not always harbor the same worms in different regions of the globe. Thus the large tapeworm of *bollariocephalus*, is found only in Russia, Poland and Switzerland: a small tapeworm, *tænia nana*, is observed nowhere except in Abyssinia, and, strange to say, the natives consider their absence from the body a sign of ill-health; the *anchylostoma* is known only to the south of Europe and the north of Africa, the *filaria* of Medino in the east and west of Africa; and the *Bilharzia*, a terrible worm, has been found only in Egypt.

THE OSTRICH DOMESTICATED.

AN English settler at the Cape of Good Hope gives this account of his ostrich stock in a private letter:—"I have a flock, or herd, or covey, or whatever else you like to call it, of 27; they are perfectly tame, and will follow me all over the place; in fact, I feel sure that they were intended to be domesticated. I have only to get outside and whistle, and the whole troop comes as fast as their legs can carry them in hopes of getting some maize, which they are very fond of. They eat almost anything, but there is so much round the house and in the old lands that they scarcely require any artificial food; but I generally give them a feed of lucerne once a day, and they seem to relish it more than any thing else. They are plucked first at about eight months old, and afterwards every seven months. The feathers are not of much value, but nevertheless return 25 per cent. per annum. The second plucking brings that up to 80 per cent. and the third about 110 or more. The feathers are then prime, and the yield from each bird, taking cocks and hens together, is about £9 or £10. The price of birds two months old is £9, and I intend to make up my number to 45 this season, and when they are full grown I expect to get £750 a year for their feathers alone, without counting increase. Wild birds are very scarce within the colony, and are only to be found in numbers far in the interior, where they are also rapidly decreasing. This accounts for the price of feathers. Of course, the demand is increasing throughout the world, so that it will be many years before the domesticated birds make any marked difference in the market. No stock gives so little trouble; they thrive where a donkey would find it hard lines to live."

Domestic Economy.

HOW TO SET A TABLE.

THERE is no surer test of refinement in persons or families than the manner and style in which their food is served and eaten. Absolute and thorough cleanliness is the first requisite in the preparation and serving of food. Next to that may be placed taste and judgment in the arrangement of the table and the succession of courses. But, leaving all side issues, let us attend simply to the question in hand, "How to set the table." In the first place the sides of the table should be parallel with the sides of the room. It is simply distressing to a person with an eye to symmetry to have the table set out "askew." In the next place the tablecloth, which should be clean, white and nicely ironed, must be put on so that the middle of the cloth be parallel with the sides of the table. The plates are usually placed around the table and turned down to prevent any dust or other defilement from soiling them. Often, however, when they have been in the warming oven they are placed in a pile before the host, and after being served, handed to each guest. At the right of the plate, at right angles to the side of the table, is the knife, with the edge of the blade turned from the plate; parallel with that is the fork, with the tines turned down. The handles of the knife and fork are an inch or two from the edge of the table. Parallel with the edge of the table at the side of the plate opposite the guest is the spoon, with the bowl turned down. The napkin is sometimes placed at the right of the fork, sometimes on the plate, sometimes folded in fancy style and put in the goblet, but all the napkins on the table are in the same respective position. At the right-hand corner of the plate is a little butter receiver, of glass or of china, and a salt cellar. All the butter plates are in line, all the salts in line; so of the glasses or goblets, which are near the salts. In the center of the table is the caster, or in its stead a vase of flowers or fruit. On one side of these stands the butter; on the other sauces in bottles, pickles and relishes. In the waiter at the end of the table occupied by the hostess, at her right, are coffee cups and saucers, at her left those for tea; the slop-basin and milk pitcher are at the left, the cream and sugar basin at the right. The tea and coffee are served in urns or pots and placed in front of the hostess. In this position they are not likely to burn the hands of the one at the right of the hostess. Bread is placed at the left of each plate, or laid on the plate, or nicely cut in slices and set on a bread plate at each end of the table. Soup is always served by the host. Fish is also served by the host, unless there are two kinds, when he serves the boiled fish and the hostess that which is fried. At the top of the table is placed the roast, at the bottom the stew. Where there is but one principal dish it is served by the host. If there are three, one is placed before him, the others opposite each other near the bottom of the table. Vegetables and other dishes occupy positions between the principal dishes. As each dish is set on a mat, and if for a time removed and returned to its place again, the table once properly set is easily kept in order till the repast is over.

Puddings and pies are generally served by the hostess. It is a good plan in teaching children and servants how to set a table to draw a diagram of the table with all the dishes in place and write down the names so that everything will be plain. Paste this on the inside of the closet door and then offer a suitable reward for perfect conformity of the table to this plan. The point to be made is uniformity in setting the table, that everything shall be precisely in its place every time. The very look of a well-set table is appetizing, and when, in addition to this, the air of the dining room is sweet, the walls are pleasantly decorated with pictures, the chairs are comfortable, the hostess is lovely, sweet-voiced and hospitable, the most languid appetite is stimulated and every sense is gratified. The table may be decorated with flowers or fruit, one or both. If there are neither, napkins of delicate tints relieve the white. They may be placed in the bread tray or the cake-basket, though white is usually preferred. In some of the best families of the South, breakfast and tea are always served without a cloth, on a handsomely-polished mahogony or black-walnut table. Under each plate is a napkin fringed and worked in cross stitch with scarlet cotton where the fringe ends. Mats of white crochet with scarlet edges, receive the dishes and contrast with the dark brightness beneath them.

The above directions for "setting a table" are from a lady correspondent of the New York Tribune.

MRS. BOCKEE'S CHOCOLATE CAKE AND CHICKEN SALAD.

French Chocolate Cake.—One cup sugar; ½ cup butter; 1½ do. flour; ½ do. milk; 3 eggs; ½ teaspoon of soda; 1 teaspoon of cream of tartar. Bake as for jelly-cake paste. Mix the chocolate with water enough to moisten, after it is grated. (This is better made the day before it is used.)

Another.—Two cups sugar; 1 do. butter; 3 do. flour; ¾ do. milk; 3 eggs; ½ teaspoon soda; 1 teaspoon cream of tartar. Paste—2 oz. chocolate; 1 cup sugar; ½ cup of sweet milk. Boil half down and flavor to taste.

Chicken Salad.—To two chickens, 1 qt. sweet oil; the yelks of four eggs; ½ cup of mixed mustard; ½ do. lemon juice. Cut up the chickens; add 1½ as much chopped celery measured. Salt to taste.

ANOTHER RECIPE FOR CHOCOLATE CAKE.

ED. RURAL: In response to the call in your last issue for Chocolate Cake recipe, I send one of ours, with sample, as the value of the recipe can be best estimated thereby; the "proof of the pudding" being always "in the eating."—Two cups sugar; 1 cup butter; 3½ cups flour; 1 do. milk; 3 eggs and yelks of 2 more; 1 teaspoon soda—dissolve in the milk; 2 teaspoons cream of tartar—mix in the flour. Frosting—Whites of 2 eggs; ¾ cup of pulverized sugar; 4 tablespoons of grated French chocolate. Flavor with vanilla or to suit taste. MRS. E. T. MILLER.

[The cake received, and found excellent. The promised recipes will be very acceptable.—ED.]

HOW TO DYE MOSSES, GRASSES, AND FLOWERS.

A GERMAN paper with an unpronouncible name, tells how they dye grasses and similar articles in Germany, from whence large quantities are sent to this country:

To Dye Moss.—Green: Boil ½ lb. of alum in 4 quarts of water, and dissolve ½ lb. of finely triturated mineral-blue in it, and a dark green dye is the result. Or a very beautiful green dye may be made with indigo—carmine and picric acid, adding water to reduce it to the desired hue. As picric acid is rarely to be had of uniform strength the exact proportions cannot be given. The same dye may be used for grasses.

Black: Two ounces of logwood in 1 quart of water, ¼ oz. of alum, and 3 oz. of copperas, the whole boiled together and the moss dipped into it while hot. Or two parts of logwood and one of Fleabane, thoroughly boiled together, and a little green vitriol.

Red: The best way to make this color is to boil as much red aniline in rain-water as will produce a pretty red. The dye should be hot when the moss is dipped.

To Bleach and Dye Everlasting Flowers.—Bleaching: Put a number of flowers, which have previously been placed in a warm chamber to cause them to open, in a vessel containing a solution of chloride of lime, ½ oz. of soda, and 2 quarts of water. Cover the vessel and leave it as it is in a moderate temperature for four or five days. During this period the flowers first change to an orange color, and afterwards to a bluish-white. As soon as these changes show themselves, take the flowers out and pour off the fluid, and fill it up again, using this time only 1 oz. of chloride of lime and no soda. Let the flowers remain in this until quite white, subsequently drying them in a warm oven.

Dyeing.—Carmine: ¼ loth (about 2 drachms) of Munich lac, ¼ pint (about ½ drachm) ultramarine blue, dissolved in 12 loth (about 6 ounces) of warm water.—Rose: ¼ quint of extract of safflower, dissolved in 1 quart of cold water.—Dark blue: 1 loth indigo extract in a quart of water.—Cornflower blue: ½ loth blue aniline, 2 loth spirits of wine, in 1 quart of water.—Violet: ½ loth violet aniline, with the same proportions of water and spirit.—Light blue: ½ loth Prussian blue, dissolved in a quart of water.—Dark blue: 1 loth of catechu, boiled in a quart of water.—Light green: ¼ loth picric acid, and ½ quint of indigo in 20 loth of alcohol.—Black: as given above.—Orange: 3 loth of borax in 2 quarts of hot water, leaving the flowers to steep for some time.

The dyes for grasses, &c., are made in the same way.

SELECTED RECIPES.

Crumb Pie.—Mince any cold meat very finely, season it to taste and put it into a pie dish; have some finely-grated bread crumbs, with a little salt, pepper and nutmeg, and pour into the dish any nice gravy that may be at hand; then cover it over with a thick layer of bread-crumbs, and put small pieces of butter over the top. Place in the oven until a fine brown. Send to the table hot.

Old-fashioned baked Indian Pudding.—Take a large cup of meal and a teacupful of molasses and beat them well together; then add to them a quart of boiling milk, some salt and a small piece of butter. Let it stand awhile in the dish you are going to bake it in until it thickens, and when you put it into the oven, pour over it from half to a pint of milk, but do not stir it in, as this makes the jelly. Bake two or three hours.

Strawberry Blanc Mange.—For a quart of strawberries, take four ounces of white sugar; crush the strawberries well with the sugar. In an hour or two strain them through a seive. In a pint of boiling milk dissolve one package of gelatine; sweeten to taste; strain through coarse muslin; and mix with it one pint and a half of sweet cream; stir until nearly cold, then add the strawberries gradually, beating the two thoroughly; add the juice of one lemon. Pour the mixture into molds and set in a cool place over night.

Blanc Mange.—Dissolve one box of Cox's gelatine in a pint of boiling water; add a quart of rich milk, bring the whole to boiling heat; strain it. Put in two ounces of blanched almonds, pounded; sweeten with loaf sugar, and turn into molds. When turned from the molds, stick thin slips of almonds all over the blanc mange and dress around with whip cream.

Charlotte Russe.—One quart of sweet cream; four eggs; half a package of gelatine; a quarter of a pound of loaf sugar. Beat sugar and yelks together; add whites, beaten stiff; whip the cream light and smooth; flavor with vanilla; stir all together and strain in the dissolved gelatine. Serve in a glass dish, ornamented with lady-fingers or macaroons.

Strawberry Ice Cream.—Take two pounds of fresh strawberries, carefully picked, and, with a wooden spoon, rub them through a hair seive; add the juice of one lemon; sweeten to taste; color with a few drops of prepared cochineal; stir in one pint of sweet cream, then freeze.

Rice Balls.—Take any kind of cold meat, chop fine, and season with salt, pepper and a little parsley; wash rice and mix with it; tie up in cloths to shape balls; boil three quarters of an hour. Serve with drawn butter.

Lobster Balls.—Mince the meat with the coral, season, make it in balls, mixed with bread crumbs and butter; dip them in beaten egg, then in rolled crackers, and fry a delicate brown in hot lard, or part lard and butter.

Lobster Curry.—Put the meat of a large lobster into a stew-pan, with a blade of mace, a large cup of meat stock or gravy, a tablespoonful of cornstarch mixed smooth, with a little milk or cream. Add salt, a small piece of butter, a dessert-spoon of curry powder and the juice of one lemon. Simmer for an hour and serve hot.

English Cookies.—One cup of brown sugar, half a cup butter, one egg, two tablespoonfuls sour cream, a little soda, cloves, cinnamon, nutmeg; make hard enough with flour to roll out; cut in thin cakes.

Hygienic Information.

HOW TO BECOME HEALTHY.

A WRITER in Tinsley's Magazine gives his opinion and experience on this frequently discussed subject. He starts out by saying:

"Nobody ever repented of eating too little," was the sage remark of an old gentleman, on the verge of ninety, next to whom the writer had the pleasure of sitting at dinner the other night. The host was pressing him to eat more, and urging him in the usual phrase, "Why, you have eaten scarcely anything!" Now, it is to be assumed that the old gentleman's words indicated one of the by-ways to good health, along which he had traveled through his long life, and to which he owed his present remarkably hearty condition; so it was suggested to him, interrogatively, that he had always been a small feeder.

"Yes," he said, "ever since I was two or three and twenty; up to that time I was a weakly fellow enough; and I used to make the mistake of trying to eat and drink as much as I could, in the hope of becoming strong. All my friends and the doctors backed me in my error; but fortunately I found it out in time, and 'knocked off,' as your modern slang has it—more than half my usual amount of stimulants. I gave up the idea of making myself strong, and merely strove to make myself well, and I was content with eating just as much as I could digest, and no more. Of course it took a little time and experience to discover the precise limits. I could not adopt the golden rule of always leaving off with an appetite, because I never began with one, but by persistently erring on the right side, I got hold of one of the great secrets of life—the secret of knowing when one has enough, and after a year or two I became so much better that I used to find myself keenly ready to eat at meal-time, and by degrees, actually acquired an appetite. Then, once found, I never destroyed it, but always determinately rose with the feeling that I should like to eat more. Naturally, the temptation for awhile grew greater as my digestion grew stronger; but I was firm; I did not behave ungratefully to my stomach, and immediately presume upon its increased powers by overloading it; I did not live to eat, but only ate to live; and behold me! I have no need to be very particular as to what I eat, even at my time of life; I have only to be careful not to eat too much."

Here, indeed, is the great secret of a great deal that is amiss with many of us. We are in the habit of eating too much, more than our digestive powers can tackle, and that which is not assimilated, more or less poisons. The system becomes overcharged, and gives any latent tendency to disease within us, every faculty for developing itself. The question is not so much what to eat, as what quantity to eat; and nothing but a sharp lookout, kept by ourselves, can give us the answer.

PATENT FOODS.

THE Lancet does not place much confidence in the various patent foods, although it is very much the fashion in the present day to feed invalids, and especially children, upon foods which are either patent or of secret composition, and which are sold to the public in tins hermetically sealed. We doubt not that many of these foods are valuable preparations, and we know that analyses of samples have often shown that the contents of the canister are at least harmless. We think, however, that the public have a right to know what is the composition of the article which they are advised to give to their invalids and children, and we wish that the Legislature would enact that all patent compositions should bear a plain statement of their ingredients upon the cover. "This is sold as a mixture of chicory and coffee," in certain proportions, has become a familiar label and those who prefer the mixture to the pure article are able to gratify their taste with their eyes open, and if, upon an analysis, they find that the proportions named have not been kept, or that any other ingredient has been put in the mixture, they have their remedy at law.

We wish we could see the patent foods labeled in the same way and we think that in justice to the public they ought to be so labeled. If the public were informed that the mysterious compounds with the Greek or Latin name, or the name of some doctor appended to them were composed of "lentil flour, barley-meal and sugar," or "baked flour and Swiss milk," or "Indian corn, oatmeal and salt," they would know what they are buying and it would be possible for medical men conscientiously to recommend them; but as matters stand now, a poor woman may give a considerable price for a canister of potato starch, ground rice sweepings and sawdust which has been advertised perhaps under some enticing name and puffing statements, and she has no power of recovery at law. We do not say that such impositions occur, nor have we any particular article in our thoughts while writing this; but it is so obvious that such tricks might be practised, and the temptation to practice them is so great, that we should strongly advise our readers never to recommend or order patent food for their patients unless the composition is definitely stated on the packet.

HOW TO BREAKFAST.

LET a healthy man "break" his "fast" with a substantial meal, and not break his breakfast with irritating little nips or slops beforehand. After the stomach has at its leisure emptied itself during sleep of its contents, and sent them to repair the worn tissues and exhausted nerve force, and the blood has been purified by washing and dressing with the window open, then is the time when the most perfect of all nutritive articles, farinaceous food, can be consumed in larger quantities with advantage. Butter also, and fat and sugar, troublesome customers to weak digestions, are then easily coped with, and contribute their invaluable aid to performing the duties of the day.

For example, many persons can drink milk to a fair and useful amount at breakfast, with whom it disagrees at other hours. And the widely advertised "breakfast bacon" by its name warns the consumer against indulgence later on in the day. *Cafe au lait* and sweet creamy tea are to many men poisonous in the afternoon, though in the prime of morning they are a wholesome beverage for the same individuals. Let the vigor, good humor and refreshment then felt by a healthy man be utilized without delay in eating a hearty meal immediately after he is dressed and not frittered away in the frivolities of other occupations. Let not reading, writing or buisness—muscular, political or economical—exhaust the nervous system. The newspapers and letters should not be opened, preferably not delivered till the appetite is thoroughly appeased.

CARBONIC acid gas is heavier than atmospheric air. In ventilating our sleeping-rooms and other apartments, the ventilators should, therefore be at the bottom.

"PROGRESS AND IMPROVEMENT."

MOORE'S RURAL NEW-YORKER,

A NATIONAL ILLUSTRATED

RURAL, LITERARY AND FAMILY NEWSPAPER.

ANDREW S. FULLER, Editor.

ELBERT S. CARMAN, - - Associate Editor.

X. A. WILLARD, A. M., Little Falls, N. Y.,
EDITOR OF THE DEPARTMENT OF DAIRY HUSBANDRY.

G. A. C. BARNETT, Publisher.

TERMS FOR 1876, IN ADVANCE,
INCLUDING POSTAGE, WHICH PUBLISHERS PREPAY.

Single Copy, $2.65 per Year. To Clubs:—Five Copies, and one copy free to Agent or getter up of Club, for $13.40; Seven Copies, and one free, for $17.20; Ten Copies, and one free, $21.50—only $2.15 per copy. The above rates *include postage* (under the new law,) to any part of the United States, and the American postage on all copies mailed to Canada. On papers mailed to Europe, by steamer, the postage will be 55 cents extra—or $3.50 in all. Drafts, Post-Office Money Orders and Registered Letters may be mailed at our risk. ☞ Liberal Premiums to all Club Agents who do not take free copies. Specimen Numbers, Show-Bills, &c., sent free.

ADVERTISING RATES:

Inside, 14th and 15th pages (Agate space)	60c.	per line.
" 13th page	70	"

SPECIAL ANNOUNCEMENT.

BELIEVING that the best of everything is none too good for the readers of the RURAL NEW-YORKER, we are pleased to announce the completion of arrangements with a number of our most noted scientists and writers on rural subjects by which they become occasional or frequent contributors to our columns. Among those from whom contributions have already been received or promised, we name:

S. B. PARSONS of Flushing, N. Y., author of the "History of the Rose," essays on rural topics and proprietor of one of our most celebrated collections of rare exotic plants.

WILLIAM ROBINSON, F. L. S., London, Eng., Founder and Editor of the Garden and author of "The Parks, Promenades and Gardens of Paris," "Alpine Flowers," etc., etc.

Col. F. G. SKINNER, Editor of Turf, Field and Farm, N. Y., long and favorably known as one of the adepts in all that pertains to the field sports of America.

Prof. CHAS. V. RILEY, State Entomologist of Missouri, whose fame as a scientist is not confined alone to America.

HERMAN STRECKER, Reading, Pa., the noted Lepidopterist and author of a celebrated work on butterflies and moths, native and exotic.

WM. J. FOWLER, late one of the Editors of the R. N.-Y. and well known throughout Western New York as a thoughtful and practical Agriculturist.

THOS. MEEHAN, Editor of the Gardeners' Monthly, author or the "Hand-Book of Trees," etc., etc., and CHARLES DOWNING, the veteran Pomologist, kindly promise to send occasional articles.

GEO. SUCH of South Amboy, the enthusiastic collector and cultivator of rare exotic plants.

JAS. VICK, the genial Rochester florist, who has done as much as any man in this country to create and promote a love of floriculture.

JOSIAH HOOPES, the noted botanist and nurseryman and author of "The Book of Evergreens."

We hope to announce a more extended list of noted names ere long, but will commence the series already secured with an article on "American Plants." by S. B. PARSONS, Esq., which will appear next week.

IN CONFIDENCE WITH OUR READERS.

THE subscribers and readers of the RURAL NEW-YORKER have probably made up their minds ere this how they like the late change in its management. Whether this change has been for the better or otherwise, it is not for us to decide, but from the many commendatory letters received and number of new subscribers coming in, both singly and in clubs, we conclude that our efforts to improve, have not been in vain or failed to be appreciated. However without desiring to apologize for any short-comings should such have occurred, nor boast of improvements, or make promises for the future, we will say that our aim is to still further improve the RURAL in all and every one of its departments. Now if its readers think we are making a paper worthy of commendation and extended circulation, will they say so to their friends and neighbors?

Look over its sixteen pages, examine the quantity and quality of the matter contained therein—note whether there is anything, which you would not be willing that your wife, daughter or sweetheart should read. Procure copies of other journals occupying a similar field and make a close and careful comparison, after which make up your mind whether the RURAL NEW-YORKER is, or is not worthy of your hearty support, if it is not, don't give it, nor ask your friends to do so, for such an act is not commendable even to extend the circulation of the best paper ever published. We ask nothing beyond our just deserts, or a penny from a patron for which a full equivalent cannot be returned, still we hope to deserve a large increase in our circulation.

The second volume of the year commences with this number and accompanying it we send the index for the first, given on an extra sheet, in order to avoid crowding upon or curtailing in any way the contents of the regular issue, as has been the former practice. While returning thanks for the liberal patronage extended to us in the past, we would remind our readers that the commencement of a volume is an excellent time not only to renew subscriptions but to ask others to join you in making up a club. A hint to our friends is doubtless sufficient on this point.

YOUNG MEN AND LIFE INSURANCE.

THE persistency of the Life Insurance Agent has become so generally understood that, on his appearance, most well-informed persons surrender at discretion. We are more ready to excuse this persistency in him than in almost any other canvasser, for we know of none other, the canvassers of the RURAL NEW-YORKER alone excepted, against whose arguments so little can be said. He has the satisfaction of knowing the right is on his side, and that if he succeeds in his efforts he is doing a favor to the insured as well as to his company and himself. All parties to any bargain should be benefited by it, although we are sorry to say this is not always the case.

Individual instances there doubtless are where it is not positively a duty for a man to insure his life, but these instances are so rare as to make them the exceptions, which, it is sometimes said, are necessary to prove any rule to be in the main correct; and from these the steps are gradual until they reach those whom it would seem are entirely inexcusable if they neglect it. Our purpose at this time is to consider one of these latter classes. This interest it is your duty to secure to her. We desire the attention of the young men who have just taken upon themselves the care and protection of a wife—and probably many who read these lines are in that happy condition. Now, to each and every one of such we want to say—By your act and by your marriage obligation you have promised to "love honor and protect" her whom you have chosen. Of the love and honor portion of the promise we take no note at present. It is the *protection* we are to consider in the present connection. Not protection only for to-day, or for next year, but through her whole life. Protection from the want of any of the necessaries and comforts of life that money can secure.

You, we assume, belong to the working class. Whether you labor in the field, the shop or the counting house is immaterial. From hard days' works come your means of support. The day you were married your wife became possessed of a *pecuniary* interest in you, estimated by legislators at $5,000. If you should be killed in consequence of the carelessness of some employee on a railroad train your wife could collect that amount as damages from the company. This sum is fixed because it is supposed the average man can earn about a dollar a day more than the cost of his economical support. The income from $5,000, well-invested, is about a dollar a day. Should you die a natural death, or, what is quite as likely, at the hands of the doctor, no damages are collectable; there are no further avails from your labor and the protection you promised is at an end.

But Life Insurance offers a way by which that protection can be continued after your death. A payment of about two dollars a week—or a hundred dollars a year, which in a good company will be decreased yearly by dividends—will insure to your wife at your death five thousand dollars. Do you say you cannot afford to pay two dollars a week for security against such a contingency? Can you afford not to do it? Ask your wife what she thinks about it and if she will be willing to economize, give up occasionally a luxury or go without something neighbors "no better off than we are" have, in order to save the amount. Give your earnings to her; let her be the investor of the family and if she be worthy the name of wife you will soon see how sacredly the two dollars a week will be devoted to the payment of the premium.

You may say, that should you live to the ordinary age of man the premium, at interest, would amount to much more than $5,000. True—but there is a possibility that you may not live ten, five, or even one year—and if you should, it is also possible that the savings of many years will be swept away by some unfortunate investment. Look around you and see how many widows of men once in affluent circumstances, are, in their middle or old age, either suffering in poverty or being supported by their children, and see if it is not best to pay something to guard your wife against such a contingency. If you are worth but an hundred dollars in the world we insist the best use you can make of it is to buy a policy of insurance on your life for your wife's security.

And there is another view to take of this matter. Such an act may prolong your own life. Many a man has worried himself out of existence by thinking, on his sick bed, of the condition in which his wife would be left in case he should die. It is a natural psychological result, and the statement that life insurance tends to lengthen the life of the insured is not paradoxical. If you are so fortunate as to be the possessor of a few hundreds, or even thousands, well invested in a farm, in stock, at interest, or otherwise, so much the better; the payment of the amount of premium will be easier. But this possession brings with it another duty, namely: the disposition of it in case of your death, and making two things which if not done, should be before you are a day older, which are—to get your life insured and make your will.

RURAL NOTES AND QUERIES.

Disappointed Philadelphians.—It is said that Philadelphians are much disappointed at the scarcity of visitors to the Centennial, and as the millions who were to come to the show do not put in an appearance, the well-filled larder of good things provided for the inner man depart less rapidly than was expected. Had this great exhibition been in London, Paris or Vienna, thousands of our people would have crossed the Atlantic for the avowed purpose of seeing it; but in truth, only because it gave them an excuse for going abroad and to have this to talk about to the end of their days. Now when the greatest exhibition the world has ever seen is near by, this very "shoddyocracy" will affect to despise it because almost everybody can go if they choose to. The fact is, it is too cheap, or costs too little, to visit the Centennial to create any enthusiasm with the average American who professes to take pride in sight-seeing.

Tell Us Your Experience.—The cultivators of the soil are experimenters in the broadest sense of the term. Every seed sown or tree planted is but the beginning of an experiment the result of which belongs to the unknown future, there being nothing positively certain in regard to what follows the slightest act or operation. Now among the millions of experiments annually conducted by our readers, there must be an occasional variation in results from known causes which, if told, would be of benefit to others situated under like circumstances. We ask our readers to bear this in mind and when reading of what others have done, think if there is nothing in their experience worth telling; if so, jot it down and send it along, thereby becoming a contributor even if in a small way, to the sum total of human knowledge.

New Jersey Horticultural Society.—We are indebted to E. WILLIAMS, Secretary of the New Jersey Horticultural Society for copies of its first Annual Report. The regular minutes of the meeting during the year are given, also the address of President GEO. THURBER, as well as various essays read at the Annual Meeting in January last. The reported proceedings are creditable to this young Society and it is to be hoped that it will receive such support from the residents of the State as will enable the members to proceed rapidly and thoroughly in the good work begun under such favorable auspices.

Melon Sugar.—Although Melon sugar is no new thing, still very little of it is known in this country. Melons have long been cultivated in Southern Europe for sugar making and there is no good reason why we could not do the same and on an extensive scale, provided the manufacture of such an article was profitable. We notice that the subject is attracting some attention in California, but it may end no better than the beet-root sugar enterprises and silk-worm culture, both of which seem to hold on to life but show little vigor or profits to inventors.

A New Enterprise.—Mr. D. D. T. MOORE, Founder and late Editor of this journal, having regained his health, has established an Advertising Agency with the special object of doing business with the Agricultural, Horticultural and Grange Press. Mr. MOORE'S long acquaintance with this class of journals gives him rare qualifications for the line of business he has selected and we bespeak for him his full share of it and a prosperous and extended future.

RURAL BREVITIES.

I. W. S., Lyndonville, Vt., will greatly oblige us by sending his full address to this office.

IT is reported that the sales of cheese in the New York market one day last week, amounted to $800,000. Who will say, after this, that there is no sale for farm products?

WE learn from D. L. POPE, Superintendent of the Centennial Dairy Department, that he has received 11,000 pounds of cheese and 18 packages of creamery butter from Wisconsin.

HAY CAPS are something which every farmer needs. Address Messrs. PITKIN & THOMAS of 110 Chambers St., New York, or 71 North Second St., Philadelphia, who advertise them for sale *cheap* in another column.

PURSUANT to the plan announced by the Chief of Bureau of Agriculture at the Centennial, there was a stated display of Early Summer Vegetables and Honey in Agricultural Hall, extending from June 20 to 24. Raspberries and Blackberries will be next in order, commencing July 3d and ending July 8th.

THE grasshopper and the potato bug sink into insignificance when compared to the locust that has recently devastated the grain fields of the Spanish provinces of Badajoz and Cuidad Real. Over six thousand tons of the insects have been burned with petroleum in trenches, and 15,000 soldiers have been occupied in destroying them.

AT Point Reyes, Cal., there is a dairy farm of 45,000 acres, on which there are 3,000 cows. The farm, together with the cows, is rented in part to several tenants. They make from $1,000 to $2,000 per annum clear of all expenses. The yield from the cows is reported to be excellent; some of the butter ranches show an average of $80 per cow through the whole herd of 200.

OUR microscopists, not being satisfied with frightening people out of using brown sugar, on account of the presence of a minute spider found in it, now tell us that orange peel is inhabited by a species of coccus related to the cochineal. It's a good thing that everybody does not possess the desired time and instruments for looking into things in general, and their food in particular.

BUSINESS NOTICES.

IF you would insure good work, use only the "Phœnix Pure White Lead." Its whiteness, fineness and great body make it the most desirable paint.

SPRING-TIME AND FLOWERS.

BY MRS. E. P. MILLER.

ALL over the fields and the meadows
The dandelion blossoms have come;
The new, golden guineas of childhood,
Sun-coined in my far-away home.

Down by the swift-running brooklet
The sweet-scented violets spring;
The pitcher plant, too, in the fen-land,
And wild, yellow lily bells ring.

Along the broad lane to the pasture,
Sweet snow-drops, so coy, trail about,
While drifts in the edge of the forest,
Unlocking let finest ones out.

In the soft, springy moss of the wood-depths
The trillium and star-flowers bloom,
Spring-beauty and fair lady's-slipper,
Where cedars and balsam trees loom.

There the delicate partridge-vine is budding,
While berries of scarlet peep out;
And great snowy, wayfaring salvers
Are everywhere dotted about.

The checker-bush, too, with its younglings,
And fruitage delicious and gay,—
Our jewels of coral in spring-time,
With aroma as sweet as the May.

With aprons-full, yes, and with bonnets,
We, joyous, our treasures would bring;
O, blest are the memories of childhood,
And blest each new coming of Spring.

The Story-Teller.

LOVE AND DUTY.

BY IDA M. ALBRO.

THE clear starlight of a winter's night was softly shining on the hill-inclosed town of Webster. The great clock in the tower of the school building pealed forth the hour of four—welcome tidings to the sleepless, comforting them with the thought that the night was far spent and ere long their eyes would behold the dawn.

The solemn stillness came not back again as the clock ceased striking. Away on a hillside to the northward a farmer's dog had commenced a furious barking that acted as a signal for every yelping cur in town to join in a spirited chorus. The leader of this canine band, however, was too sensible a dog to be heard barking at such a common occurrence as the striking of the town clock. He had been awakened from his slumber by faint sounds of talking and laughter that came from a merry sleighing party far away over the hill, just returning from a midnight ride into the midst of a vast pine forest.

"Almost home," said one, as they reached the brow of the hill and looked down on the snow-clad roofs of the town.

"Anybody stop here?" asked the driver, as he drew up before a large dwelling that stood back from the street, presenting the appearance of being a stately private residence instead of that mockery of home and its comforts—a boarding-house.

"Yes; ELLEN BARTON and JACK CAMERON," a chorus of merry voices replied.

"Don't keep us waiting long, JACK," called the driver; "I want to get around home before daylight."

But JACK and ELLEN had not a care or thought for their companions. Slowly they went up the broad walk, bordered with sighing evergreen shrubbery—slowly and silently. The magic spell that held them silent was more expressive than anything words could communicate.

"Good night," said ELLEN, as they reached the door.

JACK clasped her extended hand but uttered no word of leave-taking.

"ELLEN!" That was all he said; yet that one word betrayed the tender and uncontrollable feeling that had been awakened within him for the pretty teacher who had lately accepted a position in the Webster Union School.

"JACK, we shall go on and leave you," came from the sleigh.

"May I come to-morrow evening?" he hastily asked.

She murmured an assent and entered the house with only the consciousness that never in her life had she been so happy.

But this happiness was of short duration. When she reached her room it was but a trivial circumstance that compelled her to come down from the ideal existence created by this newly-awakened feeling—down to real life again. The first thing that she saw by the light of her lamp was a letter lying on the table with the superscription uppermost—a letter that banished the blissful dream at once, leaving her painfully conscious of the demands of duty and the possession of a love which she felt must be hopeless.

The letter was from her mother. It contained nothing that was startling. It was like many other letters that she had received—written as only a widowed mother can write to a daughter who is her sole support in the feebleness of old age. A few trifling wants were made known in a manner that indicated a perfect trust in the daughter's willingness and ability to provide for them.

"O, JACK, it can never be!" exclaimed ELLEN, dropping the letter and covering her face with her hands. "How could I forget, for a single moment, that this world contains nothing for me but slavish toil and a giving up of all that makes life sweet and happy?"

Yet, as she sat there with bowed head, in imagination living over and over again the past, she could not help remembering how often she had thought that the greatest blessing of her life was ability to care for her mother and poor idiotic sister. For six years she had provided them food and clothing, every necessary of life excepting shelter. Her mother owned the house in which she lived. She had paid for it after the expenses of her husband's sickness and death had swept away the little property they had accumulated. But as the years went by, age and hard work began to tell upon her strength. When ELLEN was seventeen years of age she was summoned from school, whither she had been sent by the charity of a distant relation, with the intelligence that her mother had at last succumbed to fatigue and sickness. Then she determined that henceforth her time in the school-room would be spent as teacher instead of pupil. Thus she took upon herself the care of her mother and sister. And she now remembered how often she had thought if human strength were called to bear no heavier burden than hers had been, then she could see no cause for so much complaining of the sorrows and hardships of this world. But that was before she knew JACK CAMERON. To-night she felt that human strength could scarcely bear so heavy a burden as hers must be henceforth. She now realized for the first time how much the word, self-sacrifice, could mean. She had often confidentially told her young lady friends that she would never bring to any man, no matter how willing he might be to take it upon himself, the responsibility of caring for her mother and unfortunate sister. She had often said and told herself so still, that to the poor-house they should never go as long as she was able to support them.

"Poor-house!" exclaimed ELLEN with a shudder and she involuntarily started up and went to the window. "The very name has always filled me with a dread of which only those who have but the frail barrier, health, separating them from such a home, can form any conception."

She drew aside the curtain and stood for some time looking out of the window.

"Asylum does not sound so bad," mused she, as her gaze rested on a large building, the outlines of which were dimly visible in the pale starlight and coming dawn. "It has a more protective sound—more suggestive of comfort and respectability. What am I thinking of? How wicked I am!" she exclaimed, suddenly appalled by the thought that she was scheming to neglect the demands of duty.

"I must try and get some sleep," she said, wearily leaving the window. "The other girls can afford to spend a night for pleasure. Their time is their own and they can rest the next day."

Nine o'clock came and not for a moment had sleep rendered ELLA unconscious of the difficulty that lay in the way of her happiness. Never had the duties of the school-room been so irksome to her as they were all that day. Never had her pupils been so refractory. She could not awaken in them a particle of enthusiasm during their recitations. This sudden change was to her unaccountable; but if she had made the subject her study, she might have traced the cause home to herself. She might have perceived that it was her own discontent and distaste for the work that was reflected back to her from her pupils.

Professor COMPTON, the Principal of the school, paid a visit to her department during the afternoon. ELLEN looked upon this as an unfortunate event, for she could not bear to forfeit his good opinion of her fitness for the work in which she was engaged. It had afforded her much pleasure during former visits of the Principal to see upon his face a look of appreciation of the manner in which she performed her work. Now she hardly dared raise her eyes to his. And when she chanced to look up and saw him regarding her with such a puzzled expression on his face, the book fell from her hand and she was obliged to call forth all the self-control she was capable of exercising to prevent herself from breaking down entirely.

"Allow me to relieve you a few moments, Miss BARTON," said he, kindly; and under his supervision the pupils at once regained their usual animation.

ELLEN could not tell whether this was meant as an act of kindness or a rebuke; but she knew that she felt very grateful toward him for leaving the room as she called another class to the recitation seat.

"JACK will soon be here," said ELLEN to herself as she entered the boarding-house parlor that evening. "I must decide whether my future shall contain any happiness or whether I must drudge on and wear my life out in the school-room."

"Whether you will save your life for your own sake or do your duty," was the mocking response of conscience.

JACK came and ELLEN had not made her decision. His manner plainly showed that he considered himself an accepted lover.

ELLEN was at first powerless to disarm him of this opinion. It was only when he drew a beautiful ring from his pocket and attempted to put it on her finger, saying playfully, "Let me see how good I am at guessing," that she was able to tell him that his case was not quite won. She snatched away her hand and exclaimed with a vehemence that caused JACK to drop the ring, "It can never, never be! You do not know who my sister is."

"Yes, ELLEN. I do know about your sister. Do not think you can remain in such a gossipping town as this for any length of time without such a fact being as well known as yourself throughout the entire community;" and he stooped and picked up the ring.

"My mother expects that I will always take care of ALMA."

"Your mother wrongs you, ELLEN. Why should you spend your life for such a life as hers—a life that can benefit no one? Every county provides a home for such as she—a home that would be just as satisfying to her as the grandest mansion in the land."

"Wherever ALMA goes mother will go."

JACK couldn't immediately see a way out of this dilemma save that indicated by the thought, "Let her go, then." This he was too polite to express to ELLEN and he arose and went to the other side of the room. As he looked out toward the east through the partially closed blinds and saw the lighted windows of the asylum, the same thought occurred to him that tempted ELLEN as the morning twilight disclosed the outlines of this building.

"She might take ALMA to an asylum," said he, eagerly. "There would be no disgrace in that. Here is a popular asylum in this place. Why, the Hon. CHARLES SHELDON'S mother is there and he the richest man in town. The entrance fee for them both would be only $200. Of course they expect those that are able to work a little. ELLEN, I will pay this sum——"

"No, you will not. I can pay it myself; but I don't think mother would willingly consent to go there."

"She would be much better situated there than she now is with you so far away, and she could care for ALMA just as well at the asylum," pleaded JACK.

Although ELLEN would have felt very much aggrieved had she been accused of the fact, yet she really desired to be convinced that it would not be wrong to allow her mother to go to the asylum. And her usual good sense did not enable her to detect the fallacy of the reasoning by which she was convinced. When JACK went away the ring was on her finger and she tried to persuade herself that she was happy.

There was to be a vacation of three weeks between the winter and the spring term. It was decided that ELLEN should go home then and see how Mrs. BARTON would receive their proposition.

"It seems to me that ELLEN will be home to-night," said Mrs. BARTON, as she went to the window and looked out on the village street that appeared to be composed of equal parts of mud and snow. "It has been a long time since we heard from her, hasn't it, ALMA?"

The creature thus addressed wrung her hands, underwent various contortions of face and body, and then gave utterance to a prolonged cry that might sound to over-sensitive ears like a desolate wail for the return of lost reason.

Mrs. BARTON drew the poor creature's chair to the fire and sat down beside her to enjoy the warmth and to let her thoughts fondly linger around the dear one whose self-denial was making the pathway of her declining life so smooth and happy. She heard the heavy old stage coach coming down the street and as its rumbling ceased she started up, but half comprehending that it had stopped at her gate. She went to the window and saw that a lady was being helped out. Then she knew that her ELLEN had come home. Yet, from the very first, she felt that she was not the same ELLEN who had ever before been so considerate for her comfort. Formerly she had been very talkative, putting the utmost confidence in her mother, scarcely having a single thought that she would hesitate to make known to her. She used to have an inexhaustible fund of anecdote over which the fond mother loved to linger when, vacation over, her daughter had gone cheerfully back to resume her labor again. Now, hours would pass and she would not say a word. Mrs. BARTON stealthily watched her daughter with increasing anxiety. She knew that a change in ELLEN could not fail to affect herself and ALMA. She feared that the time had come when this daughter, her sole dependence, was her ELLEN no longer.

ELLEN intended to make known her errand as soon as she reached home, but she could not dampen her mother's joy at seeing her that first night. She would wait until the next day. But then, everything about the house that she had provided for her mother's comfort seemed to reproach her. There was the large arm-chair which she had cushioned and covered with her brown merino dress. She remembered how much pleasure that simple task had given, and she knew that her mother's gratification was derived ,not so much from the ease of the chair as the thought, "ELLEN did it for me." Every little task she had been accustomed to do reminded her of the sacrifice that she would be asking her mother to make. She frequently uttered complaints about the disordered state of the house, intending that they should form the basis of an argument that her mother was no longer fit to live alone, and thus bring into consideration her plan for their future. But she could not help observing how lovingly her mother's eyes followed her about the room, and she felt it would be cruel to bring to them the look of grief which she knew such an argument would call forth. Her task was hourly growing harder to perform, yet she must put it off till to-morrow. When the morrow came it was no easier, but she would certainly have it over with the next day. In this manner each day passed and the evening before the day she was to return to Webster came. "It must be now or never," thought ELLEN.

The hours were slipping away. ALMA had long ago been put in bed. It was almost their bedtime. ELLEN often glanced toward her mother, who sat with closed eyes rocking to and fro in her chair. ELLEN could not remember that she ever felt afraid of her before. Yet, if the proposition she wished to make contained any wrong, the wrong would be done by herself and her mother would be the sufferer. She fancied that she could already detect the shadow of some secret sorrow resting upon her face, darkening the peaceful expression it usually wore.

"Mother, isn't the care of ALMA becoming too much for you?"

"Who will take care of her if I don't?"

ELLEN ignored this thrust and recklessly proceeded to make known her errand.

"I didn't know but you would consent. I've been thinking it would be better for you to take ALMA to an asylum than to live here alone. There is no one in Webster——"

"ELLEN, you needn't tell me any more!" exclaimed Mrs. BARTON. "Yes, this is what you have come home for. You are tired of taking care of us. You think that I will die before ALMA does and if you get us off your hands now you won't have to take care of her or let her go to the poor-house when I am gone. I hope and pray that she may die before I do. Oh, ELLEN! I have always depended on you. You have told me so many times that you would take care of ALMA. She would do it for you, I know, if you were in her place and she in yours. She was a brighter child than you before she began to have those fits and the sweetest tempered little thing I ever saw; and you would see her suffer rather than deny yourself! ELLEN, what has changed you so? Do you want to get married?"

"Yes, mother, I am going to be married," replied ELLEN, her voice tremulous with suppressed passion. "Many people seem to think that it is mere play to teach school; but there is no employment more wearing upon life than that of those teachers who conscientiously feel the responsibilities resting upon them. If my health should fail we would all have to go to a worse home than you will find at the asylum. And then perhaps I would receive only reproaches because I could labor no longer."

"Forgive me, ELLEN," exclaimed Mrs. BARTON, her disappointment having given place to that submission to the will of Providence by which she was sustained when the strong hands and loving heart on which she depended were forever stilled and she knew not how she could care for her young children. "I am old and childish and you must not mind what I have said. You have always been so cheerful and uncomplaining, I had come to regard as our right that which you did from your own unselfishness. Your life shall no longer be a sacrifice. Tell me about the asylum."

ELLEN told her mother what were the terms on which they could enter the asylum and all she knew concerning life there.

"Don't you think you could be happy there, mother?"

"Yes, if you are happy and ALMA has good care I can be happy anywhere."

Then ELLEN told her mother what she should have told her at first—about JACK CAMERON. After that, no matter how dark life at the asylum might appear to Mrs. BARTON, she would endure any amount of torture rather than utter one word of complaint that would lessen the happiness of her daughter.

ELLEN returned to Webster thinking that in a few months she would be freed from the routine of the school-room. But the thought that this was to be her last term of imprisonment did not afford her as much happiness as she had anticipated. She felt that the ties which bound her to a teacher's life would be severed with some regret as well as gladness. She had become warmly attached to her pupils and it gave her much pleasure to know that she had won the respect and confidence of their parents. She knew that she owed much of her success to Prof. COMPTON, who had so kindly and wisely advised her and, although she had ever stood in a sort of reverential fear of him, yet she knew that she had no friend more true than he would ever be to her—such a friend as he was to every one whom he could aid in any way. It was this friendly way toward the pupils and those qualities that awaken respect and reliance, rather than any superior ability to govern, that gave him his influence in the school.

ELLEN felt that the time was passing too swiftly away notwithstanding the happy release its close would bring to her life.

"Only one day more," thought she one afternoon as she left the school building for her boarding place.

Little feet came pattering along the walk behind her and a little hand was thrust within her own.

"Why, MYRTIE, not gone home yet? Where have you been?"

"To the asylum, to see Grandma SHELDON. She gets awful lonesome, if there are so many there, and tired, too. Miss BARTON," said the eager child, as she still kept hold of ELLEN'S hand and skipped in front of her to peer into her face, "don't you think Uncle CHARLES ought to be ashamed of himself to poke grandma off to the asylum after he got all her money? Mamma says if he won't take her away from there she shall, if she has to take in washing to support her."

They had now reached the boarding-house and MYRTIE stood on tiptoe for a good-night kiss.

"I am no better than your uncle, MYRTIE. If you knew, you would not care to kiss me," thought ELLEN.

ELLEN felt sad ere she was overtaken by MYRTIE. Now she knew that she was unhappy; and when she reached her own room she found more unhappiness awaiting her. She found another letter lying on her table—a letter from her mother. Mrs. BARTON had seldom written during this term and ELLEN keenly felt the difference between these letters and the ones she used to receive. They were fraught with just as much affection, but the trustful dependence was gone. Not a single want had she made known. This letter was unlike any she had ever received. It contained something she had never expected to hear from her mother. Mrs. BARTON wrote as follows:

"DEAR DAUGHTER:—I write to let you know

that ALMA is dead. Perhaps I ought to have sent you a dispatch, so that you might have come to the funeral; but I thought it would only be an unnecessary expense. I wish you could have seen my poor child when she was dying. She did not speak; but just before she died she fixed her eyes upon my face, not with the old vacant look, but they were full of peace and love; and oh, ELLEN, she looked so grateful! I felt repaid for always keeping her with me. I shall go to her, ere long, and then we will together watch for our ELLEN'S coming—the dear sister and daughter who has sacrificed so much for our own sakes. Dear ELLEN, I am perfectly willing to go to the asylum and grateful to you for providing me a home there. I shall be ready when JACK and you come for me. Good-by till then——"

"O mother, forgive me," cried ELLEN. "I have made a great mistake. My life was not represented by the money that I gave for poor ALMA'S support. God be merciful to me if I have labored so unworthily that the only result is the compensation I have received."

ELLEN did not grieve over ALMA'S death. How could she, believing as she did that now reason was again restored to her? But her grief was caused by the thought of the duty she would have left undone had ALMA lived. Of one thing she was sure—nothing should ever again tempt her to neglect her duty to her mother. If JACK really loved her he would allow her mother to spend the few remaining years he had to live in their home. But she would never ask it of him. If he did it, he would do it of his own free will."

"Gentleman in the parlor to see Miss BARTON," announced a servant.

ELLEN took the letter in her hand and descended to the parlor. JACK sat looking out of the window and did not notice the entrance of ELLEN until she stood by his side.

"It is going to be a lovely evening for a drive," said he. Then suddenly perceiving the traces of tears upon her face, he exclaimed, "What is the matter, ELLEN?"

For answer, she gave him her mother's letter.

"Why do you grieve because she is dead?" said he, after he had read it. "She is now much better off and the world has lost nothing by her leaving it."

"For her sake I am not sorry she has gone; but mother will be very lonely now and I don't think I ought to let her go to the asylum," said ELLEN, as she stood with downcast eyes, slipping the ring back and forth on her finger.

"ALMA'S death need make no difference about your mother's going to the asylum," said he, impatiently.

"She will never go as long as I can work and take care of her," ELLEN replied.

"Choose between us, then. If you love your mother better than you do me——"

"I do love her better. Take your ring, sir;" and she hastened from the room, and as she entered the hall nearly ran against Prof. COMPTON, who had just passed by the open window and heard the terms proposed by JACK and the quick response, "I do love her better." Although he was sorry to have acted the part of eavesdropper, yet his spirits rose many degrees when he heard ELLEN make this declaration.

The next morning before the pupils began to arrive, ELLEN went to Prof. COMPTON'S office and asked him if a teacher had been engaged to take her place. Upon his replying in the negative, she timidly made known her desire, if there were no dissatisfaction, to retain the situation.

"I will guarantee you the situation as long as you are content to remain with us," said he. "We have all been so disheartened at the prospect of losing you that we shall know better how to appreciate your efforts in the future."

"I shall endeavor to be more worthy of the confidence reposed in me," said she, and turned to leave the room, for she could not keep back the tears which the kindness of his voice had caused to well up in her eyes.

Mr. COMPTON, desiring to make known his sympathy for her suffering, gently detained her by placing his hand on her arm and said:

"Miss BARTON, the decision that I unintentionally heard as I passed that open window, made me very happy. I could not bear to give up my faith in you. Believe me, nothing in life can afford you so much happiness as your devotion to your mother and sister."

At an early hour on the succeeding day, ELLEN left Webster to return to her mother the unselfish daughter she was before she knew JACK CAMERON. In the car sat a gentleman with a sweet and blushing little lady by his side and even the most ignorant old bachelor of the ways of lovers would not fail to conclude that they were enjoying their bridal tour. ELLEN sat just behind them, noticing their tender glances and thinking of the difference between her journey home and what it was to have been. Yet she was conscious of feeling more contented and light-hearted than she had felt for a long time and she really believed that it was on account of the termination of her engagement with JACK CAMERON. She began to doubt that she ever loved him. And, after carefully thinking over her life of the past few months and trying in vain to analyze the subtle feeling termed Love, the only definite conclusion at which she could arrive was:—"Love and Duty ever go hand in hand. If love from heaven came, it cannot be love for which people sometimes neglect their duty."

The June evening was chilly and damp; yet, Mrs. BARTON had allowed her fire to go out. She had wrapped a shawl about her, thinking that she must be saving of the wood that ELLEN had worked so hard to buy. She felt very sad and lonely; for, strange as it may appear to some, the death of ALMA caused her as much sorrow as the loss of the brightest and sweetest of children brings to a mother's heart.

The stage came rumbling down the street at the usual time; yet, so absorbed was Mrs. BARTON with the past, she was not conscious of hearing the familiar rumbling of its wheels until it once more drew up at her gate. Before she fairly came back to the present and was wondering what it could mean, ELLEN came running in and she was clasped in her arms.

"Where is JACK?"

"JACK didn't come," replied ELLEN, with the old roguish sparkle in her eyes.

"Are you not married? Haven't you come for me?"

"No, I am not married. Yes, I have come for you—but not to take you to the asylum. When I go back to Webster at the commencement of the autumn term, you will go with me and we will rent some rooms and live together."

ELLEN was again the strong one and Mrs. BARTON cried like a child, as though all the grief she had kept in check for her daughter's sake must be wept out before this new joy could enter her heart.

ELLEN returned to Webster and the schoolroom, content with her lot in life. The burden that she relinquished for the sake of JACK CAMERON was now a most joy-affording task. It was very pleasant to be welcomed home each night by the love-light in her mother's eyes.

As the weeks went by ELLEN became slowly conscious that it was not wholly a newly-awakened enthusiasm for the work that made her duties in the school-room so pleasant. Yet, when Prof. COMPTON proposed that they might not only be partners in promoting the welfare of the school but also partners in all the joys and sorrows of their lives, she declined to enter into such a partnership. She would not commit that fearful mistake a second time, although her love for CHAUNCEY COMPTON exceeded the feeling she once possessed for JACK CAMERON, as the love of a true heart for what is true exceeds its love for what is false. But Mr. COMPTON'S faculty for persuading was fully equal to that of JACK CAMERON. ELLEN was convinced that in this case love would not conflict with duty.

"You never seemed to suspect," said he, "that JACK CAMERON caused a shadow to be cast upon my life as well as upon that of your mother?"

"I never suspected that I was at all connected with your happiness," ELLEN replied. "But I often wonder what led you to care for me at first."

"I think it was the story of your devotion to your mother and sister."

"But I cannot conceive why every other feeling did not give place to contempt when you learned of my intended desertion of them."

"A mother's love is not lessened by the mistakes her child commits. The love that causes man and woman to be united as husband and wife, should be as true and unselfish as a mother's love for her child. To know that you were happy would ever have been the greatest desire of my life; and my cross would have been my inability to contribute to your happiness."

Mrs. BARTON was for a few years a happy inmate of their home. Then, one vacation time, at the close of a bright spring day, she went home to watch for her ELLEN'S coming in the Father's house on high.

MRS. VANDERDUYNCK.

LETTERS FROM ROGER FLOYD TO HOPE STANHOPE.

BY MISS E. W. OLNEY.

[Continued from page 414, last number.]

III.

RIVERBEND, July 10.

I AM just getting back the impetuous strength of my old college days. I builded wiser than I knew when I accepted this aimless sort of life for a year or two. My illness showed me the futility of working too hard and its futility. Suppose I spend two years here and then, at thirty, go out into practical life again. I shall have gained strength and interest; I shall scarcely have lost time, nor shall I have weakened my powers of application. But you, you sentimentalist, you tell me you are glad to see that I can love a child; that you desire nothing so much as to have me give my too self-sustained, too self-burdened heart into somebody else's keeping. Who wants it? Men of opposite experiences and separate destinies from mine can talk of hearts and consolations. Still, do you remember our wilhom philosopher, Burton, when he quotes from some book of curious lore, telling of a boy who was brought up by a monk never to hear of women, of whose existence he never dreamed until one day, when he was about eighteen, he met three girls in a wood. On recovering from the vision he inquired what manner of things they were, and his preceptor informed him they were fairies. A year after, when he was asked what was most beautiful of all he had hitherto seen in the world, he replied without hesitation, "The fairies that I saw last year in the wood."

Now, Holt, the most beautiful sight I have ever seen in the world I see now every morning at six o'clock. Mrs. Vanderduynck and her little girl come down to the river bank, and I put them in the boat and row them up to black rock and back before my half-past seven o'clock breakfast. It all happened in this wise. I began by taking little Cora out. I carried her one morning across the meadow in my arms to Water Lily pond, and we pulled our arms full of lilies; and then I let her sit on the side of the skiff, and dabble her little white feet in the water all the way home. This sort of thing went on for a week; then, four mornings ago, I found Mrs. Vanderduynck, the mamma, sitting on the bank with Cora on her lap, when I came out of the boat-house. She approached me timidly.

Have I ever given you any idea of the rich widow? She married at seventeen, and now, at twenty-two, is of course in the first prime of her beauty. She is tall, quite to my shoulder, but has a *mignon* way with her which makes her look small—in fact, when I have seen her in the house I have thought it owing to her skirts that she looked so grandly, for she wears them trailing after her like a court dame's. In the boat she always appears in a white walking dress (made short enough to display the feet and ankles of a Canova's Venus) and a broad-brimmed straw hat. She understands the art of dress: everything tells on her. I, who know as much about a woman's appointments as a kangaroo, find myself noticing the set of her gloves, the ruffles about her wrists, and the knot of silk at her throat. She has long, sleepy, brown eyes, which always seem a shade too pensive and wistful for the laughing face; her forehead is low and broad, and golden hair waves and crisps off from it in a manner suggestive of art; but as I have seen her, on warm mornings, bare her hands and wet her hair and brow without other effect than making the gold curls more perfect than before, I suppose nature endowed her with this wonderful hair. Her complexion is pale, but there is no monotony to its clear pallor, for she is always flushing and paling.

As I say, she came up to me timidly that first morning. "How do you do?" said she, putting out her hand. "I could not sleep, and when I heard Cora telling nurse that you were to take her rowing, I jumped up and dressed, and have come to implore you to let me be of the party."

"I am most honored," I rejoined, kissing Cora; and then, handing them both into the boat, I pushed it off, jumped in took off my coat, and struck out at once. Cora chattered madly as usual. I willed myself to be unconscious of the coquettish-looking figure in the stern. I told the child stories. I laughed at her lisps. I finally let the boat drift while I took her on my lap to hear her repeat some French verses I had taught her the day before. I think Cora had good time. Of her mamma's enjoyment I was no certain; and when on our return she asked me she might accompany us next morning, I assented, feeling, I confess, a little ashamed of my churlishness in not addressing her; so when, the following day, she exclaimed at some wild roses and convolvuli by Black Rock, I leaped from the boat and secured them for her. What do women mean by blushing furiously at a small attention? I should fancy that a widow satiated with passionate homage might receive an ordinary civility like mine without quickened pulsation. To say I do not find this intercourse pleasant would be a pointless falsehood. Artificial coquette though she may be later in the day, Mrs. Vanderduynck is as fresh as dew-washed roses at six o'clock in the morning.—[To be continued.

THE MULE.

THE mule is the most unhealthy animal in the world—unhealthy to have around.

He is continually possessed of a yearning desire to stretch himself—especially his hind legs.

We have known this yearning to make trouble in several families.

He is also possessed of great healing power.

No man ever sees a mule kick him.

The man is usually seized with obscure visions just at that juncture.

We have seen a man get up after a mule had kicked him (very rarely though) and swear with both hands uplifted that he didn't believe the animal had stirred a peg—he looked so immovable and unconcerned.

A mule is a very "quick" animal.

Great quantities of this substance lie hidden beneath his toe-calks.

As a great explorer, the mule is equal to Stanley.

When he goes exploring for a man he always finds him.

The safest place to stand by a mule does not exist.

The mule is a very headstrong beast.

He is likewise exceedingly heelstrong.—[*Josh Billings.*

BOOKS RECEIVED.

FROM SCRIBNER, ARMSTRONG & Co., New York:

Sans-Souci Series. Men and Manners of America One Hundred Years Ago. By H. E. Scudder. [Cloth.—pp. 320.] Price $1.50.

T. B. PETERSON & BROTHERS, Philada.:

Consuelo. By George Sand. [Paper.—pp. 254.] Price 75 cents.

Massacre of Glencoe. By G. W. M. Reynolds. [Paper.—pp. 205.] Price 75 cents.

E. P. DUTTON & Co., New York:

Roadside Poems. Edited by Lucy Larcom. [Cloth.—pp. 263.] Boston: Jas. R. Osgood & Co. Price $1.

Sabbath Reading.

"THE PENNY YE MEANT TO GI'E.."

THERE'S a funny tale of a stingy man, [worse,
Who was none too good, but might have been
Who went to church on a Sunday night,
And carried along his well-filled purse.

When the sexton came with his begging plate,
The church was but dim with the candle's light;
The stingy man fumbled all through his purse,
And chose a coin by touch and not by sight.

It's an odd thing now that guineas should be
So like unto pennies in shape and size,
"I give a penny," the stingy man said;
"The poor must not gifts of pennies despise."

The penny fell down with a clatter and ring!
And back in his seat leaned the stingy man.
"The world is so full of the poor," he thought,
"I can't help them all—I give what I can."

Ha, ha! how the sexton smiled, to be sure,
To see the golden guinea fall into the plate!
Ha, ha! how the stingy man's heart was wrung,
Perceiving his blunder, but just too late!

"No matter," he said; "in the Lord's account
That guinea of gold is set down to me.
They lend to Him who give to the poor;
It will not so bad an investment be."

"Na, na, mon," the chuckling sexton cried out:
"The Lord is na cheated—He kens thee well;
He knew it was only by accident
That out o' thy fingers the guinea fell!

"He keeps an account, na doubt for the puir;
But in that account He'll set down to thee
Na mair o' that golden guinea, my mon,
Than the one bare penny ye meant to gi'e!"

There's a comfort too, in the little tale—
A serious side as well as a joke;
A comfort for all the generous poor,
In the comical words the sexton spoke.

A comfort to think that the good Lord knows
How generous we really desire to be,
And will give us credit in his account
For the pennies we long "to gi'e." [*Anon.*

THE SANHEDRIN.

FROM Smith's Bible Dictionary we learn that the Sanhedrim (accurately Sanhedrin) was the supreme council of the Jewish people. In the Mishna, or collection of Jewish laws and traditions, the Sanhedrin is traced to the seventy elders associated with Moses in the government of the Israelites, Num. 11: 16, 17. Others hold that the council arose after the return of the Jews from Babylon. From the New Testament we learn that it consisted of chief priests, elders and scribes, Matt. 26: 57, 59; Mark 15: 1; Luke 22: 66; Acts 5: 21. The number of its members is usually given as seventy-one. While in session the Sanhedrin sat in the form of a half circle, the eldest one of the number on the right. He was called "father of the house of judgment." This council acted as a judicial body and as an administrative body, in the arraignment of false prophets and in dealing with other important matters. So it arraigned Jesus, Peter, John, Stephen, Paul, as impostors, teachers of error, deceivers of the people. At this time, however, its jurisdiction did not extend further than the arrest, trial and condemnation of the one convicted of violation of ecclesiastical law. The execution of the sentence belonged to the Roman procurator.

THOUGHTS FOR THINKERS.

To repent of sin is as great a work of grace as not to sin.

As if you could kill time without injuring eternity.—*Thoreau.*

Spiritual hungerings and thirstings are satisfied only with spiritual things.

GOD esteems men's deeds by their minds, not their minds by their deeds.

THE true Christian is ever ready to receive on himself the blow aimed at the cause of Christ.

PRAYER is the opposite of anxious care, because in the prayer man commits the care to God.—*Olshausen.*

SATAN promises what he never gives—lasting pleasure; and gives what he never promises—everlasting pain.

SOME persons pass their wretched days like so many swine; they never look up to heaven till God lays them on their back.

EMINENCE is not reached by a frantic struggle. The road to it is much more commonplace. He that would dazzle must first dig.

SURELY they do not truly love Christ, who love anything more than Christ. Grace is given to trade with. It is given to lay out, not to lay up.

DON'T live a single hour of your life without doing exactly what ought to be done in it, and going straight through it from beginning to end.

IF my Lord would come and take me to himself, my joy would be first that I would be forever near him, and then that I should never wound him again by sin.—*Anon.*

YOUR disposition will be suitable to that which you most frequently think on; for the soul is, as it were, tinged with the color and complexion of its own thoughts.—*Marcus Antonius.*

HE who loveth his wife like himself, and honoreth her even more than himself; who leadeth his sons and his daughters in the path of integrity, and who provides for their settlement in early life; to him may be applied the Scripture passage, "Thou shalt know that peace shall adorn thy tent."

Ladies' Portfolio.

THE WOODPECKER.

BY MRS. LAURA S. HAGNER.

TAP! tap! goes the woodpecker's busy bill,
Tap! tap! on the old oak tree—
He hunts small game
With his tongue of flame,
For a woodman bold is he!

"'Tis the early bird gets the worm," he cries,
As he springs from his nest at morn,
And his note so shrill,
The woodlands fill,
Like the hunter's bugle horn!

In their chambers dark,
'Neath the moldering bark,
The ant and the grub lie still—
But he hurries them out
With a terrible shout,
And gobbles them up at will.

Nature's own red-republican,
He sings, and steals, and fights,
And from the fir tree's highest limb
Harangues about "his rights."
For 'tis a melancholy truth,
Not in Bird-land alone,
That they who trample others' rights
Still clamor for their own.

ATTRACTIVENESS IN WOMEN.

PERSONAL attractions most girls possess, at any rate in a sufficient degree to render them attractive to somebody; for, although there are standards of beauty, yet these do not prevail with all people. The following sensible article from a leading paper in the West will apply to the ladies here as well as to the women of the locality for which the article was intended:—"There is something wonderful in the difference of aspect which the same face wears to different beholders. Probably the philosophical explanation of this is that which is hidden from all becomes immediately and instinctively apparent to the eye of love. How can a moderately good-looking girl increase her attractions? By culture. She must cultivate her mind. An ignorant, illiterate woman, even if she attracts attention, cannot retain the interest of an intelligent man. She must do this by reading, by study, reflection, and by familiar conversation with the best and most highly educated persons with whom she comes in contact. But the heart must be cultivated as well as the head. "Of all things," exclaimed an elegant and refined gentleman—"of all things," give me a softness and gentleness in woman." A harsh voice, a coarse laugh; trifles like these have suddenly spoiled many a favorable impression. The cultivation of the heart must be real, not feigned. A woman who studies to appear rather than to be good and generous, seldom succeeds in deceiving the other sex in these respects. She who in truth seeks earnestly to promote the happiness of those around her is very apt soon to obtain admirers among men. Above all other requisites in a woman is conscientiousness. Without this one touchstone of character, no matter what her charms and acquirements, she can not expect to command the lasting regard of any man whose love is worth having."

THE EMMA MINE HEIRESS.

A CHICAGO letter to the Graphic says:—The lady after whom the Emma Mine is named is a boarding pupil at Miss Grant's finishing school for young ladies, in North Dearborn St., an aristocratic stone mansion, with an air of exclusive gentility about it. She is a tall blonde, with a satin-smooth, ivory-tinted skin, and light, waving brown hair, which was coiled in a loose, classic knot at the back. Her dress was a simple Marie Louise blue. A long scarf of black lace was tied about her throat. She was guiltless of the smallest piece of jewelry, and her long, slender fingers were unadorned by a single ring. A soft fringe of curling hair outlined a low, wide brow. This was Emma Chisholm, sole daughter of the house and heart of Robert Bruce Chisholm of Elgin, Ill., a few years ago half owner of the Emma Mine, now a retired capitalist. I explained my visit to Miss Chisholm, who laughed merrily and said:

"Well, I have always eluded an interview, and all those newspaper reports have been solicited from papa and the boys. I found the notoriety of the mine unpleasant at first, but I do not mind it now. Three years ago I visited the mine, and I enjoyed the trip very much, especially the ride from Salt Lake City to Alta, the little village at the mine. I found the miners enjoying a brand of cigars called 'The Little Emma,' and they actually had my picture on the box!"

The young lady laughed merrily at the recollection. She further added that she was only ten years old when her brother William named the mine after her as a voluntary peace offering, as she was constantly importuning him to "come home to his dear Emma." She was born in Eastern Minnesota, May 6, 1859.

LANGUAGE OF FINGER-RINGS.

IN the case of a gentleman wishing to marry—literally "in the market" with his heart—he wears a plain or chased gold ring upon the first finger of the left (or heart) hand.

When success attends his suit and he is actually engaged, the ring passes to the second finger.

After marriage it passes to the third finger.

If, however, the gentleman desires to tell the fair ones that he not only is not in market, but he does not design to marry at all, he wears the signet upon his little finger and all ladies may understand that he is out of their reach.

With the fair sex the "laws of the ring" are:

A plain or chased gold ring on the little finger of the right hand implies "not engaged;" or, in plain words, "ready for proposals, sealed or otherwise."

When engaged, the ring passes to the first finger of the left hand.

When married, the third finger receives it.

If the fair one proposes to defy all siege to her heart, she places the rings on her first and fourth fingers—one on each, like two charms to keep away the tempter. It is somewhat singular that this disposition of rings is rare!

THE JAPANESE CENTENNIAL BUILDING.

THE Japanese building on the Centennial Grounds, which commands a large share of attention from visitors, is now entirely completed and is occupied by the Japanese officials. The building is beautifully furnished throughout in a style corresponding with the better class of residences in Japan. The floors are laid with costly carpets of peculiar design and the furniture presents a rich, unique appearance. The panelings of the doors, recesses, &c., are frescoed or painted in the most delicate and artistic manner, representing birds, flowers, &c., and highly ornamental screens, such as are used in Japanese parlors or reception rooms occupy places in the angles of the various rooms. The walls are handsomely papered and the windows are furnished with a peculiar style of paper in lieu of glass and which is protected from the weather by means of wooden blinds which pull in or out from the walls of the rooms. An air of elegance and comfort pervades the entire interior and the building will be an object of great interest during the Exposition.

A YOUNG WOMAN WORKING WHILE ASLEEP.

WE take the following singular case from the Brookport (Ind.) Journal:—A young lady of this city who was preparing for a journey had a dress made for the occasion, and as the time for her departure approached she was considerably annoyed lest it should not be done in time. The dress came when promised, however, but there was something about it that did not exactly suit her, and the matter still burdened her mind. The evening previous to her intended departure she put the dress away and tried to dismiss the matter from her mind, but does not seem to have succeeded. When she arose the following morning she found her dress ripped apart, not a seam of the whole garment remaining sewed, and not a cut or tear in the material. As no one had access to it but herself, she was forced to conclude that she had arisen in her sleep and ripped it apart.

FEMALE CLERKS IN WASHINGTON.

IT is remarked of the female clerks in the Washington departments that they might set up an aristocracy of their own if they so desired. Widows or daughters of army and navy officers of the highest rank, daughters and granddaughters of former members of the Cabinet, of Senators, Supreme Court Justices and of Presidents, are to be found among them. The granddaughter of Thomas Jefferson has a clerkship. The daughter of Andrew Jackson Donaldson (the adopted son of Andrew Jackson) was born in the White House and educated in Berlin, and is now a clerk in the Post-office Department. The daughter of Chief-Justice Taney is (or was) a clerk in some Government bureau, and so was the daughter of Robert J. Walker, formerly Secretary of the Treasury. These are but a few instances where names might be cited.

WHAT IS BECOMING TO WEAR.

ON the above subject, Cassell's Family Magazine says;—If you are a brunette, avoid neutral tints and wear only positive colors; but do not tire your friends with everlasting scarlet, under the idea that nothing else becomes you. A blonde, in the bloom of youth, may wear light grays and browns; but if on the shady side of forty, she should, like her brunette sister, adopt only positive colors, as washy, weak coloring is only becoming to extreme youth and fairness. The new deep reds are very pretty, and so are the greens, and may be used for bonnets in shades with great advantage.

THE Sioux Indians name their pappooses after events transpiring at the time of their birth. As illustrative of this peculiar trait, Red Cloud is known to have taken that name from the fact that the western sky was overspread with red clouds at the moment of his birth, while the bringing of a captive horse with a spotted tail gave the now great chief the singular cognomen of Spotted Tail. Sitting Bull received this name because a buffalo bull was, by a lucky shot, thrown upon its haunches, in plain sight of his mother's tepee at the natal hour; while the cavortings of a fractious pony furnished a name for the redoubtable Crazy Horse.

A WOMAN in Paris has perfected a new method of picking pockets. She enters the omnibus with a very pretty and beautifully-dressed baby, seats herself close to the likeliest passengers, and works under cover of baby's ample drapery. After succeeding in her pilfering design, she pinches the baby so that it cries fearfully, and then leaves the omnibus suddenly, remarking that she must buy candy for it.

Reading for the Young.

My man John
To sea is gone
All in a wicker cradle;
The cradle creaks,
The cradle leaks,
But John has got a ladle.

LETTER FROM UNCLE MARK.

DEAR NIECES AND NEPHEWS:—Can any of you tell me why it is that, as people grow older, they become more observant of occurrences by which they are constantly surrounded? If the conundrum is too difficult, give it up; for I don't want you to think very much unless you feel so inclined, and the question will certainly start you thinking. Well, after all, observation is the great channel of education.

Passing through the Centennial grounds last week, my thoughts were very naturally turned upon the thousands of people by whom I was surrounded, and I sat down in a convenient place just to observe them as they passed. My location was near the main entrance, and the time was about sunset, when the exit from the grounds was greatest. One general characteristic of a large majority of them pleased me. It was the utter absence of anything like personal decoration. While they were mostly well dressed, they seemed to have made their toilets with a view to comfort instead of ornamentation. I noticed among the ladies a predominance of flat-soled, low-heeled shoes, made for walking and not for looks; also many linen dresses which looked cool and comfortable. The tendency is generally the other way at such Exhibitions. One lady as she passed me remarked that she had been all through China, and should never have believed that so various and such beautiful things could come from such a country. And this started my mind on another train of thought: Why should not China produce a *greater* variety of beautiful things than we can? Is it not an older nation by thousands of years? Were the Chinese not a civilized nation thousands of years before England was inhabited by anything but barbarians? Take a look at your history of China and see for yourself.

In what is called the U. S. Government building can be seen many things of interest to all the girls and boys whose fathers were soldiers in the late Rebellion. The manufacture of muskets and cartridges is carried on there the same as in the various U. S. arsenals. Besides this, there are hundreds of different kinds of implements of war and machines for the destruction of human life. Why will people go to war? It seems to be a very unsatisfactory way of settling differences. Yet the most civilized nations of Europe are even now making preparations for a possible war. Well, I'll give you my idea of why they do it. When people are young they frequently give way to angry feelings, and think ill of their companions for some actual or imaginary wrong which has been done. As they grow older these feelings grow stronger and often of more frequent recurrence, so when they become grown these passions become the sources of wide breaches between friends and quarrels between enemies. Nations, too, which are mere collections of human beings, are swayed and governed by the same angry feelings, and they result in warfare. Sometimes a defensive war is necessary to prevent the bad from overcoming the good, just as it is sometimes necessary for a good man or boy to defend himself against a wicked person. But there are few wars or even quarrels between individuals which could not be avoided if the angry passions were controlled and kept in subjection. Therefore I should advise all my young friends to learn at once to keep their tempers in subjection. If, when you feel anger rising, you will stop to think, you will generally be able to control yourself, and once having done it you will find it much easier the next time. What I have said may sound very like a sermon, but being human myself I know from experience that I never did a thing in anger in my life that I was not sorry for afterwards. Just try it yourself. The next time your sister, brother or mother (for mothers sometimes, when troubled with family cares, do speak crossly) says that to you which makes you feel angry, stop to think and give a pleasant reply. You will find that you have defeated them and gained a victory over yourself.

There, you see, I started to tell you about the Centennial, and in my earnest desire to make you avoid some of the pitfalls from which I have been obliged to drag myself during my long life, I have preached you a little sermon. Never mind; it is like the Irishman's cap: it will fit all the heads that are not too large or too small for it.

I am glad to see that Kansas boy calling Uncle TRUE'S attention to the poor chance he gave the Western boys for his prize. You see he is pretty old and probably did not think of the effect the answers would have. JENNIE L., I certainly shall give you more Centennial and less sermon the next time. In the meantime I don't want that editor to be cross to me as he was before for writing such long letters, so I will have to say good-by, and you shall soon hear again from UNCLE MARK.

LETTERS FROM BOYS AND GIRLS.

From the Keystone State.

DEAR EDITOR:—I think the RURAL is just splendid—nothing less. My brother CHARLIE takes it, and we all like it very much. Most of the Cousins tell about their pets, but I have none except a dear little brother who eclipses all. Now about YOUNG TOM: We did not take your valuable paper last year, so I did not see his letter, but I think I can excuse him on the plea that his lady-love has jilted him, and so he takes vengeance on all womankind for her sweet sake. I love to go to school. My favorite studies are Elocution, Music and Drawing. I delight in literature. My favorite authors are LONGFELLOW and SHAKSPEARE.—ALICE, *Erie Co., Pa.*

P. S.—Some of the Cousins add a postscript, so I will to keep them company. Girls or boys who go to our great Centennial, please let us hear of some of the fine curiosities you see.

A Lecture from E. J. S.

DEAR COUSINS:—It is raining this afternoon, and I will write to my RURAL Cousins. So, Uncle MOORE has retired from the Editorial chair. Well, I'm sorry, *very sorry*. Father's farm is looking very well now. Oats are heading; gardens are very good; potatoes are up; beans, peas and other vegetables are thriving also. I suppose R. H. C. is too busy to write to the RURAL. Do write again, ROBERT. Don't think I'm a boy, as I'm only a girl. ANNA M.: I'm waiting very impatiently for your answer. That other Canada *boy*, J. M. S.: What is the reason you don't write, sir? When you (not particularly you, J., but all of you, nearly,) write *one* letter that seems to satisfy you. I will close by asking *all* the Cousins to write to the dear old RURAL.—ELLEN J. S.

The Boy who has Pets.

DEAR MR. EDITOR:—As I have read many letters from the girls and boys, I thought I would try. I have not so many pets as most of the Cousins. I have a goat two years old, and two hens and a rooster which came from England. I do not live on a farm, but we have nearly enough stuff to stock a farm. I can milk a cow, feed the chickens, and do almost as much as a boy that lives on a farm. I go to school, winter and summer, and like it very much.—GEO. B., *Corning, N. Y.*

From the Southern Tier.

ED. RURAL:—It is a long time since I have written to your dear old paper, and as you were so kind as to print my last one I will write again. I was very much pleased with YOUNG ARTIST'S letter, and think she must be a very nice young lady. Has Cousin JOHNNIE joined the list of offended ones, like YOUNG BACH, YOUNG TOM and DEW DROP? I hardly think that can be.—WILL DE B., *Delhi, N. Y.*

The Puzzler.

CURTAILMENTS.

1. CURTAIL to yawn, and leave a chasm.
2. A color, and leave a dot.
3. A city of Massachusetts, and find an auction.
4. A board, and leave a plot.
5. A city of Illinois, and leave a voice.
6. A city of Michigan, and leave a river of Egypt.
7. A city of Minnesota, and leave change.
8. Yeast, and leave to depart.
9. A Western lake, and leave bad weather.
10. To partake of a fluid, and leave a river of Austria.
11. A lawyer's writing, and leave a river of England.
12. Finished, and leave a river of England.
13. A dress material, and leave a river of Spain.
14. Went under the water, and leave a river of Austria.
15. Arrived, and leave a river of England.
16. To explode, and leave a river of Italy.
17. A river of England, and leave a pier.

☞ Answer in two weeks. LITTLE ONE.

BIBLICAL SQUARE-WORD.

1. A MOUNTAIN which overlooked the promised land. 2. An ancient country. 3. A ferocious wild animal. 4. A wicked king of Israel.

☞ Answer in two weeks. ISOLA.

CENTRAL PUZZLE.

1. A CHICKEN'S drumstick. 2. Part of the head. 3. Part of a man. Words of three letters. Centrals form part of your head.

☞ Answer in two weeks. B.

PUZZLER ANSWERS.—June 17.

SCRIPTURAL ENIGMA No. 1.—"The path of the just is as the shining light, that shineth more and more unto the perfect day."

CROSS-WORD ENIGMA No. 14.—Euphrates.

CENTRAL PUZZLE No. 1.—Nightshade.

MISCELLANEOUS ENIGMA No. 5.—Letta Adams Bell.

PUBLISHER'S NOTICES.

TO SUBSCRIBERS AND AGENTS.

As we are now entering upon the second volume of the Twenty-seventh year of the RURAL NEW-YORKER, it would be well for the proprietors to say to subscribers and agents that a more prosperous time than the present has not been seen in this office for many a year.

Notwithstanding the cry of "hard times" which has been echoing through the land, the rural population seem to be able to take their paper. It may not be known to many of you that at the end of each year and half-year a newspaper changes a large number of its subscribers. Some old ones discontinue and their places are filled with new, so that while the list does not diminish in numbers, the changes frequently amount to many hundreds.

There were hundreds on our list whose subscriptions expired with the last number in June, and of these every one has *renewed* but *six*. This is something unprecedented in the annals of a newspaper office, and is the most flattering indication to the new management that their strenuous and laborious efforts to make a *good* paper are fully appreciated. With such encouragement as this, subscribers and agents may rest assured that nothing which time, labor and money can procure will hereafter be omitted to make the RURAL still better than it is.

The Literary Departments will be kept up to their standards of excellence and morality, while the Practical Departments will continue to be made up of the most straightforward common sense which can be obtained. In these matters the aim will not be to make them so scientific that they may not be readily understood by every one; but it will be our constant endeavor to publish that which is *absolutely correct*. Now, all that is needed is for each subscriber to get another and our list will at once be doubled.

News of the Week.

HOME NEWS PARAGRAPHS.

RAILROAD fares are now regarded as having reached their lowest point—$20 to St. Louis and back during the Convention. Despite the reduction of freights and fares so that they scarcely pay the running expenses of the roads, there has as yet been no notworthy increase of traffic.

No prospect is yet apparent of the breaking of the deadlock on the Appropriation bills. The Army, Navy and Post Office bills are among the number that the two Houses are unable to agree upon. The Legislative, Executive and Judicial appropriation is also in a crisis; but something is likely to be done about that, since otherwise the salaries of members of Congress will stop. Congress itself has no thoughts of stopping. The resolution passed in the Senate to take up the impeachment trial on July 6, instead of postponing it till Fall, insures a long session for both Houses, as they must both hold over during the trial.

It was Prentice who declined to discuss the question of woman suffrage in his paper, because he had considered woman from the creation as a side issue.

A number of shrimps were found lately at the bottom of a gold claim in Melbourne, the depth being 300 feet. They were totally blind, and, though active enough at the bottom, died when brought to the surface.

Venezuela exhibits forty varieties of fruit preserved in their natural state in alcohol; also tree sap, possessing the color, taste, and, it is said, all the nutritive properties of cow's milk.

A convention of representatives of all the national banks of the country was held at Willard's Hall, Washington, June 2. They propose pressing before the Committee on Banking and Currency the consideration of certain bills before that Committee, and to make a final appeal in relation to the abolition of the war taxes on the capital and deposits of State and National Banks. The call for the Convention says: It is believed that a representative from every bank in the country, so far as possible, before the Committee, will virtually amount to a national demonstration, and result in the total abolition of these taxes imposed in consequence of a war necessity. That situation no longer existing, the general stagnation of trade and commerce, together with the depressed institutions of the country, are making the present bank taxes absolutely unbearable, and which, if not promptly repealed, must end in the dissolution of a large number of banking institutions, and the withdrawal of banking capital as an investment throughout the land.

The most terrific hail storm known in that section passed over the South Canadian River, June 21. The course of the storm was from West to East and varied in width from a half to two miles. Timber was blown down, trees entirely stripped of leaves, and every species of vegetation in its track was destroyed. All the glass in dwellings and passing trains was broken. The damage done is immense and cannot be estimated.

Dom Pedro visited Newport and took a glimpse at the Torpedo Station, where he was honored with a sub-marine salute of 22 torpedoes. He is not ready to admit that Brazil is behind us in this branch of warfare.

The Polo Club, late of New York, have transferred their operations to Newport. Polo is the old game of "shinny," the players being mounted on ponies.

The Commencement exercises of Brown University, at Providence, R. I., were inaugurated on June 19.

New York is to have a large fresh and salt water aquarium, similar in principle to those in Paris and at Brighton, Eng. How the little fishes will swim!

Grand torchlight procession in Philadelphia on the evening of the 3d, and the military to be permitted to risk sunstroke on the morning of the Glorious Fourth!

A disturbance has occurred at Mount Pleasant, near Port Gibson, La. The negroes, following the example of the whites, organized a band of regulators and ordered a Democratic negro to leave the place. Refusing to leave, he was attacked and killed by the regulators. The constable and a posse attempted to arrest the murderers, but were driven off. The Sheriff of Baton Rouge, with a posse, went to Mount Pleasant and captured 14 negroes, including the murderers.

The reunion of the Army of the Cumberland will take place in Philadelphia July 6 and 7. Gen. Sheridan will parade. The Academy of Music has been engaged.

Gov. Tilden has pardoned Charles and Mary Fisher, sentenced Nov. 16, 1874, in the County of New York, the former to seven years and the latter to five years' imprisonment in Sing Sing. It now appears satisfactorily to the prosecuting officer that they are innocent of the crime charged against them.

The belles of Seville have adopted a new and ingenious device. They keep long India-rubber speaking tubes in their rooms and drop them to their lovers, who are thus enabled on the lower level of the street to feel their dames' breath on their cheeks and to whisper soft nothings into the fair one's ears.

Since the trade in human hair has been so much injured in Paris by the reports that the tresses displayed in shop windows came from the hospitals, or from the heads of dead persons, many Parisiennes insist upon having the hair cut off in their presence. The dealers are, however, equal to the emergency. They bring up their Breton girl in full costume. She cries as her locks are cut, and the buyer is satisfied. Usually the girl is an imposter, and the hair fastened to her head by an artful process.

A whirlwind at Salt Lake, the other day, lifted a hot house, with its floral and vegetable contents, from its foundations, and carried it up into the air five hundred feet above the city. When released it came down with a crash on an open lot.

Judge Sawyer, of the United States Circuit Court of California, has decided that the Civil Rights bill is unconstitutional as far as it applies to theaters, on the ground that they are private property. The decision was given in a suit of a negro against the manager of a theater, because he was refused admittance.

There are 662 miles of water pipes in the City of Philadelphia, and the city has 74 drinking fountains.

Mr. Bramwell, the well-known English engineer, asserted, recently, before the Society of Arts, that railway accidents are frequently aggravated by applying the brake power too sharply.

Vanderbilt University, at Nashville, Tenn., has received another gift of $300,000 from Commodore Vanderbilt. The total amount given by him to that institution is $1,000,000.

About 12 o'clock P. M. June 19, a fire broke out in the engine-room of the propeller John Taylor, lying at the dock of the Athens and Schenectady Railroad, opposite Athens, N. Y., and the flames rapidly extended to the other vessels at the dock and to the depot building, which were almost totally destroyed. The vessels burned were the John Taylor, the barge Hercules, loaded with sugar, and the Canal boat Stephen Warren, with a cargo of merchandise. These vessels belonged to the line of John H. Starin. A canal boat belonging to Smith Betts was damaged slightly. The large depot, 1,600 feet long, built at great expense by Daniel Drew, and known as the "White Elephant," was nearly destroyed, with its contents, including freight. One hundred freight cars standing on the track and loaded with flour, corn, oats, and tobacco, were totally consumed. The depot belonged to the New York Central and Hudson River Railroad Company. All the books and papers of the railroad company and of Starin's line were saved. The loss is about $400,000.

At Robinson, Ill., a desperate murderer who attacked and nearly killed the Sheriff when locking up the prisoners, was taken out of jail by a crowd and hung.

The water in the canal at Sault Ste. Marie began rising about 10 o'clock on the morning of June 24th, without any apparent cause and reached a greater hight than has been known for many years.

Albert Curtis, son of Judge Curtis of Ashland, Ohio, was shot and instantly killed on his ranche near Laramie City, by a man named Chandler. The shooting grew out of a difficulty between the two.

Two of the northern spans of the railroad bridge across the Missouri River at Kansas City, were burned last Friday. The loss is estimated at $100,000. It will probably take two weeks to repair the bridge.

Samuel W. Strough, a farmer and a prominent citizen of Jeff. Co., N. Y., was struck by lightning and instantly killed. His horse was also killed, but a neighbor who was riding with Mr. Strough was not injured.

President Raymond of Vassar College preached his baccalaureate sermon June 25.

The new Masonic Hall, Buffalo, was dedicated June 24th with imposing ceremonies. James W. Husted, Grand Master of the State, officiated. Monroe and Cyrene Commanderies of Rochester and Batavia Commandery took part.

The insurance companies have effected arrangements with the town of St John's by which the fire risks will in future be much less than formerly. They intended to withdraw from the town unless these arrangements were agreed to.

A new air line to Boston, by way of New Haven, Middletown and Willimantic, Conn., will soon be completed and in running order.

A princely visitor from Europe arrived lately in the person of Oscar Charles Augustu, Duke of Gothland, and son of the King of Sweden, who comes as a midshipman on board the Swedish corvette Narrkopsing. His father gave express instructions that the young prince, who, by the way, is only 17 years old, should accept no attentions other than those befitting his subaltern rank in the navy, and he therefore goes about with his fellow officers without the least ceremony.

The forthcoming wedding of the daughter of Mr. Dannfelt, the Swedish Commissioner, to Mr. W. Christopherson, the Norwegian Commissioner, creates a good deal of interest in Exhibition circles. The marriage will take place next Thursday in the Jury Pavilion on the grounds.

William Wilkins Glenn, a prominent citizen, and for several years one of the proprietors of The Baltimore Gazette, died in Baltimore, June 25, at the age of 51 years.

Hugh J. Jewett has filed a report as receiver of the Erie Railway Company for the month of April. Including $380,397.96 cash on hand at the beginning of the month, he states his total receipts for the month at $2,134,276.81, his total payments at $1,829,270,85, leaving a cash balance on hand for May of $305,005.96. The receiver's notes and certificates of indebtedness outstanding on April 30, were $1,170,000.

Telegraphic orders from Washington have been received at the Torpedo Station at Newport to stop all work and discharge all hands. Only two men are retained as watchmen and to keep the machinery from rusting.

A special dispatch to The Eagle, from West Point, says 300 cadets, with a band, will leave there on the Mary Powel for Jersey City, where a special train will be in waiting to convey them to Philadelphia, where they will go into camp, returning July 7.

An inward bound steamer reports passing Capt. Johnson in his dory, the Centennial, Tuesday week, eastward of Cape Sable.

The arrangements for celebrating the Fourth in New York City are being made on a scale of unparralleled grandeur. Torch light processions, fire works, various societies, the military and the butchers in a solid column numbering 8,000 men will parade.

The utter inability of the conference committees to agree on the disputed points in the appropriation bills, is now admitted. This makes the dead lock between the Houses again complete. The danger that several of the Government Departments, including the Post-Office, will be obliged to stop their operations after June 30, looms up more ominously than before.

A great international rowing match between four of the London Rowing Club and a crew of four of the best oarsmen of the Frankfort-on-the Main Ruder Gesellschaft took place on the Thames course, from Putney to Mortlake. The Londoners, who were the favorites at long odds, led off at starting, and won easily by eight lengths. Both boats carried coxswains.

The fund for the bust of Thomas Paine, to be placed in Independence Hall, Philadelphia, amounts to $695.93. The sum needed is $1,200.

An order has been issued by Gen. Sherman providing that the Centennial anniversary of the Independence of the United States be observed by the army as follows: At each military post and camp provided with artillery and ammunition a salute of 13 guns will be fired at the dawn, and also at the close of the day, and a national salute will be fired at meridian. Post commanders will prescribe such additional inexpensive observances, such as parades, &c., as they may consider appropriate to the occasion. They may also, at their discretion, participate with their commands in any civic or military ceremonies taking place in the vicinity of their posts to which they may be invited.

Of the 16 University races, Harvard has won 9, Yale 3, and other colleges 4.

Owing to the hard times and low freight rates, vessels out of Chicago and Milwaukee are loading too deep. The owners and masters want to take every bushel possible, and in their eagerness to get a sufficient quantity to pay expenses are really overlading. This is not the case with small and medium-dimensioned craft alone. The larger sail vessels and propellers are following the same course, and unless some check is put upon the practice there will be serious disasters.

In speaking of the situation in the Indian country, Gen. Sherman states that the attack of the Sioux on Gen. Crook's command indicates that those Indians are very determined in their warlike operations. He thinks that the offensive movements from Forts Abraham Lincoln in the Northeast, Fetterman in the South and Ellis in the Northwest will result in very effective punishment of these proud and refractory savages.

Mr. Cox's pilgrimage to St. Louis has cost him the Speakership pro tem. of the House. He was elected some time ago, and had he remained in Washington he would have held the place until the Speaker, Mr. Kerr, resumed his position. Mr. Sayler of Ohio, who is a skillful parliamentarian and also very popular with both Republican and Democratic members of the House, was on Saturday, June 24, on motion of Mr. Holman, elected to the position of Speaker pro tem., made vacant through the absence of Mr. Cox.

There is a good deal of talk now regarding the Belknap impeachment trial, not that anybody feels any interest in the trial itself, but on account of the time necessary to devote to it. It seems to be the opinion that it will, after all, be postponed until November, the House making the request of the Senate.

FOREIGN NOTES.

HAMBURG is to have a new town hall at a cost of $1,500,000.

French apartment flats are being erected extensively in London.

A fire occurred recently in the clock tower of the Canterbury Cathedral.

A very handsome Exchange in the Renaissance style has been built in Dresden.

An Art and Industrial Exhibition for North Wales is to be held at Wrexham.

Angling in the Thames is now very successful, the river being stocked with fish.

Lord Hylton, formerly a Conservative "whipper-in," died recently at Reigate.

A Shakespeare Memorial Theater and Picture Gallery are to be built in Stratford.

The Spanish fleet has been ordered to join the English fleet in the Mediterranean.

The body of M. Moulin, the French Consul murdered in Salonica, has reached Marseilles.

The new buildings of the National Gallery are now completed and will shortly be hung with pictures and opened to the public. The old galleries contain 800 pictures; the new ones will have 500.

A boa-constrictor was captured aboard the ship Surprise, in the London docks, recently. It is supposed that she crawled aboard at Natal to hear the music of a concertina. She entirely cleared the ship of rats and vermin during the voyage.

A special dispatch from Berlin to the Pall Mall Gazette says that one captain and six lieutenants of the Chinese army have arrived there accredited by China and bearing a request to be allowed to serve in the Prussian army for the purpose of studying the German military system. The request has been granted.

Count Louis Joseph Narcisse Marchand is dead.

Gen. Freiherr Alexis von Koller, Austrian Minister of War for the whole Empire, has resigned.

Since the withdrawal of the British man-of-war Ariel from Whydah, the King of Dahomey again refuses to pay the fine recently imposed by the British Commodore, Hewett, for maltreating a British subject.

In London the Americans are actively preparing to celebrate the Fourth with due honor. Minister Pierrepont, who left here recently, will no doubt arrive in good time to take part in the celebration and thus invest it with greater importance. Dean Stanley has declined on account of his recent bereavement, to attend the banquet, but offers to conduct Americans through Westminster Abbey, showing them the tombs of the illustrious dead connected with this continent who repose there.

There comes from Turkey and the adjoining States the customary crop of incidents. Austria continuing her timid policy, has resolved to "intern" 20,000 refugees in Croatia to prevent them from aiding the insurgents. Servia has called out part of her reserves and is almost ready to begin hostilities. Mukhtar Pasha has, according to the Turkish report, relieved Niesic and thus rendered that fortress safe, until in the usual order of things it is again invested. At the capital all is transquil, the Sultan being busy putting the finances in order. The situation thus portrayed is not in itself alarming, but it indicates that there are elements at work which portend grave disturbance.

In Denmark, the Folkething or Lower House has passed a vote of want of confidence in the Government and closed the session. The King is no doubt glad to be rid of the refractory legislators on these terms. Being in accord with the people they could have been more troublesome had they desired to restrain the Government from engaging in expensive armaments.

The impending recall of Gen. Ignatieff, the Russian Ambassador, from Constantinople is confirmed.

Some of the 500 boys on the British ironclad Caledonia, stationed at Davenport as a training ship, tried to sink the ship the other day because they had been punished. Several feet of water were in the hold before it was discovered. There will be a court of inquiry.

It is reported that General Ignatieff, the Russian Ambassador at Constantinople, has been recalled, and that Prince Orloff will succeed him.

Matthew Noble, the sculptor, is dead. He designed the "Wellington Mounment" at Manchester, which cost $35,000, and executed other works of merit.

Kiamil Pasha, ex-President of the council of Ministers, is dead.

A dispatch from Berlin announces that the Powers, and especially Germany, insist on the serious prosecution of the parties who are really responsible for the murders at Salonica. The Porte appears not to be inclined to satisfy the demand.

Brent, the forger, who was released five days ago, has given up all claim to the money he had and will probably return to America.

SPECIAL NOTICES.

DEAFNESS RELIEVED. — No Medicine. Book free. G. J. Wood, Madison, Ind.

THE MARKETS.

PRODUCE AND PROVISIONS.

NEW YORK, Saturday, June 24, 1876.

RECEIPTS.—The receipts of Produce for the week were as follows:

Flour, bbls	81,060	Molasses	—
Whisky	2,000	Rice, bbls	485
Corn meal, bbls	3,450	Cut meats, pkgs	7,553
Corn meal, bags	912	Lard, pkgs	7,522
Wheat, bush	1,287,425	Tobacco, hhds	4,046
Corn, bush	543,500	do. cases	3,903
Oats, bush	378,550	Butter, pkgs	27,650
Rye, bush	101,240	Cheese, bxs	82,508
Malt, bush	42,871	Cotton, bales	9,122
Barley, bush		Rosin	6,498
Beans, bbls	6,898	spts. turp., bbls	1,796
Grass seed, bush	200	Dried Fruits, pkgs	44
Beef, pkgs	1,557	Keys, bbls	11,200
Wool, bales	2,742	Peanuts, bags	152
Hops, bales	770	Leather, sides	70,248
Pork, bbls	600	Sugar, hhds	—
Tallow	1,350	Oil cake	7,000

HINTS TO SHIPPERS.—Pack produce as firmly as its nature allows; otherwise many items suffer in appearance, if not in quality, through the jostling incident to transportation. Do not mark packages with any material that will smudge. A good paint for marking purposes can be made of bichromate of potash and extract of logwood. Nailed cards are very insecure. For long lines of goods a marking plate or brand is preferable to ordinary lettering. At the time of shipment put a complete list of the lot into one of the packages if it can be done; but be sure to mail to consignee a full list, naming date, style of packages and contents. Aim to have each parcel of uniform quality as far as possible; mixing always injures sale. Roll butter should be wrapped in clean white muslin. Dressed poultry should be packed in well shaken dry straw. When poultry sweats in boxes straw-dust gives a mean look. Break off nail points from the inside of old barrels when they are used in order to prevent property from tearing. Short cut dry straw is better for packing eggs than anything else. Try and avoid the arrival of gnomer items here on Saturday.

BEANS AND PEAS.—Exports of beans past week 1,013 bbls.; since Jan. 1st, 31,651 do.; same time last year, 12,809 do. Exports of peas past week, 1,951; since Jan. 1st, 45,135 bush.; same time last year, 216,201 do. Mediums have a fair trade without any improvement following. Marrows are in larger supply through late receipts, and the export trade at present does not support rates. White Kidneys dull. Red Kidneys better for selected. Pea beans bring full prices, when lots are picked out. Cundalan Peas are in full demand for small lots. No barrels here, bulk are firm. Green peas extremely low. Black or Turtle soup beans quoted at $4 per bushel. We quote:

Beans—Prime pea, $1.15@1.20; fair to good, $1.00@$1.10; prime mediums, $1.00; fair to good, 75@80c.; poor, 60@70c.; prime marrows, $1.45@1.50; fair to good, $1.20@1.10; prime white kid., $1.30@1.35; other, $1.00@1.20; prime red kidney, $1.50@1.55; other, $1.15@1.25; Lima (Cal.), $2.50. Black beans, $1.00. Peas—Canada, in bulk and bond, 90c.; green, $1.00@1.10; Southern B. E., 2-bush. bag, $2.65@2.70; split, $ bbl., $6.

BEESWAX—Has but little demand from bleachers, with prices unsettled and easy. Sales at 33@34c. for Western; 35c. for Southern. Exports, past week, none; since Jan. 1st, 65,044 lbs.; same time last year, 31,941 do.

BROOM CORN is sparingly dealt in, with prices unsettled.

We quote Brush, short green, 8½@10c.; hurl, green, 8½@10c; green, medium, 5@6½c.; red and red-tipped, 3@4c.

BUTTER.—There has been steady demand enough to support prices for State, but quotations cannot be rated firm. At this season trade is apt to be fickle, as the market can be easily overstocked. Holidays and vacations vary the daily or weekly consumption especially in high grades of stock. Weak figures may affect the market at short notice any time from now until after the Fourth and sellers are in no way inclined to reserve the offering. State butter arrives more liberally than usual for the period; the crop shows a large early end and buyers should be humored as far as keeping up steady use will permit. Unless unforeseen circumstances shrink the yield, an unusually heavy make may be depended upon. It will be well if the summer make can be worked down, even if moderate figures have to be accepted. Summer butter, as a general thing, after it has carried to the busy fall season, has to be marked under fine fall is abundant enough to give the latter anything like an easy tone. As the shipping of dairy products points to comparative cheapness, the natural course of the market should not be further injured by allowing an unwieldy surplus to accumulate either here or in the country. Some of our contemporaries place considerable stress upon the possibility of an enlarged shipping demand. Of late years the export business has been a precarious stuff to lean upon. Such buyers want a large margin; when they operate speculatively and can force a favorable bargain, stock presses the seller. If State should go down to a point that would allow European exports, Western would be apt to be held back; but as holding back does not use up crops, we think it always advisable for the producer to cater to that outlet which furnishes regular business, and the past two seasons have shown the capacity of our populous cities and their environs to consume the enlarged make of the country. During the week Western butter has sold well for best and poorest, the medium grades neglected. Prime yellow firkins are wanted for Southern export. English shippers are paying 16@16c. for Welsh and firkins that are all right. They seem to want a better grade this year than usual. We quote State as before; sales mainly at the inside figure; large buyers can do a shade better than even these rates. Western is marked up for all good serviceable retailing lots. Selected Western tubs, 20@22c. We quote:

Pails, State selected, 27@28c.; do., other 22@26c.; creamery, 25@30c.; half firkin tubs, prime, 26@27c.; fair to good, 23@24c.; Welsh tubs selected, 24@25c.; Welsh tubs, prime, 21@23c.; fair to good, 20@—c.; Pails, Western creamery, prime, 25@27c.; fair to good, 23@25c.; Western tubs, dairy, good to prime, 18@20c.; fair to good, 17@16c.

Western factory choice, 18@20c.; do. fair to good, 14@15c.; poor, 12@13c. Grease, pure, 7@10c.

Western firkins quoted at 15@18c. for poor to fair, 20@25c. for poor to fine, 24@27c. for prime. Sweet cream pails range at 23@28c.

COTTON.—Export movement is very slow, and prices generally weak. The closing prices are: For June, 11 15-16@11 31-32c.; July, 11 15-32@11 31-32c.; August, 12 3-32c.; September, 12 1-32@12 1-16c.; October, 11¾@ 29-32c.; November, 11 25-32@11 13-16c.; December, 11 25-32@11 13-16c.; January, 11 29-32@11 15-16c.; February, 12 5-32@12⅜c.; March, 12⅝@12 5-16c.; April, 12 13-32@12 7-16c.; May, 12 29-32@12⅝c.

Quotations for spot cotton, based on American standard of classification:

	Uplands.	Ala.	Orleans.	Texas
Ordinary	8 11-16	8 11-16	8 11-16	8 11-16
Strict ordinary	9⅜	9⅜	9⅜	9⅜

Middling fair	13½	13½	13½	13½
Fair	14⅛	14⅛	14⅛	14⅛

CHEESE.—Receipts have been large, and have comprised a freer quantity of choice factories. Exporters have been operating quite freely, paying 11c. for best factories, which is an advance since Tuesday last. Latterly the sales have been very liberal. The cable quotes 51s. 6d. for new cheese. Anything a trifle off in quality or heated has to be sold comparatively low. Exports past week, 88,217.

New at 10¾@11c. for fine factory; 10@10¼c. for good; 9@9½c. for fair; do., half skimmed, 7@8c.; do., skimmed, 3@5c. State farm dairy, fair to good, at 9¼@10c.; poor lots, 7@9c.; Western factory, good to prime, 7¾@9c.; fair lots, 6@8c.

DOMESTIC DRIED FRUITS.—Business still drags; prices generally reduced, it is very hard to sell even small lots.

Apples—State, sliced, 8¼@9c.; do., quarters, 8¼@ 8¾c.; Southern sliced, 8@9c. for prime; Blackberries, 9@9¾c. Peeled peaches, good and prime Georgia, 10@12c.; do. fancy, 11c. Unpeeled peaches, new, 11@11½c. for halves and 10c. for quarters. Plums, 14@15c. Raspberries, 25@26c. Cherries, 17@18c.

Exports past week 43 bbls. dried apples; since Jan. 1st, 1,679 bbls.; same time last year, 9,505 do.

EGGS.—At one period of the week it looked as though the market was about to relapse, but it recovered again, and at the close there is a firm feeling. The probability is that a liberal business will attend the Fourth of July wants. Let it be remembered that no vim in the demand will warrant the shipment of poor stock. At present the condition is good, but there have been many complaints. We quote:

Near points, ₱ bbl., 19@20c.; State and Penna., 18@18½c.; Western, prime, 17c.; do. fair marks, 16½c.; Canadian, 17@17½c.

ESSENTIAL OILS.—Oil Peppermint, in glass, $3.75 ₱ lb.; in tin, $3.25. Spearmint, in glass, $3.50; in tin, $3. Wintergreen, $3. Sassafras 55c.

FEATHERS still continue quiet. Common poultry feathers not wanted. We quote prime live Western geese, 52@55c.; mixed, do., 35@45c.

FLOUR.—Exporters are doing but little, with the supplies liberal and freely offered at $4.50@4.10 for poor to choice superfine State; $4.50@4.90 for very common to fair extra do.; $4.95@5.00 for good extra do.; $5.05@5.15 for fancy do., and $5.20@5.75 for very choice extra; $3.50@4.10 for superfine Michigan, Indiana, Iowa, &c.; $4.90@4.95 for shipping extra do, the inside price for inferior, and $5.00@5.50 for choice to very fancy extra do.; good to choice white wheat extras, $5.55@6.30; fancy do., $6.25@7.75; white or wheat good to choice family city mill extras, $7.50@8.75; round-hoop Ohio, $4.75@4.95, and trade brands of do. at $5.00@7.00; St. Louis, $5.00@6.20 for common to fair extra, and $6.25@8.75 for good to very choice; Minnesota "straight" at $5.10@6, and patent at $5.75@9. Southern at $4.85@5.15 for common to good extra, $5.20@6.00 for good to choice, $6.05@8.50 for common to choice family extra. Rye flour at $4.75@5.15. Corn meal, $2.65@3.10 for yellow Western, Pennsylvania and Jersey, and $3.32@3.40 for Brandywine.

FRESH FRUITS.—Those who have not had the advantage of location of New York since fruits and, berries have developed such special cultivation can hardly realize the splendid appearance of our market now when compared with former periods. A few years ago, plates and small baskets of fancy berries were scattered among prominent places, such as prize shows or high-priced hotels, generally accompanied with the legend, "Hands Off," and the usual remark of "too handsome to be eaten." Now we have a daily supply of full crates of varieties that used to be shown as merely choice samples. We know of places that handle really commercial lots of Monarchs of the West, Jucundas and Boyden's No. 30. In quantities large enough to render it necessary for cheap prices to be adopted so as to close them out. The general run of strawberries has been elegant, but the grower will not average as good prices as for last and other years. Fruit, with other things, has to run in the descending scale these scarce-money times. Cherries are in large supply, but many gardens have been wetted and the crop is not so handsome as it might be otherwise. Scarcely any have brought good figure, though Black Tartarian, Madeiras and other fancy table sorts have been included in the supply. A few more Georgia peaches have arrived without giving satisfaction; quoted $2@3.50 for small, sparsely-filled crates. Gooseberries are in better demand. Florida watermelons are abundant for all purposes at this early season. Delaware Black Caps and Red Raspberries are now quotable, also a few Blackberries. Apples are quotable for special use. A few ice-preserved Russets are quoted at $1. We quote:

Apples, choice, $1.50@3.75 per bbl.; other, 1.50@3 Strawberries, N. J., ₱ quart, 6@8c.; Up-river and Staten Island, fancy do., 12@15c.; other, 8@10c.; extra, do., 20@25c.; Small hulled baskets, 2½c. Cherries, best, ₱ lb., 7@8c.; common, do., 3@5c.; Gooseberries, ₱ bush., 11. Seedling, $1.50@2; Eng., $3@4. Florida watermelons, ₱ 100, $25@45. Black caps, ₱ qt., 9@10c. Red raspberries, 14@16c. Currants, large, ₱ lb., 7@8c.; do., small, 10@12c. Whortleberries, ₱ bush., $3@5.50. Peanuts held at following prices: Virginia, ₱ bush., $1.10@1.12; Wilmington, $1.80@2.00; do. Tennessee, $1@$1.20. Hot-house grapes, ₱ lb., 75@$1.25 for black Hamburgs.

GINSENG.—Southern, $1.50@1.60; Northern, $1.15@ 1.20; Seneca root, 75@80c.

GRAIN.—Wheat values have been steadily declining, with the foreign markets dull and depressed and but little doing. Latest sales of amber Michigan at $1.20; No. 3 Chicago spring, 95c.@$1; No. 3 Milwaukee spring, $1.06@1.10; No. 2 Chicago spring, $1.30; No. 2 Chicago spring, $1.13; No. 2 Milwaukee spring, $1.16 @1.18; New York "no grade," 88@90c.; fair Iowa spring, $1.15½; No. 1 spring, $1.28@1.30; winter red Western, $1.15; No. 2 white Michigan, $1.25; ungraded spring, $1.03@1.23. Rye at 82@85c. for Western and 90@96c. for State. Corn closed more active and strong; sales at 57@60c. for mixed Western. Oats are more active; sales, 32@42c. for mixed Western and State and 35@45c. for white do.

HAY AND STRAW.—Arrivals are liberal of hay, demand slow and prices weak. Straw is fairly active and at full prices.

Bale hay is quoted:—Shipping, 70@75c.; retail qualities, 80@95c.; clover, 60@70c.; salt, 60@65c. Straw is quoted at $1.15 for long rye; 70@85c. for short rye; 60@65c. for oat.

Exports past week, 800 bales. Since Jan. 1st, 28,300; same time last year, 22,800.

HIGHWINES.—Quoted at $1.13@1.14.

HOPS.—There is a very fair trade considering the period of the year. Exporters have taken 334 bales and there is more doing from the home trade. There is no change to prices. The quotations are:

N. Y. State, 10@17c.; Eastern, 8@15c.; Wisconsins; 8@15c.; Yearlings, 8@10c.; Ohio, all growths, 4@6c.; Californias (nominal), 15@18c., ₱ lb.

MISCELLANEOUS.—Maple sugar, 7@9c. Cider, 14c. Cider vinegar, 18@25c. Sheep skins, clipped, 25@30c.; unclipped, $1.50@2.25. Lamb, 55@60c.

OIL CAKE.—Western brings $40 (currency) per ton.

POULTRY AND GAME.—Country dressed poultry is nominal, quoted as follows:—Fowls, 16@17c.; Spring chicks 27@32c.; Turkeys 12@15c. The higher rates are for choice iced parcels. Live poultry is selling well, spring chickens are now largely used at near by excursion points. The scarcity of game tends to force the sale of fine fowls and chickens. We quote the advance:

Fowls, N. J., ₱ lb., 14@15c.; do. Western, 13@14c.; Roosters, 6@8c.; Turkeys, N. J., 12@14c.; do. Western, 12@14c.; Ducks, N. J., pair, $1@1.25; do. Western, 65@80c.; Geese, N. J., $1.75@2.25; do. Western, $1@$1.37. Spring chickens—Western, 23@24c.; do. N. J., 25@26c.

Prime stall fed pigeons are reliable; the demand is about over for pigeons. Woodcock will be marketable after July 3d. We quote:

Picked flight pigeons ₱ doz., $1.12@1.25; do. stall fed $1.62@1.75.

PROVISIONS.—Heavy products generally more active on export account, and at strong prices. Mess pork quoted at $19.35@19 10 for spot lots, $19.35 for July, and $19.50 for August. Bacon at 10½c. for long clear, and 11 3-16c. for short clear; Western steam lard at $11.40 for spot lots; $11.45 for July; $11.60 for August; $11.72½ for September. Western steam at 13¾c.; Tallow at 8⅝. Beef hams at $22@23. Beef.—Barreled lots quoted: $10@11 for plain mess; $12 for extra mess, and $13 for packet. Pierced quoted at $20 for prime mess, and $21 for India mess. City extra India mess at $21@22.

SUGAR.—Refined is quoted at 8½@9¼c. for soft yellow, 9⅝@10c. for soft white, 10⅛c. for crushed and powdered, 10⅜c. for granulated, and 10⅞ for cut loaf.

SEED.—Grasses are quiet; clover quoted 16c. and timothy $2.80@2.85.

TOBACCO.—Trade is very slow, and supplies are accumulating. No change made in prices.

VEGETABLES.—Prime old potatoes are in demand and many lots have kept admirably, particularly Peachblows. New are quite salable at the moderate price. Tomatoes run poor and have a wide range. Charleston cucumbers are no longer wanted. Green stuff is generally low and abundant.

Potatoes—Old Peachblows, bbls., 1.25@1.50 ₱ bbl.; E. Rose, bulk, 75c.@$1; common, 50@75c.; Norfolk, new, $2.50@3; Charleston, do., $3@3.50. Bermuda, $4@4.50. Asparagus—Oyster Bay, ₱ doz., $1.50@1.75; N. J., 75c. @1. Rhubarb, ₱ 100 bunches, $1.50@2.25. Southern cabbage, ₱ bbl., 75c.@$1. L. Norfolk string beans, ₱ bbl., flat, 75c. @$1.25; do. round, $1@2. Long Island beets, 100 bunches, $2@2.25. Potato onions, ₱ bbl., $2.50@3. L. I. string beans, ₱ bbl., $1@1.50.

WOOL.—The market since the auction sale of goods has shown an improved position. Manufacturers have been brought into the market for freer quantities and there has been no trouble in sustaining full unchanged prices. The chief business is necessarily in new clips of California and Texas, on account of the small offerings otherwise. Great interest is attached to the marketing of the new Western clips; thus far on the parcels to hand in the interior prices have ruled too high to admit of extensive contracts; a continuance of the present feeling in the goods marked would probably lead to more liberal views among manufacturers, respecting prices.

COUNTRY CHEESE MARKET.

LITTLE FALLS, N. Y., June 24, 1876.

ANOTHER dull market this week for cheese and with no material change in prices from last week. The offerings from factories amounted in the aggregate to upward of 7,000 boxes and sales began to be made at 10c. for the lower grades. This was increased to 10½@10¾c., about 35 factories selling at the latter figure. The highest price reached was 10¾c., at which 18 factories changed hands. We quote lowest price, 10c.; highest, 10¾c.; average, 10⅜c. Several factories sent forward their goods to be sold on commission and one or two lots were sold on private terms.

The delivery of farm dairies amounted to 100 boxes, the range of prices being 7@10c., according to quality. One large lot of farm factory sold at 10½c.

There was a light delivery of butter from farm dairies which sold at 20@22c., while creamery in return pails brought 23@24c., only a few tubs reaching the latter figure.

Grass is now abundant in pastures and the herds are making good returns.

We have advices from abroad for the first week in June. Our London correspondent reports the new American cheese at hand as selling at 55@58s. Cheese of fine qualities is sought after but secondary sorts are difficult to place. We quote:

The prices are for extra American, 60@62s.; fine, 54@58s.; good, 46@50s.; secondary and common, 20@44s. English cheddar brings 50@93s.; Wiltshire double; 64@78s.; Cheshire medium, 50@53s.; fine, 70@80s., Scotch, 60@68s.

Normandy butter sells well, but other descriptions turn in favor of buyers. Dorsets brings 136s.; Corks, 123s.; Jersey, 106s.; Danish and Swedish, 100@130s.; Normandy, 136s. No American or Canadian butter in market. Oleomargarine (or artificial butter) sells at 80@90s. ₱ cwt.

LIVE STOCK MARKETS.

NEW YORK, June 24, 1876.

RECEIPTS OF LIVE STOCK.

" last week	10,013	77	2,627	25,790	17,636

BEEVES.—Trade opened very slow on last Monday in horned cattle; the run being light, the markets closed firm, with none of the herds unsold. Prices ranged at 8¾@11c. ₱ lb.; weights, 1508¾ cwt. The quality to hand was from coarse to good, the herds being in general heavy and fat. Wednesday trade slow, with prices off ¼c. ₱ lb. on Monday's rates. The quality of the herds was from common to fair and they were sold off at 8@11c.; weights, 5¾@9¼ cwt. Thursday, trade as usual, small at 8@10½c.; weights, 5¾@8¾ cwt. Friday, the markets closed dull; sales at 8¾@10½c.; weights, 6¾@7¾ cwt. From 66@68 lbs. has been allowed net. General sales on 56 lbs. to the cwt. net. Native steers sold at 8@10¾c.; grade, do. at 10½@11c.; these animals sold at higher rates were disposed of at retail. The best herds to hand have been slaughtered and shipped for the London market. Oxen, 9@9¾c. Bulls on live weight, 4@4¾c. Stall-fed steers, 9@9¾c.

COMPARATIVE RATES.

Quality.	This week. Cents.	Last week. Cents.
Good	12 @	12 @
Fair	11 @11¾	11 @11¾
Poor	10 @10¾	10 @10¾
Poorest	8 @ 9¾	7¾@ 9¾
Gen. selling rates	9¾@10¾	9½@10¾

MILCH COWS.—Trade slow; 9 cows sold at $45@62 ₱ head; 1 at $53; 1 at $62.50; 1 at $35—calves always included. Some few head of poor quality cows could not be sold.

VEALS AND CALVES.—The quality of the calves to hand continues to be from poor to ordinary, in general course. Buttermilk-fed calves sold at 3@6c.; course quality calves, 5@6¾c.; ordinary quality at 6¾@7¾c. No smooth quality veals to hand. State, 3@6¾c.; Jersey, 6¾@7¾c.; Pennsylvania, 7@7¾c. Trade slow.

SHEEP AND LAMBS.—The quality of the flocks to hand since our last weekly report has been inferior to that heretofore received, ranging from poor to fair. Trade has been slow, with general sales in small lots. Monday sheep sold at 4¾@6¾c.; lambs, 6¾@9c. Wednesday, sheep, 3@6¾c., lambs, 8@10c. Thursday, sheep 4@6c.; lambs, 7@10¾c. Friday, the markets closed weak; sheep, 4¾@4¾c.; lambs, 7@ 9¾c. State sheep, 3@6c.; Ohio, 4¾@5¾c.; Kentucky, 5@5¾c.; Colorado, 4¾@4¾c.; Virginia, 3@4¾c.; Jersey lambs, 9¾@11c.; State, 8@10c.; Kentucky, 6¾@8¾c.

HOGS.—Trade in live very small, a few head having been sold at 6¾c. City dressed inactive at 8@ 8¾c. for hogs. Market pigs, 8¾c.

HORSE MARKET.—The sales of high-priced valuable horses have been so few during the past week as not to influence trade. Twenty-two head of poor quality light harness horses sold at $15@95 ₱ head; 30 at $58@100 ₱ head; 17 ordinary, $120@210 ₱ head; 13 coarse quality heavy draft horses, $150@275 ₱ head; 8 saddle horses, quality inferior, $20@285 ₱ head; 9 roadsters with fair trotting action, $25@379 ₱ head; 2 ponies, $80@115 ₱ head. Fifty-nine horses arrived per Erie Railway, via Oak Cliff Station.

PERSONAL ITEMS.

ELKANAH BILLINGS, F. G. S., the distinguished Canadian geologist, is dead.

REV. DAVID ADKINS of Williamsburg, Ky., is in jail for murdering a widow of his congregation.

DR. LE MOYNE, a philanthropic citizen of Washington, Pa., has constructed a furnace for the purpose of cremation.

A MONUMENT to Luther is to be erected at Ersleben, Germany, his native town. The Emperor has given 3,000 marks toward it.

PRESIDENT FOSS will preach the baccalaureate sermon at the next Commencement of Wesleyan University at Middletown, Conn.

WHEN a man awakens from a chloroform trance in a dentist's chair, can he be said to be in a trance-end-dental state of mind?

FLETCHER HARPER, of the well-known publishing firm, has been elected President of the Board of Trustees of the Homœopathic Insane Asylum.

A QUAKER school in Baltimore was addressed the other day by Rhoda Lamb. A lady with that name must certainly have some peculiar hobbies.

AN Oregon hotel clerk is missing; and the singular feature of it is that a guest's pocket-book containing $915 disappeared about the same time.

A JUDGE in sentencing a man to death, observed:—"Prisoner at the bar, you will soon have to appear before another and perhaps a better judge."

ANOTHER tramp, named Frank Benson, started from Northampton, Mass., to walk to Philadelphia, a distance of 250 miles, in eight days for a purse of $500.

WOMAN has many advantages over man. One of them is that his will has no operation till he is dead, whereas hers generally takes effect in her lifetime.

A TOMBSTONE in Kansas City is said to bear the following touching tribute:

"With a yell and a whoop,
He died of the croop."

"WHAT is Heaven's best gift to man?" asked a young lady the other night, smiling sweetly on a pleasant-looking young man. "A horse," replied the young man with great prudence.

You are indebted to the good sense of the Empress Josephine for the privilege of wiping your nose on a handkerchief instead of the palm of your hand. She introduced handkerchiefs.

THE following attractive advertisement appears in a Boston newspaper:—"A lady in Claremont, New Hampshire, of Emersonian thought and sentiment, desires to secure summer boarders."

UGLY TRADES.—The ugliest of trades have their moments of pleasure. Now, if I were a gravedigger, or even a hangman, there are some people I could work for with a great deal of enjoyment.

DURING the session of a County Court in the Interior, a witness was asked if he was not a husbandman, when he coolly replied, amidst the laughter of the court, "No, sir, I'se not married."

You can now buy a paper collar with a picture of George Washington on each end. The time is at hand when a man earning but $6 a week can have pictures all over his shirt. Let us be joyful.

"No man was better inoculated to prejudge pork than my husband was," says Mrs. Partington; "he knew what good hogs were, he did, for he had been brought up with 'em from his childhood."

"I thought the derned thing was a water cooler," remarked a fat lady from the country the other day, when a Centennial policeman ordered her to "stop fooling" with a Babcock fire extinguisher.

"UNCLE" DANIEL CURTIS, the oldest postmaster in the United States, died at his home in North Dorset, Vt., on the 17th ult., aged 87 years. He was first appointed postmaster by President Jackson.

A POOR Californian, named Patrick Brown, (Frenchman, judging from the name,) has been jailed for sixty days and fined $120 for merely maiming a Chinaman with a stone. Can such things be?

"IF there is anybody under the canister of heaven that I have in utter excrescence," says Mrs. Partington, "it is the slanderer, going about like a boy constructor, circulating his calomel upon honest folks."

THE latest thing in "strikes" is the strike of the grave-diggers in Liverpool. They insist on having shorter hours, forgetting, perhaps, that it is to the shortening of others' hours they owe their having the means of subsistence.

THE prevailing disease among New York artists is paralysis of the right wrist, which compels them to learn to use the brush in the left hand. Hereafter, when one finds the cow in a farm-yard scene on the wrong side of the milkmaid, it will be easier to understand than it has been heretofore.

A CUBAN lady left by will $30,000 to be invested in lottery tickets. The proceeds of the prizes were to be devoted to the erection of a magnificent church. The trustees purchased the tickets, but failed to discover any connection between religion and lucky numbers. The church will not be built.

QUEEN VICTORIA was recently requested to help a Wesleyan bazaar in a letter shrewdly addressed to her as "Empress Victoria." The concise reply was: "Sir T. M. Biddulph is desired to acknowledge Mr.——'s letter, as addressed to the 'Empress Victoria,' and to say that the title is not applicable to the Queen. The Queen is unable to subscribe to purely local objects."

ADDRESS
RURAL NEW-YORKER,
78 Duane St., New York City.

MOORE'S RURAL NEW-YORKER became a household word and power in the land long before we quit "going to school," and, perhaps, needs no comment from us; still "its memory is ever fresh and green," and is renewed by its appearance every week, brimful of *good things* as ever. We are glad to announce that our predictions in the January number are being more than fulfilled. We have sent it more than *five hundred* names, and we learn that subscriptions have been pouring in in like proportions from all parts of the country, despite the hard times. Long may it continue to be what it is—a power for good in the land.—*Agent's Friend.*

Trees, Seeds, Plants, &c.

SEEDS
OF
RUTA BAGA and other TURNIPS
Of our own Raising. Our Motto is
Low Prices with High Quality.
Farmers can obtain supplies by Mail direct, postpaid, at small charge. Send Postal Card for List of Prices.
DAVID LANDRETH & SONS,

Time Pieces.

Thirty Hour Clocks.
BY MAIL, POSTAGE PAID.

The "St. Nicholas," $2
(Box board case, double; imitation morocco; 4½ in. high, 4 in. wide.)
The "Cabinet," 2.50
(Solid black walnut or maple case; 6 in. high, 4½ in. wide.)
The "Oreide," 3.00
(Round metal imitation Gold case; 5 in. diameter.)
The "Boudoir," 3.50
(5 in. octagon morocco case.)

These are all 30-Hour Detached Lever Escapement Clocks, of careful construction and are guaranteed as accurate and reliable time-keepers. They will run in any position, and are suitable for any place where correct time is desired.

Henry T. Williams, editor of the LADIES' FLORAL CABINET, New York, says of them: "The little wonder has come. It has proved as accurate as the best $200 watches, obeys the regulator immediately, and is fully as reliable as any clock of ten or twenty times its worth. We think it well worth the money."

The AMERICAN AGRICULTURIST of New York says of it editorially: "It is a very neat affair. We have had one running for about two months, in competition with a larger and more expensive clock, and though we can't say that the little one has beaten, we are quite sure it has KEPT EVEN with the other."

Such notices as these would not be given to anything but a first-class article, so that all who purchase are certain of getting the money's worth. Sent by mail, post-paid, on receipt of price. Established 1856. S. B. JEROME & CO., NEW HAVEN, CONN.

LADD PATENT GOLD WATCH CASES. Circulars descriptive and historical sent on application by the Manufacturers, J. A. BROWN & CO., 11 Maiden Lane, New York.

Educational.

PEEKSKILL, N. Y., MILITARY ACADEMY opens Sept. 13; 5 resident instructors; 50 boarding pupils; gymnasium; grounds, 6 acres; $400 ₱ yr.

ANSWERS TO CORRESPONDENTS.

I. B., Brooklyn.—We know of no other way to increase the Clematis but by layering. Cuttings will not strike. Seeds germinate in about one year. Jackmanni is a deep, vivid blue and a strong grower.

A Subscriber.—You want to know the "easiest and best way to kill out elderberry bushes from a pasture where the ground cannot be plowed." The same question is frequently asked in regard to destroying various other noxious shrubs and plants, such as Canada thistles, milk weed, burdocks and scores of similar pests, which are more or less tenacious of life. Now there are two effectual methods of destroying plant-pests on land, where the plow and harrow cannot readily be brought into service, and the first is to cut off the plants at the ground, then apply crude petroleum, salt, oil of vitrol or some similar substance, to the covered stems and roots. A liberal application of either of the above will kill the roots of almost any known noxious weed or shrub; but this may be too costly and the farmer must resort to cheaper means; if so, he has only to remember that no known plant inhabiting our northern climate can exist or any considerable time if deprived of foliage, hence, to be certain of killing the roots, permit no leaves or stems to grow. In some instances it will require frequent and persistent removal of leaves and stems during an entire season, or longer, to utterly destroy the roots of Canada thistles; but this course, if persisted in, never fails to produce the desired results. The elderberry bushes you desire to kill out should be cut down close to the roots immediately. This may be done with a grub hoe, then as soon as sprouts appear again, remove them in the same manner. If this plan is continued during the season, few plants will be found alive next year. Tanners' bark may be used for mulching apple, or other trees with safety, and usually with benefit.

J. F. R.—The hickory galls sent were badly decayed when they reached this office, but are probably the same as found in various localities throughout the country. In fact there are a large number of species of these gall-producing insects which infest the hickory, but the history of only a very few of them has as yet been written. We could not attempt to name the different species, even if perfect specimens were sent us, as this particular order of insects has never received much attention at our hand.

J. J.—The so-called Conover's Colossal Asparagus is not a distinct variety, and, even if it had been one at the start, the method of propagation pursued, *i. e.*, raising the plants sold under that name from seed, utterly precludes the possibility of perpetuation of the claimed distinct characteristics. Would anybody think of claiming that the seed saved from a plant of the Linnæus, Colossal, or Prince Albert Rhubarb, would invariably produce plants identical with the parent variety? Well, this is just what *is* claimed for the colossal asparagus, but it is simply the common old sort given extra room and culture, which probably has, to a certain extent, added something to the vigor of the plants and seedlings therefrom.

John.—It will take a long time to make people call things by their right names, and we doubt if that period in our history ever arrives. A Mud Turtle is as nearly related to a horse as a bug is to a beetle, and still there are persons who will persist in showing their ignorance by calling the Colorado potato beetle a *bug*, just as some writers on agricultural topics, in referring to the various species of clover, speak of them as "these grasses."

J. S.—Yes: we have heard that horses used in cultivating potatoes were being poisoned by the Paris green applied to the vines to kill the Colorado potato beetles. It is said that the poison gets on their legs and they lick it off, and are thereby fatally injured. This is a very good story to start on its rounds, and will doubtless help sell some of the new patent mixtures, which are said to be sure death to the beetles and not poisonous to the larger animals, and we are inclined to think it cannot be traced to any more reliable source. That dead horse, killed by licking Paris green from his legs, is probably a myth, but the last time we heard from him he was being buried in New Jersey.

There have been some desperate efforts made to prevent potato-growers using Paris green and to substitute therefor some of the lately-introduced patent or secret mixtures, which nobody knows anything except the manufacturer, and this horse story is one of them. We have a letter from one of our correspondents, who says that he tried one of those new patent mixtures and the beetles seemed to like it, taking the leaves and composition as though there was nothing there intended to injure them.

Geo. J.—We must confess our ignorance of what you term "ticky horses." Presuming that the ticks are some insects peculiar to the South, we would advise washing the animals in a weak solution of carbolic acid, or soap suds made of carbolic soap, which can be purchased at almost any druggist's.

A. L.—Put some cayenne pepper mixed with a little cream on the cows udder or bitter aloes and we think she will soon give up drawing her own lacteal fluid. If this does not break her of the habit by putting a wooden rack about the neck which will prevent her reaching the udder.

Jos. A. Hess, W. Va.—"You will please name the enclosed weed. It was brought to this country some years ago in clover seed from some of the States north of us. It is the worst weed we have ever had to contend with, and is spreading rapidly over our country. Please give its common as well as its botanical name, also its history, if it has one."

Lepidium Campestre is the weed you send—a pepper grass of the mustard family. As troublesome as it is with you, it is rare over other parts of the country. It is a European species but sparingly naturalized.

A. E. A.—We do not see that "hardihood" and "hardiness," though of the same root, can with propriety be used synonymously as applied to plants. The accepted signification of hardihood is intrepidity and audaciousness—a mixture of bravery and impudence. That of hardiness is power of endurance. We should decide, therefore, that the catalogue which speaks of a plant as possessed of "great hardihood" uses the term incorrectly.

J. G. H. Griffin, Ga.—The changeableness of the "Shah" *Coleus* and of Chameleon is the rule and not the exception. We have never found either to be constant. Three-quarters of the summer-growth is the usual bronze leaf with the simple green or gold margin. Others may cultivate them true to name in every leaf, but we have never seen such plants outside of greenhouses. Thanks for your kind expressions respecting the RURAL. Wishing now and always to avoid all boasting, we are yet working for it with all our "might and main" and nothing could gratify us more than to know that every one of our subscribers is, like you, a friend as well.

Jas. M. Lancaster, Oville, Ellis Co., Texas.—"I send specimen of wild flower for a name. In Texas it bears the name of Texas Plume. They are very hardy annuals—will grow in any kind of soil—hight four to six feet—are very beautiful with their long plume-like flowers. I can furnish some seeds to RURAL readers in the fall if they will send postage."

On the part of our readers, we thank our correspondent for this offer. The plant is showy and desirable. *Ipomopsis (Gilia) coronopifolia* and Standing Cypress are the botanical and familiar name. It is a biennial.

Mrs. M. E. M. Paradise, A. S.—If you will send us flowers of the plant, we will give the name. The leaves alone, as a rule, are not sufficient. Send us several flowers as well as a twig.

D. B.—We are not aware of the Bommer method of making manure being practiced to any extent in this country. Why we do not know, but probably because farmers generally are negligent about such matters, seldom making a compost heap of any kind, much less doing the thing in a scientific manner.

J. C.—Neither the eggs or grubs of the Colorado potato beetle live in the ground or elsewhere over winter, but the perfect insect or beetles do, and come forth in the spring in time to lay their eggs and feed upon the first sprouts of potatoes appearing above ground.

J. C. B.—Orchard grass seed may be saved in the same manner as timothy, oats or wheat, either be cut with a cradle and bound in bundles or mown and threshed as soon as well cured, The better method however is to cut and tie in bundles and then thresh with flail or machine.

C. D., Pa.—We would not advice the silver maple for street planting in exposed situations. Its growth is so rapid that the long branches of the current season's growth are frequently broken from the stem by even moderate winds. To make its naturally long shoots and scanty foliage assume a more compact and dense habit severe annual shortening-in is necessary. Treated in this way the tree is far more ornamental as well as less liable to injury from winds—or from being broken down by their own weight.

H. C. C.—We will leave it to our correspondents to answer your question, to wit.: "Which is the best butter worker." Who will tell us?

A. B. New Jersey.—The Bartlet Pear is marked by the Am. P. S. with one and two stars for various sections of this state. In Bergen Co., we know of instance where it cannot be made to thrive though given greater care than Seckels, Louise Bonnes, Winter Nelis, Duchesse d'Angoulome, Superfine and others growing in the same grounds. But as a rule it flourishes in New Jersey either as a standard or a double-worked dwarf. It does not do well as a dwarf. Yes.—The Duchesse succeeds well in this state and, indeed, in almost every other state.

Real Estate.

A BEAUTIFUL COUNTRY SEAT
FORTY ACRES of land, under high cultivation with fine mansion well arranged and finished with beautiful lawn carefully set to fruit and Ornamental trees. Barn, stables, carriage house, hennery &c. and all necessary out-buildings. Large vegetable garden, all stocked fruits. Orchard of 200 apple trees with a variety not excelled in the Northwest, (having been awarded sweepstakes premiums at three Ohio State fairs) 200 young peach, cherry, pears and quinces. Over a dozen varieties of table grapes in prolific bearing 80 rods of river front, with high banks susceptible of the finest terracing with an unbroken splendid river-view of 5 miles. 100 rods road front on the finest drive to Toledo. The whole in the highest cultivation. Tile drained, &c. Admirably adapted to subdivision into 2-acre villa lots, which will be in demand for suburban residences, being only 20 minutes by rail from Toledo. Four trains daily each way. Convenient to Churches, Schools, Post-Office, Market, &c., &c. The grounds have been laid out by a gentleman of education and taste. The whole will be sold at a bargain.

ISAAC MUNSON, Sec'y.

MOORE'S RURAL NEW-YORKER.—With its full corps of editors, and a new publisher of energy and ability, the management propose to celebrate the quarter-centennial of the pioneer RURAL in such a manner as to augment its popularity and usefulness. For a first-class, lively paper, containing matter of interest for all classes, take the RURAL NEW-YORKER, and do so at once, for the paper never was better, and its prospects never brighter.—*Freeport (Ill.) Journal.*

Traveler's Guide.

JOHN CRUMP, - - Proprietor,
Chestnut St., cor. 15th,
PHILADELPHIA.

CALIFORNIA.
Have you any thought of going to California?
Are you going West, North or Northwest?
You want to know the best routes to take?
The shortest, safest, quickest and most comfortable routes are those owned by the Chicago and North-Western Railway Company. It owns over two thousand miles of the best road there is in the country. Ask any ticket agent to show you its maps and time cards. All ticket agents can sell you through tickets by this route. Buy your tickets via the CHICAGO & NORTHWESTERN RAILWAY for San Francisco, Sacramento, Ogden, Salt Lake City, Cheyenne, Denver, Omaha, Lincoln, Council Bluffs, Yankton, Sioux City, Dubuque, Winona, St. Paul, Duluth, Marquette, Green Bay, Oskosh, Madison, Milwaukee, and all points west or northwest of Chicago. If you wish the best traveling accommodations, you will buy your tickets by this route, and will take no other.
This popular route is unsurpassed for Speed, Comfort and Safety. The Smooth, Well-Ballasted and Perfect Track of Steel Rails, Westinghouse Air Brakes, Miller's Safety Platform and Couplers, the celebrated Pullman Palace Sleeping Cars, the Perfect Telegraph System of Moving Trains, the regularity with which they run, the admirable arrangement for running Through Cars from Chicago to all points West, North and Northwest, secures to passengers all the COMFORTS IN MODERN RAILWAY TRAVELING. *Pullman Palace Cars* are run on all trains of this road.
This is the ONLY LINE running these cars between Chicago and St. Paul or Chicago and Milwaukee. At Omaha our sleepers connect with the Overland Sleepers on the Union Pacific Railroad for all points west of the Missouri River.
For rates or information not attainable from your home ticket agents, apply to
MARVIN HUGHITT, Gen'l Superintendent. W. H. STENNETT, Gen'l Passen'r Agt.

THE PALACE HOTEL TRAIN
BETWEEN
NEW YORK AND CHICAGO,
via Cleveland.
Leaves Erie Railway Depot, foot of Chambers St. New York.
9:00 A. M., Daily except Sunday. Drawing-Room Sleeping Coaches through to Chicago; but one change of day cars.
7:00 P. M., Daily. The Palace Hotel Train to Chicago. Drawing-Room Sleeping Coaches and Pullman's Hotel Dining Car, through without change; but one change of day cars
The only line running Hotel Dining Cars out of New York. A ride of nearly a thousand miles without leaving the car to eat, drink or sleep!

Agents Wanted.

DIAMONIZED Metal Knife and Scissors Sharpener, Glass Cutter and Ice Pick in one. "Best in the world," "Wouldn't sell it for $5," "Is worth a dozen steels." Hundreds of similar testimonials! Samples by mail, 25 cents. Terms to Agents of this and other Novelties, free. G. J. CAPEWELL MANF'G CO., CHESHIRE, CONN.

CHARLES DUDLEY WARNER among the How he journeyed into the Land of Egypt Richest thing out. New faces on old things. **MUMMIES** AGENTS wanted in every Town. For Circulars and Terms, Address AMERICAN PUBLISHING CO., Hartford, Ct., Chicago, Ill., Cinn. Ohio.

$40 AGENTS' PROFITS A WEEK.—New Novelties and Chromos. Catalogues free. Oxo, 6, FELTON & Co., N. Y. C.

AGENTS WANTED for the fastest selling book ever published. Send for circulars and our extra terms to Agents. NATIONAL PUBLISHING CO., Philadelphia, Pa.

WANTED Agents for the best-selling Stationery Packages in the world. It contains 15 sheets paper, 15 envelopes, Golden Pen, Pen-holder, Pencil, Patent Yard Measure, and a piece of Jewelry. Single package, with a pair of elegant gold stone Sleeve Buttons, post-paid, 25 cts; 5 packages, with assorted jewelry, for $1. Watches given away to all agents. Circulars free. BRIDE & CO., 769 Broadway, New York.

$5 to $20 per day at home. Samples worth $1 free. STINSON & Co., Portland, Me.

$250 A MONTH.—Agents wanted everywhere. Business honorable and first-class. Particulars sent free. Address J. WORTH & CO., St. Louis, Mo.

$12 a day at home. Agents wanted. Outfit and terms free. TRUE & CO., Augusta, Maine.

AGENTS WANTED TO OBTAIN Subscribers for the best Agricultural and Family Weekly Newspaper. Liberal commissions for little work. Address RURAL PUBLISHING COMPANY, Box 3518. 78 Duane St., New York City.

MOORE'S RURAL NEW-YORKER is one of the readable, useful, family papers, equally in demand by the lady in her conservatory, the matron with her household, the farmer in his field, the stock raiser among his animals, and the young folks around the evening lamp.—*Laws of Life.*

Wit and Humor.

TWO ARISTOCRATS.

"BILLY," said one newsboy to another recently, as they thronged the sidewalk in a mass awaiting the advent of the Evening Republican, "wot's the matter o' yer complexion? Ain't yer health good, my dear?"

"It's disserpashun, cully," was the prompt reply. "Wot with operrers an' late hours in the spring, an' these swell parties just now, an' high livin', I'm a roonuin' my coutertooshun. I ain't wot I wuz in my younger days, I tell yer!"

"Jest ez I thought, Billy; yer must let up. Didn't I see yer makin' a call ez I directed my coachman ter take a little turn through Loocas place yesterday, and didn't yer have a bookay?"

"I 'spose 'twas me yer saw. I take 'er a $5 bookay now an then. 'Smy style, yer know."

"Wa'al, it's all right, Billy, it's all right; but don't yer be throwin' yerself away! Yer too much uv a ornament ter sercicty, yer be, ter waste yerself."

"Oh, I know my vally. Don't yer be alarmed. Hitch up yer britches an' have a partager, cully."

And then the two scions of a bloated aristocracy sat down on the curbstone together, and smoked a couple of cigar stubs with great dignity and considerable labor.—*St. Louis Rep.*

SPARKS AND SPLINTERS.

THE first successful Granger—Ce-crops.

THE bull-frog was the first circulating greenback, and the entire breed have been notorious inflationists ever since the flood.

ALL in St. Louis. Her name was Marie Meyer and his was Helper Bogg. He wanted to marry Marie and helper through the mire.

"Is your house a warm one, landlord?" asked a gentleman in search of a house. "It ought to be," was the reply; "the painter gave it two coats recently."

NEW MEXICO is to be admitted into the Union under the name of "Montezuma." A more appropriate name, considering the prevailing weakness of the inhabitants would be "Three-cardmontezuma."—*Chicago Times.*

EDITORS have discovered by long and careful observations that the best way to save a man's life when he is sick is to expend a good deal of labor in the preparation of an elaborate biographical sketch to be used in case of death. The victim always gets well.

"THE boy may walk," said a Brooklyn pedagogue to the class in grammar. "Parse 'may walk.'" "'May walk' is a verb," said the first boy, "delightful mood, pluperfect tense, singular number present, and has for its object sponge cake and ice cream, understood."

THIS is the season when, as they fondly linger at the gate, he says in tones tremulous with the ecstacy of love, "Darling, my own precious darling, one fond kiss before we part!" and a sharp voice from the up-stairs window calls out, "Sarah Jane you march into the house. To-morrer is washin' day, and you ain't a going to lay abed till noon, now I tell you!"

VERY STERN PARENT INDEED.—"Come here sir. What complaint is this the schoolmaster has made against you?" Much Injured Youth—"It's just nothing at all. You see Jemmy Hughes bent a pin, and I only just left it on the teacher's chair for him to look at it, and he came in without his specs and sat right down on the pin, and now he wants to blame me for it."

"MY wife tells the truth three times a day," remarked a jocose old fellow casting a mischievous glance at his "better half." "Before rising in the morning, she says, 'Oh dear, I must get up, but I don't want to!' After breakfast, she adds, 'Well, I suppose I must get to work, but I don't want to.' And she goes to bed saying, 'There! I have been on the move all day, and haven't done anything.'"

THE Norristown Herald seasonably says: "Young man, if you should see your girl gazing intently at your feet don't shift them about uneasily, or draw them up and sit upon them, under the impression that she is overwhelmed by their immense size. She is merely taking their measure mentally for a pair of slippers, on the toes of which she intends to work a blue dog with a green tail and scarlet ears."

HARD TIMES.—The carpenters say they don't get enough to pay their *board*. The shoemakers that it takes their *all* to keep them at work, and their *sole* dependance is of their *last* job. Tailors have determined to give their customers *fits*. The hatters have kept a *head*. The gasfitters go in for *light* work. Bakers say they *need* more, and don't like to see so many *loaf*-ers. Butchers have to work at *killing* prices. The business of the paper makers brings them to *rags*, while that of the printers is *quoin*-less.

A WATERING-PLACE INCIDENT.

Swell—"Aw, beg pardon! But I believe you dropped this!"

USE ONLY THE BEST.
THE RUBBER PAINT
IS THE
BEST PAINT IN THE WORLD.

There is no Paint manufactured that will resist water equal to it. It is Smooth, Glossy, Durable, Elastic, Beautiful and Economical; and of any shade from PURE WHITE to JET BLACK; and as evidence of its being the *BEST PAINT* the necessity of their establishing the following Branch Factories will abundantly testify.

BRANCH FACTORIES:

506 West St., New York. 83 West Van Buren St., Chicago, Ill.

(CIRCULAR.)
Consumers Importing Tea Co.,
No. 8 Church Street.
P. O. Box 5,509. New York City.

This is a combination of capitalists to supply the consumers of Teas throughout the United States on the mutual principle.

We have experienced agents in all the best districts of China and Japan to select Teas especially for our trade.

We expect every consumer of Teas to render us all the assistance they can in carrying out our enterprise, as we make a specialty of SUPPLYING CONSUMERS ONLY (and allow no middlemen to make any profit on our importations), which will enable us to supply them with Teas at prices lower than have ever been known, and of those fine qualities that seldom reach the interior, being sold only to the large cities and among the very wealthy.

Hoping the consumer will take an interest in our enterprise, and send at once for a circular with full explanations of how to proceed to obtain our goods, we remain,

Most respectfully yours,
Consumers Importing Tea Co.,
No. 8 Church St.,
P. O. Box 5,509. New York City.

FATTENED
ON AN
Aultman-Taylor Straw Stack.
FARMERS who wish to SAVE what grain they raise and secure several bushels more to a field than they ordinarily get, should write to THE AULTMAN & TAYLOR COMPANY, Mansfield, Ohio, for their Illustrated Pamphlet, which will be sent free to all who apply, saying that they saw this advertisement in Moore's Rural New-Yorker.

"THE VIBRATOR."
1,000 SOLD LAST SEASON
WITHOUT ONE FAILURE OR REJECTION.
This is the famous Threshing machine that has "swept the field" and created such a revolution in the trade, by its MATCHLESS GRAIN-SAVING AND TIME-SAVING principles.

THE ENORMOUS WASTAGE of grain, so *inevitable with other styles* of Threshers, can be SAVED by this Improved Machine, *sufficient, on every job, to more than pay all expenses* of threshing.

FLAX, TIMOTHY, MILLET, HUNGARIAN and like seeds, are threshed, separated, cleaned and saved, as easily and perfectly as Wheat, Oats, Rye or Barley.

AN EXTRA PRICE is usually paid for grain and seeds cleaned by this machine, for extra cleanliness.

IN THE WET GRAIN of 1875 these were substantially the ONLY MACHINES that could run with profit or economy, doing fast, thorough and perfect work, *when others utterly failed.*

All GRAIN, TIME and MONEY wasting complications, such as "Endless Aprons," "Raddles," "Beaters," "Pickers," etc., are *entirely dispensed with;* less than one-half the usual Gears, Belts, Boxes and Journals; easier managed; more durable; light running; no costly repairs; no dust; no "litterings" to clean up; not troubled by adverse winds, rain or storms.

FARMERS and GRAIN RAISERS who are *posted* in the large saving made by it, will not employ inferior and wasteful machines, but will *insist* on this Improved Thresher doing their work.

FOUR SIZES made for 6, 8, 10 and 12 Horse Powers. Also a specialty of SEPARATORS designed and made EXPRESSLY FOR STEAM POWER.

TWO STYLES OF HORSE POWERS, viz.: our Improved "Triple Gear," and our "Spur Speed," (Woodbury Style), both "Mounted" on *four* wheels.

IF INTERESTED in Threshing or Grain Raising, apply to our nearest Dealer, or write to us for Illustrated Circular (sent free) giving full particulars of Sizes, Styles, Prices, Terms, etc.

The Horseman.

KIS-BER, THE WINNER OF THE DERBY.

Racing in England is almost as uncertain a game as similar sports in this country. However much sporting men guess or even bet upon their favorite "nags," they are frequently disappointed, as there is always a chance of some new and comparatively unknown horse coming in at the eleventh hour to carry off the highest of English laurels. This seems to have been the case the present year, for the old favorites, which were backed by the supposed-to-be-knowing ones, found a successful competitor in a Hungarian colt which received his name only a few days before the race. Kis-Ber (signifying "the home farm,") is one of three imperial stud farms of Austro-Hungary, of which the other two are Babolna and Mezohegyes, situated on the rich black soils of the great Alfold or Tiefeland of Lower Hungary.

Each of these estates are under the care of a Colonel or Major of the Austrian army and all the work done by soldiers. The home farm of Kis-Ber (pronounced Kishbere) is in charge of Colonel Zoest assisted by an English groom, and to the latter our English cousins may be indebted for the loss of their laurels, although they have the satisfaction of knowing that this now famous winner is the son of Buccaneer, horse well known to the English public, hence he is really more English than Austrian after all. But the owners of Kis-Ber were not content with his great achievements in England, but crossed the Channel and entered him for the Grand Prize of Paris, 115,000 francs, which he carried off much to the disgust of the French turfmen, judging from the comments and growls appearing in the press. Kis-Ber is described as a superb animal, dark bay with elegant limbs, small feet with a single white spot on his back. He has that calm aristocratic look belonging to racers, and pronounced by his admirers the greatest horse now living.

The Frenchmen, however, are now urging a quibble in regard to bets made and lost against Kisber, for it seems he was entered for the race as an English horse, but it leaked out that he came from Hungary, although of direct English blood; therefore, losers have a chance of getting rid of paying the lost stakes. They say that since Kisber is an Austrian horse, those who backed the French horse against him are not obliged to pay, as it was not an English horse that won. This is but one of the various ways which turfmen have of doing things to please themselves.

The most that our readers can take any interest in, is the name and history of such a magnificent specimen of the noble race as shown in Kisber. For the spirited portrait of this now noted animal, we are indebted to the Illustrated Sporting New-Yorker, which is one of our most enterprising, as well as handsome, sporting journals, and really worthy of liberal patronage.

KISBER, WINNER OF THE "DERBY" AND THE "GRAND PRIZE OF PARIS" THIS SEASON.

Field Crops.

IMPROVEMENT OF POTATOES.

An article in the *Revue Horticole* translated, and published in the Farmer (Eng.) contains some points worthy of attention by our American farmers, as the same principles which govern the growth of this tuber in Europe are also potent here. When we want to regenerate any particular kind of potato, or still more, to prevent its degeneration, it is of the first importance to make a judicious selection of parent plants. Several means may be adopted to this end. For example, the choice of the largest possible tubers which represent well the marked features of the variety, since the too frequent setting of small tubers tends to deterioration. Another plan is to choose the seed, when digging up the crop, from the well-furnished roots, and select the tubers which are most typical of the special variety under treatment.

The shape of the tuber need not be too much considered. Some people imagine that tubers which differ from the usual shape of the kind to which they belong, are of necessity degenerate specimens, but this is an error. Tubers may be not exactly of the shape characteristic of the variety, and yet produce well-shaped potatoes in the following year. As a rule the shape of various kinds of potatoes differs according to the nature of the soil in which they are cultivated. For example, it is generally supposed that the "Marjoulin" ought to be long and narrow; nevertheless, some light sandy soils produce it in a swollen, and sometimes even rounded form, though it turns out long and narrow if grown in stiff soil. It is a general physiological fact, common to almost all plants, and specially marked in the case of the potato, that if they are planted early every year, their precocity increases, whilst by reversing the course of action the contrary effect is produced, and they tend to become later in attaining full growth. The same result appears if we plant successively in a cold soil. In this case they become later in arriving at maturity, while the contrary happens if we select a warm ground. Again it is almost certain that if we take the first buds that are developed on a potato for planting, the crop will be earlier than if we planted with the second buds, or still more with those of a third germination. It results from all this, that amongst the various precautions to be taken in attempting to maintain or even improve any variety of potato, a judicious choice of tubers for planting is of especial importance.

The employment of seeds properly so called, might also perhaps be resorted to, sometimes advantageously so. But how often must we not sow before we get good types, and good varieties as a result? Still, notwithstanding its uncertainty, this method should not be neglected. It is generally believed that certain kinds of potatoes, such as the "Marjoulin," neither flower nor run to seed. This again is an error. All potatoes will flower and yield seed when they are very strongly manured and are in a condition of exuberant vegetation; but it is none the less true that there are some varieties whose natural strength leads them to flower and seed more freely than others.

HOP CULTURE IN ENGLAND.

Hop cultivation is singularly precarious work. According to the Brewers' Guardian, the hop prospects of 1876 are not of the brightest in the Kentish district. Taking the plantations throughout, the hop land has not been so well done as usual this year, either as regards cultivation or manure. The wet season hindered the former, and "shortness of cash," it is said, has somewhat affected the latter. Everything connected with hop production, says our contemporary, is at a "top price:" trade on the other hand is dull and declining. Landlords have also in some instances raised the rents enormously. The weather has been dead against hop-growing for now nearly two years. The vine is now fully a fortnight late, and is of a yellow hue, owing to the prevailing cold nights and biting east winds. The fly, however, has not been so busy as usual after cold springs, but it is unfortunately expected to commence its work of destruction as soon as the wind abates and warm weather sets in. "When the rigor of this arctic spring has somewhat modified," says the Guardian, "which, some say, will not be until the 'turn of days,' it is quite likely that there will be a sprinkling of fly, which will cause infinite trouble on account of the delicate state of the vine and its predisposition to disease. All hop-growers, therefore, are strongly advised to get their washing engines ready, and their soft soap purchased for the enemy that is lying *perdu* in every part of the hop-growing area. The aphis has also appeared in the roses. The plum-trees are infested with their peculiar fly. The apple blossom, beautiful with its white and pink petals, has caterpillars lurking within. Filberts and Kent cobs have the maggot. All the foes of the florist, fruitgrower, and farmer are up and doing, but the hop fly alone waits for its pasture grounds to shew a few more green or juicy leaves. It is very early to predicate, and it would be presumptuous to speak positively upon the chances of the coming hop crop, but it is believed that it will not be a large one, and this belief is held by the majority of growers, and those who watch the signs of the times, who had records of past seasons for comparison, and who watch the shadows cast before coming events."

COLORADO POTATO BEETLE.

I see that you of the East are agitating the question of how to get rid of the above named beetle, and a little of our experience may be of service:

The first beetles were seen at this place in 1867; their numbers were few and no one tried to fight them. But in the spring of 1868 when they came out and watched for the potatoes to come up, people began to think of destroying them and various methods were tried such as hand-picking and burning or scalding, sprinkling the potatoes with kerosene, with plaster, salt, bone-dust, Paris green, ashes and I don't know how many more things were tried. Sprinkling with kerosene killed the beetles, also the potatoes; dusting with plaster had no perceptible effect; the same with ashes and bone dust; where salt was used heavy enough, potato and beetle both disappeared; where Paris green was used clear it usually killed the vines and beetles and gave the person who applied it sore hands, and if applied on a windy day often made him sick. In spite of this war, potato fields were "sear and brown," in early fall and the next year but few, the more persevering ones, planted any potatoes and the beetles, not finding wholesome food enough to satisfy their wants, took tomatoes, melons, squash and sometimes young corn and finally took to the woods, and oak trees by the thousand were stripped of their leaves and were as bare as in winter.

They crept into the houses and were all over, in your clothes, among your books, in the curtains, carpets and everywhere. They tried to cross the Bay and were washed ashore by the millions till the whole beach was a crawling, nasty mass of live and dead beetles. The stakes for the fishermens nets were always covered with them. They would often crawl by the hundreds up the sides of the vessels and on every floating thing a colony would be found. Those few who kept at it found that by mixing Paris green with four or six times its bulk of flour or plaster it lost much of its dangerous properties and could be safely used in a duster. They were rewarded by getting $2 per bushel for their potatoes that fall. We now fear them much less than a drouth.

Paris green may be mixed with twenty times its bulk of flour or plaster and applied in a duster or one teaspoonful may be put in ten quarts of water and applied with a sprinkler.

Fort Howard, Wis. A. M. Van Auken.

NARROW-LEAFED PLANTAIN.

Enclosed find leaf and seed-stalk of what we call in this vicinity "Narrow-leafed Plantain" by some Black Plantain, and others have called it Canada Plantain, but the correct name to me is of secondary importance. My object in writing is to have the mystery of its origin cleared up.

Until about six years ago I never saw a plant of it in my cultivated fields and only very rarely one in pasture. At or about the above time, it began to appear in my cultivated fields, and since then it has been gradually increasing, so that at this time we have serious fears that it will increase beyond our ability to stop it by weeding.

I have been on the place where I now am for 28 years and for 25 years have not bought and put on my farm a pound of clover seed and in timothy seed we should have seen it if it had been there. The reason of my not buying clover seed is because I have raised and used it bountifully. I have a theory of my own and I wish further light on the subject.

My theory is that as new plants are at times coming into existence and the proper time having come for this, it had its origin that way. If not asking too great a favor, I would like for you to give this a place in your valuable paper in order to get the views of others on the point in which I am somewhat in the fog. J. B. Koon.

Auburn, N. Y.

The species of plantain sent is the old and very common *Plantago lanceolata* a narrow-leafed plantain. It is not produced spontaneously but came from Europe many years ago and has been gradually spreading over the country. The Indians used to call Plantain, "the white man's foot" because it came into the country with him and appears along roads and foot-paths. It is easy to account for its appearance in your fields without seeking for any spontaneous or evolution theory.

Farm Economy.

AN ABOMINATION IN THE SOUTH.

A WOMAN'S OPINION OF GUANO.

A great plague is upon us, and famine and rapine bid fair to follow in its wake.

Already our poor houses and prisons open to receive wretches who have fallen victims to the scourge.

Many stout-hearted, strong-handed "tillers of the soil," and wealthy land-holders, are beginning to quail before it, for its fatality is great among them; and desolation is imminent in many of their households. And yet no means are taken to rid us of the pest. On the contrary, we encourage its growth, and spend annually thousands and thousands of dollars to keep it in our midst. We had rather suffer bankruptcy than cast it from us, and, though like the dread judgment, it crushes us to earth, still we cling to it, and madly throw ourselves before it, and the detestable stench of it is as "sweet-smelling incense" to us. My reader, this great affliction is known in the agricultural world as Guano. It infests our warehouses, is strewn upon the earth, and the very air is filled with it.

As a general thing, those of our agriculturists most lacking in energy are the greatest sufferers from this plague. For instance, a man possessed of acres and acres of land, that have descended from one ancestor to another for ages past, quietly smokes his pipe and gazes around him in lazy contentedness, from the ingathering of his crop in the fall until planting time in the spring. He has, perhaps, half a dozen negro farm hands under his control, besides white tenantry, and about fifty head of stock. All the winter, white and black men are lounging around in idleness, and horses, mules and cows are standing knee-deep in that, which, if properly composted, would greatly increase the value of his land.

If the stables and stock-pens are ever cleaned out, their contents lie unused, or are carelessly strewn over the nearest field.

At length the buds upon the trees begin to appear, the birds begin to sing, and planting time is at hand. It is too late to properly break up the land now, and there is no home-made compost, so the master of all these broad acres hies him to town, confers with the agents of several Guano Companies, and the consequence is, his farm forces are hauling ton after ton of this abomination when they ought to be plowing—plowing deep, and richly preparing the land for the future crop. The land is plowed, or rather scarified, Guano strewn, and sown, and then our "intelligent Southern Planter" retires—no more to appear upon the field, trusting his crop to Guano, white hirelings and negroes.

The man and brother, with his family, consisting of wife and many children, must be, in his parlance, "run." The employer must stand for his white laborer, else he can not make a crop, and in too many cases he, as well as Cuffee, come out in debt after the crop is made. So after Guano and provision bills are paid, there is very little left for employer and employed.

One wealthy (!) planter smokes his pipe in gloomy ill-nature, frowns at his wife, if he has one, complains of her extravagance, and after a time, perhaps sends her to the wash tub or cooking-stove.

Cuffee and his white fellow-laborer are not so badly affected. They can go over on the adjoining farm the next year and be "run" again, and Boss must either hunt new hands or go into a law-suit to keep those already in debt to him. He buys more Guano, smokes a great deal, and waits for the next crop to be made, instead of taking hold of the plow handles himself and showing a little of the independence so erroneously attributed to him.

If Southern men, as a class, were half as independent as Southern women, how much greater would be our prosperity and how much happier our homes. M. Jayere.

WORKING ROADS IN PENNSYLVANIA.

I notice that the subject of roads is being discussed more or less in the columns of the Rural New-Yorker. It is certainly one in which all residents in the country should feel deeply interested, and there is nothing a stranger admires more while traveling through our rural districts than good roads. We have here in Pennsylvania a township law, which I think is the only plan that is likely to end in bettering the condition of our roads.

The law authorizes the election of three commissioners, one holds his office one year, the next, two years, and the third, three, thereafter one being elected annually. The roads are laid out in half mile sections and numbered. These sections are sold to the lowest bidder at auction, the purchaser being bound to keep each in repair, build bridges, culverts, or whatever may be required to make a good road.

The commissioners decide how wide the roads shall be, as well as establishing the grades, etc. Anyone having cause to complain of the condition of the highways, makes his complaint to the commissioners having that particular division in charge. The commissioners, in turn, notify the contractor, who must make the necessary repairs within six days, failing to do this, men are hired and the said repairs made at the contractor's expense.

We are now working roads under this system for the seventh year, and of course it costs less each year to keep the roads in repair, and the sale each spring is correspondingly lower than in the previous one. There may be objections to this system, for dishonest commissioners will work in collusion with dishonest contractors. But, upon the whole, we think it is about as good a one as can readily be devised, and I would recommend it to other localities for trial.

Washington Co. S. Baker.

WIRE FENCING, AGAIN.

In your issue of June 17, I noticed an article on "Wire Fencing." It is very true, as you say, that "many a wire fence has proved of little use in turning stock." The common wire fence has become almost worthless at the West for that purpose, and is fast being superceded by the popular fence known as the Barbed Wire Fence, which I consider altogether preferable to any fence now in use, and one that will effectually turn stock.

It is generally made of two small steel wires twisted together, with a wire barb twisted securely in at intervals of about five inches. The barb projects about one inch on each side of the wire or cable, and made pointed at each end. They are so twisted in that they are very strong and stiff. The cable is well covered with asphaltum varnish to keep from rusting, and is said to be much stronger than the common plain wire. It is fastened to posts in the usual way—with staples. In the words of a farmer that has it in use: "Stock just let it alone." With three wires for a fence, neither man nor beast can get over or through it. No animal will ever touch it but once. Two wires are sufficient to turn cattle or horses.

It is sent to market on wooden reels, and the best way for distributing it, preparatory to making fence, is to insert the tail-board rod of a farm wagon and unreel it by driving the wagon along by the fence. It costs 20 cents a rod, single cable, or 60 cents per rod for a fence of three cables for the wire. Some of the Western Rail Road Companies are fencing their roads with it, using cast-iron posts, made especially for that purpose, thereby doing away with all danger from fire. C. W. Hammond.

Monroe, Mich.

Sheep Husbandry.

SHEEP AND QUICK RETURNS.

Quick returns are what most business men endeavor to obtain especially in trade or in any kind of mercantile pursuit and it would seem to follow that quick returns were advantageous to agriculture also; thus as sheep bring wool annually and can be managed so as to make a quick return in meat too, doubtless sheep-husbandry will continue to be increased till every farmer will own a good stock and insure a good remunerating income.

I may be wrong, but think the killing of so many lambs in proportion to sheep has an injurious effect on sheep raising generally. It is true that the demand for lamb instead of mutton causes farmers to sell what is a ready sale and what brings likewise a quick return, but this system of selling so many lambs necessitates the keeping of old ewes and wearing them out till they are good for nothing as mutton.

The only ripe meat from the old fashioned general sheep keeper being lamb brings a dislike for mutton as it seems little more than skin and bone.

Now if a quick return of mutton and wool could be had the same as the English farmer has, there would be no stock raised or any crops grown which would pay like the raising of sheep and the growth of mutton and wool. There, in England, by refusing to sell lambs and by using rams of such breeds as produce good mutton and fleeces, an annual good income is maintained and there is no loss by old toothless ewes and poor dirty wool.

When crops are grown for the purpose of being converted into mutton and wool and when sheep are made to sell for ten dollars each on an average for mutton, the farms they are received and fattened on will increase in fertility, growing such an abudance of food that the income will increase in every way, of course the time for giving hay and food of any kind in the winter in the South will eventually cause that to be the chief mutton and wool district.

Working Farmer.

Dairy Husbandry.

ENGLISH DAIRYING.

The Spread of American Ideas Abroad, and Their Effect on the Dairy Interests of the Country.

THE impression generally prevails that the factory system has not proved a success in England. It is true that the first efforts to establish factories in Derbyshire met with considerable opposition, and the prediction was quite current among dairymen in various parts of England that the system was not adapted to the conservative ideas of British dairymen, and hence the attempt to introduce it in the kingdom would prove a failure. The first factories in Derbyshire, it is admitted, were started more as experiments than as permanent institutions. But the system has been steadily gaining ground, and England now numbers 30 factories, the bulk of which are very prosperous, and others are being talked about and projected.

DAIRY ASSOCIATIONS.

As an outgrowth of what has been done, the leading dairymen of England have been agitating for the past year the practicability of inaugurating dairy associations on the plan of those in America. It is proposed by the friends of this movement to have a preliminary meeting at Birmingham during the Show of the Royal Agricultural Society of England, and we have no doubt the proper steps will then be taken to establish a dairymen's association which will be national in character, with branches located in the great dairy centers of England, Ireland and Scotland. Mr. J. P. SHELDON of Derbyshire, in a recent letter to us, asking information concerning the plan of organizing associations in America and the manner of their working, gives some insight in regard to the

PRESENT CONDITION OF THE DAIRY IN BRITAIN.

He says there are considerably over a million and a half of milch cows in England alone, not to mention those of Scotland, Wales and Ireland. Of this large number, it is computed that *one-third are devoted to cheese making*, the remaining two-thirds producing milk for the towns and cities. The annual value of the produce of these cows is probably about thirty millions of money (pounds sterling), or one hundred and fifty millions of dollars.

DAIRY PRODUCTS DETERIORATING.

He thinks the proposed dairymen's association would influence this great interest—this important industry—in a marked and beneficial manner; and he remarks that it will scarcely be disputed that, at all events, the cheese making branch of the dairy in England has deteriorated in the quality of its productions, and this deterioration, he thinks, may be traced in part, and is owing to the system of "high farming" which has become so general, and which has brought with it influences that are seen in the increased difficulty which ordinary dairymaids experience in successfully handling milk in the process of cheese making. There has consequently arisen a distinct want of diffusion of scientific knowledge and means by which these increased difficulties may be encountered and overcome.

HOW DAIRY PROGRESS IS MADE.

This statement of difficulties is undoubtedly true, and the organization proposed, aided by the researches of scientific men, as well as by the experiences of practical cheese makers, would be a powerful medium for the dissemination of knowledge which could not possibly fail to very favorably affect the quality of English cheese. Many useful and important facts now having only a local influence would be collected at the annual meetings, and would afterward be distributed and made available to the entire cheese-making community of the kingdom, in the interest of which all persons would be cordially invited to contribute the information they may possess.

Mr. SHELDON says the lack of unity and intercommunication which at present unfortunately exists among cheese makers is felt to seriously hinder the progress and development of cheese making as an art, and this desirable unity the organization would seek to promote and cultivate.

Whenever a body of men band themselves together in pursuit of a given object, that object is almost invariably attained; but disunited, however sincerely they may strive after progress, it is at best partial, desultory and uncertain. But not cheese making alone, all dairy farming—butter making, the supply of milk to the towns and cities, the breeding of cattle for the dairy, and agriculture generally—would come in for a due share of attention; and it will not be denied that all these branches of rural industry are open to improvement and expansion.

THE EFFECT ON THE DAIRY INTEREST OF AMERICA.

Fears have been entertained that the introduction of factories in England and the progress of t dairy knowledge abroad, to be attained from the inauguration of dairy associations, will be a disadvantage to the dairy industry of America. This opinion, it seems to us, is a narrow view of the question. The true welfare of the dairy lies in the spread of intelligence—a knowledge of better methods of handling milk for the production of dairy goods, improvement in the care and management of cattle, of dairy farms, and of every branch of business connected with this industry.

In regard to the science of the dairy, it is quite probable we should learn as much, indeed more, from the English than they would from us. It would be greatly to our good should dairy associations be established in Britain, for we then should get the results of some of the best practical farmers in the kingdom, together with scientific investigations in regard to the dairy from well-known scientists.

Our advantage over English dairymen lies in the cheapness of our lands as compared with theirs, and this is an advantage which will remain to us in any event. In regard to the economy and science of farming, we can hardly claim an equality with Britain; and hence we think the inauguration of dairy associations will be a most decided advantage to us. Besides this, a rivalry in the production of fine goods will stimulate our manufacturers and dairymen to do their best, and as our goods improve in quality and palatableness, consumption will be increased both at home and abroad, and thus our dairymen will be the gainers financially.

ENGLISH DAIRY PRODUCTS DECREASING.

Mr. SHELDON refers to what is undoubtedly a fact in regard to a decrease in the production of cheese and butter in England. He says the consumption of milk in the towns and cities, with the increased facilities for transportation, is constantly making inroads on the cheese and butter dairies of the kingdom, and so rapid is this increase in the consumption of fresh milk that the time is not far distant when cheese and butter will only be made in considerable quantities in outlying districts, and hence the great bulk of these products needed in England must be supplied from America and other countries. To this may also be added another element to decrease dairy production—the meat supply, which is becoming more and more difficult, and which, on account of the high prices, is holding out better inducements to the farmer than dairying.

It will be seen from what we have said that our dairy interests are not likely to be unfavorably affected by anything which may be done in England, but, on the other hand, larger and larger quantities of cheese from year to year will be demanded. Let us increase our knowledge of handling milk and in manufacturing; let us do everything that is reasonable for the improvement of our dairy products, depending on *that* for success, rather than bewailing the spread of intelligence or in the endeavor to confine the dairy industry within certain prescribed and narrow limits.

As England is our best foreign customer, it will be important for our dairymen to keep well informed in regard to the progress of the dairy in that country—to keep watch of everything the English may do which would be likely to affect the dairy industry of America.

SCALDING MILK FOR BUTTER.

WILL you please inform me whether scalding milk in spring and fall adds to the keeping qualities of butter? and if so, do you think that any more butter can be made by so doing?

Some of our dairymen are making experiments with the freezing process, but with no marked success, and as you may be somewhat familiar with this matter, I should be pleased to have your opinion in regard to it.—WELL. J. HICKOX, *Oneida, N. Y.*

REMARKS.—The scalding of milk in the spring and fall will add nothing to the keeping qualities of the butter, at least we never could discover any such characteristic over butter properly made by the cold process. The keeping qualities of butter depend, for the most part, on having good milk to commence with, and then in working out and expelling the buttermilk thoroughly and not injuring the grain of the butter. Of course the cream must be obtained within a reasonable time and be properly churned; for if the latter be imperfectly done and a portion of the unchurned cream be incorporated with the butter while working, it will be injured in its keeping qualities.

One leading advantage in scalding milk in the spring and fall is to facilitate the rising of the cream and the churning of the butter, and more especially so under the old system of setting the milk in small pans and where none of the modern appliances are provided. Under such circumstances there will not unfrequently be an advantage in scalding the milk during the spring and fall, and as the cream rises with more facility and is more easily churned, the butter product also will be likely to be increased. But if the scalding process be compared with modern processes, where milk can be properly cooled and the temperature not allowed to rise or fall according to the state of the atmosphere, the scalding process will have no special advantage in regard to the quantity of the product or its keeping qualities. It may be observed, however, that with milk sometimes affected in its constitution at those seasons of the year, by which the churning is rendered quite difficult, we have found it to be improved in this regard by scalding.

We have obtained cream by allowing the milk to freeze. When milk is set aside and allowed to cool rapidly and freeze, the cream is thrown up very perfectly, and may be removed by scraping off with a spoon or other instrument until the blue milk appears; and although nearly the whole of the cream in the milk may be obtained in this way, the freezing seems to affect the keeping qualities of the butter, at least such has been the result in our experience. A quite different result in this regard is obtained when milk is treated under the Swedish process, the cooling being carried to a few degrees above freezing. Mr. HARDIN, who uses a refrigerator box for cooling the air where the milk sets, says he has come to the conclusion from his experiments that 49° Fahrenheit is the best temperature for obtaining the cream, quantity and quality being taken into account. The milk in his process is set in cans from 12 to 20 inches deep by 8 inches in diameter. The ice shelf is in the top of the box, and a space of one inch is left open on each side of the shelf to allow the air to pass around the ice. The drippings of the ice are utilized to the extent of four inches in the bottom of the box. The cans are made with a perforated rim in the bottom to allow the water to pass under them, and they have a cover to prevent the drippings from the ice getting into the milk. This plan is gaining favor among butter makers, and we should prefer either this or the Swedish plan to that of allowing the milk to freeze, while the latter plan would be practicable only in cold weather.

We have never practiced the heating of milk during summer for butter making, except as an occasional experiment, and for this season of the year we should recommend cooling either with water or with water and ice, on the plans to which we have referred.

The Poultry Yard.

HOW TO RAISE CHICKENS.

Last fall I purchased 15 late June pullets, a cross of White Brahmas. They commenced laying early in the winter and continued until the first of May. I had from them over 60 dozen eggs.

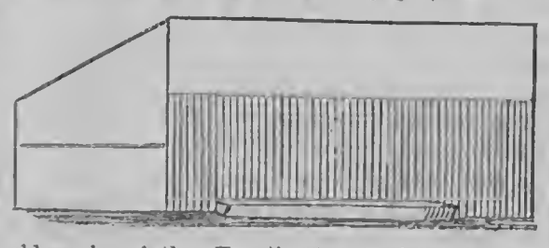
My hen house is partitioned off in one end of my stable, double boarded, and not very warm.

Their feed during the winter was bran and Indian meal, mixed with sour milk, fed cold, and stood by them all the time. When the mixture became frozen, I warmed it on the stove. I kept chopped cabbage by them all the time, and fed two or three times a week with chopped onions.

I gave them no water, but kept snow in easy reach. I fed no animal food, kept a box of road dust for them to wallow in, slaked lime and old plaster.

Now for my mode of raising chickens. Last winter I read in an eastern paper a short account of how to raise chickens without a mother. It struck me as quite the right way.

I made what I call a step-mother, a box 2 ft. long by 16 inches wide and 1 ft. high out of thin stuff, partitioned off on the back end 8 inches, (as per diagram) lined the sides with paper, over that



old woolen cloth. For the top a piece of paper box, cushioned with long, coarse wool made into tufts stitched on the end inside to drop down to about 4 inches of the bottom, so it will raise or fall as the chickens stand or sit.

In such a box there will be room enough, until they are two or three weeks old, for 300, when they should be transferred to a large coop with shed roof, to set out-of-doors in warm weather.

The boxes should have plenty of hay, chaff, road dust and ashes, and fine gravel or coarse sand to eat and wallow in.

On the back end of the boxes there should be a strip 4 inches wide, the width of the box, hung on leathern hinges to let down. Clean out the litter once in two or three weeks.

I make a coop 6 ft. square, pickets 2 ft. long out of lath, nailed on to narrow strips, and close enough together to keep the chicks from getting through, raise it a little to let the chicks go out and in in mild weather.

The first of last March I commenced setting hens, sixteen in all. The first hen I set has hatched four broods, just fifty chickens, and is now hatching her fifth. Three of them hatched three broods each, some two, and others one. As soon after the chicks are hatched, and they are strong enough to take off, I remove them, put in clean straw and fresh eggs.

I don't know how long a hen will sit without abandoning her nest. I probably shall before I get through with the one now sitting.

I have had hatched 220 chicks and have lost of that number only five. To raise chickens in the winter or early spring in this way, it is necessary to have stove heat in the day time; in the night they will be comfortable enough. I fasten them in their coops at night to keep them from skunks, cats and rats. I feed my hens and chicks wheat bran and Indian meal, with loppered milk exclusively—no whole grain.

There is not a hen louse about my hen roost that I can discover. A quart or two of kerosene oil in a dish, sprinkled on their roosts and sides of their house with a clothes broom, and dusting with flour sulphur on the sitting hens and in the nests, will keep away all lice. Sprinkle sulphur on the roosts and sides of the boarding.

To a person who takes an interest in chickens, it is pleasant to see them in the morning rush out of a large, airy room, in an outbuilding, after being fed, fly, chirp and run in all directions, and when they are hungry to see one or two hundred in a drove starting to their feed boxes. I can sell my half-grown chickens now for as much as I could get for them next fall. P. BOWEN.

Erie County, N. Y.

SCURVY LEGS ON FOWLS.

AMONG the many remedies given for this disease the following from the Poultry Nation is probably as good as any in use:

Remedies for this unsightly malady are often given, but in answer to numerous inquiries we give the treatment we are at present using, when necessary. It is simply to anoint the legs and toes of affected fowls twice a week till cured with a mixture composed of carbon oil, one gill; sulphur, one-half ounce; stir well together, and add one gill of fish or lard oil and thirty to forty drops of pure carbolic acid. Stir well before using, and apply with a brush or cloth, soaking it well in. Scaly or scurvy leg is caused by a minute insect that burrows in the skin under the scales of the shank of fowls' legs. The insect is invisible, except under the microscope, and is similar to the "sheep scab" and "itch" parasite. The first indication of the disease is a slightly-roughened appearance of the inside of the shank, near the hock joint. It develops rapidly till the scales are entirely destroyed, and replaced by irregular, enlarging, warty excrescences, encrusting the whole shank from the hock to the toes. The application of our remedy will kill the cause, and the crust will crumble away, leaving the leg smooth; but once destroyed, the natural scale can never be restored. This disease is infectious by contact and inoculation. It is not apt to spread among fowls where their perches are often saturated with carbon oil, or when under treatment for it. It is most swiftly and surely transmitted by hatching hens and mothers to small chicks. Breeders cannot be too careful in selecting hens for maternal duties having no trace of the affection. A little thoroughness on its appearance will make an easy cure.

EGGS RESISTING COLD.

THE degree of cold which a hen's egg can bear without losing its power of development has lately been investigated by M. Colasanti. Having first observed that salt water at ordinary temperature did not affect the development of eggs, he buried some eggs in a freezing mixture of ice and ordinary salt. Of any three or four treated thus one or other always breaks its shell; and the contents both of these and of the unbroken ones were found solidly frozen. After remaining one or two hours in the mixture (the temperature of which quickly went down to—7 deg. to—10 deg. for 30 to 40 minutes, rising again to—4 deg., or—5 deg. by the end of the second hour), the unbroken eggs were taken out, washed and dried and placed in the hatching oven, having a temperature between 36 and 40 deg.; and after ten days they were examined. In every case a normal embyro was found to be developed, without the least trace of anomaly. They were in all respects like the normal embryos of eggs that had been placed in the hatching oven without previous exposure to cold. M. Colasanti, remarks that the fact is in harmony with a large number of other natural history facts, which altogether show that the germs of organisms possess a considerably greater power of resistance than the completed organisms themselves.

Industrial Implements,

THE BUFFALO PITTS THRESHER.

Visitors to the Centennial will find an Art Gallery in Agricultural Hall, as well as elsewhere. We refer to the very fine display of Implements designed to assist the farmer. Manufacturers have indulged in silver plating and similar embellishments, until the machines are as pretty as pictures. Looming up like giants among the lesser machines, stand the threshers, and the golden grain so much talked about has threshing appliances no less gilded.

In Sections T and S, Nos. 7 and 8, stands a 36-inch cylinder Buffalo Pitts Thresher, which we deem worthy of illustration and explanation; to be appreciated, however, it sho'd be seen. Mr. Bronson, who is in charge, is specially fitted to explain its merits, and our readers cannot spend a part of their time to better advantage than in listening to this courteous and persuasive gentleman expatiate on threshers in general and the "Farmers' Friend" in particular.

The Buffalo Pitts Grain Threshers, manufactured by Mr. James Brayley at the Pitts Agricultural Works, Buffalo, N. Y., have the reputation, not only in the United States, but throughout the grain growing *World*, of being superior implements and second to none. The materials, workmanship and finish of Mr. Brayley's exhibit at the Centennial, satisfies us that this reputation is deserved.

THE BUFFALO PITTS THRESHER.

Everything about the machine indicates *strength and durability* of materials, *simplicity and perfection* in construction, the finish and ornamentation being *decidedly rich and tasteful*. We heard testimony to the excellent qualities of the Buffalo Pitts from threshermen and farmers on a visit to the "big show." In particular, we noted one old farmer who says he is still using a thresher bought of Jno. A. Pitts (the founder of the Pitts Ag'l Works) in 1843 and that *it is in good running order yet*.

These machines are furnished with solid steel cylinder shafts which in the band machines are extra heavy, having double bearings with pivot point boxes and self-oilers. This fits them for use with water or steam power.

We noticed, too, that the girts which brace and stiffen the frame are much larger than used in other machines of the same size. This stiffening of the frame prevents the twisting of shafting and gearing out of line and must save a great deal in expense of repairs.

The concaves that were formerly in two pieces are now cast in three, occupying the same amount of space as formerly. Each of these concaves have holes for two rows of teeth making six rows altogether that can be used, if necessary, in threshing tough grain. When grain is dry and in good order, the concave can be taken out and a grate substituted. Those who have been used to making these changes in the old way can fully appreciate this improvement. The diameters of the pulleys and shafting have been enlarged, thus avoiding straining the belts and requiring less power to do the work. The grain is separated from the straw as it passes from the cylinder on the main, or first carrier and over an open raddle.

The great length of this raddle and the use of the new "Patent Agitator," seems to make a perfect separation of the grain from the straw.

The newest and most important feature is the shoe or "End Shake" which has a *longitudinal* motion, that is, it is agitated lengthwise of the machine. This motion is communicated by means of eccentrics and pitmans that are attached to the under side of the shoe and is driven by a belt from the fan-shaft on the outside. The shoe runs without noise or jarring the machine.

It is claimed that by this contrivance grain or flax can be cleaned fit for market without changing anything except the sieves; which have to be given the proper pitch. The blinds, must of course be also adjusted.

We wish also to say a word concerning something novel in the threshing machine here. It is a small thresher and separator (without cleaner) for the use of those who raise small grain crops, and desire to do their own threshing at their leisure. Its construction is simple and durable, and the implement looks as if it would perform all that is claimed for it. Mr. Brayley will send catalogues and particulars free to all who may apply for the same.

If it were possible for our friends intending to visit the Centennial to so time their arrival as to be present at the Thresher trial, they would have a rare opportunity for comparison and judgment on the most noted machines in the country.

Floricultural.

AMERICAN PLANTS.

BY S. B. PARSONS.

This is the term given in Great Britain to a class of plants which are supposed to grow better in peat soil. It is a class indispensable to every garden small or large and the culture of which is presumed to require especial care and expense. So general for many years, has been this impression that a middle-aged English, Scotch or Irish gardener can scarcely be found who is not perfectly convinced that no good plants of this class can be grown without peat and shade. There is no greater fallacy. Those who have watched the Horticultural Journals of England for the past ten years have noticed the gradual inroad of doubts on this point. Year by year the opinion of intelligent men has found expression and many of the best cultivators now openly assert that any good open garden soil, with plenty of humus, will grow Rhododendrons and Azaleas as well as the best peat-lands of Surrey. While claiming only an equality in adaptation of these different soils, many go still further and assert that plants grown in peat cannot, without injury, be transplanted to ordinary soils and thus prefer to obtain plants grown in the latter.

If such is becoming the opinion of intelligent men in England, it applies with tenfold force to this country. Under our hot sun, in our exciting air and variable temperature, differing entirely from the moist and equable climate of England, this equality of adaptation in the soil is positively injurious. The failure of Rhododendrons in many parts of the country is doubtless owing to the peat culture to which so many of our gardeners steadily adhere while the success of the same plants in small suburban gardens whose owners know nothing of peat attests the soundness of our position. The struggling efforts of foreign Rhododendrons to establish themselves here is due in a great measure to their having been grown in peat soil. Many who admire these beautiful plants are deterred from using them by the idea that they require especial soil and especial culture. To encourage these we have enlarged upon this point and our opinion is based upon an experience of thirty years.

Let them be planted as are Roses and any good shrubs and the result will justify the soundness of our opinion. Of this class of plants the Rhododendron stands deservedly at the head. Its broad rich green foliage keeping its color and freshness in winter as well as summer would alone entitle it to the first rank. But when June comes and each branch clothed with these broad leaves is crowned with a cluster of flowers large enough for a hand bouquet and of varied colors, white, lilac, blue, mauve, pink and scarlet, superlatives are exhausted in describing their beauty.

Of the brilliancy of the late English tent exhibition of these plants in Philadelphia there could be but one opinion and with connoisseurs but one regret—that nearly all these high colors belong to varieties not hardy in this climate. In the climate of England such beautiful varieties as *Alarm*, *John Waterer*, *Concessum* and others are perfectly hardy, but in our climate they will endure neither summer nor winter. I am writing now of the latitude of New York. At Baltimore some of the high-colored varieties would bear the winter but the hot summer would test them severely. Out of 150 of the best English sorts which we have tested in every way for 20 years there are scarcely more than a dozen or fifteen which we can pronounce absolutely hardy and reliable under all circumstances and some of these varieties are not known in England because they are seedlings originating in this country.

As the character of Abraham Lincoln stands out in bold relief among the eminent men whom America has produced, so the Rhododendron *Abraham Lincoln* stands far in advance of all its congeners. Its leaf is solid, hard and pre-eminently hardy, its flowers well-shaped, compactly placed and of a rich rosy-crimson. Being a seedling produced at Flushing some years must elapse before it will be abundant. Next come *Grandiflorum* and *Everestianum* the first a light-bluish crimson, the second bluish-lilac crimped. They are both valuable not only for their well-tried hardiness but also for the facility with which they set on buds. They have long been and will continue to be two of the most popular sorts. Then come *Album elegans* a standard-growing sort with large white flowers very slightly tinted, *Candidissimum* the nearest approach to a pure white. *Album grandiflorum* white and blush, *Bertie Parsons*, a favorite Flushing seedling with a soft delicate pink-mauve color, *General Grant* another Flushing seedling of a lively scarlet, *Bicolor* a dark rose color, *Celestinum* with a bluish rose-tint, *Delicatissimum* white and blush with a very superior foliage. *Purpureum crispum* a purple crimped variety. *Purpureum elegans*, a fine purple, *Roseum elegans*, a fine rose color. There are some other varieties among the English sorts which future years may prove hardy. At this time those who plant the varieties we have named may feel sure of satisfactory results, while those who are misled by high colors or charming maculations and go outside of those varieties embark upon a sea of uncertain hopes.

The future of Rhododendron culture here must rest largely upon American seedlings many of which are in process of testing. With the sorts now known it is a safe rule that the lighter the color the more tender the variety.

HARDY AZALEAS.

This plant is one of the most valuable grown. Although deciduous and wanting in the rich foliage which characterizes the Rhododendron, its brilliant bloom of white, orange, pink, scarlet and the various shades of each give it a charm and a refinement of character not known to the more robust beauty of the former. Its excellence grows upon the owner and each year it gives him an added pleasure. Like the Rhododendron it can be transplanted at any season when the ground is not absolutely frozen and no plant is adapted to a wider range of soil and climate. No garden small or large can afford to be without it and on lawns the finest effect is produced by planting in masses.

Among the best of these will be found *Bouquet de Flore*, pink and white, *Concinna* dark orange, *Graf Von Maran* rosy-white and double, *Mirabilis*, lilac, *Narcissiflora*, double and fine yellow, *Peincellata stellata*, straw and salmon color, *Pontica imperialis*, large yellow and *Punicea*, crimson-scarlet. Here again Flushing seedlings occupy an important position and among these the best are *Dr. Gray*, scarlet-orange, large, *Dr. Kirtland*, deep-rose crimped, *Flushing-Queen*, deep-salmon, very fine, *Wm. C. Bryant*, deep-pink. There are also some new varieties from Japan possessing remarkable beauty. They belong to the *Mollis* family and are supposed to be hardy.

The *Kalmia latifolia*, more commonly known as *Laurel*, is one of the most hardy and beautiful plants. Its foliage is evergreen, its habit compact and its bloom most abundant. When planted in masses its effect is almost brilliant. It is adapted to a wide range of soil and climate and grows abundantly in valleys and on hillsides where peat is never known. Like the Rhododendron it blooms better in the sun while its foliage is darker in the shade. It sports very much, sometimes nearly white and sometimes bright pink. There are several species, but the *latifolia* is by far the best. The *Kalmia* is indispensable for every garden. The *Rhodora Canadensis* is but little known. It bears an abundance of purplish flowers early in the spring before the leaves appear and is very valuable for its earliness. Its native habitat is New England and New York and it may thus be relied upon for its hardiness.

The *Andromedas* are also little known. They are all small shrubs except *A. arborea* or Sorrel Tree, which is deciduous and grows to be a second class tree. Its foliage is bright and glossy, the new leaves have a delicate pinkish-bronze tint in the Spring and clothed in the brightest colors in Autumn. *A. mariana* or *Kill-calf*, is a small shrub of great beauty with clusters of large pink flowers like the Lily of the Valley. *Andromeda floribunda* is an evergreen shrub forming its bloom buds in the Autumn and blooming very early in the spring. It is very beautiful but somewhat difficult to manage. *A. catesbaei* and *calyculata* are both good and worthy of a place in any garden. The *Magnolias* are also cultivated in peat in Europe, but it is so well understood in this country that they flourish better in common soil that we will defer their description for another paper.

Flushing, N. Y.

FLORICULTURAL NOTES.

Forcing.—At the last meeting of the Massachusetts Horticultural Society, Mr. Hovey said that he had placed Verbena cuttings in wet sand in a temperature of 80 or 90°, and they rooted immediately—certainly by the next morning.

Mr. Wilder said that he had rooted Verbena cuttings in thirty-six hours, soon after hot water was first introduced for propagating beds; but not many plants root so easily.

Trailing Arbutus.—James Cruikshanks remarked that no one had yet succeeded in making *Epigaea repens* look well in cultivation.

Mr. Rand said that he had been successful in growing it in his Rhododendron beds, but that Mr. C. was right as to its culture in ordinary garden soils.

[Is Mr. Rand still successful in its cultivation; if so, what is the soil of his Rhododendron beds?]

The Centennial.

CENTENNIAL CORRESPONDENCE.

IN THE GRASS FIELD
AT SCHENCK'S STATION, PA.,
June 27, 1876.

"WHERE is Mr. Getty? I want to see Mr. Getty right away!" The perspiration was streaming down his face, his shirt collar wilted, coal dust and cinders in every crack and crevice of his physical anatomy, and his general appearance was that of a railway traveller on a hot summer day. Having expressed the question and the wish in the one breath he had left, he looked around helplessly upon the knot of gentlemen standing near him for a reply. Finally one of the group interrupted the operation of wiping the perspiration from *his* face long enough to inquire if he knew whom it was he wanted to see. "Why, yes, Mr. Getty, the Superintendent of this Agricultural Machine Exhibition." Then a light burst in upon the group, and the same one replied, "Oh! It's Jim Geddes you want to to see. That florid gentleman talking over there, busy about those mowers, that is your man." Then, turning to his companions, who were all using their handkerchiefs upon *their* perspiring faces, he said, "That's a good joke on Jim. Some call him Getty, some Giddy, and some Gurdy, but it's Jim Geddes they mean all the time." This was one of the little incidents which were of constant occurrence upon the field of trial, which should properly be named the second Gettysburgh.

All the RURAL'S readers have seen mowing machines, reapers and hay rakes; but probably very few of them have seen a dozen or so of each drawn up in line of battle, "eager for the fray." Now "fray" is not the proper term here, for the Centennial Commission, in all their mighty wisdom, have "frayed" the thing all out and left a comparatively empty show. It must be distinctly understood that this thing is in no sense a *trial*, but simply an *Exhibition*. The man who exhibits his implements in Agricultural Hall on the Centennial grounds and does not come here at all, is, in strict justice, as much entitled to an award as the one who sets his machine to work here and does yeoman service. But most Agricultural Implement Manufacturers are proud of their productions, and want to show to the whole world and his brother what can be done by them,—hence this *Exhibition*.

Quite a number of the jurors were present on the ground to-day, and the mowers were started off, without much method and with no prearranged plan. Mr. Landreth and Mr. Geddes, with his steady Lieutenant, Mr. Williston, did all they could to make the Exhibition pleasant, both to Exhibitors and visitors; but, as there was no objective point, it seemed up-hill work. So far I fail to see exactly what the whole thing is about.

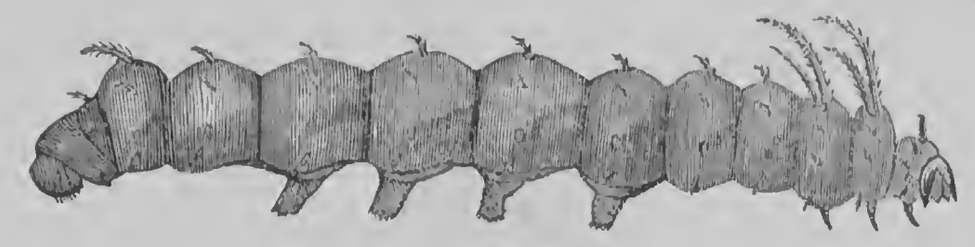
June 28.

Now I begin to get a glimmering of an idea of what all this thing means. No awards, no premiums, no trial, a report—perhaps—well, it must be an immense machine pic-nic. Yes, that is just what it is. Capt. Landreth seems to enjoy it hugely. On the field he is ubiquitous. Mr. Coleman of England, the Chairman of the Jury, called for a roller. Like everything else required of the Superintendent, it was at once furnished. It was then started into the grass and the various machines were each in turn started in after it.

Now I don't know whether I ought to begin telling you the things I don't understand, for fear your paper would not be large enough to hold them all; but certainly I cannot fathom the object of this move. If it was to show just how poorly the best machine could cut under adverse circumstances it was a perfect success. Perhaps, however, they always roll their grass in England just before cutting, and then run their machines the same way as the roller to make those heavy English horses thoroughly earn their oats each day. Some one of the Implement men suggested (and they are always making ridiculous suggestions of some kind) that it would be a good idea to yoke a pair of oxen to a loaded stoneboat and send them in ahead of each mower. It had one good effect, however, for it thoroughly waked up the exhibitors.

As soon as it became generally known that this plan was the order of the day, the number of little impromptu machine and blacksmith shops which were established along the line was something surprising. Nuts were unscrewed, bolts taken out, and a general click, click, click, started over the field. None of them seemed desirous of shirking this test (?); but it seemed to all a novel idea. In the meantime the sun was growing no cooler very fast, and in the face of it all, the jurors and spectators were industriously following the implements up and down the swaths. As this was a part of the show, and didn't cost anything, I took a little myself, but it didn't wear well and I soon transferred my share to more favored individuals. Forty-seven acres of solid sunshine, ninety-eight to the square inch, never *did* agree with me very well at this season of the year.

There is one noticeable feature, however, of this Show—everybody is good-natured and well-behaved, even the newspaper correspondents—ahem! Mr. Coleman, the representative of Mrs. Victoria Rex, works very industriously, if not methodically. Mr. Oldendorff, whom the Argentine Confederation some years since imported from the domain of Kaiser Wilhelm, seems to be



THE CATERPILLAR.

making his examinations very conscientiously, and in connection with our own juror, Mr. Bruce of Oregon, is endeavoring to find out which is the best machine. With the jurors representing Brazil, Spain and Japan my interviews were very naturally so limited that I could hardly form an opinion as to what they were doing. They all took notes in their respective native tongues, but of course I was too polite to read these.

To-day the dynamometer test was the order of the day. Some of the exhibitors were astonished at their light draft, and some others never said a word about it; in fact, you wouldn't think, from their conversation, that there had been any such test. Of this medicine, however, they each took a dose. The instrument used was that of Baldwin & Eichenmeyer.

In the afternoon a meeting of exhibitors was called for the purpose of making arrangements for the Harvester Trial in the wheat field next week. A committee was appointed, and they reported a plan of drawing lots for spaces. Just before the adjournment Capt. Landreth gave notice that on the 6th of July a meeting would be held at the wheat field for the purpose of organizing an Association of Agricultural Implement Manufacturers, which should have for its object a closer intimacy and more friendly interchange of ideas among them. This is a step in the right direction. Heretofore, at exhibitions and trials, there has been a system of competition, or rather a lack of system, which has been frequently the reverse of pleasant. Of course on these occasions large interests are at stake and feelings are apt to run high. Should an Association of this kind be formed, however, rules and regulations for trials, modes of test and scales of points could be adopted, which could be used at all trials and exhibitions, and the competitors and exhibitors would know exactly what would be expected of them. Had such a code of regulations and scales been in existence to-day for use on this field, I will venture to say that there would have been much more satisfaction among all present. This body of men cannot do better than to associate themselves together in a society, and cultivate those relations which will certainly be fruitful at once and beneficial at all times.

A large hay field is not of itself necessarily ornamental; but come to dot it over here and there with Centennial Guards in their blue uniforms and red stripes, the eye is satisfied and relieved. I suppose these guardians of the peace were considered necessary among so many manufacturers; but I fear the only peace they actually had to take care of was their piece of bread. Lieut. Bennett's urbanity, however, rendered all guarding unnecessary.

This afternoon the grass was fast becoming hay when Perry's Tedder, the only one on the ground, was called into requisition. It did its work well and made almost as much stir among the grass as the action of the Centennial Commission did among the manufacturers.

Then came Satan——no, the hayrakers also. These were watched with much interest by the jurors, and would have been thoroughly tried but for the sudden appearance of what Mr. Geddes termed an American *zephyr*, but what Mr. Coleman maintained to be a *typhoon*. What was the judgment of the tents and flagstaffs, I cannot tell, but they were certainly "down on it." It is unnecessary for me to say that at this particular juncture the little affair was adjourned for the day.

June 29.

Hay rakes to right of them,
Hay rakes to left of them,
Hay rakes in front of them,
Rolled and thundered,
Stormed at with shot and ——

Well, there were not six hundred of them, but a goodly number. Mr. Coleman took the rakes and Mr. Oldendorff the rest of the mowers, and the work of the picnic went merrily on. I meandered around among the groups of rake owners and inventors and listened to what they had to say. That is the way to learn, and I believe I have learned it. Each individual machine is a little better than either of the others. That is what I learned from their conversation, and they must know all about it. One says, "We've got it, boys!" another, "I've scooped that field, fellows!" Now, if this is not convincing proof of my position, what is?

The morning was devoted to rakes and the noon hour to the gentle discussion of good cheer, after which the solid, substantial work of the first part of the Great Implement Picnic was finished. The world will never see its like again, unless the great Centennial Commission of 1976 cause everybody to believe there is going to be a great Competitive Field Trial and then April-fool them again about the first of May, as they did this time.

There was still a piece of grass standing of about fifteen or sixteen acres. For this, the machines were brought out in line and all put to work. Nineteen of them started off almost simultaneously, and if ever grass fell in double-quick time, it went down then. About forty minutes served to render the grassy prairie a level plain—I almost forgot to say—then we all went home.

Taken all in all, the Great Picnic was a success. Of course it would be out of place for me to say, in advance of the report of the Jurors, which implements did best or which were particularly worthy of mention. I am very much in the position of the old toper when a friend refused his proffered drink because it was bad, and he said, in plaintive tones: "Don't say that—there ain't none on it bad, some's better nor others; but there ain't none on it bad." So with the machines exhibited—none of them were bad, though some were better than others

Among the most interesting features of the exhibition were those of Hay-loaders, Hay-forks and Conveyors. These are comparatively new implements in their various improvements and late inventions, and attracted much attention. Many of the other machines have developed new features, all of which will probably be covered by the Jurors' report, and will eventually be of great advantage to the farming constituency. I am sorry to say that very few of the Bucks County people attended this Great Exhibition, held at their very doors. Why will people refuse to learn when teaching is almost thrust upon them? As it is not my day, I cannot even answer this conundrum myself.

SHORTHORN.

CENTURY BLOSSOMS.

WE noticed Wilbur's Direct Draft Eureka Mower at the great exhibition of mowers in the field. This implement is something of a new departure in mowing machines, having the "cutter bar" placed between the wheels. They are thus enabled to use a six-foot cutter bar and secure a direct draft by gearing each wheel. In operating the machine, one horse walks in the grass while the other has the cleaned track. The machine did excellent work, and although it has been in use for eight years, the mower is not as well known as it should be. Its merits demand, and will, we think, eventually command inspection and investigation very generally. The manufacturers are sanguine, not to say enthusiastic, on the score of its merits and publish a challenge to all side draft machine makers to mow 50 acres, the Eureka agreeing to forfeit $1,000 if they do not show a superiority in the competition on the prominent and vital points in cutting and gathering hay.

THE DOUBLE HARPOON HAY FORK made by the Pennock Mfg. Co., Kennett's Square, Pa., looked as familiar as the grass itself at the Field Trial near Schenck's Station. This admirable implement is among the exhibits of this Company at Q-12 Agricultural Hall, where Mr. JACKSON will always be found ready to explain its merits.

In the present instance the fork was subjected to a severe test by the Committee and came out of it brilliantly. The fork has gained a wide reputation during the past six years and received the indorsement of leading agriculturists. Being simple, strong, convenient and durable, with no exposed parts to be injured through coming in contact with beams, etc., it penetrates the hay with ease, compressing it with an even pressure from top to bottom, and is consequently specially adapted to fine, short and brittle hay, unbound hay, barley, etc.

From the manner of its hold in the hay, the forkful being wide and comparatively shallow, separates the hay from the load with considerably less power, placing it easily in the mow. In its manufacture constant supervision and care is exercised to have every fork perfectly made and fitted up. The materials used in its construction are the very best throughout. The wrought iron used is the very best refined, and the malleable iron is made by the best manufacturers. At the New York Fair (Sept. 1870) this fork was awarded the First Premium and Bronze Medal.

ON WEDNESDAY, at the Implement Exhibition, when one of our six or seven-foot mower-men saw, for the first time, the roller standing in his plot of grass before his machine, he turned his eyes inward for an instant, then exclaimed: "I'm ruined." One of the Jurors, standing by, said to him: "Young man, there is no medal in that machine." Sic transit glorious Wednesday!

Entomological.

THE ROYAL HORNED CATERPILLAR AND REGAL WALNUT MOTH.

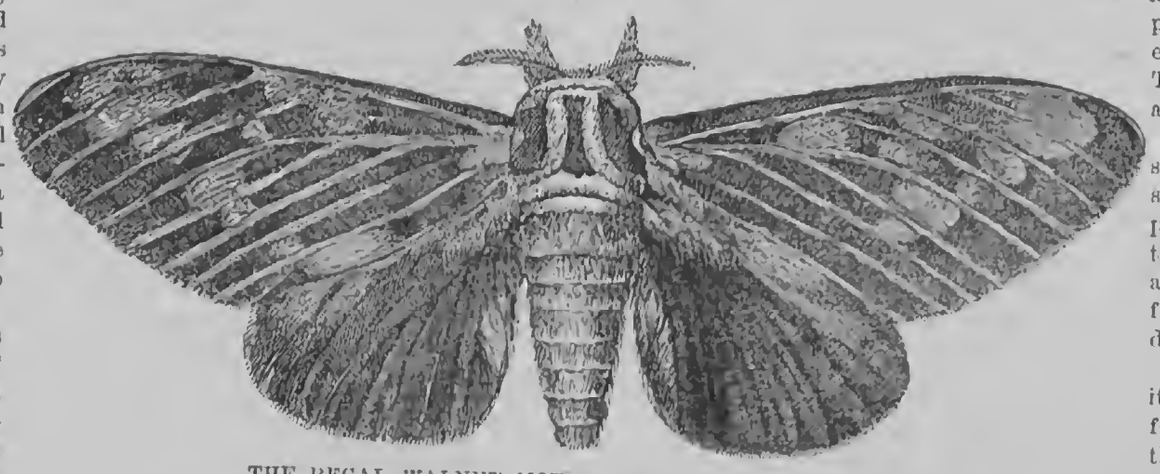
THIS is one of the most beautiful of our North American insects. Its scientific name is *Ceratacampa regalis* [FABR.] It is never plentiful, although found sparingly over a very wide range of country. Although it has received the common name of "Walnut Moth," the caterpillars do not confine themselves to the Black Walnut, but feed upon the leaves of the Hickories, Butternut, Persimmon, and some species of the Sumac. The moths usually appear the last of June or early in July (Fig. 1). The fore-wings are olive colored, ornamented with several yellow spots and veined with blood-red lines; the hind-wings are orange-red, with two large, irregular, yellow patches before and a row of wedge-shaped, olive-colored spots between the veins behind; the wings expand from five to six inches. It is altogether a magnificent insect, and so rare that collectors seldom allow a perfect specimen to escape.

The female moth deposits her eggs on the leaves of the trees named above, but only lays a very small number; hence the scarcity of this insect. The young caterpillars at first are nearly black, but change their colors at each molting, until at last they reach their full size (as shown in Fig. 2), and are then truly formidable in appearance, although really harmless. Their general color is green, with a slight yellowish tinge. The ten long horns on the fore-part of the body are orange-colored, with tips and points black.

These caterpillars are solitary in their habits, seldom more than one or two being found on the same tree. Mr. ABBOT tells us that this caterpillar is known among the blacks of the South as the "Hickory Horned Devil;" and it is not at all strange that the ignorant should give it some frightful name, or attribute to it the power of doing a person bodily harm.

When the caterpillar has reached full maturity it descends to the ground, burying itself in it, forming an oval chamber, wherein it casts off the prickly skin and becomes a chrysalis. It remains in this state until the following year, when the moth emerges, the transformation being completed.

If any of our readers should happen to find one of these caterpillars this season, they need not be over anxious to destroy it, as our entomologists would prefer that the number should increase rather than decrease, as they are none too plentiful in cabinets, nor are they likely to be for some time to come.



THE REGAL WALNUT MOTH—CERATOCAMPA REGALIS.

Pomological.

BLACK-CAP RASPBERRIES.

It is only within the last fifteen or twenty years that the black-cap raspberries have become sufficiently popular to warrant their cultivation for market. Previous to the period named, the few reaching our city and village markets were gathered from the woods and old, neglected fields and clearings, and frequently this fruit was little more than a cluster of hard seeds, held together with a small quantity of almost juiceless pulp.

We have, however, no one species of wild fruit which shows the effect of culture more quickly than the black raspberry, especially in the increased quantity of the pulp surrounding the seed. Moisture at the roots during the time the fruit is growing and ripening is quite important, hence the benefits to be derived from a deep, rich soil, free from weeds. The latter condition secured either by frequent stirring of the surface or covering with some kind of mulch.

YOUNG PLANTS BEST.

The plants will grow and fruit for many years, but the largest berries are always secured from the young and vigorous, the decline coming with the third or fourth season's crop. Of course, by giving the plants a rich soil and good after culture, the decline in quantity and size of the fruit may be exceedingly slow, but, as a rule, the renewing of the plantation every half dozen years, or setting out a new one upon fresh soil, would be a more economical system to pursue than to attempt to restore an old one after it once commences to decline.

While it is doubtless true that the black-cap raspberries will thrive in lighter and poorer soil than the red varieties, still they show the effects of high culture as quickly and give as good return therefor as any of our cultivated fruits.

CHOICE OF VARIETIES.

The Doolittle was one of the first which attracted any considerable attention, and is to-day one of the very best of the thirty or more sorts in cultivation. The plants are vigorous, hardy and prolific, and the berries as large as any variety, ripening at the same time or as early. Davidson's Thornless is an excellent very early sort, the canes having few or no thorns upon them, but are less vigorous than the above, and not quite as hardy.

The Seneca is a valuable variety, coming in a few days later than the Doolittle, perhaps a trifle larger and the canes fully as vigorous, but no more prolific. The berries are of a shining black color, covered with a very thin light bloom, hence they are not likely to look stale, if gathered when wet with dew or slightly rubbed on their way to market.

The Miami, or Mammoth Cluster, as it is known by both these names, is one of the very largest and latest sorts in cultivation. It is an excellent variety, extending the season of this fruit about ten days beyond that of the Doolittle. The berries are covered with a dense bloom, which helps to give them a stale appearance when sent a distance to market, or if gathered in damp weather.

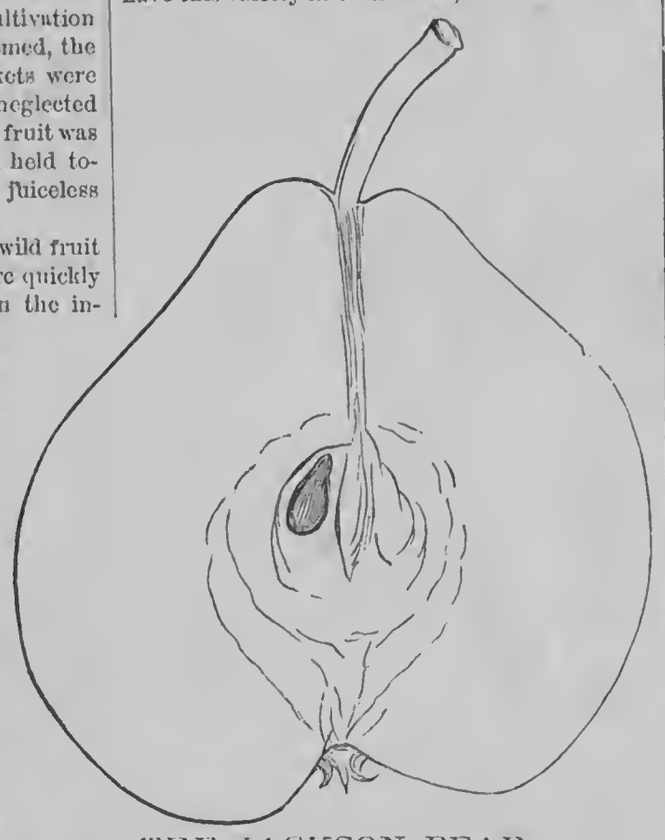
The four sorts named above fill up the season from the earliest to latest and possess all the good qualities known to belong to this fruit, still there are, perhaps, other sorts equally as good. The Ontario resembles the Mammoth Cluster, but no better, if as good. The Surprise is a large and excellent sort, its principal distinctive characteristic is its more conical-shaped berries. Fay's Thornless is also an excellent sort, similar to the Doolittle, ripening at the same time, but the canes are less thorny. Then there are several light yellow berries, spotted with red, but these are more valuable as curiosities than for use.

THE JACKSON PEAR.

It should not be taken as conclusive proof that a variety of fruit originating in a cold climate must, as a natural consequence, be more hardy than one of the same species raised in a milder one. Still, if we were lacking for fruits to be cultivated in Vermont, we should prefer to trust those sorts which originated in the Northern States than in the Southern.

The Jackson Pear, of which we give an accompanying outline, originated in New Hampshire, and is considered a valuable sort for the New England States. Downing describes it as follows: Free, vigorous and productive. Young wood, dull reddish brown. Fruit, medium, obovate short pyriform, pale yellow, somewhat russeted. Stalk, long and curved, fleshy at its junction, inserted in a slight cavity. Calyx, small and open, set in a rather deep, abrupt basin. Flesh, white and juicy. Flavor, brisk and vinous. Good to very good. Ripens the last of September. How extensively this pear has been propagated and disseminated we have no means of knowing, beyond the few reports occasionally appearing in local papers; still it may have been planted largely in the New England States.

We should be pleased to hear from those who have this variety in cultivation, in order to learn if it continues to hold out as good as the above description would indicate.



THE JACKSON PEAR.

SUMMER PRUNING OF FRUIT TREES.

A correspondent of the Journal of Horticulture gives the following very excellent reasons why trees of certain kinds should be pruned in summer.

The summer-pruning of fruit trees when well and timely done promotes health, vigor and fertility—it maintains a just balance between wood growth and fruit growth, promoting yet restricting such growth in the best and highest degree. It prevents waste of vigor, devoting the precious sap out of which every part of the tree is formed—stem, leaves, buds, blossom, fruit—to the formation of a wood growth short-jointed, sturdy and robust, bristling with blossom buds. Thus the growth is turned to its legitimate purpose, the production of fruit of the highest excellence in the greatest possible abundance in a given space. How is this done? I have before now tried to explain the process, but the inquiries of "F. J." convince me that I must be more explicit.

Let us begin at the beginning. All fruit trees have branches; let us take one of them and explain its treatment, and the lesson will be applicable to the entire tree of whatever form it may be. Now the branch has two distinct growths, the main or leading shoot forming the branch itself, and the lateral or side shoots forming the spurs. The annual elongation of the leading shoot should not exceed 18 inches nor be much under a foot according to the habit of the tree, very robust growth reaching the maximum, slender growth being confined to the minimum, even within its limit. Neither of these lengths consists of one clean shoot but of parts of two growths. The first part or spring growth being pruned or picked off at 6 or 9 inches; and the second or midsummer growth, left to grow unchecked till the beginning of September, is then twisted at a point slightly beyond the prescribed length, and the end left attached to the branch and hanging downwards till it is removed in the pruning.

What is our object in this part of the process? Just this—to induce a prompt formation and an even distribution of internal growth or side shoots along the entire length of the branch, to which end we pinch off the tip of the spring shoot, and so checking the upward flow of sap we divert it into other channels, as is shown by the increasing size of each leaf and the lateral bud at its base which so promptly follows the pinching. But we do more than this, for we gain at least a year in every season of growth, no mean result of our manipulation being that we induce the tree to do the work of two seasons in one; and in the treatment of young trees we may go even further than this, and claim to effect the the work of several seasons in one by the rapid formation of fruiting buds which we induce.

In our treatment of the side shoots we proceed upon the same principle, only with this advantage—that as each extension is limited to about an inch, often less, we are enabled to effect a little more by proceeding in this way. When the shoots are long enough to have become somewhat stout and stable at the base they are shortened to one or two eyes, which in a very favorable season push into growth so promptly that the second growth may also be pinched in a similar manner, and then the third shoots are left like the leading shoot till September, and twisted downwards near the base.

There are two points of importance here to which I wish to draw especial attention. First, the young shoots are not pinched till they are tolerably stout at the base, hasty and indiscriminate pinching inducing a crowded, weakly, barren growth and totally defeating the object in view; but then I much fear that those who do their work in such a heedless fashion are a sort of purblind folk with no particular end or aim in view; they have been told that summer pinching is good for the trees, and so they pinch and pinch, but injuriously.

The other point is this—whether the second growth may be pinched or left to grow unchecked till September, when it is twisted downwards, must depend entirely upon the season itself. With a very forward spring a third shoot becomes really possible, and certainly be had; but in a late season like the present it will be much wiser to rest content with two distinct growths, pruning the first and twisting the second, for if a third growth is encouraged this year the result will probably be an abortive crop of weakly unripe shoots which with the wood from which they spring would have to be pruned entirely away, and thus instead of sturdy well-ripened spurs bristling with plump buds, we should have a lot of miserable stumps and destroy the work of an entire season.

These hints apply very generally and with considerable force to the fruits enumerated at the head of this paper. They should, however, be regarded as elastic, exceptional cases so frequently arising which must be treated solely upon their own merits. The work is an interesting and withal a profitable one, and I am obliged to "F. J." for the opportunity he has afforded me of entering more fully into its details.

William Parry, of New Jersey, is always getting up something new and good. His Monarch of the West strawberry has scarcely been allowed to establish itself before it is followed by another, this season, we believe for the first time, called the "Star of the West." It is of very shapely appearance, round and plump, and must speak for itself. Then there is upon the carpet, the "Delaware Raspberry," the fruit of which grows to a good size, which will we presume, be tested this season.—*Germantown Telegraph.*

Around the Republic.

MORE PRAISE OF KANSAS.

I have received numerous letters of inquiry in regard to this country since the publication of my articles in your paper, asking for further particulars concerning this locality, its healthfulness natural resources, etc.

Nature has done all that man could wish to make the Arkansas Valley one of the first agricultural States in the Union. You will find, by referring to the map, that Kansas occupies the middle spot of North America, equally distant from the Atlantic on the East and the Pacific on the West, thus occupying a central position on this continent.

To such advantages of situation on the very highway between two oceans, are added a soil of unsurpassed richness and a fascinating, undulating beauty of surface, with a health-giving climate calculated to nurture a powerful and generous people, worthy to be a central pivot of American institutions.

I have found by a three years' residence in South-western Kansas, that all that has been written in regard to this country can be more than realized by proper management.

Our crops are looking very promising. The wheat harvest has already been commenced, and by next week will become general. Our streets are thronged with farmers who are hauling home their harvesters, reapers, etc, preparatory to making a general onslaught on the wheat fields next week.

It is surprising to see the amount of farm machinery that is taken out of this town daily, and it would bother some of your Eastern farmers to know what they were to do with it all on this "great American desert," which has only been settled up about five years. But then when you go out into the country and behold the broad fields of grain ripening for the harvest, and realize the very few hands that we have to cut and take care of it, you will be convinced that were it not for the machinery it would be impossible to do our harvesting in season.

We have been having garden products on our tables for the past two or three weeks, and now potatoes and green peas are in our markets. To one like myself, who has been used to living at the North, these early vegetables are delightful.

When I see the broad acres spread out here for man's benefit, running to waste for the want of the hardy yeomanry of the North to till them, and knowing, as I do, that it will yield an abundant return for men's labor, it grieves me to see the toiling millions in our Eastern cities and villages, who are living, as it were, from hand to mouth, hardly keeping soul and body together, when here they could earn in a few years a home for themselves and children, and thus secure a good support for their declining years.

Wages are good, and every available man can get employment the year round at fair terms. A man with a good team of say three horses and two yoke of cattle, with a breaking plow, can earn his $6 per day and get all the work he can do; or can make more money by running a Reaper, Harvester or Header through the harvest season. I must close, but will give you further facts in regard to this country as time and opportunity offer. B. M. House.

Newton, Kansas.

Our correspondent is needlessly bestowing sympathy upon the "toiling millions" in "Eastern cities," who live from hand to mouth, for they certainly do it, if at all, from choice and not through any necessity or compulsion.

Better wages are paid to laborers of all kinds in these very cities and villages than in any other place on the globe, besides, there is more uncultivated lands in the Eastern States, and good rich lands at that, than will be used in the next century, and all in consequence of a scarcity of skilled and efficient laborers to occupy it. We see hundreds of these poor, toiling millions as we go to our office in the morning. They are sitting comfortably on seats in the shade of trees in the city parks, while their wives probably are sweating over washtubs or sewing in garrets and their boys blacking boots to find wherewith to purchase food, and this is the way nine-tenths of the poor, abused working-classes of over-crowded cities look for work and can't find it. We are inclined to think that neither Kansas nor other Western States have any use for such people.

A GLIMPSE OF TEXAS.

In your "Around the Republic," will you please to take in this interesting slice of "Uncle Sam's" *terra firma* in one course of your flying trips. Many of us are anxious for said visit, and fearing that the all-absorbing Centennial may divert your attention, I thought you might pardon me for taking the liberty of jotting down some little items of interest to those who might be looking around for a future home in some locality more inviting than their present one, or those whose surroundings may be such as to compel them to seek a locality where less capital will secure a desirable home.

Permit me to give a few condensed facts as to what may be found and realized in Texas.

The climate of Texas cannot be excelled for its mildness and healthfulness, and perhaps has not its equal in the Union, unless California may come up to its standard.

The temperature of winter for four years past, (mean average) 85°—Ther., highest, 40°; lowest, 22°. Except the winters of '73 and '74, 9th of January, the extremes of 16° was reached. The summer heat is an average of 68°—extremes 98° and 48°. Summer heat always tempered by Gulf winds, and our cold days in winter are but few—not more than ten or fifteen days, and are produced by heavy North winds of from one to three days' duration, and as soon as North winds abate, warm spring weather prevails.

Grass and garden vegetables flourish all winter. There has not been a day in the last four years (except January of '74) that a goodly number of vegetables, fresh from the garden, could not be obtained for the table, and beef and mutton of good quality from native grasses.

Two crops of Irish potatoes, three of turnips, two of cabbage per annum, and sweet potatoes are taken from the ground the year round. The Lima bean does not rest from its labors but three months in the year.

The numerous herds of cattle and sheep driven out of Texas have no taste of any other food but grass, and never were in an inclosure but at breeding time.

But to shorten my remarks. We are now digging our first crop of Irish potatoes. Onions are gathered, and berries have been in use for two months past. Plum pies are now on docket. Roasting ears of corn coming in—corn in silk. Oats cut and in stack. Wheat, do. or threshed out. Much hay in rick (first crop). Figs and peaches full grown. Broom corn heading out—we make two crops of brush from one planting of this crop. Good railroad transportation. Market at home. Plenty of good lumber—price, $25 per 1,000 feet. Cheap lands—all tillable. Price of lands, from $2 to $4 per acre. Plenty of timber and prairie. Good water and plenty of it. Settlements, schools and churches all over the State. Texas is sparsly settled nearly all over, and everybody is land poor, and anxious to sell some of his lands to get neighbors and money to pay taxes. Taxes low. Good free school system. A paradise for men of small capital—a heaven for men of large capital.

Gonzales, Texas. D. Beach.

Hygienic Information.

EATING BEFORE SLEEPING.

Mr. W. Barker writing to one of your city cotemporaries takes pretty strong exceptions to a brief note which appears in another journal to wit:

"It is a mistake to suppose it is unhealthy to sleep after eating. Man is an animal, and all animals guided by instinct sleep immediately after eating." And from the same article:—Peasants as a rule enjoy robust health; supper is their heartiest repast and they go to sleep immediately after their last meal. Mr. B. disputes the assertion that peasants as a rule are healthy, and further on disputes also *in toto* the assertion that peasants (or farmers) do generally go to sleep (to bed) immediately after eating the last meal of the day.

Now did friend B. never suspect that the unhealthiness of farmers of the present age might be caused by sleeping on an empty stomach, contrary to nature's laws and the natural habits of the whole animal creation? The babe wakes and the mother understands its call for food, and knows that when that is obtained it will go to sleep and not before. The child is sleepy after supper and would follow the practice into manhood and old age of thus retiring, were not artificial habits forced upon him by the usages and conveniences of society. The old man whose working days of mind or muscle are over falls back upon nature and sleeps after dinner as well as after supper. Man in as near a state of nature as we can find him, eats his principal meal just before sleeping.

The half civilized white hunter and voyager and soldiers on the march do the same. Surveyors and land hunters in the uninhabited regions and overland travelers to the great West learn to eat light till camped for night and hardly move after eating. There may be exceptions to these rules, but ten to one you will in such cases find them like friend B.'s neighbors unhealthy, because they have been too long lured or forced into unhealthy habits.

Neither do I hold with Mr. B. that we can learn nothing of value to us from the natural habits of the lower animals. They rest and sleep during digestion. A colt, calf, lamb or pig, does not sleep when hungry. Teamsters on long journeys and many of the most intelligent farmers and loggers in the pine woods have learned to give their teams their heaviest meal at night.

I admit, that when wearied with labor some time should be given for rest before taxing the stomach with a full meal, but it is a matter settled long ago by careful and scientific experiment that digestion goes on more quietly and perfectly and is accomplished in less time when resting and sleeping than at other times. I admit also the fact, that bad dreams, nightmares, apoplexy and death have followed excessive or irregular late suppers, and I advise any one disposed to indulge a gluttonous appetite that he had better do it in broad daylight, for ailments generally are exacerbated at night.

"Man is the creature of habit" and when artificial habits have with him "become a second nature," it may be dangerous to meddle with them. These injurious, late suppers are however generally in excess of the fixed habits and natural wants of the body.

I am well aware that Mr. Barker in his censure of the sentiments expressed above but speaks the sentiments of the public generally, and that his charge of heresy is not without foundation, but those who have read the history of the rise and fall of public opinion for the past fifty years must know that much that was once popular opinion has since proved to be popular error, as well in hygiene as in many other things.

The most strenuous advocate of nocturnal starvation of the present age was the late Dr. Hall of the Journal of Health, who recommended to eat nothing after three o'clock P. M. but he, though good authority in most matters knew little of country life and habits, and died I think at mid-age, and if he died for the want of sufficient nutriment with plenty before him, he is not the first martyr of the kind.

A physician lately published a remedy for sleeplessness as practiced by himself, and that is to eat onions before going to bed. I hailed this as a straw indicating a change in public opinion: probably the eating of any other palatable food would have produced the desired effect. I also hailed the opinion expressed as above as a whole bundle of straws pointing the same way. The correspondent notes correctly the habits and healthfulness of the rural population of the New England States of 50 to 60 years ago, at which time and place if the word dyspepsia was seen or heard, the dictionary would have been required to learn its meaning. Mr. Barker represents the practices, opinions and sanitary condition of the farmers of the present age who come in from the field at six p. m. to tea and go again to work, and at dark or after go supperless to bed and have dyspepsia and other diseases, the effects of modern improvements in hygiene.

Setting aside all statistics, instincts and natural habits, and reasoning alone from physiological facts as known and established and generally admitted, how could we reason ourselves into the belief that man or any other animal is the better off, for sleeping on an empty stomach? The blood is the life of the animal and in all efforts of the mind and body it flows in increased quantities where most wanted, to the brain to the muscles, the lungs, the heart or the stomach; it never was intended to work all these organs in full force at the same time. The lungs and heart never entirely suspend their action, but in sleep they and the brain and muscles have a partial rest, labor less hard, and give the stomach, then prepared to work, all the blood and vital force necessary for its use. Dyspepsia has run an even race with the modern reforms in the habits of living, and is likely to win in the end if the latter does not bolt the track.

Now my friend Barker, if this meets your eye and you should wish to discuss this matter further, we will do it in good humor and I will, if you wish, cite to you many changes of current opinion, occurring within the past fifty years on hygiene and the treatment of disease, equally strange with the change that is to happen on this subject of late suppers. Changes, too, not alone among the illiterate, but with the scientific and professional. S. B. Peck.

Muskegon, Mich., June 8, 1876.

SEASONABLE ADVICE.

The Health Board of New York at a late meeting adopted the following report of the Sanitary committee on the prevailing disease of infants, and ordered 20,000 published and distributed:

Never neglect looseness of the bowels in an infant. Consult the family or dispensary physician at once and he will give you rules about what it should take and how it should be nursed. Keep your rooms as cool as possible; have them well ventilated and do not allow any bad smells to come from sinks, garbage-boxes, gutters, etc., about the house where you live. See to your own part being right and complain to the Board of Health, 301 Mott street, if the neighbors' houses are offensive. When an infant is cross and irritable in the hot weather a trip on the water will do it a great deal of good, and may prevent cholera infantum. Do not allow your children to eat unripe or dried fruit. An infant under a year old should not have any fruit except by a physician's orders. In very hot weather dress your children in thin clothing and bathe them with cool water one, two or more times a day.

Children under ten months to a year do not need anything but the breast or good milk. Cow's milk, when pure, is made like mothers' milk by adding one-third water to two-thirds milk and warming to blood heat and a little over one and a quarter ounces of white sugar to a pint of the mixture; but in the city a good deal of the milk has plenty of water and too little cream. If you do not nurse the child see that the nursing-bottle tube and mouth-piece are kept in clean water when not used. The addition of a little soda will keep them from turning sour. If the baby does not thrive well on cows' milk consult a physician and take him some of the milk you are using, or bring it to 301 Mott street and the Board of Health will examine it for you.

SUN STROKE IS CAUSED

by excessive heat, and especially if the weather is muggy. It is more apt to occur in the second, third or fourth day of a heated term than on the first. Loss of sleep, worry, excitement, close sleeping rooms, debility, abuse of stimulant, etc., predispose it. It is much more apt to attack those working in the sun, and especially between the hours of eleven o'clock in the morning and four o'clock in the afternoon. On hot days wear thin clothing and have sleeping rooms as cool as possible. If working indoors where there is a strong heat see that the room is well ventilated. If working in the sun wear a light hat; not black, as it absorbs heat, and put on the inside of it a wet cloth or green leaf. Frequently lift the hat from the head and see that the cloth is wet. Do not check perspiration, but drink what water you need to keep it up, as perspiration prevents the body from being overheated. Have, wherever possible, an additional shade, as a big umbrella. When much fatigued do not go to work, rather be excused from work after 11 o'clock in the morning on very hot days, especially if the work is in the sun.

If a feeling of fatigue, dizziness, headache or exhaustion occur, cease work at once; lie down in a shady, cool apartment and apply cold cloths to, and pour cool water over, head and neck. If anyone is overcome by the heat, send at once for the nearest good physician. Give water, or cool black tea, or coffee, if 'able to swallow.' If the skin is hot and dry, spring water over the body is good and apply to the head pounded ice in addition.

BEWARE OF OPIATES.

In order to induce natural and healthful sleep such methods are to be adopted as will abstract an excess of blood from the brain. This may be accomplished by exercise, which draws off the blood to the more weary organs; while a well-ordered digestion demands the blood that keeps the brain in too great an activity for the stomach; where it is needed. To sleep well, too, according to Dr. Ferrier, one must, if possible rid himself of all care, anxiety and disturbing thoughts as the natural season of repose approaches. A brisk walk toward the close of the day, and when the brain has been overtaxed, is commended to us. But Dr. Ferrier warns us—and it were well if he could be heard everywhere and heeded—from opiates as "dangerous ground." They do not produce sleep so much as torpor. If you cannot get sleep by methods which nature itself dictates, he says, it is full time to call in the family doctor.

Domestic Economy.

WASHING VEGETABLES.

We find the following floating about and although somewhat on the "extreme order" still it contains some hints worthy of attention.

Those who value fresh vegetables and sweet salads will have none washed in the garden. Neither the one nor the other should be washed until they are just about to be cooked or eaten. Even potatoes lose flavor quickly after being washed; so do carrots and turnips; while water will speedily become tainted in summer in contact with cauliflowers and cabbages, and thus destroy their freshness and flavor. The case is still worse with salads. If washed at all, it should be only before they are dressed, and they should be dried and dressed immediately. Nothing ruins the flavor of vegetables and renders good salading uneatable sooner than water hanging about them. If lettuce are quite clean, they make the best salad unwashed; but if washed the operation should be done quickly, and the water instantly shaken out, and the leaves dried with a clean cloth. But alas! how often are they cut and washed in the garden in the morning, and pitched into water in the scullery sink until wanted. What French *artiste* would be mad enough to rinse out his salad juice and then recharge his lettuces and his endives with semi-putrid-water?

The best practice is simply to remove all superfluous earth by scraping or rubbing, and all rough tops or leaves by cutting. Enough tender leaves may still be left on cauliflowers and broccoli to overlap the flowers. Salad should be sent in from the garden with most of the outside leaves and main root on. The tender leaves are easily tainted and injured by exposure, and if the chief root is cut off sharp, much of the juice oozes out at the wound. When vegetables and salading have to be bought from a town green-grocer, the conditions are altogether different. Not only washing, but soaking often becomes requisite to restore something like pristine crispness.

DIRECTIONS FOR KALSOMINING.

Buy the best bleached glue, if the walls are to be white or some light tint (if dark, it is immaterial, so the glue is clean), and use it in the proportion of a quarter of a pound to eight pounds of whiting. Soak the glue over night, in the morning pour off the water, as it simply swells while soaking. Add fresh water, put it in a pail, and set that in a kettle of boiling water. When dissolved, stir it into the whiting, adding enough water to make it, after mixing, of the same consistency as common whitewash. It may be tinted any color, and is applied with a whitewash brush. If the color is rubbed smooth in a little water and then mixed with the wash, it will be more even. If the walls have been previously whitewashed, scrape away all that will come off, and wash with a solution of white vitriol—two ounces in a pail of water. The vitrol will be decomposed, forming zinc white and plaster of Paris, to which the kalsomine easily adheres. It is important to dissolve the glue in a hot water bath, for if scorched by too great heat, its tenacity is impaired or destroyed.

COOK AND HOUSEKEEPER.

A good cook is not the one who uses the most and richest ingredients, regardless of the expense; but she who studies economy, and is able to concoct a delicious meal from scanty materials.

To be a successful housekeeper, a woman requires as much system and tact as she would to carry on any other business. It is in this particular that so many of our foreign "help" prove unsatisfactory.

ORIGINAL RECIPES.

Chocolate Cake.—Mr. Editor, I see through your paper, (the Rural) a recipe wanted of chocolate cake. Here is an excellent one, and never fails, if followed by rule. 1½ cups of sugar, 1 ditto sweet milk, 2 tablespoons melted butter, 2 teaspoons cream tartar, 1 ditto soda, 1 pint of flour, whites of 3 eggs, bake as jelly cake. Frosting for inside.—Whites of 1½ eggs, beat to a froth, and add ½ cup of sugar, ½ cup of grated chocolate, flavor with vanilla. Frosting for outside.—½ cup of grated chocolate, 1 ditto brown sugar, ¼ wine glass water, boil until it will harden in water.—Mrs. J. L. G.

Chocolate Marble Cake for J. C.—One cupful of butter, two cupfuls of sugar, one of sweet milk, three of flour; whites of five eggs; two teaspoonfuls of cream tartar and one of soda. Take one teacupful of the latter and stir into it one large spoonful of grated chocolate, wet with a small tablespoonful of milk, fill a cake-dish about one inch deep with the white batter, then drop in two or three places a spoonful of the dark mixture; continue this until the batter is all used.—Mattie Hiatt, *Winchester, Ind.*

Scientific and Useful.

THE SODA MINES OF WYOMING.

The soda consumed in the United States is now imported from England. During the year 1875 about 200,000 tons were used, costing $12,000,000. There is a prospect now, however, that the time will soon come when not only the consumption of this country can be supplied from the production in its own borders, but that enough can be mined to supply the world. The deposits lately discovered, says the Omaha Herald, and for which land patents have been issued lie on the north side of the Sweetwater River, in Carbon County, Wyoming, about 55 miles north of the town of Rawlins on the Union Pacific Railroad. The soda is found in a clerystalized state, solid as ice. The deposit is something over 400 acres in extent and of unknown depth, and estimated to contain enough soda to supply the world for a thousand years. The mineral is a carbonate of soda, containing a small quantity of common salt and sulphate of common soda. Analysis has shown it to be of about the same purity as soda ash of commerce. The owners it is said, will immediately commence to build a railroad from the deposit to connect with the Pacific road. A capital of $1,500,000 is to be employed, and to fully utilize these deposits there will be employment for 2,500 persons.

FURNITURE POLISH.

If you wish one of the simplest and best, get a pint bottle and fill it with equal parts of boiled linseed oil and kerosene oil; any druggist has the former; mix and apply with a flannel, and rub dry with a second flannel. It will remove all scratches and white marks made by bruising. Destroy the rags or keep in open sight, as oiled cloths have been known to ignite spontaneously. Have used this for years.

STRENGTHENING SACKS.

A German paper recommends the following recipe for making sacks stronger and more desirable:—Take a proportion of two pounds of oaken ashes to two and three-quarter gallons of boiling water, let the mixture boil for an hour, and pour off the liquid, in which the sacks are to be soaked twenty-four hours. It is said that this process "tans" the vegetable fibers in the sacks, just as hides are tanned."

SCIENTIFIC AND USEFUL NOTES.

Glue.—A teaspoonful of saltpetre added to a large potful of glue will effectually prevent it from smelling; besides, it causes it to dry faster and harder than it would without it.

A New Mucilage.—The Journal de Pharmacie states that if, to a strong solution of gum arabic, measuring 8⅓ fluid ozs., a solution of 30 grains sulphate of aluminum dissolved in ⅔ oz. water be added, a very strong mucilage is formed, capable of fastening wood together, or of mending porcelain or glass.

To Preserve Wood, Skins, Woven Tissues, &c., from the Attacks of Insects, Decay, &c.—The first step is to form a metallic soap insoluble in water by means of a metallic solution, such as the sulphates of alumina, copper or iron, and a soluble soap, like that of Marseilles, or even a rosin soap. This may be done either hot or cold, stirring well to effect the mixture. In the hot process the insoluble soap melts.

COUNT THE COST.

In business circles, if it becomes known that a person is careless about his accounts, that he does not make a practice of taking an inventory of his stock on hand, his accounts due and debts payable, and completely and accurately balance his books, to know how he stands with the world, his credit becomes impaired and, as a rule, his failure is inevitable.

If a manufacturer should commence business and have in view only the fact that he must sell his goods for a price as low as or lower than his neighbors receive for similar wares, without estimating their cost, his margin of profit would be enormous to prevent his soon finding himself with less money than he commenced with.

At a book trade in New York a few years ago, APPLETON & Co. declined an offer for 500,000 copies of Webster's Spelling Book which was only one-eighth of a cent below their price. They knew what the book cost them to make and were not satisfied with the profit that would be left after the deduction of that small amount.

The proprietor of one of the largest bakeries in New York insisted on having his accounts so concisely kept that his books were balanced daily at 12 o'clock. The superintendent of every department at that time rendered an account of what flour and other material had come into his hands, what remained and what products he had delivered to salesroom. The superintendent of the salesroom accounted for everything received; if sold, how and to whom; and if on hand, a regular account of stock was rendered. The bookkeeper was required to tabulate these reports and to add to them the estimate of the day's expense for rent, labor, wear of machines, interest on investments—everything, not even the sweepings were neglected, and every night the proprietor was furnished with an abstract. That man acquired a reputation for giving better bakers' products for the same money than any other baker in New York. He died about two years ago and, as might be supposed, left a large fortune, every dollar of which he had made by industry, economy and strict attention to the small details of business.

While the farmer cannot calculate the cost of his productions so closely as the manufacturer, that should be no reason why he should not do so as well as he can. But how many can tell what it really costs him to raise ten acres of corn, wheat or potatoes and how, if he does not know the relative expense of production, can he know which is the most profitable for him to raise?

A collector of Internal Revenue for a rural district comprising four or five townships, told the writer that in all his district he found but one farmer who pretended to keep any account with his farm and he was a physician, who had retired from practice, and few were found who had any idea of the amount of farm product consumed by the family. It seems to us that a little more thought and care in these matters would be of great advantage, both by way of economizing and of directing labor to those channels where it pays best.

And in this connection we beg to say a word to wives and daughters. It used to be an old saying in Yankee land that it was the man's business to bring home the money and the woman's to see that it was used judiciously and economically. But there is a sad want of knowledge of domestic economy in the land and no school is more needed than a school for housekeepers. Who can tell how much it costs to make a loaf of bread or half a dozen pies—whether it is more economical to use eggs for food or sell them at the market rates—how much a pound of beef will lose in roasting or boiling? There are a hundred of these little domestic conundrums that could be studied to advantage. We doubt if there be one who reads this that can tell even the approximate value of the provisions he consumes in a year. What difference does it make if we know or not? Just this—that with a thought about it will naturally come the endeavor to get the best results from the expenditure of the least money. It is the little things that count. Two and two make four. We made that axiomatic expression to a young lady a few days ago, in reference to certain minor expenditures. "I know it," said she, "but it don't seem as if it did." She took the idea at once. Remembering the cost of every article, we see the sum total in a different light.

We might continue this subject by looking at it in its various aspects and may take it up again some time. We have so far had in mind the cost of material things. The cost of habits would give room for much moralizing. The cost of smoking the first cigar, for instance; who can calculate it—whether considered pecuniarily, physically or morally?

PROFITS OF RURAL PURSUITS.

LARGE fortunes are not as frequently made in farming and other rural pursuits as in what are generally termed commercial enterprises conducted in our larger cities and villages and as an offset to this it may be truthfully said that fewer are lost after having been accumulated. The gain in almost every occupation of man corresponds with the risks taken, and if the farmer has a less number of chances to make a fortune than the merchant, or stock-broker, he also runs less risk of losing what little he may have gained. But from the frequent complaints which reach us from the country we must conclude that there are a great number of discontented persons among our rural population as well as among those residing in cities. The question, however, which concerns ourselves and a majority of our readers most is, which of the two classes are really the worse off under the present depression of trade, or as it is generally termed "hard times?"

It is doubtless the fact that the method of counting profits of country and city people are quite different. The city man who labors for a living looks upon the net returns of sales after deducting first cost and expenses of conducting his business, although this may be consumed in his own personal expenses or that of his family. The farmer however counts only the clear gains, over and above what has been used for himself and family during the year. This is not a fair way of making up the account, or making a comparison with city people who have no greater amount of capital invested in business.

Now the farmer usually lives in his own house, therefore has no rent to pay to exacting landlords, he also has his horses and vehicles to carry himself and family to mill and to meeting without extra cost, luxuries which few men in a city with five, ten or twenty thousand dollars invested in business can seldom afford. Then, again, the farmer is not obliged to put his hand into his pocket every time a head of lettuce, cabbage, or peck of potatoes is wanted in the kitchen. Stale vegetables, adulterated milk, addled eggs and a thousand other necessaries which the residents of cities meet daily, are or should be unknown in the country.

It is also well to take into the account the freedom of country life from the thousand of petty annoyances which cannot be avoided in cities. If farmers' wives, as is often claimed and perhaps justly so, do work harder than their sisters in the cities, they are compensated for it in part at least in seeing their children grow up more robust and healthy, through the inhalation of a purer atmosphere and a wider field for exercise. It is however, still a mooted question whether the city woman does not as a rule labor as hard as those of the country to meet the demands of society in which she moves. It may be difficult to get everything to work as smoothly and evenly as we would all desire, still the advantage and disadvantages of location, as well as occupation and position in life are about equal when sifted of all extraneous matter.

IMPLEMENT EXHIBITION.

FROM our Centennial Correspondence on another page we are enabled to judge how far short of the original intention this Department of the Exhibition has fallen. It seems to have been a struggle of the manufacturers to bring their important interest to the notice of progressive people against the attempt of the Commission to hide this light under a bushel. The manufacturers went into the thing with great earnestness and a full desire to forward the objects of the International Exposition so far as time, money and labor *of their own* would accomplish it. The Commission attempted to snub them; but fortunately the large majority of them belong to a class of intelligent, shrewd, straightforward sort of men that don't snub worth a cent.

Fully appreciating the old adage, that "half a loaf is better than no bread"—denied the privilege of a Competitive Field Trial, they went into the Field Exhibition (the next best thing) with enthusiasm and numbers which plainly bespoke for them a steadiness of purpose not easily balked by official stupidity. The Chief of the Agricultural Bureau too, is not a man to be easily turned from a good purpose by trifling obstacles. Let him continue to maintain his Department in the face of official obstructions hereafter as he has done in the past and he will come out of the affair in November with flying colors, which will be a striking contrast to the position of many of those managers who are neglecting the objects of their appointment in their general quarrel over their finances.

RURAL NOTES AND QUERIES.

June Lilacs in Brooklyn.—There is nothing more gratifying than to read the lines of a writer whose words impress you with the feeling that he knows whereof he speaks. You feel that you are in the company of a master and surrender at once all thought of previously-attained knowledge to give place to his teachings. "Here," you say, "is one to whom homage is due. His writings combine the results of accurate observation and cultivated reasoning." But would such an one have written the lines we cut from the Brooklyn (N. Y.) Eagle for June 27: "The city just now is one vast flower garden and wherever one turns the *odor of lilacs* and sweet-scented clover greets the senses." That writer is a little worse than the average who do the floriculture for our daily papers. But it is probably his misfortune, rather than his fault, that he don't know what lilacs are and that the last of June is not the time when they appear to the best advantage.

Cheap Postage on Plants.—At the late meeting of the Nurserymens' National Association, Mr. J. S. HUBBARD of New York moved that a committee be appointed to communicate with Congress and endeavor to get a reduction on third class matter, but as Western men do not worship or stand in awe of their representative in Congress, one of them Mr. D. B. WIER of Illinois offered the following:

Resolved, That we, the nurserymen, florists and seedsmen of the United States, in Convention assembled, demand it as our right of the Congress of the United States, that the rates of postage on seeds, cions, plants, etc., be restored to the rate of 1 cent for each 2 ounces.

The resolution was unanimously adopted.

This has the ring of true metal, and if our people would demand more of their public servants and cringe less with suppliant petitions for relief, when oppressed, political demogogues might be taught to do their duty with becoming good manners.

The New Raid on Pruning.—Our uneasy theorists among horticulturists have had a rather dull time for several years past and the late tirade of SHIRLEY HIBBERD of England upon the general practice of pruning trees, has given the discontents something to talk about. We rejoice over this one foreign convert to Apostle SAUNDERS, old time theory of no pruning for fruit trees, still we believe that the old farmer was about right, when advised to pinch back his blackberry bushes to make them bear big berries, replied—That's so! I can remember when I lived down in Dartmouth that we always found the biggest blackberries on the bushes that the old cow browsed off in spring. We had much rather have an old cow loose in our garden than to put it in charge of one of these non-pruning gardeners.

Smoke Injuring Grape Vines.—For many years the vineyardists on the banks of the Hudson, who happened to be located near brick kilns, have complained of the injury to the vines from smoke. We now learn that M. C. HUSSON has addressed a paper to the French academy of sciences on this subject, showing that vineyards in close proximity to lime kilns are frequently badly injured by the smoke therefrom, and in many instances the fruit became so impregnated with noxious odors as to be unfit for making wine. Those who are cultivating vines near brick or lime kilns, or manufactories from whence much smoke is given off, may have occasion to look into this matter if bad flavors are discovered in their vines.

RURAL BREVITIES.

A POUND of copperas dissolved in a gallon of water, is said to be sure death to currant worms and even more efficacious than white Hellebore.

THE great racing event of the year, in England, the Derby, has passed and the victory won by an "illustrious stranger" from Hungary called the Mineral colt, but hereafter to be known as Kisber, after the estate where he was bred in Austro-Hungary.

THE San Juan Guide is the name of a bright little sheet published at Topeka, Kansas, the first number of which is received. We have no doubt it will prove an efficient guide to those who may seek homes in the West, as well as teach its readers how to live and prosper.

"MOON'S BEE WORLD" is what the boy's would call a "stinger" among the bee journals. Its correspondents are "live men," and some of them "brag" of their lovely crop, and are ready to back up their opinions with something more substantial than words. Its a pleasure to see men in earnest in whatever they undertake, even in beekeeping.

WE are indebted to BEACH, SON & Co. of this city, for a bunch of fine lilies, composed of the gorgeous *Lilium auratum* (or Japan Golden-banded) and that old and universal favorite, the *Lilium candidium*. Our editorial sanctum was made redolent with the refreshing fragrance of these gorgeous flowers, and we return many thanks to the donor.

THE first meeting of the National Nurserymen Association, was held at Chicago, June 14 and 15, passed off with satisfaction to all parties concerned. Nurserymen from most of the Northern States were present and discussed matters of importance to the trade, which will doubtless result in a more fraternal feeling among the members if nothing else.

BUSINESS NOTICES.

THE "Phœnix" brand Pure White Lead is corroded by the only true method, known as the "Old Dutch Process," and is sold with the positive assurance of absolute purity.

FREEDOM.

Of old sat Freedom on the hights,
The thunders breaking at her feet:
Above her shook the starry nights;
She heard the torrents meet.

There in her place she did rejoice,
Self-gather'd in her prophet-mind,
But fragments of her mighty voice
Came rolling on the wind.

Then stept she down thro' town and field
To mingle with the human race,
And part by part to men reveal'd
The fulness of her face—

Grave mother of majestic works,
From her isle-altar gazing down,
Who, God-like, grasps the triple forks,
And king-like, wears the crown;

Her open eyes desire the truth.
The wisdom of a thousand years
Is in them. May perpetual youth
Keep dry their light from tears;

That her fair form may stand and shine,
Make bright our days and light our dreams,
Turning to scorn with lips divine
The falsehood of extremes! [*Tennyson.*

FASHION ITEMS.

NEW YORK, July 5, 1876.

NEVER, I think, has there been so much variety in dress. Women seem to have discovered that they have minds capable of developing original ideas and fashion has ceased to be an equalizing machine designed to grind down and efface all originality. In the Centennial year (could one write upon any subject without dragging in that poor word?) the style is the woman, and in the patterns appearing on this page I have endeavored to select those that can be the most readily modified to meet individual requirements. No. 4402 is an overdress of the favorite "Jewess" shape. Overdresses of this style are made, usually of either Swiss, organdies, light Cashmeres, or grenadines. White Swiss trimmed with bands of

4469

blue silk or ribbon, and fine knife plaitings of the material might be worn with silk of any neutral tint and thus make a very pretty house dress. Organdies, grenadines and other thin goods are trimmed with the material and lace. It is not the least of the advantages of this overdress that it can be so arranged as to make a partly-worn silk dress look very pretty and stylish.

The model is made of white dotted Swiss and trimmed with velvet. It is adjusted by means of a dart in each side of the front, together with a curved seam in the center of the back. The front and back of the waist portion, instead of meeting in the usual manner under the arm, are curved inward to a point several inches below the waist line, where the parts are joined. Three upward turning pleats are laid at the commencement of each side seam and tops fastened beneath them and tied together, confine the drapery at the back. The skirt of the back is shaped in two points and the center seam is discontinued about half way from the waist line. The pattern comes in 13 sizes for ladies, from 28 to 46 inches, bust measure. It requires seven yards of 27-inch wide material for a lady of medium size. Price of pattern, 35 cents. Although the polonaise is slowly regaining its old popularity, yet the pretty and convenient overskirt holds its own and is as as often seen on leaders of fashion as the polonaise. Still, I predict that the polonaise will eventually triumph.

The model of a close-fitting overskirt (No. 4409) is made of tucked cambric and the entire garment is composed of a single breadth fitted to the figure by darts. The ends of the breadth, instead of being joined at the back, are sloped off like a sash and a slight drapery is produced in front of each sash end by shallow upward-turning plaits near the lower edge. Beneath the belt and clusters of plaits are fastened tapes which are tied at the back. From the lower edge fall ruffles of plain cambric which are laid in plaits where they cross the tucked portions and gathered at the plain spaces. Cambric, Swiss or lawn worn over silk or grenadine skirts, makes a very tasteful garment. If plain material is used, the effect of

4469

tucked goods may be produced by laying clusters of tucks before the cutting is done, or more elaborately by inserting Swiss or Hamburg embroidery and bordering them with edging. This shape is also adapted to light woolen goods. The pattern is in nine sizes for ladies; waist from 20 to 36 inches, requiring 3¾ yards of material already tucked and measuring 27 inches in width, or six yards purchased plain, to be tucked before cutting. Price 30 cents.

The circumscribed limits of this article precludes anything but a mere mention of materials, but I hope to revert to this subject in the near future. I may say that the preference this season seems to be for light woolen materials such as the countless varieties of camel's hair goods. Pearl-gray and dark *ecru* are the most prominent shades. Some charming effects result from stripes which shade from the faintest to the darkest tint, and are thrown into relief by a ground almost white. The Llama, which is a mixed, loosely-woven stuff, light, and possessing good wearing qualities, makes up prettily and economically. DeBeiges now come in the new stripes and plaids. Grenadines are losing their popularity, although the new Algerines and batistes are, properly speaking, grenadines.

Cambrics and prints are striped and plaited in the same patterns and colors as mohairs and camel's hairs. They make up handsomely and are popular for street wear. The predilection for light woolen goods grows apace, and as they are now made as light as gossamer and require no weekly renovation, perhaps their popularity rests upon a sensible basis.

"Every woman her own hat maker," is the wail of milliners, and as in everything else that pertains to dress this season, there is no arbitrary style. It has at last dawned on us women that the style of face must be consulted if we desire becoming head gear. Fig. 4 sits very far back on the head. The rim is round and flat, bound with silk, and a silk coil encircles the low crown, form-

FIG. 8.

ing standing loops at the right side; a cluster and ostrich tip completes the outside decoration; a coil of silk forms the face trimming.

No. 6 is too familiar to need much description. It comes in the various straws but is, of course, most elegant when made of French chip.

No. 8 is the popular gipsy hat. The front rim is caught back by a full coil of lustrous silk; a loop of the same separates two plumes, one of which is the same shade as the loops and falls over a third tip, which is dark, like the one drooping over the face; a wreath of fine blossoms passes about the crown at the right side and falls gracefully over the back. Dark silk also encircles the crown, the ends terminating under the plumes at the front. This shape comes in Dunstable straw, which is quite pretty and less expensive than chip.

Our old friend, the inverted soup-plate shape, is still among us and I hope will *wear* as well as your correspondent FROLIC.

The Story-Teller.

MRS. VANDERDUYNCK.

LETTERS FROM ROGER FLOYD TO HOPE STANHOPE.

BY MISS E. W. OLNEY.

[Continued from page 14, last number.]

IV.

RIVERBEND, July 15.

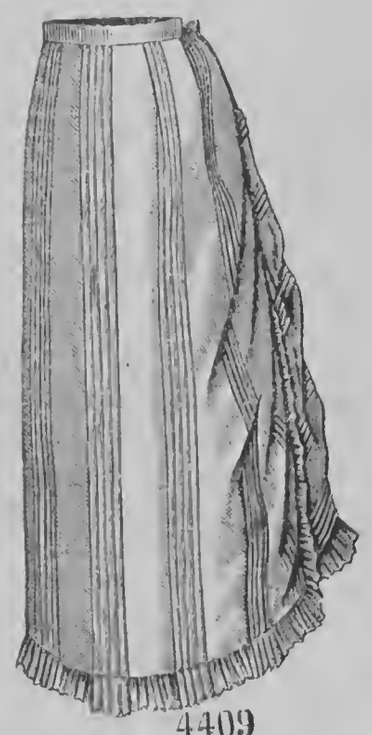
I HAVE your letter, dear Holl. You consider me, then, in peril. My coolness is an artificial crust upon smoldering volcanic fires is it, needing but a single convulsion to desolate my whole nature? What I lack is, you assure me, a rational attachment. You warn me to resist this woman as I resist the devil; for everything in our acquaintance conspires to rouse my imagination and to unchain passion. To add to the self-contempt your letter invoked, Mrs. Hunt just came in and interrupted me and we had a peculiar interview. She entered the school-room and in a friendly manner sat down here opposite me at the desk. She had a new study to propose for Albert; then, after a pause, said;

"Mr. Floyd, will you be good enough to consider me a faithful, admiring and attached friend while I speak to you?"

"You wish to say something to me for my own good," I returned with a smile.

"You are satirical," said she, with dignity; "but you do not guess my respect for your character and acquirements, my real liking for you as a gentleman."

"Do not keep me in suspense," I exclaimed. "No words of yours will ever call forth a satirical response from me, Mrs. Hunt."



4409

"I do not want you," she murmured, leaning toward me and speaking earnestly, "to become the victim of a coquettish woman. Mrs. Vanderduynck is a thorough coquette, besides being very charming. Your early morning rows on the river with her are the theme of conversation among my guests and you are called 'Mrs. Vanderduynck's caprice.' I admire you too much, Mr. Floyd, to be willing to have you in a false position. Besides, I look at the matter with the experience of a woman who knows the world and I fear for your heart. What can prevent you falling desperately in love with this beautiful young creature?"

I sprang to my feet and paced the floor for a few moments; then, mastering my anger, I went back to her.

"You are very good, Mrs. Hunt," I said with apparent coolness, "but your womanly love of romance has led you astray. I am not given to sentiment. I am here as your son's tutor and, believe me, not a thought, not a wish beyond my position has ever found place in my mind. I owe it to you as my employer to assure you on this point. Your solicitude concerning me has arisen from a total misconception of my character. As for the lady you have mentioned, if it is possible for me to surmise upon the laws that control gossip, her name will never be mentioned in connection with my own in future." She regarded me steadily.

"Pardon me," said she, rising. "How can I ask you to forgive me?"

"I thank you deeply," I returned and bowed over her extended hand; then opened the door for her and closed it behind her, returned to my desk to resume my letter to you. But that was four hours ago. It is now two o'clock and my letter is not yet finished.

If you hear of anything in my line that opens congenial employment for me, will you be good enough to let me know at once? To think of my exposing this frank young girl (for she is no more) to the tattle and gossip of the people who have watched us from their lace-trimmed pillows, overwhelms me with shame and despondency; for a man's remedy is not mine to give. I cannot protect her from the world's laugh. I cannot— But something too much of this.

V.

WEDNESDAY, MIDNIGHT,
RIVERBEND, Aug. 15.

You did not spare my feelings in your last letter, but until to-night I have laughed at your augury that the end is not yet between Mrs. Vanderduynck and myself. For since Mrs. Hunt's

FIG. 6.

conversation with me concerning the matter, I had not once looked into her face. My rowing was discontinued and I took long walks instead. I passed her once on the lawn with a salute and pretended deafness when she spoke my name softly. It seemed unmanly, but what was I to do? She is too young, besides being too well placed in the world to indulge in friendships with shabby tutors. But perhaps she pities me—good God! perhaps she pities me. I am five feet, eleven inches tall; my weight is one hundred and thirty-five. I have muscles which are recovering their

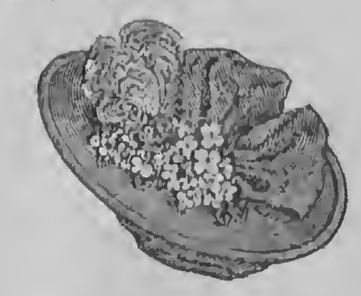


FIG. 4.

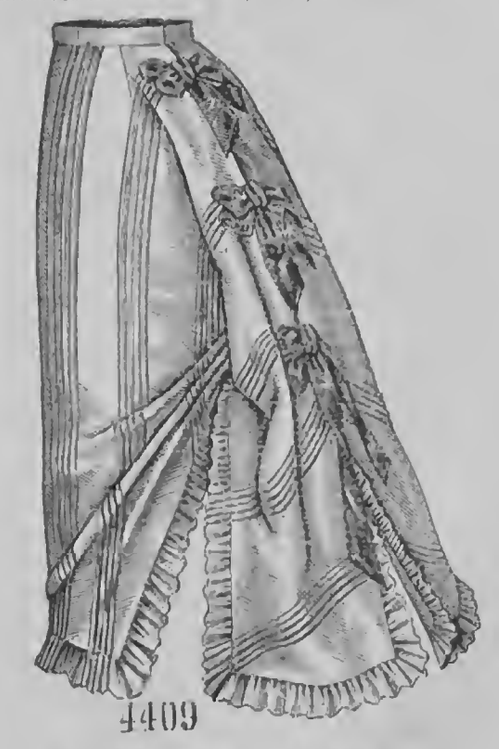
native iron; nerves that are guiltless of a tremor—yet perhaps she pities me because I am clever and yet wear at times a frayed, white-seamed coat. I don't pretend to understand women. I'll just tell you the story of this evening and leave you, with your preternatural power of detecting motives, to discover what she means!

The house seemed unusually still at six o'clock to-night. I was waiting for the boys to come in from their croquet, to ring for tea. I was tired and worn out with the heat and felt an unreasonable petulance which of late frequently assails me. I sat in my armchair, my hands clenched, my eyes closed, when suddenly something jumped on my knee. It was not the greyhound but little Cora, whom I had not seen for three weeks. I took her to my breast with real pleasure. I stroked her fine soft hair like spun gold; she held up her face to be kissed and I pressed my lips to the little rosebud mouth again and again. Tears came into my eyes—I suppose because I had been feeling lonely.

"Naughty Mr. Floyd," she cried, clinging to me, "why do you never take me in the boat any more? I love to go with you in the boat and so does mamma! Mamma says Mr. Floyd is too clever and too proud to go on talking to silly children like her and me. Are you so proud, Mr. Floyd?"

"No, dear," I responded tamely. She jumped down, still holding my hand in her own. "Come," said she, "come;" and she dragged me away unresistingly down the stairs to a little room off the library which Mrs. Hunt calls her boudoir. I had expected to see that lady, but it was Mrs. Vanderduynck who rose from the sofa where she was sitting between the boys and offered me her hand with drooping eyes and trembling lips.

"I am going to have a tea-party," said she shyly, in the softest voice, while I held her hand; the daintiest trifle of a hand, flolt, satin to the touch,



4409

carved alabaster to the sight and laden with rings. "I stayed at home from Judge Stone's dinner-party," she continued presently, drawing her fingers away when she found me apparently unwilling to release them. "Everybody is away except ourselves. Is it not nice?"

"Delicious," I returned, rather bereft of reason,

standing and watching her movements as she hovered over the tea-table.

"Sit down then," said she laughing, "and Cora and I will feed you and the boys."

Now, Holt, I stand in such mortal terror of your condemnation that I am going to tell you the cunningness of the temptation which induced me to break my plighted bond never to speak to Mrs. Vanderduynck again. Imagine the time and the scene. Sunset. A small room luxuriously furnished in pale-green silk, its French windows opening wide upon the terrace, a charming middle distance of flowery slopes, the river beyond, with its border of weeping willows now swaying in the evening breeze. But all that was accessory; the riveting point of the picture was this:—A lady fair and young bending over the tea-table. She was dressed in what I have heard Mrs. Hunt call Nile green, a most exquisite tint; and in this toilette, softened by delicate laces that trimmed and draped both waist and skirt, these impalpable web-like laces alone covered neck and arms. A necklace of lusterless Roman gold, with innumerable little lockets attached to it, encircled the throat and on her wrists were broad bands of the same workmanship, with little chains or charms or lockets attached—something that went tinkling and chiming among the teacups. I was in for it. I leaned back in my chair and watched her insatiably. I had never before begun to realize her beauty. She treated me well, my boy. I drank innumerable cups of tea; I ate and allowed the boys to eat a variety of comestibles which I should condemn at a school-room meal. I listened to her talk; it was charming, tender and piquant in a breath. As she flew from one to the other of us with the cream jug or the sugar basin, she reminded me of a bird with her incessant, graceful motions, her air of intense interest. In fact, she invested each trifling service with a fascination which you require to feel in order to appreciate; or, develop it out of your own moral consciousness you cannot, you luckless old fellow!

Once she was dropping sugar in my tea when the *breloque* of her bracelet chimed against my spoon. "They are so troublesome," she murmured, putting her disengaged hand upon the chain. "But then," she added laughing, "I suppose you wonder why I wear them since they are so troublesome."

"No," said I, "no. They take my fancy." Our eyes met. Hers fell.

"Is this equal to a lonely tea in the school-room?" she asked softly.

"Not in one way."

"In which way?"

"I may desire to take tea like this to-morrow night. Now my school-room teas involve no afterthoughts, no regrets."

"There is to be a ball to-morrow night," said she, soberly. "I shall sleep all the afternoon in order to feel fresh for it."

"I realize that this pleasure cannot be repeated," I returned; "in fact, therein lies part of its charm."

"You do not believe in recurring pleasures."

"This is a miracle and miracles do not repeat themselves."

"You are too clever for me, I suppose," she said, with her peculiar, indefinable charm of sad eyes and laughing lips, "for I do not understand you. For instance, why did you give up your morning rows? Had they become insufferable after Cora and I robbed them of solitude?"

"Do not think it for a moment," I cried, impetuously; but then, remembering how my tongue might betray me, I remained silent. The servants removed the tea-table, the children went back to their croquet and we were left alone. The sun had gone down, the full moon hung in the east. It was so still that, as we stood together in the open window, we could hear Roaring Brook three miles away. I had nothing to say but much to feel. She was simple and unembarrassed in her manner and talked quietly about Cora and my boys. "Let us go down to the river bank," said she, finally; "and then when we come back I will send Cora to bed and if you like I will sing to you."

I assented. She carelessly gathered up her trailing skirts and walked down the path with her hand upon my arm. I had rarely been on the grounds at that hour and their beauty astonished me. I said so.

"What do you generally occupy yourself with in the evenings?" she asked. "I often see a light in the school-room till past midnight."

"I write a great deal."

"Books? I know you have written one book. I have read it since I came here."

"That was praiseworthy of you, for you must have found it very dull. I am writing a book, but I do little about it at present. I write just now that I may make money."

"For what?" she questioned timidly. "Are you going to marry?" She blushed furiously, Holt, as she asked this.

"Oh, no," I replied with a half laugh; "I shall probably never marry. I am anxious to lay by two thousand dollars or so, that I may devote some time to my book in foreign cities. I cannot complete it here."

She looked a little weary and we returned. She called Cora, kissed her good-night and sent her off with the nurse. The boys went docilely to the school-room for their hour of study before bedtime and Mrs. Vanderduynek and I stood together again in the window. The moonlight lit the rose-bordered terrace now, and though the west was still golden, day was over. "Shall we have lights?" she asked.

"No," I said, opening the piano; "lights would spoil this. Come and sing."

She sang for an hour. I resigned myself to the spell of her voice—not alone to that sirenic power, but to the pleasure of being close beside her. I was so near her that her dress touched my feet and when she turned, the silks and laces fluttered across my knee. The music wound into my inmost soul and stole away its strength. I no longer felt loveless and lonely. How could I, with the most beautiful woman in the world beside me—music in my ears whose suggestions made youth a pleasure, existence a thirst—a passion? But I smiled at myself within myself—a dreary smile full of cynicism; still it showed me I was not wholly a slave in thrall, though my blood ran quicker than usual in my veins and my stoicism was sleeping somewhere, lulled by unexpected happiness. The clock struck ten at last and I rose. "Must you go?" she whispered. "We have had a pleasant evening, have we not?"

"We have indeed," said I. "You are used to pleasant evenings, but I—I never had such an evening before in my life." I spoke quite coolly, Timon; put no warmth into that speech of mine, for there was none in it. I did not go quite then. It was so pleasant outside we strolled about the grounds once more.

THURSDAY NIGHT, 2 O'CLOCK.

I went to bed last night, after writing the foregoing, in a tumult of feeling, and slept little. I laughed at my quickened pulsations as I lay there in the dark and gave myself a holiday from my task-mistress Reason for twenty-four hours of passionate folly. They are not over yet; before they slip away I am going to look them once more in the face. Sitting by Evelyn's side last night (she incidentally told me her name was Evelyn and in ardent dreams one does not like to call his goddess by so long and grotesque a name as Mrs. Vanderduynek), I felt that man is made to love. A thousand ardent impulses quickened me; they did not vanish with her presence, but haunted my sleep and met me when I awoke this morning. Mrs. Hunt begged a holiday for the boys, as her ball came off to-night, and the day was like a fete to them, as the house and grounds were under the arrangement of workmen and decorators. Mrs. Hunt had insisted that I should be present at the ball and this morning I formally accepted the invitation. Having nothing to do, I unloosened my boat from her moorings and determined to spend the day as the fit seized me. Why should I not enjoy a fool's paradise one day, since I felt the power to turn out the insurgent passion to-morrow and reinstate reason in her domain?

I came home toward dusk. The Chinese lanterns were all lighted as I came up from the river and the supper tent was a miracle of brilliance and tasteful decoration. I hastily gained my own room, rang for my tea and read a novel for an hour in utter forgetfulness of my real life and its requirements. At half-past nine I dressed. As I drew on my gloves I was asinine enough to be glad that the figure in my glass was correct in outline and style; and with the fire born of happy thoughts lighting up my face, I was even good looking. I was glad, as I say. The youth I had believed forever gone had returned with its enchanting demons to tempt me and I wanted to be no withered Faust, but a Faust young and *debonair*. It neared half-past ten when I descended the stairs. The band was playing delirious waltzes that seemed the language of my own passionate longing. I found Mrs. Hunt in the little parlor off the long drawing-room.

"I consider myself quite honored," said she graciously. "Had I the time I would ask you to walk through the rooms with me, but the people are not yet all here. You must speak to Mrs. Vanderduynek. She is in the other room dancing, I suppose."

I walked through the crowded halls and entered the drawing-room. I am not used to such assemblages and for a quarter hour the foamy sea of gauzy dresses, white shoulders, floating curls, cavaliers in dress suits and with courtly smiles on their moustached faces, dowagers in yellow lace and diamonds, surged about me without my gaining a sufficiently clear vision to see what I was seeking. Half a dozen gentleman moved on from the punch bowl in the hall and grouped together in the doorway, carelessly rattling on.

"Decatur is no end of spoons on her," said one, in that clear and concise English which distinguishes fashionable young men.

"That's so," remarked another, "and he is taking his innings to-night, apparently. I declare it's too bad to see how she plays with him."

"Not a bit of it," remarked a third. "It's a fair fight. She knows that he is a notorious fortune-hunter and she has a perfect right to despise such devotion. She's a good little creature at heart."

"She's got on the pearls to-night!" interposed the first speaker. "Jove, how they shine! Look at Winthrop! What fools she makes of men!"

"Nature was beforehand with her in Winthrop's case. It's my turn soon. Tom, I heard about her being sweet on Mrs. Hunt's tutor. Is he here to-night?"

"Dunno. Seedy fellow, I suppose. Tutors always are. Rich women always adore shabby fellows out at elbows."

"*La caprice d'une grand dame*," sneered somebody whom I longed to throttle, and then they all crossed over to Mrs. Vanderduynek, who had paused under the arch. She was superbly handsome. She was dressed in some black gauzy stuff, with silver lilies, embroidered, I suppose, all over it. She was in what social parlance denominates full dress; arms, neck and shoulders were bare and on bosom and wrists hung large, fair, lustrous pearls. The waltz had flushed her and her eyes were dark, liquid, dangerous. Twenty men were grouped about her and she was talking with a sort of electrical life and animation. I knew she was aware of my vicinity, for she had turned once to meet my eyes, but her own had drooped with sudden timidity. I felt no shyness; in fact, I felt an almost ungenerous desire to triumph once over these elegant young men who surrounded her with incessant and graceful homage. I left my position, took advantage of a temporary break in the circle and edged my way so close to her that I could hold out my hand.

"Good evening, Mrs. Vanderduynek," said I, coolly meeting her pleased glance. "I have come to ask you for a waltz." She flushed and smiled.

"I had kept this for you," she returned; "and though my book is so mixed up that I expect all my friends will cut me to-morrow, still this is decidedly yours, Mr. Floyd."

She nodded to the men about her and took my arm. "I was so afraid you were not coming down stairs," she whispered, her face close to my shoulder. "I have been watching for you for an hour."

I merely looked down at her. Words seemed poor.

"Do you really waltz?" she went on. "I suspect it was a ruse of yours to send those men away from me."

"Indeed I waltz," said I. "I could never have dared otherwise to despoil you, for I know you love dancing."

The band commenced a sighing, delicious strain. I put my arm about her and we moved away together. The music changed all too soon for me and a quadrille followed. "Let us go upon the piazza," said my partner, "for I am warm—so warm." We passed through the open windows and joined the promenaders there.

"How well you waltz!" she murmured. "I should never have suspected you of such an accomplishment."

"Even bears dance," I rejoined, "but I should never have learned unless a Spanish woman had insisted on teaching me in spite of myself."

She laughed peculiarly. "A Spanish woman! Ah, thereby hangs a tale!"

"Not a romantic one, Mrs. Vanderduynek. Some two years ago I was detained with a sick friend in the doctor's house in Huannaco and the physician's wife—a little ugly woman of forty—was so fond of waltzing she insisted on my dancing two hours every evening with her." I spoke coldly. I was too conscious of undue excitement not to be afraid of unloosening my tongue; but a pause ensued which was bad for me. Her little hand was on my arm; her bare shoulder touched my sleeve. She looked up at me and smiled! "Stay a moment," said she, as we reached a distant, deserted corner of the piazza. "Listen to the music! Ah, how I love waltz music! Those are the 'Blue Danube' waltzes! Is it not a lovely ball? I never enjoyed one so much. Nothing fails me to-night. It is my birth-night, did you know it?"

"No."

"Yes. I am twenty-three years old. Sometimes I feel old—very old—but to-night I feel young, with a long life of happiness before me. Look at the moonlight! And do you smell the tuberoses? Is it not beautiful?" She had uttered these words in a low whispering voice which thrilled me as it caressed my ear. I could not speak, for if I spoke I should have told her what I had no wish to tell her. My silence apparently surprised her. "I cannot understand you to-night," said she. "Sometimes you seem to be my friend, but now, when I am so happy, you appear so indifferent—so cold."

"Indifferent, cold," I echoed, and laughed a bitter laugh. She drew back from me, slightly loosening her hand from my arm and regarding me wonderingly. As she moved, by chance her fingers touched mine. I had too thoroughly resigned myself to passion's sway for the last twenty-four hours not to be its slave now. I caught her hand before it could leave mine and pressed it to my breast; then covered it and the delicate, braceleted wrist and rounding arm, with kisses. I confess my folly. It was a barbarous action; but she should have learned before this what such a man as I is made of. Her drawing-room admirers—men who have drained passion to the dregs—may languidly palter with such temptations. I could not. The moonlight gleamed on the pearly shoulders and arms. I remembered our waltz. She called me cold when I was ardently alive to each perfection of that exquisite face and form, and a second Prometheus, I determined to dare heaven's vengeance for such sacred fire. She was quite helpless and trembled violently.

"Do not accuse me of coldness for, where you are concerned, I am just so cold and indifferent!" I muttered, releasing her at last. "I will take you back to the drawing-room. It is not safe for you to be out here alone with a madman." Her sweet face was bent down upon her bosom; she looked as shy as a girl of sixteen. Had she found courage, I think she would have spoken; but her lips were too tremulous to form the words which I saw fluttering there. I sighed. I must have kissed her lips had I stood there longer, Holt, for there was timid but eloquent passion in her whole mien. But I took the little hand, put it on my arm and led her back along the piazzas to the parlors, where I left her standing under the arch where I first found her. That was an hour and a half ago, my friend. The band is playing the "Blue Danube" waltzes again down stairs.—[Concluded in next No.

BUDDAH'S COMMANDMENTS.

By gentleness, 'overcome anger; by good, evil; by liberality, greed; by openness and truth, dissembling and falsehood.

Speak the truth; yield not to anger; give, when asked, of the little thou hast; by these three steps thou shalt go near the gods.

A man slothful, saying many good things but not doing them, is like a herdsman counting the kine of others, but owning none.

Sabbath Reading.

SOMEWHERE.

SOMEWERE—somewhere a happy clime there is,
A land that knows not unavailing woes,
Where all the clashing elements of this
Discordant scene are hushed in deep repose,
Somewhere—somewhere (ah me, that land to win!)
Is some bright realm, beyond the furthest main,
Where trees of Knowledge bear no fruit of sin,
And buds of Pleasure blossom not in pain.
Somewhere—somewhere an end to mortal strife
With our immortal yearnings; nevermore
The outer warring with the inner life
Till both are wretched. Ah, that happy shore!
Where shines for aye the soul's refulgent sun,
And life is love, and love and joy are one!

[*John G. Saxe.*

BIBLE ALBUMS.

BIBLE Albums induce the young to study their Bible, and they make a pleasant occupation for invalids. The process of making the album is to cut out pictures from books, newspapers and magazines, and, having found Scripture texts to illustrate the pictures, paste them in the album, putting the text immediately under the illustration. The one above all others who has done a commendable work in popularizing Bible Albums is Lady Juliana Walker of London, the third great-granddaughter of William Penn, the Quaker. Besides setting an example herself, she has induced her friends to make these albums, and the thanks of patients in the London hospitals have been her reward. Many, on a sick-bed, who have no strength or inclination to read the Bible, will look at a Bible Album, and thus a text of Scripture may fasten itself in the memory. Lady Walker, in addition to her interest in Bible Albums, is now engaged in promoting the flower mission in London. One calling at a certain hour of the day might find her occupied in preparing hampers of flowers for the poor, attaching to each bouquet a text of Scripture, which she calls a bouquet-holder. Lady Walker is anxious that Bible Albums may be introduced extensively into our own country. For this purpose she has sent to a lady in Brooklyn two albums, tastefully bound and beautifully ornamented, the result of much careful study. Under some of the pictures are twenty or thirty suitable texts. The texts, in many cases, with the accompanying illustrations, are better than an ordinary sermon. The picture of a suffering invalid is found over the words, "My grace is sufficient for thee, for my strength is made perfect in weakness." A fine wood-cut of Durham Cathedral, in England, is aptly described by a verse in Proverbs, "The rich and poor meet together. The Lord is the maker of them all." A whole page is devoted to shells, sea-weed and fishes. The accompanying verse is, "And the fishes of the sea shall declare unto thee." A large elephant, though not very accurately, is yet suggestively described by the verse, "Moreover the king made a great throne of ivory." One page is devoted to what the Bible says of trees, giving the names of trees and the illustrative texts. On another page is the music of the Bible, showing the names of the instruments used and the occasions of their use. Several pages are given up to women and their work. The picture of a beautiful woman makes a universally accepted fact of the clause, "It is not good that man should be alone." Beneath this text are the following lines:

THE RIGHTS OF WOMEN.

"The rights of women! What are they?
The right to labor and to pray;
The right to comfort in distress;
The right, when others curse, to bless;
The right to love when others scorn;
The right to comfort all who mourn;
The right to shed new joy on earth;
The right to feel the soul's high worth;
The right to lead the soul to God,
Along the path her Saviour trod—
The path of meekness and of love,
The path of faith that leads above,
The path of patience under wrong,
The path in which the weak grow strong.
Such woman's right, and God will bless
And support or give success."

Scenes in Christ's life, and prominent biblical characters and epochs are vividly portrayed in these albums, so that the young, the sick or any one can often acquire from them in a half hour what they would fail to learn in days.

BISHOP WHIPPLE gives an account of some tableaux given by a tribe of Western Indians for his amusement. They were intended to show three phases of an Indian's existence—the wild, the civilized and the Christianized. The curtain rose first on a party of aborigines, in a dark forest, nearly nude—this was the native state; the second showed to his delighted eyes the same actors, dressed as semi-savages, armed with rifles and pistols, and grossly intoxicated. The third was composed entirely of women, who sat meekly attired in black alpaca dresses. They were evangelized.

To hold truth for untruth is always a loss, even if the matter immediately in question is trivial. The prejudice may arise from some unperceived defect in ourselves; and the letting in of the new light may be a step in the course of self-improvement. But, further, such a misapprehension may possibly hinder the acceptance of some ulterior truth, which is of real importance. Thus the diligent festering of a candid habit of mind, even in trifles, is a matter of greater moment than appears at first sight.—*Dean Howson.*

Ladies' Portfolio.

COMFORT.

I HAVE professed to love thee, MARY mine;
Mine still, to cherish, comfort and protect;
To give thee, from my heart's interior shrine,
All that I can, and duly not neglect.
You have believed my words, and hold me true
As LANCELOT, the brave Round Table Knight,
Who nothing less than highest honor knew;
May I ne'er grow less worthy in your sight.
And I have promised, should an evil day
Ere dawn upon you (which the fates forefend),
To be to you a comfort and a stay,
Alway and everywhere till life shall end.
Such promise I will keep: but still I pray
You may be saved from every harm alway.

But if there come a time, as come there may,
When sudden tribulation smites thine heart,
And thou dost come to me for help and stay
And comfort—how shall I perform my part?
How shall I make my heart a resting place,
A shelter safe for thee when terrors smite?
How shall I bring the sunshine to thy face,
And dry thy tears in bitter woe's despite?
How shall I win the strength to keep my voice
Steady and firm, although I hear thy sobs?
How shall I bid thy fainting soul rejoice,
Nor mar the counsel of mine own heart-throbs?
Love, my Love, teaches me a certain way,
So, if the dark hour come, I am thy stay.

I must live higher, nearer to the reach
Of angels in their blessed trustfulness,—
Learn their unselfishness ere I can teach
Content to thee, whom I would greatly bless.
What woe were mine, if thou should'st ever come,
Troubled but trusting unto me for aid,
And I should meet thee powerless and dumb,—
Willing to help thee, but confused, afraid.
It shall not happen thus, for I will rise,
God helping me, to higher life, and gain
Courage and strength to give thee counsel wise,
And deeper love to bless thee in thy pain.
Fear not, dear Love—thy trial hour shall be
The dearest bond between my heart and thee.

A LADY ON LADIES.

WOMEN have their own place both in nature and society—a place beautiful, important, ennobling and delightful, if they would but think so. But with the curse of discontent resting on them from the beginning, they prefer to spoil the work of men rather than try to perfect their own. Say, of their own special work, what is perfected to such a degree of excellence as warrants their leaving it to take care of something else? The servant question in all its branches annoys and harasses everyone; but this, essentially a woman's question, a circumstance of that part of life which is organized, administered and for the larger proportion fulfilled by women, is confessedly in a state of chaos and disorder, paralleled by none other of our social arrangements. The extravagance of living, of dress, of appointments, which is part of the servant disorder—because maids, being women, will trick themselves out in finery to attract as much admiration as their mistresses; and men, being animals, will gorge where their masters feast—whence do these come save from women, rulers of society, regulators of modes and fashions as they are? Do the husbands order the dinners or decide on the length of the train or the fashion of the dress? If the ladies of Britain chose that the rule of life should be one of noble simplicity, beautiful, artistic, full of meaning and delight, the false ornament and meretricious excess with which we are overweighted now would fall from us and the servant question among others, would get itself put straight. It is a matter of fashion, not necessity, and the *mot d'ordre* comes from above. But where is the spirit of organization, the resolutions to meet difficulties, the courage of self-control, through which alone great movements are made and great reforms led? The women who want to influence the councils of the empire, to have a voice in the making of laws which are to touch and reconcile contending interests, to help in the elucidation of difficult points, the administration of doubtful cases, see the servants standing in a disorganized mob at the gates of the social temple and are unable to suggest anything whereby they may be reduced to order and content. But at the same time the women who complain of their own stunted lives and who demand leave to share the lives and privileges of men, deny the right of their maids to live up to a higher standard as far as they themselves are concerned and hold the faith that service should mean practically servitude.

It is not the fathers who use the schools for their daughters—not the governors who draw up the programme of what is to be taught there—not men who decide that what boys can attain only by long years of close application, girls may knock off by a few months' "classes"—nor yet men who think it indelicate for women to teach a girl the most ordinary, the most necessary facts in physiology, on the one hand, but who send her into the dissecting room with a crowd of youths, on the other. Whatever girls' schools may have been, women alone have made and ordered them. If the women who mould and regulate the lives of women; and if the answer is, Mothers make their girls what men desire them to be, is there not a counter reply: Are not all men the sons of women? The miserable thing called a polite education has been and is emphatically the work of women; that more miserable thing called a fine lady is still more emphatically her work and creation; and the fast woman—the girl of the period—is by no means the work of man's hands or brain. But with all this cry for education, the higher teaching formulated and offered of late has not been taken advantage of by women for its own sake so much as for the practical use of which it may be hereafter. Women as rule do not care for knowledge *qua* knowledge. On the contrary, they prefer ignorance. There is not a sentimental craze, not a superstitious fancy, not an unworkable crotchet, which does not count its woman advocates by hundreds, where its men supporters are in units; and their attitude toward science and free thought generally is lamentable. The very shriekers who have shaken their skirts at all the restraints of sex have not emancipated themselves from the thraldom of illogical crotchets and weak superstitions—rather the contrary; and more than one subject could be named on which they have shown themselves totally unable to reason, to reflect, and good only for hysterics all around.—*Mrs. Lenton, in Belgravia.*

CONSCIENCE.

THE idea of a *civil* conscience! It is a good joke—an excellent joke. All the consciences *I* ever heard of were nagging, badgering, fault-finding, execrable savages! Yes; and always in a sweat about some poor little insignificant trifle or other. Destruction catch the lot of them, *I* say! I would change mine for the small-pox and seven kinds of consumption, and be glad of the chance. Now tell me, why *is* it that a conscience can't haul a man over the coals once for an offense, and then let him alone? Why is it that it wants to keep on pegging at him, day and night and night and day, week in and week out, forever and ever, about the same old thing. There is no sense in that, and no reason in it. I think a conscience that will act like that is meaner than the very dirt itself."—*Mark Twain, in Atlantic for June.*

POISON IN LADIES' HAT TRIMMINGS.

THE other day a lady had a hat sent home from a milliner's and put it on to take a drive. On her return she was very much surprised, and not a little alarmed, to find a painful, and by no means ornamental, eruption covering her forehead. As her hat was well forward it occurred to her that that might have connection with the cutaneous difficulty, and so she had the lining stuff analyzed by a chemist. The dye-stuff was found to be very poisonous.

FOR AND ABOUT WOMEN.

MISS CHRISTINA ROSETTI is investigating the analogies between the works of Spencer and Dante.

A LOUISVILLE fashion writer says:—"Overskirt cut bias and pinned back was the prevailing style in the fashionable churches yesterday."

THE Harvard Professors in chemistry, mineralogy and botany, certify that in these studies girl students are in no way inferior to the men.

THE MOMENTOUS QUESTION.—Augustus: "Now, Emily, do you love me or do you not?" Emily—"Well, if I say I don't, shall I have to return your presents?"

MRS. GOVERNOR HAYES is described as a modest, intelligent, cultivated and sprightly woman, with a pair of laughing eyes which are black and bright.

FASHIONABLE wedding notices in some sections of the country mostly conclude thus: "At the conclusion of the ceremony, the happy pair left by rail for Philadelphia."

A MASSACHUSETTS matron in taking leave of her newly-married daughter, said:—"Remember, Lucy, that the first principle in cleaning house is to make everybody as uncomfortable as possible."

A MARQUETTE CO. (Mich.) lady attended a circus recently and was so charmed by the grace of the acrobats that she attempted to imitate them on her return home, but unfortunately sprained both her wrists in turning her seventh successive somersault.

THE ladies of Austin (Nev.) have started a "Lying Club." The following story was told at a recent meeting of the association by a young lady who was an applicant for membership:—"A few days ago a wood-tick got into my knee and in order to get it out it was found necessary to rig a block and tackle to a post and fasten the rope to one of the legs of the creature, and it then took the combined strength of four men to hoist it out of the flesh." The application was accepted without debate.

MARY CLEMMER, in a recent Washington letter, says:—"We are approaching that line in the thermometer when from a natural law human affections cease and even woman ceases to be a lovable being; for I persist that a woman with a perspiring face, in a sticky muslin, fighting flies, is not a lovely or a lovable being. It is merely a question of weather when the capacity for romance ceases and the power of human affection dies out of the human heart. Surely it must be easier to be affectionate at the North than at the South Pole.

THE FAN LANGUAGE.—A book has been published at Berlin entitled "The Fan Language," which gives the usual sentences in the vocabulary of love and friendship, with appropriate directions as to their expression by means of the fan, such as "You have won my love"—the right hand points with closed fan towards the heart. "When may I see you?"—touch the right eye with the closed fan. "I would like to be ever near you"—fan the person in question with the open fan. "Be quiet; we are watched"—hold the closed fan over the mouth. "Dare I hope to win your love?"—unfold the fan wide with a quick movement. "Do not be so cold"—move the closed fan backward and forward with the right hand. "Do not be so jealous"—rest the closed fan against the right eyebrow. Pretty nonsense this for simpletons!

Reading for the Young.

BLESS THE BABIES!

BLESS the babies, one, two, three,
Bless the babies, all there be;
Bless them for their cunning ways,
Bless them, for the *baby pays!*

Bless the babies, daughter, son,
Bless the babies, every one;
Bless the little creatures dear,
Heaven's blessed cherubs here.

Bless the babies! Who can tell
The half we love 'em, or how well?
Their little mimic voices ring
Like garden birds', in early spring.

Bless the babies, bless their ma's,
And graciously remember pa's;
Bless the babies! Yes, we will,
And Heaven help to bless them *still.*

"Linden-Wold," 1876.

A WORD TO THE BOYS.

I WISH to say a few words to our RURAL boys. Boys, I do not purpose in these few words to preach you a sermon, but simply to have a talk with you, and shall endeavor to correct some erroneous ideas I know to be entertained by many young men and boys of our rural districts.

You sometimes think your rollicking farm life dull, monotonous and extremely laborious, and long for a situation as clerk in some kind of an establishment in the city. If I should tell you that your life on the farm is of the two much the easier, you would undoubtedly think it very strange. But I do say so; for such is the case. Could you but look in upon some of the clerks employed in many of the dry-goods establishments in our cities, and see the labor performed by them in their daily rounds, no words would be needed to convince you of this fact. Your labor is varied; 'tis walking, riding, driving and other changes, all of which are almost indispensable to proper muscular development and good health, and very unlike the closely-confined, monotonous occupation of daily standing behind a counter or sitting at a desk from the rising of the sun till near midnight ere your labor is completed and rest comes.

But I hear some young man say, "I will go to the city and make my fortune, rise to honor and opulence, instead of staying here on the farm and working hard to make a little." Young man! banish that idea. When you do away with such thoughts you will have laid more certainly the stepping stone that leads to ambition's goal. Do not think because you were born on a farm that you surely will not rise to honor and independence. Remember what POPE says:

"Honor and fame from no condition rise,
Act well your part, there all the honor lies."

Ah! that's it, "Act well your part." Act it well on the old farm, and in times like these, when fortune smiles one moment and frowns the next, upon the farm is the place to stay, where you are comparatively safe from the ever-changing whirlwind and the contaminating influence of the Metropolis. A FRIEND.

The Lake Country.

FROM AUNT MAGGIE.

MY DEAR LITTLE FOLKS:—I don't suppose that you were aware that Aunt MAGGIE had been reading your letters these long years with so much interest, but when I read Uncle MARK'S letters saying he would tell about the Centennial, I must respond, for I cannot attend the great Exhibition. Tell us, Uncle MARK, all you can; it will be read with great interest.

I do not approve of the use of tobacco. I think that if all young ladies would be firm in their resolutions, young men would quit all dissipation. But it is natural for us to be forgiving; at least, I have had a great deal of it to do.

My pets are, first, my children, then my plants and flowers. One of my pansies measures one inch and three-quarters one way and one and one-half the other. I think all the little girls should grow pansies. I have a fuchsia six feet high, full of beautiful flowers; it is of the Speciosa—a winter-blooming variety. Good-by, little ones.

AUNT MAGGIE.

LETTERS FROM BOYS AND GIRLS.

Inquiry from a Young Florist.

DEAR RURAL COUSINS:—I want to tell you of my room, flowers, pets, etc., if the kind Editor will permit me. I have a north room, carpeted with rag carpet that I made myself. (I did not weave it, but earned the money to pay for warp and weaving.) I have in it a bed, stove, organ, stand and several pictures. One is a medley of flowers, made from colored plates taken from Floral Guides; another is a medley of colored plates, which is admired very much. I have a zephyr wreath in a glass box that I made. I wish, dear Cousins, you would write more about flowers, for I love them dearly. I have a good many flowers in summer; two I think are very nice, for their oddity. They are annuals and very hardy. I never saw them advertised in any catalogue. One is called "Snow on the Mountain;" it is a variegated plant and grows eighteen inches high. The leaves are all one height and form a circular head, perfectly flat, with lily white flowers all over the leaves. The other grows something like catnip, but each stem is completely covered with green cups, six in a circle around the stem, and six thorns beneath the cups; has a small white and blue flower in each cup. The whole plant is fragrant. I have counted 190 cups on a single stem and twenty stems on a plant. I wish the Editor would tell me what it is. I had fifteen kinds of pansies last summer, but roses and fuchsias are my favorite flowers. Will some one tell me whether English Ivy would stand out on the north side of a house through winter in Northern Indiana? also what are the best vines with which to cover a south porch?—MARION, *Vine Cottage, Noble Co., Ind.*

[YES, English Ivy will stand out if grown in shade. For good vines for a porch take the Japan Golden Honeysuckle. If MARION will send specimen we will answer her other question.—ED.]

A Kanuck's "Pets."

DEAR MR. EDITOR:—As I see so many letters from the boys and girls in your paper, I thought I would write and tell about my pets. My father is a Canadian farmer. We had some pets that I thought we did not need. They were very mischievous things and infested one of our barns. They were rodents, and since New Years we have been killing them. We fixed a trap door so as to catch them on the floor, and with our dog the first night we killed nineteen. We would go in with a light and clubs and play shinney with them. They would bite our boots and run up our clothes. Occasionally the neighbors would come and help us. We have killed over 200; one poor fellow had a bob-tail. I think I have said enough in regard to rats. Hoping that the RURAL Cousins will laugh as heartily as we did while killing them, I am, truly,—C. E. S., *St. Mary's, Ont.*

A Wolverine's Opinion.

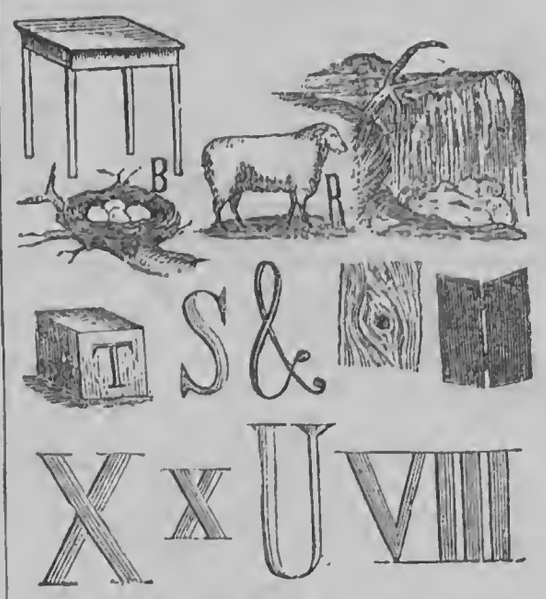
DEAR UNCLES TRUE AND MARK:—As I have a few leisure moments I think I will pay you a visit—on paper. I read JOE STEELE'S letter, and I think he is about right; only I dislike to see a fellow with too much cheek. But I suppose it is the nature of all of us Yankees to have a great deal of it. One thing before I leave off: There is a fellow that lives near me who had a great deal of cheek, so much, in fact, that he had to go to Ann Arbor to have it cut off—only it wasn't the kind of cheek you mean; it was a bunch or swelling. Have any of the RURAL Cousins a collection of antique curiosities? I have about ten different kinds of Indian arrow heads, belonging to different tribes; one stone hatchet and several old coins and pieces of petrified bone.—A. B., JR.

Poor Young Tom!

DEAR RURAL:—I think criticising YOUNG TOM has been run into the ground. I suppose *some* think they could not write a letter without mentioning him. I move we let him rest at present. Will YOUNG POTATO DIGGER please give his hight in his next letter? I am exactly five feet high; will be fifteen this month.—JERRY POSTAL.

The Puzzler.

ILLUSTRATED REBUS.



☞ Answer in two weeks.

CENTRAL PUZZLE.

1. AN article for the wash-stand. 2. A city of New York. 3. A city of Italy. 4. A city of Prussia. 5. A river of Germany. 6. A country of Asia. 7. A city of Ecuador. 8. A city of Peru. 9. A city of Belgium. 10. A city of France. 11. A river of Africa. 12. A city of England. 13. A city of Belgium. Words of five letters, with centrals forming a lake of New England. MD.

☞ Answer in two weeks.

DOUBLE ACROSTIC.

1. A CITY of Palestine. 2. A city of Roumania. 3. A city of Arabia. 4. A division of Africa. 5. A city of Zanguibar. 6. Lying beyond. 7. Part of Great Britain. 8. A scarf. 9. A city of Sardinia. 10. One of the Shetland Isles. 11. A town of Northern Russia. 12. A certain breed of cattle. 13. A city of Mexico. 14. A lake of Sweden. 15. A city of Spain. Primals and finals for two U. S. Presidents. LITTLE ONE.

☞ Answer in two weeks.

PUZZLER ANSWERS.—June 24.

ILLUSTRATED REBUS NO. 10.—Trifles light as air, are to the jealous confirmation strong.

BIBLICAL ENIGMA NO. 7.—The law of the Lord is perfect.

DOUBLE CROSS-WORD ENIGMA NO. 3.—Arkansas and Savannah.

PUBLISHER'S NOTICES.

TO SUBSCRIBERS AND AGENTS.

As we are now entering upon the second volume of the Twenty-seventh year of the RURAL NEW-YORKER, it would be well for the proprietors to say to subscribers and agents that a more prosperous time than the present has not been seen in this office for many a year.

Notwithstanding the cry of "hard times" which has been echoing through the land, the rural population seem to be able to take their paper. It may not be known to many of you that at the end of each year and half-year a newspaper changes a large number of its subscribers. Some old ones discontinue and their places are filled with new, so that while the list does not diminish in numbers, the changes frequently amount to many hundreds.

There were hundreds on our list whose subscriptions expired with the last number in June, and of these every one has *renewed* but *six*. This is something unprecedented in the annals of a newspaper office, and is the most flattering indication to the new management that their strenuous and laborious efforts to make a *good* paper are fully appreciated. With such encouragement as this, subscribers and agents may rest assured that nothing which time, labor and money can procure will hereafter be omitted to make the RURAL still better than it is.

The Literary Departments will be kept up to their standards of excellence and morality, while the Practical Departments will continue to be made up of the most straightforward common sense which can be obtained. In these matters the aim will not be to make them so scientific that they may not be readily understood by every one; but it will be our constant endeavor to publish that which is *absolutely correct*. Now, all that is needed is for each subscriber to get another and our list will at once be doubled.

News of the Week.

HOME NEWS PARAGRAPHS.

THE Centennial Ocean Yacht Race was won by the schooner America in the first class, and the sloop Arrow in the second class. The yachts started from Sandy Hook to sail to Cape May and return. The America and Alarm were entered in the first class and the Arrow and Gracie in the second.

Pennsylvania has 235 beer breweries; Wisconsin, 232; Ohio, 210; New York, 203; California, 202; Illinois, 165; and Michigan 149.

The measles are raging as an epidemic in the vicinity of Plano, Ill., there being over one hundred cases reported last week.

The number of graduates at the Naval Academy this year is forty-one, and among the first five, or star graduates, is B. T. Walling of Ohio.

The results so far from the prosecution of the Whiskey Ring may be summed up as follows: Value of property seized, $1,500,000; assessments, $1,409,000; suits on official bonds, $250,000. There has been turned into the treasury $600,000. There have been indicted 95 distillers and agents, 2 supervisors, 5 revenue agents, 2 collectors, 8 deputy collectors, 40 guagers, 15 storekeepers, and 19 other persons. There have been 110 convictions and 17 acquittals. These suits were inaugurated May, 1875.

A Connecticut farmer finds guinea hens the best potato bug destroyers he has tried. He keeps twenty of these fowls, and they do their work thoroughly.

Paper napkins and paper handkerchiefs are among the novelties being exported from the East. They are sheets of fibrous mulberry paper, so well known on our tea packages, in size about seventeen by twenty inches, are very soft and flexible, and are printed with a neat border.

More than 5,000 people have gone to the San Juan mining region in Colorado this summer.

A fire that broke out in H. W. Johns' roofing factory at Hunter's Pont, N. Y., injured the stock and building to the extent of $48,000, destroyed Bridge's hammer factory at a loss of $15,000, and Young's blacksmith shop at a loss of $2,000, and injured Newrorandt's pottery and the Long Island City pottery.

Under the Confederation, the public debt of Canada has increased $53,000,000, the imports have exceeded the exports by $140,000,000, and the tonnage has greatly decreased.

Cholera infantum is killing babies in Baltimore at an unprecedented rate.

Abundant rain during this month has made the hay crop in Eastern Vermont the best for many years.

The potato bug is gaining the mastery over gardeners in Dorchester and West Roxbury, Mass.

A coal bed has just been discovered in Hamilton County, O., of sufficient thickness to be worked remuneratively.

The Presbyterians have established a mission among the Pueblo Indians of Laguna, New Mexico. At the first meeting, held by the Rev. Sheldon Jackson and others, two interpreters were required, one to translate English into Spanish, and the other to put Spanish into Indian.

The supply of seeds for distribution at the Agricultural Department is exhausted.

The cotton area under cultivation at present is reported by the various cotton exchanges and by the Department of Agriculture in percentages which would amount to about 8,960,000 to 8,975,000 acres, against 9,250,000 acres in 1875. The crop was planted a few days later than the last, and there has also been more rain in some sections than was needed. The condition of the crop is reported less favorable than at the corresponding date last year. The food crops were probably never more promising, and the present prospects are that the yield of all the earlier cereals will be the largest known. Of the late cereals, such as corn, it can only be known that the acreage is of the largest breadth. There are hazards surrounding them all, but the situation was never more gratifying. The California wheat exports will be about 200,000 tons larger than last year, a gain of nearly fifty per cent. So far, there is no crop of which we have knowledge, reported otherwise than favorable, with the exception of leaf tobacco. The latter has recently been "coming out" to a surprising degree, and with as good weather conditions as the present, there will probably be a good average acreage planted after all.

The men who have been flooding the country with counterfeit money have at last been trapped in Brooklyn, N. Y. Geo. White, one of the most skillful engravers in the country, was arrested and plead guilty.

Rains in Georgia have been very heavy, and have done almost fatal damage to crops.

The Democratic National Convention met at St. Louis and nominated for President, Samuel J. Tilden of New York, and for Vice-President, Gov. Hendricks of Indiana.

The President has signed the bill retiring Col. W. H. Emory with the rank and pay of brigadier general.

Seven of the officials sentenced and imprisoned in Indiana because of complicity in the Whisky Ring have been pardoned by the President.

The delegation from the French Trades Unions has arrived in New York and been enthusiastically received by fellow workmen.

The Brazilian hymn composed by the famous maestro, Gomez, and dedicated to the American people by the Emperor of Brazil, was publicly heard in Independence Square, Philadelphia, on the 4th inst. There were 250 musicians and a chorus of 1,000 voices, under the leadership of Mr. P. S. Gilmore.

No successor to U. S. Treasurer New has yet been appointed.

It is probable that the celebration in New York City on the night of the 3d and morning of the 4th of July was the most brilliant pageant ever seen in this country. An energetic committee had been arranging the details for weeks, and although the smallness of the contributions of money disappointed them, they nevertheless organized the scattered elements that might otherwise have made a thousand petty celebrations into one great military and civic torchlight procession and a general illumination of the city. The ending of the nation's hundredth year and the beginning of the hundred and first was celebrated with a grand burst of cannon, fireworks and music at the last stroke of the midnight bell. The response of the people to the expressed desire of the committee that they illuminate their houses with lanterns and transparencies was very general, and notably so on the line of the procession. The procession reached Union Square at midnight, and at the down stroke of 12 o'clock, in accordance with the programme, a 10-inch gun was fired from Fort Columbus. This was the signal for all the bells and chimes in the city to join in with the general rejoicing. The singing of national hymns at the grand stand in Union Square now commenced by the united singing societies and was kept up for fully an hour with a spirit that did not tire. Fireworks and allegorical representations kept up an incessant display at the same time, after which the procession broke up. The celebration was resumed at the Academy of Music at 11 o'clock on the morning of the Fourth, where Dr. Storrs of Brooklyn delivered an oration and William Cullen Bryant's hymn and Bayard Taylor's "Song of Seventy-six" were sung. But this was but "a drop in the bucket" of the proceedings on that day in New York. The City Hall, the court houses and other public edifices were grandly illuminated on the nights of the 3d and 4th. Flags were displayed on all public and many private dwellings, and the shipping in the harbor was absolutely hidden with bunting. Almost all the German, Irish, Scotch and other shooting, sporting and social clubs and societies vied with each other to surpass all former efforts in the brilliancy of their excursions, picnics and merry-makings. The Tammany Society held a grand pow-wow in their wigwam, and the Young Democracy had a most pleasant time in Irving Hall. Eighteen German societies had a concert in Jones' Wood on Sunday, July 2, and to provide against police interference they purchased 1,000 kegs of lager for the occasion. Nearly all the principal business houses in the city remained closed from the morning of the 1st till the 5th of July, that their employes might have much needed recreation and amusement by partaking in the general rejoicing. The Central Police Office and all the subordinate stations were decorated on the 3d and 4th, in compliance with a general order issued by the Commissioners. The above summary of the proceedings in this city on the 3d and 4th of July are necessarily brief, but they will serve to give our readers an idea of the superb magnificence of everything in this great city to do fitting honor to the celebration of the hundredth birthday of the nation.

The great eight-oared race at Springfield, June 30, was won by the Yale boys. The victors have well earned their laurels and their adversaries are not disheartened. A more plucky race, under the circumstances, has seldom been rowed. The attendance was principally local.

The nest of counterfeiters, just arrested in Brooklyn, Congdon, Conklin and White, had their plans laid to put afloat fifteen or twenty thousand dollars on the Highland National Bank of Newburgh. Congdon had organized the best system of dealing that has ever been broken up and it is asserted that he had facilities to get rid of $500,000 in time, had he escaped detection. For every bank White was instructed to make a new set of plates. It takes four plates to print a bill. The first impression taken is the green border, after which the vignette is printed; then the face is printed with the name of the bank left blank. It is next numbered and stamped with seal. The counterfeiters' work was not slighted in any particular. The vignette plate that was found in White's house had been sent there for repairs, as one of the legs of Columbus was crooked.

John C. Schwartz, former Secretary and Cashier of the German Up-town Savings Bank, New York City, was arraigned in the General Sessions recently on an indictment for embezzling $52,921 of the bank's money. He pleaded guilty and accepting his promise to disclose the names of others implicated with him, Recorder Hackett remanded him for sentence.

A dispatch received June 30 from Fort Laramie says there is a report from Red Cloud that Indians coming in bring news of another fight with the Northern Indians—the troops engaged not being Gen. Crook's—and that a village was entirely destroyed.

The adjustment of the differences between the two branches of Congress respecting the general appropriation bills is considered by all parties to be merely a question of time. The salary and compensation features are the main points at issue. The difficulty with the Indian appropriation bill arises from the provision of the House for the transfer of the Indian Bureau from the Interior to the War Department. The two Houses having passed a joint resolution making temporary provision for carrying on the Government, the apprehension of embarrassment by the delay in passing the general appropriation bills is entirely removed.

Willie Morgan, son of State Senator Morgan, and Victor Monroe, son of a prominent citizen of Hernando, Miss., were drowned in Harman Lake on the 30th ult., in attempting to save the life of a companion. Two other young men narrowly escaped a similar fate before the youth for whom Morgan and Monroe lost their lives was rescued.

It is understood that a new experiment in socialism is to be attempted shortly. This time in Virginia on the banks of the Potomac, on a domain consisting of some seven thousand acres of land, including finely cultivated farms with many thousand fruit trees and a valuable water-power. This place has been secured at a cost of about $30,000. The projectors of the new movement are Swedenborgians, Spiritualists and Come-outers, who are recruited from every section of the country, and who have an abiding faith in the possibility of realizing the dreams of Fourier, Brisbane and Owen upon this continent. The immediate leaders are Mr. Samuel Leavitt of New York and Mr. Charles Sears of the Co-operative Farm, Silkville, Kansas. A monthly magazine entitled the Eclectic and Peacemaker, published by Leavitt, is the organ of this new scheme, which will naturally excite a great deal of interest in certain circles. The projectors of this new community believe in the sanctity of marriage and regard both the Shakers and the Oneida Communists as social heretics.

It is reported from Washington that Gen. R. D. Mussey, a member of the bar of the Supreme Court of the District of Columbia, has placed in the hands of J. Proctor Knott, Chairman of the House Judiciary Committee, a memorial charging D. C. Humphreys, one of the Associate Justices of the Supreme Court of the District of Columbia, among other things, with being totally unfit mentally for the position of Judge, in that he is ignorant of law, incapable of logical reasoning, and given to feeble, vapid, disconnected utterances upon the bench, devoid alike of legal point and common sense; that he is frequently intoxicated while on the bench; that he has sat in at least one case where he had a direct pecuniary interest in the result; and that generally by his conduct as a Judge he has hindered justice, rendered himself a public laughing-stock, and brought discredit upon the court of which he is a member.

Internal revenue receipts, were $423,381.81; customs receipts, $569,960.07; national bank notes received for redemption, $874,801, to June 30.

Mr. Randall, from the Committee on Appropriations, reported a bill providing for the expenses of the government. It provides that for ten days after the 30th day of June, unless appropriation bills shall have previously passed, it shall be lawful for the several departments of the government to use any unexpended balances which may exist for the service of the current fiscal year.

Speaker Kerr is said to have become quite despondent in regard to his health, though his physician does not agree with him and expresses strong hopes of his ultimate recovery.

Eleven tons of cucumbers from Jacksonville, Fla., in one day.

The Nautical School-ship St. Marys has left Glen Cove for a summer cruise among the Azores.

Gen. J. R. Hawley of Connecticut has been reelected trustee of Hamilton College, and the Rev. Dr. W. E. Knox of Elmira was elected trustee in the place of Gen. John Jay Knox, deceased.

John J. Astor and Wm. B. Astor propose to erect a magnificent altar in Trinity Church, New York, as a memorial of their father, the late William B. Astor. It is to be built of Caen stone, white marble and alabaster, relieved by gold and mosaic. Y. C. Withers, after whose design it is to be built, will sail early in August for England for the purpose of ordering the work.

Commander Charles A. Babcock, commanding the Ironclad Cannibus, died suddenly in Newport, R. I.

South Carolina's Treasurer announces that, in consequence of the payment of a large portion of the taxes in bills of the State, made receivable for taxes by a decree of the United States Supreme Court, there is but $25,000 in the State Treasury available to pay $73,000 of interest on consolidation bonds due, leaving a deficit of $45,000 to be provided for by the Legislature next November.

FOREIGN NOTES.

Two guns belonging to the Spanish Armada, which have been under water for 288 years, have been recovered off the Scotch coast by a diving party.

Miss Harriet Martineau, the well-known English authoress, died June 27, at her residence, the Knolls, Ambleside, England.

Kangaroo skins are becoming an important article of traffic in Australia, where they are said to yield the toughest and most pliable leather.

Dr. Patrick Black of London has published a book with the original title of "Essay on the Use of the Spleen, with an Episode of the Spleen's Marriage—a Physiological Love Story."

Letters from Spain state that the vineyards and cereal crops in Andalusia are marvellously productive and promise a yield of barley unknown for a 100 years. In Ciudad Real and Banajor the cereal crops have been wholly destroyed by the locusts. In Badajoz 60,000 arrobas (an arroba is twenty-five pounds) of locusts have been burnt with petroluem in trenches. This shows the fearful extent of the plague. More than 15,000 troops are occupied in their destruction.

A Rawul Pindee correspondent informs the Times of India that a gentleman who recently arrived there from Cashmere gives an appaling account of the extent and fatality of the cholera epidemic now raging in that country. According to his statement the inhabitants are dying by hundreds, and the disease has spread throughout the valley.

An illustration of the value of timber on waste lands in the Highlands is afforded by a sale of wood which took place on the estate of the Earl of Cawdor, in Natrushire, the other day. In 1820 two hills on the Cawdor property of about 300 acres in extent, and of almost no agricultural value, were planted with fir and other trees, and after successive thinnings, the sale of which realized large sums, the remainder of the wood on this waste land during the fifty years is stated to be equal per acre to the return for the best arable land in the country.

Capt. Souter of the Intrepid, from Davis Straits, whale-fishing, reports that while anchored in Isabella Bay he found it necessary, in consequence of the great body of ice coming down, to proceed in shore. After sailing some distance he came into a fine, commodious, natural harbor, not marked on charts. There was nothing to show it had ever been entered before. Capt. Souter and other officers left in a cairn a writing indicating the discovery. Splendid water was found, and there was less of the arctic appearance about the locality.

Some Arabs, digging among the ruins of the great temple of Karnac, Egypt, came upon a sandstone cist buried in the debris, inside of which was the sculptured figure of a female hippopotamus in green basalt. The monument, including the slab, is three feet high, and is admirably carved and polished. A long inscription in hieroglyphics runs along the back, and another is cut on the slab in front of the figure. The inscriptions contain the names of Psammetichus I., his queen and daughter, and also of a hitherto unknown king.

In the British House of Commons a petition wound on a roller, three feet in length and two feet in diameter and signed by 102,000 persons, was presented, praying that no further advances be allowed to members of the royal family until a full statement be made of its present income.

The anxiety respecting the relations between China and England continues. The British Minister declines friendly intercourse with the Peking officers, and the Chinese of all classes are in great alarm. There are 4,000 British troops in Burmah prepared to cross the frontier in case of need.

The Standard's Vienna dispatch says Servia's strategetical plan is to hold the Turks in check at Nitsch until Montenegro, who is somewhat distrusted, joins the movement. Two hundred cannon have been mounted at Kragujevacz. Sclavonic advices assert that the Russian Grand Duke Vladimir is in Servia incognito.

The Paris correspondent of the Standard reports that a regular war panic prevailed on the Bourse, recently, founded on the belief that it would be impossible to confine the war between Turkey and Servia to the limits of the Ottoman Empire, and that a collision between Russia and Great Britain would eventually result.

The members of the Irish Rifle Association, to constitute the eight for the annual competition for the Elcho Shield, will consist of the six who made the highest individual scores at the Wicklow competition, namely: Messrs. Wm. Rigby, Fenton, Fulton, Johnson, Smyth and Miner, and two others to be selected by them. Wilson and Ward, or John Rigby will probably be the men chosen. The Irish team to go to America has not been decided

upon yet. The score on the competition for the Gildersleeve cup is not yet officially calculated, but Fenton is believed to be the winner by a splendid score, with Johnstone second.

Hairullah Effendi, who played so important a part in the overthrow of the Sultan Abdul Aziz, is that mollah who, in 1867, accompanied the deceased monarch to Europe in the quality of a second chaplain. With that sovereign he visited Paris, Vienna and London and everywhere showed the greatest interest in the political and social institutions of Europe. He is about 35 years of age. According to information received from Constantinople by the Tages Presse, Hairullah was not an instrument in the hands of the conspirators who deposed Abdul-Aziz, but was himself the soul of the movement.

India papers report that the Emperor of Abyssinia has 30,000 Egyptian troops prisoners and that he will not give them up until the Khedive has paid a ransom of two millions sterling.

Mr. Gladstone continues his alternating labors with the pen and the ax. A fortnight ago he completed a paper on "Modern Religious Thought," which appeared in the Contemporary Review for June; after which he set to work and cut down a beech tree, the trunk of which measured 13 feet in circumference. This task he accomplished in less than six hours and according to the opinion of professional wood cutters, in a thoroughly workman-like manner.

The Pera correspondent of the Times, in a letter dated June 23 says:—"The new Sultan of Turkey, Murad Effendi, is overwhelmed with the difficulties of his position, and, it is reported, contemplates abdicating in favor of his younger brother. The Turks are actively preparing to meet a Servian attack. The camp on the Bosphorus opposite Therapia, where they intended to assemble in considerable force, has been broken up, and every available man is being forwarded to the front. It is reported that the Government has formed the desperate resolution of enlisting eighty thousand Bashi-Bazourks throughout the empire, who, if they cannot do as much as soldiers, may prevent the spread of the insurrection by a constant menace of a general massacre of the Christians. Gen. Ignatieff, the Russian Ambassador, embarked his children aboard a Russian dispatch boat for Odessa on the 29th ult. The General himself and his wife remain, but the wives of the secretaries of the embassay have been sent to a place of safety. The reported recall of Gen. Ignatieff is not confirmed. Insulting and threatening letters reach him daily from various quarters, and he is certainly exposed to imminent danger. Zealous Mussulmans regard the Government's resolution to suspend the sentence of the Salonica authorities as evidence of subserviency to the European powers, from which an aggravation of their hostile feelings toward Christians may be justly apprehended. The aspect of things becomes more serious every day.

An elaborate monument has been erected at the Chatham dock-yard in England to commemorate the French prisoners of war who died there in the early part of the century. The monument bears this inscription: "Here are gathered together the remains of many brave soldiers and sailors, who, having once been the foes and afterward the captives of England, now find rest in her soil, remembering no more the animosities of war or their sorrows in imprisonment. They were deprived of the consolation of closing their eyes among their countrymen they loved, but they have been laid in an honorable grave by a nation which knows how to respect valor and to sympathize with misfortune."

Recent reports from the south of France, relative to the condition of the mulberry trees and the rearing of silk-worms, are not favorable. The former, struck by the frost, give no sign of vegetation in the neighborhood of Valence (Drome), and the proprietors who had hesitated to sacrifice the latter, have been compelled to do so from the absence of leaves for food. At Saint Ambroix (Gardi) the trees were still without buds, and the eggs not yet hatched are offered at a very low price. The same state of things exists at Uzes. In the Vaucluse it is reported that a number of mulberry trees are dead, and the proprietors are closely pruning those which were most severely attacked by the cold.

SPECIAL NOTICES.

DEAFNESS RELIEVED. — No Medicine. Book free. G. J. Wood, Madison, Ind.

THE MARKETS.

PRODUCE AND PROVISIONS.

NEW YORK, Saturday, July 1, 1876.

THE main features of trade this week might be condensed in a single paragraph. New points have not had a chance to develope as the centennial fever has been steadily increasing and in its intensity has affected all local commerce. Patriotic preparations for the moment paralyze interest in common place matters. One sober old store-keeper assured us that "sky-rockets were the only items that have any possibility of going up, and that any thing to show actively must have powder in it." Seriously the spirit of celebration was perhaps never so general and the liberal business in decorative or noisy expression must for the time being absorb funds usually devoted to more substantial purposes.

HINTS TO SHIPPERS.—Pack produce as firmly as its nature allows; otherwise many items suffer in appearance, if not in quality, through the jostling incident to transportation. Do not mark packages with any material that will smudge. A good paint for marking purposes can be made of bichromate of potash and extract of logwood. Nailed cards are very insecure. For long lines of goods a marking plate or brand is preferable to ordinary lettering. At the time of shipment put a complete list of the lot into one of the packages if it can be done; but be sure to mail to consignee a full list, naming date, style of packages and contents. Aim to have each parcel of uniform quality as far as possible; mixing always injures sale. Roll butter should be wrapped in clean white muslin. Dressed poultry should be packed in well shaken dry straw. When poultry sweats in boxes straw-dust gives a mean look. Break off nail points from the inside of old barrels when they are used in order to prevent property from tearing. Short cut dry straw is better for packing eggs than anything else. Try and avoid the arrival of summer items here on Saturday.

BEANS AND PEAS.—Receipts of beans are very heavy for the season and the general market is almost at a stand still. Prices unchanged.

Beans—Prime pea, $1.15@1.20; fair to good, $1.00@$1.10; prime mediums, $1.00; fair to good, 75@80c.; poor, 40@50c.; prime marrows, $1.45@1.50; fair to good, $1.25@1.40; prime white kid., $1.30@1.35; other, $1.00@1.20; prime red kidney, $1.30@1.35; other, $1.15@1.25; Lima (Cal.), $2.50. Black beans, $4.00. Peas—Canadian, in bulk and bond, 95c.; green, $1.00@1.10; Southern B. E., 2-bush. bag, $2.65@2.70; split, ₱ bbl., $6.

BUTTER.—Even if the period had not the interruption of an important holiday it would be difficult to do much better trade in the style of weather we have been melting under. Our previous remarks are still admirable. Summer should be kept in easy consumption, though it is detrimental to quality for shipments to be made while the weather is so excessively warm. Prices for State are somewhat unsettled and the inside line best expresses what limited business is doing. Western is low and gets a good share of the demand. Sales as before chiefly for low and finest grades. Foreign exports have withdrawn.

Pails, State selected, 27@28c.; do., other 22@26c.; creamery, 25@30c.; half firkin tubs, prime, 26@27c.; fair to good, 23@24c.; Welsh tubs selected, 24@25c.; Welsh tubs, prime, 21@23c.; fair to good, 20@—c.; Pails, Western creamery, prime, 25@27c.; fair to good, 23@25c.; Western tubs, dairy, good to prime, 18@20c.; fair to good, 15@16c.

Western factory choice, 18@20c.; do. fair to good, 14@15c.; poor, 12@13c. Grease, pure, 7@10c.

Western firkins quoted at 17@19c. for poor to fine yellow. State firkins 19@25c. for poor to fair, 24@27c. for prime. Sweet cream pails range at 25@28c.

CHEESE.—The English advices are rather against the market, offering but little encouragement for free shipments. The full shipments of last week have probably assisted to the tame feeling abroad. Arrivals are running large, and receivers manage to keep them from accumulating materially by pressing them at easy figures; this applies to other than the choicest grades. For best lots of factories 11c. is quite steadily held, they showing less freely in the supply and being mostly wanted; 10½c. represents a market for about fine, mod and anything under this goes off relatively lower than usual.

Now at 10¾@11c. for fine factory; 10@10¼c. for good; 9@9½c. for fair; do., half skimmed, 7@8c.; do., skimmed, 3@5c. State farm dairy, fair to good, at 8¾@9¼c.; poor lots, 7@9c.; Western factory, good to prime, 7½@8½c.; fair lots, 6@7¼c.; do. cheddar, choice, 9¼@9¾c.; do. flat, choice, 9@9½c.

COTTON.—Export movement is slow, and there is a very dull market otherwise. Quotations are:

11¾@11 29-32c. for July; 12c. for August; 11 15-16@11 21-32c. for September; 11 25-32c. for October; 11 21-32c. for November and December; 11 13-16@11 27-32c. for January 11 31-32@12c. for February; 12⅜@12 5-32c. for March; 12 9-32@12 11-32c. for April; 12 13-32@12 17-32c. for May.

Quotations for spot cotton, based on American standard of classification:

	Uplands.	*Ala.*	*Orleans.*	*Texas*
Ordinary	8 9-16	8 9-16	8 9-16	8 9-16
Strict ordinary	9¾	9¾	9¾	9¾
Good ordinary	9 15-16	9 15-16	10 1-16	10 1-16
Strict good do.	10¾	10¾	10¾	10¾
Low middling	11 1-16	11 3-16	11 5-16	11 5-16
Strict low middling	11¾	11¾	11¾	11¾
Middling	12	12⅛	12 3-16	12 3-16
Good middling	12¼	12⅜	12⅜	12⅜
Strict good middling	13	13⅛	13⅛	13⅛
Middling fair	13⅜	13½	13⅜	13⅜
Fair	14¼	14⅜	11½	14½

Stained.

Good ordinary	8¾	Low middling	10¼
Strict ordinary	9¾	Middling	11⅛

DRIED FRUITS.—The general market is weak and very dull. It is difficult to sell even lots, in which way there are offerings in instances under quotations:

Apples—State, sliced, 8¼@9c.; do., quarters, 8¼@8⅝c.; southern sliced, 8@9c. for prime; Blackberries, 8@9c. Peeled peaches, good and prime Georgia, 10@12c.; do. fancy, 11c. Unpeeled peaches, new, 11@11¼c. for halves and 10c. for quarters. Plums, 11@15c. Raspberries, 25@26c. Cherries, 17@18c.

EGGS.—Prime Western and Canadian have worked up to very satisfactory prices, and with the present rate of receipts the new figures are likely to be supported.

Near points, ₱ bbl., 20c.; State and Penna., 18c. Western, prime, 18¼@19c.; do. fair marks, 17¼@18c. Canadian, 18¼@19c.

ESSENTIAL OILS.—Oil Peppermint, in glass, $3.75 ₱ lb.; in tin, $3.25. Spearmint, in glass, $3.50; in tin, $3. Wintergreen, $3. Sassafras 55c.

FLOUR.—Export movement is very light, the markets abroad depressed, and it is hard to move even small lots on home trade account, prices are unsettled and weak. The quotations are:

Poor to choice superfine State, $4.50@4.90 for very common to fair extra do.; $4.95@5.00 for good extra do.; $5.05@5.15 for fancy do., and $5.20@6.75 for very choice extra; $3.50@4.00 for superfine Michigan, Indiana, Iowa, &c.; $4.50@4.85 for shipping extra do., the inside price for inferior, and $5.00@5.50 for choice to very fancy extra do.; good to choice white wheat extras, $5.55@6.80; fancy do., $6.85@7.75; winter wheat good to choice family city mill extras, $7.50@8.75; round-hoop Ohio, $4.75@4.95, and trade brands of do. at $5.00@7.10; St. Louis, $5.00@6.20 for common to fair extra, and $6.25@8.75 for good to very choice; Minnesota "straight" at $5.10@6, and patent at $6.75@9, unsound stock at from $3.25@5.50; No. 2 at $3.25@3.00; Southern at $4.85@5.15 for common to good extra, $5.20@8.00 for good to choice, $6.15@8.50 for common to choice family extra, and $8.00@8.75 for choice to fancy new process. Rye flour at $4.75@5.15. Corn meal, quoted at $2.00@3.00 for yellow Western, Pennsylvania and Jersey, and $3.25@3.35 for Brandywine.

FRESH FRUITS.—Strawberries are about gone; the end of the supply is coming from Owego and Oneida. These State berries have been quite a feature for several years. This season the weather is rather warm for the journey and prices are low. Antwerps and Red Brandywine raspberries are in demand. The latter are now commercially and make a favorable entree. Fifty cases of California apricots have arrived. They are remarkably large and showy but poor in flavor. Southern apples have slow sale this year. The crop of fine cherries has been light. Florida watermelons are in fair demand; a few are expected from Galveston, Texas. Currants are in good demand. Russet apples nominal at former figures.

Strawberries, State, ₱ quart, 10@25c.; Eastern, 10@16c. Cherries, best, ₱ lb., 9@12c.; common, 4@7c. Gooseberries, Eng., ₱ bush., $3@5, small $1. Seedlings, $1.50@1.75; common, 75c.@$1. Black caps, ₱ qt., 8@10c. Antwerps, thirds, 8@10c. Red B., ₱ quart, 8@10c. Currants, small, ₱ lb., 4@5c.; do., cherry, 6@10c. Watermelons, ₱ 100, $25@35. Whortleberries, ₱ bush., $5@5.50. Wild Blackberries, ₱ qt., 6@8c.; cultivated, 12@15c. Peanuts—Virginia, ₱ bush., $1.40@1.65; Wilmington, $1.80@2.00; do. Tennessee, $1@$1.20.

GRAIN.—For wheat the market has been very depressed, yielding in prices from day to day, and a very slow export movement. English markets have been very dull, with fair stocks on hand there and easy prices. The slightly more unfavorable political situation abroad, is without influence here as yet; latest sales for No. 3 Chicago spring, 95c.@$1; No. 3 Milwaukee spring, $1@1.04; No. 2 Chicago spring, $1.14; No. 2 Milwaukee spring, $1.14@1.17; Ungraded spring, $1@1.12; No. 1 spring, $1.20@1.30; rejected spring at $1; winter red Western, 93c.@$1.12; amber State, crop 1874, $1.33. Rye at 82@84c. for Western and 90@95c. for State. Corn is more active at steadier prices; sales at 57½@60c. for mixed Western; 60c. for steamer yellow. Oats sell slowly at 33@42c. for mixed Western and State and 34@45c. for white do.

HAY AND STRAW.—The demand is always more or less restricted at periods around the Fourth. The juvenile patriot is not over particular about the landing place of his crackers or lighted punk. And buyers who require a large supply of such combustible commodities as hay and straw will not load up until the precurious enthusiasm subsides.

Supplies still run liberal, and the feeling is weak on hay, but in straw sufficient going on to steady prices.

Bale hay is quoted:—Shipping, 80@95c.; retail qualities 80@95c.; clover, 50@55c.; salt, 60@65c. Straw is quoted at $1.15 for long rye; 70@85c. for short rye; 60@65c. for oat.

HIGHWINES.—Quoted at $1.12½.

HOPS.—Exporters show less indications to operate this week, and trade from brewers is moderate only. There is a feeling now to await definite intelligence respecting the new crop. Prices are steadily held. The quotations are:

N. Y. State, 10@17c.; Eastern, 8@15c.; Wisconsins; 8@15c.; Yearlings, 8@10c.; Olds, all growths, 4@6c.; Californias (nominal), 15@18c., ₱ lb.

LEATHER.—Hemlock sole at 20@21c. for light, 21@23c. for middle, 21@23½c. for heavy. 19@20c. for good damaged.

POULTRY AND GAME.—Both dressed and live poultry have a good movement under the extra call for the Fourth. We quote:

Dressed Turkeys, 15@17c. for choice and 12@14c. for other. Spring chickens, 28@33c. Fowls, N. J., 12@15c.; State and Western, 10@11c.

Live Poultry—Spring chickens, 25@27c.; Fowls, 13@15c.; Roosters, 5@6c.; Turkeys, 13@15c.; Ducks, N. J., pair, 75c.@$1; do. Western, 50@65c. Geese, State and N. J., $1.75@2.25; do. Western, $1.25@1.50.

Stall-fed pigeons higher, at $1.87@2 ₱ doz.; flight, $1@1.25.

PROVISIONS.—There is increased export demand and a stronger general market. Mess pork quoted at $19.75 for spot lots, $19.70 for July; $19.80 for August. Bacon at 10¾c. for long clear, and 11½c. for short clear. Western steam lard at $11.62½ for spot lots; $11.57½@11.60 for July; $11.70 for August; $11.80 for September. Western sloaring at 13½c.; Tallow at 8 9-16@8¾c. for prime. Beef hams at $22@24. Beef at $10@11 for plain mess; $12 for extra mess, and $13 for packet. Tierced quoted at $20 for prime mess, and $21 for India mess. City extra India mess at $20@21.

REFINED SUGAR.—Quoted 8¾@9¼c. for soft yellow; 9¼@10c@c. for soft white; 10¾c. for crushed; 10¾c. for powdered; 10¼c. for granulated.

RICE.—Carolina quoted 5¾@6c. for fair; 6¾@6¾c. for good; 6¾@6¾c. for prime; 6¾@7c. for choice.

SEED.—Nothing doing in grass beyond small lots prime store. Quoted at 16c. for clover; timothy, $2.80@2.85.

TOBACCO.—Exporters are doing but little and supplies accumulate. Prices are a little unsettled on other than prime grades, but best lots not urgently offering.

KENTUCKY LEAF—NEW CROP.

Wisconsin	5½@ 7

VEGETABLES.—Prime old potatoes are in good demand. New Norfolk sell steadily. In green stuff Long Island chiefly supplies the local market. We quote:

Potatoes—Prime old Peachblows, $1.25@1.37 ₱ bbl.; other not wanted; Bermuda, $1@1.50; Norfolk, new, $2@2.75. L. I. green peas, ₱ bag, 50@75c.; do. string beans, ₱ bag, 75c.@$1. Spinach, bbl., 25@50c. Cauliflower, ₱ doz., 50c.@$1. Cabbage, ₱ 100, $2.50@4. Norfolk white squash, ₱ bbl., $2@2.50; Charleston marrows, do., $2. Southern tomatoes, ₱ crate, $1@2.

WOOL.—The market continues to show a fairly active business on manufacturing account, favored by a little freer movement in the goods market, with prices generally steady.

ROCHESTER, July 1.—Flour market dull; spring, $6.75; amber winter, $7.00; white winter, $7.25; double extra, $7.50. Rye flour quiet at $5.00. Wheat lower; Milwaukee club, $1.20@1.26; amber winter, $1.18@1.23; white winter, $1.23@1.33. Oats, nominal at 35@40c. Corn quiet at 55@60c. Corn meal, $1.30@1.35. Butter, 19@20c. Cheese, 11@13c. Eggs, 13@14c. Lard, 11@12½c. Apples, bu., $3@3.50. Potatoes, bu., 25@30c. Beans, ₱ bu., 60c.@$1.10. Mess pork, $22 00. Wool, 20@35c. Hay, $8@12. Straw, $6@8. Timothy seed, $2.75@3., clover, $9.25@10. Mill feed dull at $14 for shorts, $16 for shipstuffs, and $19 for middlings. Railroad Freights—Flour to Boston, 40c. ₱ bbl.; to New York, 30c.; to Albany, 25c. Wood, hard, ₱ cord, $3@3. Coal, $6.50@6.90 for stove.

COUNTRY CHEESE MARKET.

LITTLE FALLS, N. Y., July 1, 1876.

THE cheese market this week has been dull, but the prices of the previous week were well sustained. Not far from 400 boxes of farm dairy cheese were on delivery and changed hands at 8@10c.; the bulk of sales ranging at 9@10c. Farm dairies have improved greatly in quality; still, we are not quite free from lots that are partly skimmed.

Factories were well represented and there was a large offering, amounting in the aggregate to upward of 8,000 boxes, nearly all of which changed hands. Buyers command trade by paying 10¾c.; then 10¾c. was freely offered, at which a number of sales were made. The best factories held firmly at 10¾c. and the fanciers insisted upon 11c.; but this last was about ½c. above the views of buyers. Nearly 3,000 boxes sold for 10¾c., 800 at 10¾c. and 3,500 at 10¾c., and one lot was reported at 11c.

The delivery of butter was light and composed wholly of grass-make. Farm dairy in Welch tubs brought 22@23c. and creamery in return pails, 24c.

The weather has been warm and showery and grass is growing finely in pastures and meadows.

We have advices from abroad for the second week in June. Our London correspondent reports the new American cheese at hand as selling at quotations. Fine cheese is scarce and secondary is easier.

The prices are for extra American, 62@64s.; fine, 54@58s.; good, 46@50s.; secondary and common, 20@44s. English cheddar brings 80@94s.: Wiltshire double; 66@78s.; Cheshire medium, 56@58s.; fine, 70@80s., Scotch, 60@68s. Dutch cheese—Edams, 53@58s.; Gouda, 48@50s.; Derby shape, 48@52s. ₱ cwt.

Dutch and Jersey butter are lower, while on the contrary Normandy cleared at full rates and still higher prices are asked for delivery. Dorsets brings 136s.; Jersey, 100@104s.; Danish and Swedish, 100@136s.; Normandy, as landed, ranges at 110@140s. There is no American or Canadian butter in market. Oleomargarine (or artificial butter) sells at 80@94s. ₱ cwt.

LIVE STOCK MARKETS.

NEW YORK, July 1, 1876.

RECEIPTS OF LIVE STOCK.

	Beeves.	Cows.	Calves.	Sheep & Lambs.	Hogs.
Sixtieth St.	3,821	10	2,203	5,310	000
Forty-Eighth St.	00	55	301	434	000
Fortieth St.	000	00	000	000	13,247
Harsimus Cove	1,741	00	000	9,161	9,654
Totals this week	8,562	95	2,507	15,705	22,901
" last week	7,419	45	3,227	15,956	19,098

BEEVES.—Trade opened very slow on last Monday with a moderate run of generally fair cattle; prices were sustained, but the markets closed weak, with several carloads of beeves unsold. Prices ranged at 8¾@10½c. ₱ lb.; weights, 5@8¾ cwt. Wednesday, trade very slow, with prices at 8¾@10c.; weights, 6@7¼ cwt. Thursday, trade both small and slow at 7¾@10c.; weights, 5@8¾ cwt. Friday, the markets closed fair at 9¾@10c.; weights, 6¼@8¾ cwt. From 55@57 lbs. has been allowed net. The quality of these herds as above quoted has been generally coarse but fat, and have ranged from poor to fair, with a few top steers of good quality. Spanish herds sold at 7¾@8c.; stall-fed steers, 8½@10¾c. Native steers sold at 8¾@10c.; grade, do., including a few of the last to hand, which were sold at retail, fetched 10¾@11¾c. Oxen, 9¾c. Mixed herds, 9@9½c. Bulls on live weight, 5¾@6½c.

COMPARATIVE RATES.

Quality.	This week. Cents.	Last week. Cents.
Good	11¾@	12 @
Fair	10¾@11¾	11 @11¾
Poor	9¾@10½	10 @10¾
Poorest	7¾@ 9½	8 @ 9¾
Gen. selling rates	9¾@10½	9¾@10¾

MILCH COWS.—The fresh cows to hand are not of sufficient good quality to meet the demands of the trade, which is slow; 3 cows sold at $50 ₱ head; 9 at $40@65; 9 at $55@70; 6 at $60@75—calves always included.

VEALS AND CALVES.—The quality of the calves to hand has been generally coarse; no smooth quality veals has been received. Buttermilk-fed calves sold at 4@5½c.; ordinary quality at 5@6c. State, 4@8c. General sales, 6¾@7¾c. Jersey, 7@8c.; Pennsylvania, 7½@8c.

SHEEP AND LAMBS.—Trade has been slow, with general sales in small lots. Lambs were few of sale but also in small lots. Monday sheep sold at 4@5¾c.; lambs, 6½@7¾c. Wednesday, sheep, 3@6c.; lambs, 6½@9¾c. Thursday, sheep, 4@6c.; lambs, 7@10½c. Friday, the markets closed weak: sheep, 4¾@6c.; lambs, 6¾@9¾c. State sheep, 5@6½c.; Colorado, 4@4½c.; Kansas, 4c.; Kentucky, 4¾@5c.; Ohio, 5¾@6½c.; Virginia lambs, 7@8½c.; Ohio, 7c.; Delaware, 9c.; Jersey, 9@10¾c.

HOGS.—Monday last 95 Ohio hogs, average gross weight 247 lbs. ₱ head, sold at 6¾c. Wednesday, one carload do., 190 lbs., 6¾c. Trade in city dressed inactive at 7¾@8¾c. General sales, 8@8¾c.

HORSE MARKET.—City trade slow and small: 19 head of poor quality light harness horses sold at $80@100 ₱ head; 20 ordinary, $150@175 ₱ head; 11 roadsters with fair trotting action, $270@390 ₱ head; 1 pair stylish carriage horses, aged, $700; 7 pairs family do., $325@500 ₱ pair; 1 pair heavy draft horses, $500; stage line horses, $150@200 ₱ head; street railroad horses, $82@115 ₱ head. Seventy-six horses arrived per Erie Railway, via Oak Cliff Station.

PERSONAL ITEMS.

SECRETARY MORRILL is sixty-one.

BRIGHAM YOUNG is failing fast.

JEROME B. STILLSON of New York is seriously ill in Buffalo.

MR. JOHN G. WHITTIER is visiting friends in Portland, Me.

ISAAC NEWTON and Isaac Watts are among the Centennial Judges.

ABOUT $100,000 have been given to public charities by Mrs. A. T. Stewart since the death of her husband.

LOUIS J. JENNINGS is writing London letters to the New York World. It would be superfluous to say they are good.

THE glorious times are coming when a fellow can go out and roll in the hay—and roll all over a hidden nest of eggs.

WHILE in Boston, Dom Pedro obtained a photographic picture of the Boston Post building, the birthplace of Franklin.

THE N. Y. Herald says that the catcher of the Chicago base ball nine acquired his skill by practicing with a mule's hind leg.

M. ONIMUS writes for the Revue des Deux Mondes. Wonder if he's any related to that voluminous writer, Ann Onimus?

M. QUAD is authority for the statement that a Chicago fireman can dress in 19 seconds. All he does, though, is to reel on his hose.

FOR singing at the commencement exercises of Bowdoin College, Aug. 2, Miss Clara Louise Kellogg is to receive $500 and expenses.

HORACE WHITE, late of the Chicago Tribune, will deliver the Fourth of July oration at Beloit, Wis., where he was born and educated.

WE have reliable information that Joseph Pawnee-no-pah-she has been elected Governor and Chetopah chosen Head Counsellor of the Osages.

CLERGYMEN in the Shetland Islands are expected to live on three dollars a week, and not to be too particular about collecting even that promptly.

"JACOB served seven years for Rachel: Bob Schenck two years for Emma; Jack won, Bob lost"—is the way in which the Chicago Courier puts it.

GEN. SHERMAN will in a few days take possession of the diamonds belonging to his daughter, Minnie Sherman Fitch. They have been in this city for about a year.

A MAN whose wife never travels with him, has arranged about her attending the Centennial. He has decided to go to this one himself and allow her to attend the next.

A MAN who has evidently been victimized writes: "Fifteen thousand dollars in gold will now buy an American lady a decent outfit to be married in, and there's no use talking about prices going any lower."

"JANE EYRE" has been translated into Italian, and bears the strange title, "*Il Marito della Demente*"—"The Crazy Woman's Husband." Two of Miss Muloch's novels have also been translated into Italian.

THERE is a man residing near Berlin, Wis., who weighs 440 pounds. He is unable to work, and in warm weather is in the habit of spending several hours each day in the river, where he floats like a life-preserver.

AN Emperor, a Prince and a select party of Philadelphians were permitted to see the great Exhibition on Sunday, and everybody else was kept outside the gates. Is this the great American republic?

A TRIBUNE correspondent says that William and Mary Howitt "are *ardent spiritualists*." It can't be so. They are leaders of the temperance movement and don't drink any ardent spirits whatever. So, there!

A PROVIDENCE girl's expressive description of the Centennial Show is thus given in the Press:

PHILADELPHIA, June, 1876.

DEAR MOTHER:—Oh! Oh!! Oh!!! Oh!!!!! O-o-o-o-o-o-o-o-o-h!!!!!!!!!

Your affectionate daughter, MARY.

MR. DREW GAY, a London correspondent, has recorded the heroic deeds of the Prince of Wales in a book of travels called "From Pall Mall to the Punjaub; or, With the Prince in India." He should have given the Punjaub work to an American joker.

ANNA DICKINSON returned to Boston last week and will remain there till the opening of the next dramatic season, when she comes here to appear in "A Crown of Thorns" and other pieces, some of them standard ones. She will take lessons of Mr. J. C. Cowper. In the winter she will make a tour of the principal cities of the Union, having been engaged ahead till next June.

THE first Lord Lyttleton was very absent-minded in Company. One day at dinner he pointed to a particular dish and asked to be helped out of it, calling it, however, by a name very different from that which the dish contained. A gentleman was about to tell him of his mistake. "Never mind," whispered another of the party; "help him to what he asked for, and he will suppose it is what he wanted."

MISS KATE FIELD writes from London to the Louisville Courier-Journal that "the two young elephants—twins in fact—brought home by the Prince of Wales are now rejoicing in the name of Moody and Sankey, and are the recipients of pious attentions from admiring multitudes. What irreverent person baptised the twins I have not yet found out, but they bear up under the dispensation wonderfully well."

How very, very wicked it is for a man to lie at the point of death.

THE Rev. Mr. Spurgeon is to visit the United States in the autumn.

RHEUMATISM is always a joint affair, and yet there is only one party to it.

AN old curmudgeon says that the ladies have a "decoration day" every Sunday.

THE sting of a bee carries conviction with it—it makes a man a bee-leaver at once.

DR. J. G. HOLLAND and his family are staying at the Lake View House, at Litchfield, Conn.

"KATE FIELD is coming home shortly to marry an American critic." Who is the Petruchio?

DEPUTY SECOND COMPTROLLER WILLIAMS of the Treasury, has resigned, to take effect July 1.

THE late Sultan Abdul Aziz ended his life with what many editors begin theirs—the scissors.

THE literary societies at Bates College are to have an oration from James Parton this week.

THROUGH the death of an Italian count, Verdi, the composer, has fallen heir to Paganini's fiddle-bow.

"CLAMBS, shugar and other groceries for sale here," is a sign on a Ninth Avenue store, New York.

AN American girl, Miss Julia Sinclair, has received the degree of M. D. at the University of Zurich.

GEN. CAMPANHA, who accompanied Napoleon I. in his Russian campaign, died at Lisbon a few days ago.

BILL JOHNSON went to sea in a dory. If the craft had been stronger, this story'd been longer—probably.

THE Governor of California has gone to the Yosemite Valley on a tour of inspection. Don't blame him.

HARRISBURG (Pa.) clergymen announce that they will no longer marry any one without cash on the nail.

MR. H. W. RAYMOND, the talented son of the founder of the N. Y. Times, is to enter the lecture field next season.

THE Emperor of Germany has given 3,000 marks toward the erection of a monument to Luther at Esleben, where Luther was born.

GRACE GREENWOOD rode on a cow-catcher. Her impressions are summed up in the impressive remark, "I shall never do that again."

JOHN B. GOUGH has so far recovered from his recent illness that he will attend the temperance celebration at Concord, N. H., Thursday.

WILLIAM PENN is an Osage chief. His sign manual is an X. His name is attached to the new Constitution of the Osage Indian Nation.

THE new fast mail train has been dubbed "The Widow," by some postal service attaches, because it fetches the mails much quicker than any other train.

THE young Napoleon recently called upon the Czar of Russia and was well received. That young man, if he lives, will yet cost a good many cable dispatches.

IT is reported that Harriet Hosmer is coming to the Centennial. She is worthy of a niche in the Temple of Fame; she has never, we believe, been called Hattie.

THE historian Froude, who has prophecied the future greatness of South Africa, practices what he preaches by sending his son to the Cape to become a farmer.

PROF. WALKER, of Yale College, the ex-Superintendent of the United States Census, is strongly urged by the Boston Post as the successor of the late President Stearns, of Amherst College.

THE French are beginning to grow tired of furnishing the world plays for nothing. "She Stoops to Conquer," under another name, or slightly *adapted*, has been produced upon the Parisian boards.

THEY are going to erect an equestrian statue to Philip Augustus in Paris. This they ought by all means to have done long ago. Philip Augustus—let's see, he was the man who—but no, it couldn't have been, either.

BECAUSE Montreal, Canada, built an office for the Witness, a newspaper in that city, at a cost of $100,000, and presented it to that paper free of charge, every paper in the country is talking of moving to Canada.

MR. PAGE M. BAKER, editor and proprietor of the New Orleans Bulletin, which journal he originated, announces its sale and withdrawal from all connection with it. He is succeeded by Mr. Richard Weightman, who has assumed editorial control of the columns of the Bulletin.

THE "Bryant Vase" described in the July Harper's, is a fine thing; but the artist made a sad mistake in representing Bryant the journalist copying an article out of another paper. There are two objections to this: 1, He wouldn't do such a thing; 2, If he did he'd do it with the scissors.

DONN PIATT doesn't seem to like the Cincinnati papers. He writes of the solemn old Gazette that is edited by the ghost of Charley Hammond, and the Daily Iniquity, called the Enquirer, and the Morning Sneer, vulgarly known as the Commercial, and the Evening Times, recognized organ of sixty thousand educated idiots.

EX-MAYOR EASTMAN of Poughkeepsie, says an exchange, gave 500 of the street boys of that city a straw hat each, with these words pasted inside the crown:—"Don't drink intoxicating liquors, don't swear, don't chew, don't smoke. Be industrious, work hard, study hard, play hard, and you will never be hatless. With the best wishes for your future welfare."

Implements and Machinery.

$1,000 Challenge $1,000

Wilbur's Direct Draft Mower is the lightest draft Mower in the world. Will cut more grass than any side draft Mower. Leaves grass in better position to cure. Enables the farmer to make a better quality of hay—is the most economical Mower the farmer can use. The Eureka shows a new *departure*—a new principle. It shows many points of superiority over side-cut machines. We challenge side-cut machine manufacturers to mow 50 acres with us, in competition, on the above points, for $1,000.

ADDRESS
RURAL NEW-YORKER,
78 Duane St., New York City.

MOORE'S RURAL NEW-YORKER became a household word and power in the land long before we quit "going to school," and, perhaps, needs no comment from us: still "its memory is ever fresh and green," and is renewed by its appearance every week, brimful of *good things* as ever. We are glad to announce that our predictions in the January number are being more than fulfilled. We have sent it more than *five hundred* names, and we learn that subscriptions have been pouring in in like proportions from all parts of the country, despite the hard times. Long may it continue to be what it is—a power for good in the land.—*Agent's Friend.*

ANSWERS TO CORRESPONDENTS.

X., Maple Grove.—"How long does it require for Clematis seed to germinate and when should it be sown?" ANS.—As soon as ripe—July, August and September, according to variety. Some will germinate the ensuing winter—most will not germinate until the next fall. A uniform temperature and moisture are desirable.

Amateur Gardener.—Yes, "big feed" does have much to do with big strawberries, still we usually get a good variety to begin with. But food is the great renovator and improver of both plants and animals, even to mankind, for the half-starved man or woman cannot long disguise the fact from the most casual observer.

Young Entomologist.—You need have no fear that all the species of insects will be discovered before you become qualified to commence describing or giving a history of them. Out of the eight or nine thousand species of North American beetles described, the life history of scarcely one hundred of the number is fully known. Besides this, there are hundreds—yes, thousands—of new species which are still undescribed and unnamed. In other orders there is even more work awaiting the coming entomologist than even among the *Coleoptera* (beetles); therefore, should you live a hundred years and labor constantly in this field, there would still remain enough to be done by those who may come after.

Young Farmer.—Utah and all the adjacent region of country is well adapted to stock-raising, but it is idle to talk of giving them no protection in winter or laying up any forage for them during the same season. An occasional winter may pass in which it will not be absolutely necessary to feed stock, but there is never one so mild that shelter from cold storms would not be required for both the comfort and health of the animals. It is said that 4,000 head of stock perished last winter in Utah alone in consequence of deep snows, cold weather and a scarcity of food. There is no safety in depending upon pasturage in winter for stock anywhere on the great Western plains or on the mountains, no matter who may express an opinion to the contrary.

Teamster.—You make a great mistake in regard to your rights on the highway, when asserting that if a man desires to pass you "he has the privilege to do so if he can." We conclude you mean by this that you have the right to remain in the center of the road, and if it happens to be a narrow one, compel any one who may desire to drive a little faster than yourself to take to the ditch in order to "pass on ahead." The "law of the road," however, would compel you to turn out, if requested to do so, giving one-half to the man who may desire to pass on, in overtaking you, as well as meeting when going in a contrary direction. There is a great deal of misunderstanding about such matters; but a little common sense ought to teach a man that civil and obliging manners must come very near being the written as well as unwritten law of the road.

J. G. H., Griffin, Ga.—We wrote to Mr. PETER HENDERSON, asking as to the changeableness of the *Coleus*, "The Shah." He replies as follows:

"'Coleus,' 'The Shah' and 'Chameleon' are rather uncertain as to keeping true to character. I had probably not more than one-fourth of my plants last summer that were planted out, held to their markings, which they did throughout the entire season; but all the rest ran back to the plain color. So far, I cannot yet say what will 'set' the markings." Mr. HENDERSON'S remarks are, in effect, the same as those we expressed last week. We do not believe there ever will be a Shah or Chameleon so fixed as to hold its diffused, undecided colorings, while the plants are permitted to make a healthy, vigorous growth. We have tried Chameleon ever since its introduction, propagating only from the most highly-colored shoots. These would remain true during the winter, but the spring and summer growth has always been as ten of the old Coleus to one of the "Chameleon," and this is the experience of several others of whom we had made inquiry. We have had little experience with the "Shah," but, from the undefined character of its markings, we venture to place it in the same box.

A., Bristol, R. I.—We should do our painting, whether Averil Chemical or ordinary lead paint be used, in mid-spring or mid-fall. Excessive heat or excessive cold in different ways, seriously affects its value and durability.

R. S. (1.) Cuttings of the Weeping Willow will strike now. Make them two feet long—or longer if you choose—and insert them in rather moist earth or muck, in a shaded place, six inches deep. Press the earth firmly about them. (2.) Such cuttings, of course, will not stand the same degree of cold that they would if struck in the spring. (3.) If planted in moist ground, they will, in three years, grow to trees twenty feet high.

S. C., Meadville.—The fact that your "Australian Pine, planted this spring, has not yet pushed its buds," is not proof that it will die. We have known them to remain dormant until the next spring, and we have known them to commence growth as late as Sep. 1st. It is not, we presume, advisable when the season is so far advanced, to stimulate growth, as you suggest, "by digging about the roots and watering them profusely," since the young and tender leaves and wood would probably be killed, if next winter should prove one of severity. Better leave the tree to itself and retard growth. If transplanted evergreens do not turn brown and lose their leaves by mid-summer, they may be considered out of danger, even though not one bud has pushed.

Cherry Grower.—The small, cylindrical, brown beetle, about an eighth of an inch long, found boring into the bark of your cherry tree, is one of the numerous species of Scolytus inhabiting this country and preying upon various kinds of trees. The specimen sent was so badly smashed that we cannot determine the species, although enough was left for us to recognize the genus to which it belongs. The only way we know of preventing the attacks of the bark beetles is to keep the stems and larger branches of the trees whitewashed or smeared with soap.

Gardener.—The currant bud-mite referred to as doing so much damage in Europe has not to our knowledge appeared in this country. If any of our readers should discover its presence in their currant bushes, we hope they will send us specimens.

Young Voter.—The custom of voting to elect officers or magistrates to govern or make laws for the people is of very ancient date; in fact, it would be difficult to determine just when, where, or how it originated. But you and other young voters may not know that the ballots used by the ancient Romans were beans of different colors. A white bean cast for a candidate was a vote in his favor; a black one against him; and from this custom, it is supposed, originated the one of blackballing obnoxious candidates applying for admission to secret or other societies.

Young Coleopterist.—You can obtain small pocket lenses, suitable for examining common insects, at from 50c. to 15 or $20. One of the cheaper kind will probably answer your purpose very well and be of great assistance in making examinations of the smaller species, as well as the organs of larger kinds.

School Girl.—Yes, we do make a distinction between the words "branch" and "limb," even though some of our dictionaries fail to do so. Poets and novelists are allowed considerable license in the use of words, but as you desire to know why we do not call the *branch* of a tree a *limb*, we give it—it is because we think it an incorrect way of speaking. The distinction made may be somewhat arbitrary, still it is just as well, if not better, to confine the word "limb" to the animal kingdom in ordinary conversation and when writing upon subjects relating to natural history, as to use some other and less correct name. We notice that our best and highest botanical authorities do not call the *stem* of a tree or shrub the "trunk" or "body," neither do they say "limb" when referring to a "branch." Hence, when speaking of the principal parts of a tree, we use the names root, stem, branch, twig, leaves, etc., and say limbs when referring to the legs of horses, cows, reptiles or insects. The arms and legs of a man are his limbs, and no one would think of speaking of them as his branches, still it would be just as correct as to call the branches of a tree its limbs.

C.—"Are coal ashes good for Raspberries and Blackberries?" ANS.—It is the very general opinion of chemists and horticulturists that coal ashes contain no elements that can be of benefit to plants. We sometimes fancy, however, in spite of such opinions, that coal ashes exert a highly beneficial influence upon certain plants (among them the Raspberry and Blackberry), and that, like gypsum, which, under certain conditions, seems to have no effect whatever, and under others most marked effects, their action and adaptation are little understood. If their effects were due solely to the small quantity of wood ashes usually mixed with coal ashes, most plants would be improved by their application. Such, however, is not the case. If their action were purely mechanical, loosening the soil or serving as a mulch, most plants in soils requiring such mechanical action would be benefited, but this is not the case. That coal ashes in nineteen instances out of twenty are useless, or even sometimes injurious, we do not dispute. But in the twentieth instance it may, we believe, prove of great service; and in this place, speaking from experience alone, we think the above species of the genus Rubus will be found.

Market Gardener.—It is a very old and common belief that the free use of lettuce induces sleep. COLUMELLA, who wrote his great work on Roman agriculture more than eighteen centuries ago, said:

> "And now let lettuce, with its healthful sleep,
> Make haste, which of a tedious, long disease
> The painful loathings cures."

The belief in the sedative properties of lettuce is certainly old enough to have become fixed, even if not very potent.

Real Estate.

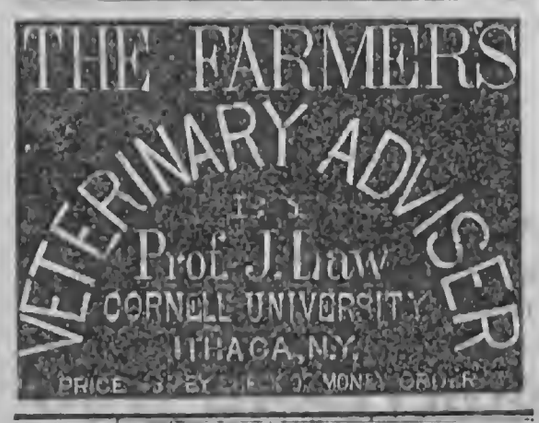
WESTERN FARMS.
Parties desiring to purchase Farms in any of the Western States, either improved or unimproved, are requested to write to
MASON, MILLS & CO.,
REAL ESTATE DEALERS AND BROKERS,
115 South Clark St., CHICAGO, ILLS.,
for Descriptive Catalogue and Price Lists, which will be mailed free upon application.

KANSAS PACIFIC HOMESTEAD.
This paper is full of reliable information about Kansas, her climate, soil, products and progress. Contains a nice map of the United States, and a fine view of a prosperous Colony from Pennsylvania.
It is a faithful guide to the best and cheapest body of lands in the West. 5,000,000 acres for sale.
For a copy, send your address to
S. J. GILMORE,
Land Commissioner Kansas Pacific Railway,
LAWRENCE, KANSAS.

VIRGINIA FARMS.—Tracts of 30 to 300 acres; good improvements. Also houses and lots in the growing town of Ashland, Hanover Co., on R. R. from Washington to Richmond; healthy, delightful climate; great bargains. *T. J. Wooldridge*, Ashland, Va.

VERY DESIRABLE MARYLAND AND Delaware Farms, cheap and on easy terms. For "Land Guide," address D. J. BLACKISTON, Chestertown, Kent Co. Md.

New Publications.



Dairy Utensils.
